BURLINGAME PUBLIC LIBRARY Burlingame, Cal.

# . . . this great best-selling novel which strips the masks from an American town!

220783

EVERY adult in Kings Row knew that a human face sometimes becomes a "mask"—hiding its owner's secret love, hate, or ambition—but fourteen-year-old Parris Mitchell did not suspect it. He simply took people at their face values.

He liked his affectionate little girl-friend Renee. They tramped the country and went swimming together, at first in Adam and Eve innocence. He loved his big-hearted, girl-crazy pal, Drake McHugh. He liked and trusted Drake's tomboy girl friend, Randy Monaghan, and Jamie Wakefield, who secretly wrote poems, and whom people called "too pretty for a boy."

Cassie Tower, the prettiest young girl in town, he admired but thought "strange," perhaps because she was always kept at home by her unpopular physician father, who lived mysteriously well without any patients to speak of. Parris liked Dr. Tower, even if few grown-ups did. But he feared and disliked the cold-faced surgeon, Dr. Gordon, whose patients' hearts were so often found "too weak for chloroform." Once Renee and Parris had heard frightful screams from a farmhouse, with Dr. Gordon's buggy there. Parris never forgot them.

Through this sensitive reaction to the people around him, Parris gradually developed the intuitive insight of a born physician; gradually he discovered that each and every one of them faced the world of Kings Row through some kind of protective mask, which hid a sickness of the mind or soul—perhaps a gnawing fear, a paralyzing inferiority complex, or a cherished vice. And later, as Dr. Parris Mitchell, equipped as a psychiatrist by five years study in Vienna, he helped some of them to take off their masks.

How the masks of Kings Row were removed, and how their wearers' tangled lives joined in dramatic and thrilling conflict, makes an extraordinary story that is gripping in its intensity, exciting in its action, fascinating in its suspense, compelling in its power.

Here, at last, is a truly great American novel—a story that springs out of the lusty, zestful, growing years of adolescent America—enlivened with all an American town's charm, zest, ambition, passions, loves, hates, hypocrisies, tragedies, comedies and, sometimes, nameless horrors! The *New York Times* called *Kings Row* "a grand yarn, full of the sap of life. Eventful, swift in pace." The *New York Herald Tribune* said, "Rich in sentiment, emotional, powerfully felt—a moving and passionate book."

And now you can have this amazing best-selling novel, for which thousands have paid $2.75, entirely FREE. Here is one of the most sensational offers ever made by the DOLLAR BOOK CLUB. If you accept membership now we will send you, without cost, a copy of Kings Row.

# DOLLAR BOOK CLUB MEMBERSHIP IS FREE!

## --and this $2.75 best-seller illustrates the amazing bargains it brings you!

HERE are the advantages of DOLLAR BOOK CLUB membership: First, it is the only book club that brings you books by outstanding authors, for only $1.00 each. This represents a saving to you of 60 to 80 per cent from the original $2.50 to $5.00 price. Every Dollar Book Club selection is a handsome sized library edition, well-printed and bound cloth.

Second, members are privileged to purchase many Club selections as they wish at the special price of $1.00 each. Although one selection is made each month and manufactured exclusively for members at only $1.00 each, you do not have to accept the book every month—only the purchase of six selections a year is necessary.

### The Economical, Systematic Way to Build a Library of Good Books

Dollar Book Club selections are from the best modern books—the outstanding fiction and non-fiction by famous authors. The Club has offered books by Sinclair Lewis, Edna Ferber, W. Somerset Maugham, Vincent Sheean, Emil Ludwig, Marquis James, Van Wyck Mason, and many other noted writers. And the cost to members was never more than $1.00. How are these savings possible?

70,000 discriminating readers are enthusiastic supporters of the Dollar Book Club. This huge membership enables us to offer book values unequaled by any other book buying.

### Enjoying Membership at Once

[illegible] of the attached coupon you will be sent a [illegible] f KINGS ROW. With this book will come [illegible] ue of the free monthly magazine called "The [illegible] h is sent exclusively to members of the Club. [illegible] describes the next month's selection and re[illegible] hirty other books available to members at only [illegible] h. If, after reading the description of next month's s[illegible] ion, you do not wish to purchase the book for $1.00, you may notify the Club any time within two weeks, so that the book will not be sent you. You may request an alternate selection if it is desired.

### Send No Money—Just Mail the Coupon

When you see KINGS ROW and consider that this free book is typical of the values you will receive for only $1.00, you will realize the value of free membership in this popular Club. Don't miss this wonderful offer. Mail the coupon now.

COVER VERNON GRANT

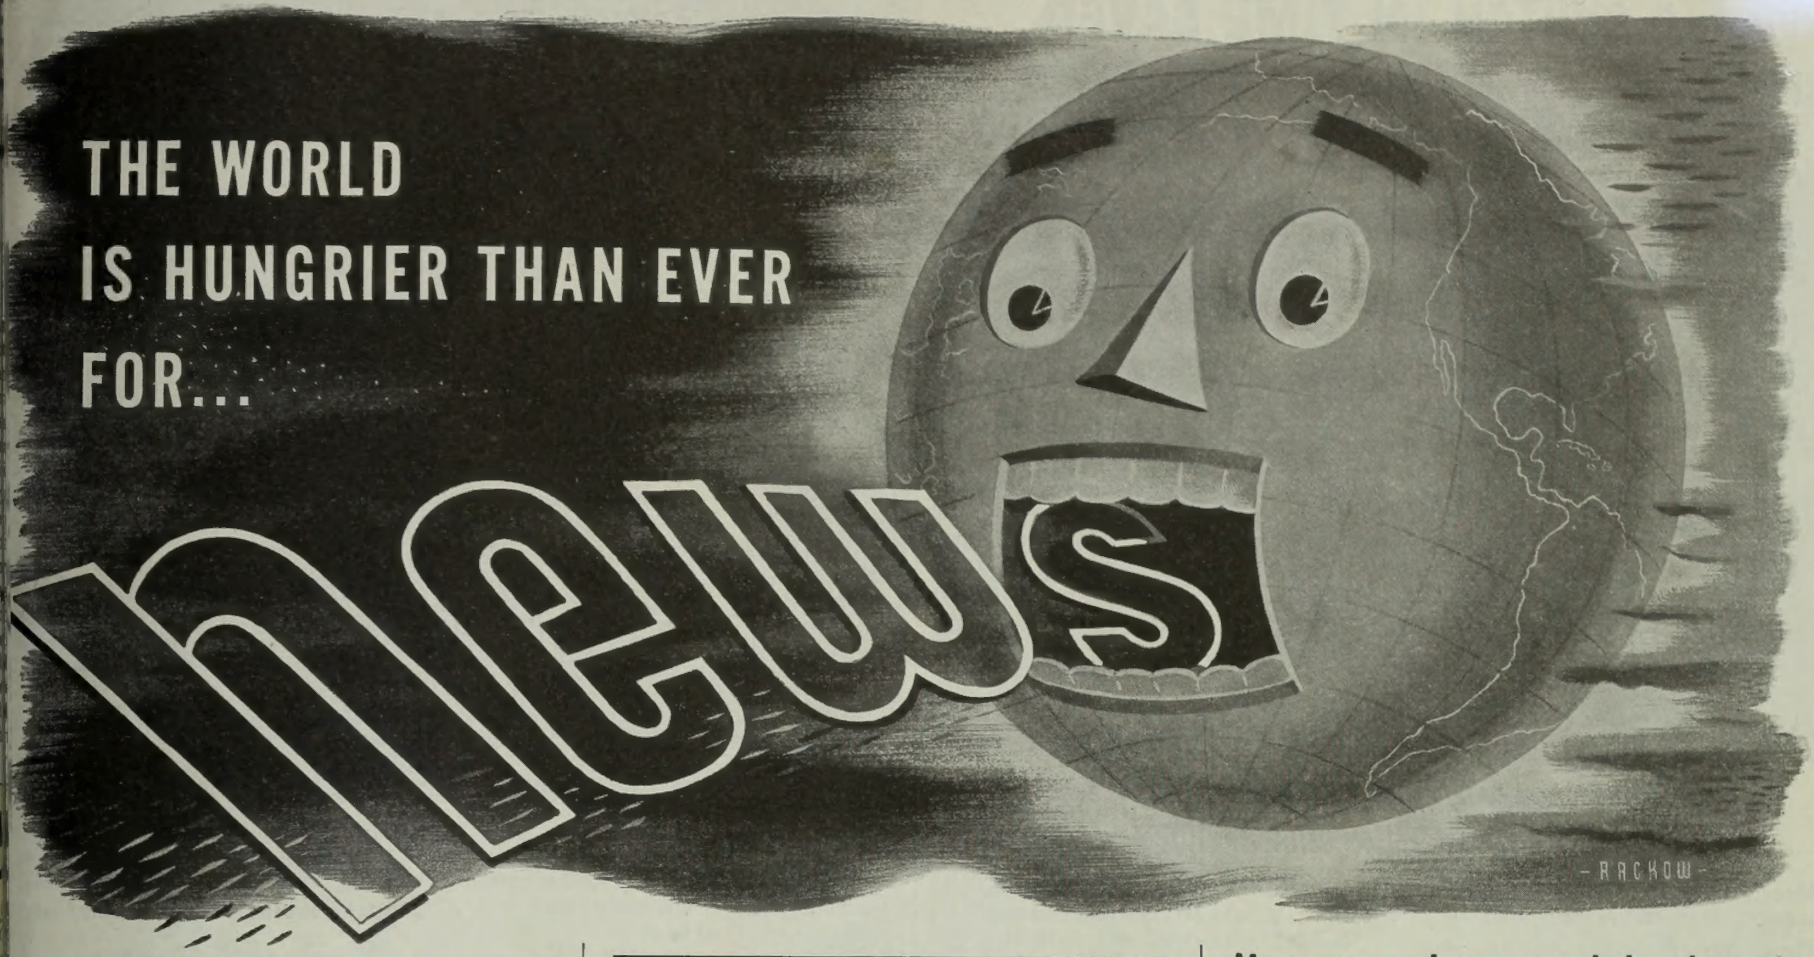
# ANY WEEK

BY THE time we reached Buffalo we needed a bit of diversion. You can spend just so much time in Washington these days and keep the morale intact. After a few days you need a change—a sea voyage, for example, or a new hat or something. Anyway, when the plane got to Buffalo, things began to pick up. Little did we think, for example, that we'd live to see the day when one might not take photographs of Niagara Falls. Yet there at the airport was the notice—no taking pictures of Niagara Falls. Naturally this inspired a great deal of speculation and discussion. That we might have something to go on, an Army officer told us that certain defense measures were being taken to guard the falls from "possible and even probable enemies." We sided with two gentlemen who were contending that it was as it should be—that after all these years the falls were entitled to a little privacy. Our side contended, too, that while it was something like slapping down a priority on photos of the Mississippi River (which was being considered with some gravity in Washington at the moment) we couldn't very well complain. After all one could still shoot pictures of the falls from the Canadian side, that country being at war, not seeming to mind. However, we were comforted by the man who ran the newsstand. He said that there was no visible shortage of photographs of Niagara Falls, that he had on hand seventy-two different views and thought that anyone wanting more than that warranted being suspected of subversive motives. Anyway, it picked us up quite a lot after Washington where, somehow, we began to droop when we discovered that between the OPM and Mr. Leon Henderson, 100 per cent priorities were being placed on blueprint paper and glass eyes.

NEVERTHELESS, problems of this sort are puny compared to that which had an employee of the Honorable Harold Ickes on the somewhat uncertain side. This fellow works the Chicago district for the National Forests division of Mr. Ickes' Interior Department. It is his particular job to agitate the American public to more and longer motor tours of our beautiful national forests and parks. From what he had read in the papers, Mr. Ickes was urging motorists to conserve gasoline and nothing in his instructions told him how tourists were to conserve gasoline and at the same time redouble their touring of our national parks and forests. He had wired to his chief in Washington. Either his plea for instructions had gone astray or his chief was busy looking up a few instructions on his own hook. Anyway, the tour promoter was in quite a quandary when we met him. "Sometimes you begin to suspect that there's a lot of conflicting ideas down there these days," he sighed as we left.

BURNING as little gasoline as possible, Mr. Will Schribner of Madison, Wisconsin, was motoring through North Dakota. Stopping for refreshment at a place near Bismarck—a place Mr. Schribner describes as "a favorite with the better class of riffraff"—he became engaged in conversation with the barkeep and eight or ten customers. "The situation, national and international, was pretty well straightened out in a few minutes," writes Mr. Schribner. "The concensus was that we have too few tanks in the field and too many in official swivel chairs. There seems, too, to be a growing feeling that a few hundred per cent priorities should be laid on Congress. This sentiment developed when the bartender said that he'd had a customer, the day before, who had told him that there was some talk of Congress planning to pass a law postponing next year's elections for the duration."

AND here's one from a young man who is burning no gasoline at all. He is touring on a bicycle, having paused in Estes Park, Colorado, long enough to write to us. His name is Mr. Jack Bitterwack. When not touring he lives in Chillicothe, Ohio. Mr. Bitterwack was graduated from college in June and has had time since, says he, to "figure out what hundreds of commencement orators said to hundreds of graduating classes." He thinks that it all comes down to this: "Make the best of our mistakes so that you may hand down a brand-new set of mistakes to your own sons." And then Mr. Bitterwack concludes: "I have already thought of one. When I get to the state where I am asked to address a graduating class I'm going to suggest that I do nothing of the sort. I will insist that we ancients trade places with the graduating kids for the day and let them do the talking. The result will add nothing, as usual, to the wisdom of the world, but it will be a whole lot easier to understand."



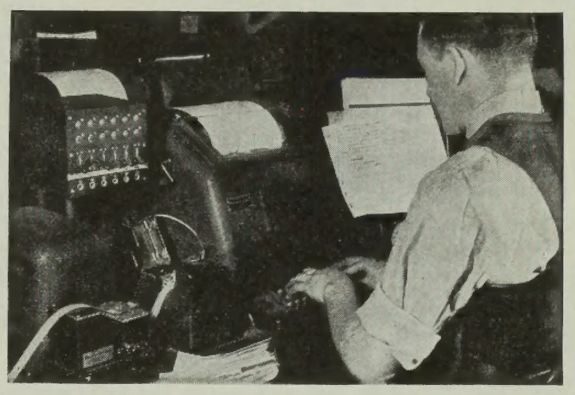
THIS stirring incident was observed by Mr. Paul Gravely of Toledo, Ohio, while he was waiting on a New York street corner for the lights to change. Other occupants of the corner were two gentlemen conversing in German and a very indignant lady who wa talking to herself. When the ligh had changed she darted toward th traffic cop and, pointing to the still co versing gentlemen, told the cop th they were speaking German. "Ar what do you suggest I do about madam?" asked the cop. "Your dut of course," said she. "They're Ge mans—probably spies." The c looked at the lady for a moment a then said: "Madam, it's a humid d sure enough. Now let me take y across the street." So he guided h across, she becoming more indignant the step. Once across, the cop touch his cap and said: "Now walk slow madam. It's a warm day, sure enoug

WE MENTIONED a lot of th things to a friend of ours who lives Detroit—particularly that part ab about the ever-increasing ban on p tures of old familiar scenes. He dic scoff; he sneered. Anything could photographed by the ingenious, he sured us. He told us that one of motorcar manufacturers had invi news photographers to shoot a few p tures of an airplane engine—the f of its kind in America to be rolled an assembly line. As the lads aime the arriving engine, an Army capt dashed in, leaped between the gine and the cameraman, lifted arms and shouted: "No pictures! pictures. In the name of the Un States Army." (Ever since he known as Ethan Allen, Junior.) could the photographers persuade to get out of the way. They were ab to give up when a general appea escorted by his staff. The captain, tory in hand, departed, saying he'd return in a few minutes. He but not before one of the camera called to the general: "General, w you mind posing beside the new gine?" Said the general: "Certa not, my boy." Before the captain back they had shot the general and motor from all possible angles.

AND that's about all for the mor except a bit of advice to Washing to be used in the event it bec completely baffled for methods spending money faster. Just tal couple of billion and ride aroun Detroit taxicabs. With economy money should last several days. not more. . . . W

Vol. 108, No. 14. Entered as second-class matter at Post Office, Springfield, Ohio, U. S. Remit by postal or e money order or check in United States funds to The Crowell-Collier Pub Company, Springfield, Ohio. Changes of address should reach us five we advance. Give both old and new addresses.

## How this appetite for news is fed



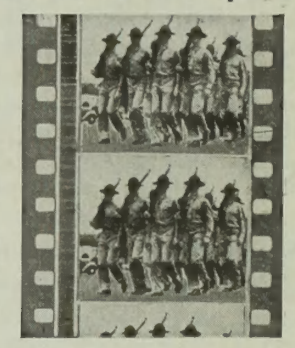
What happened in Europe today? What did Congress do? Who won the golf title? And, nearer home, will it rain this week-end?

We want fast answers—and we get them through newspaper, newsreel and newscast. Do you know that these purveyors of news gather it largely on equipment produced by one organization?

### The newspaper reporter's right arm is the telephone—made by Western Electric

Using the long arm of the telephone, the reporter can reach out to thousands of inaccessible spots, scoop up the news and bring it to his own desk. When he is in the field, telephones everywhere put him in instant touch with his paper.

### News while it's fresh is flashed over Western Electric Teletype machines



The great press associations send out thousands of words every day to papers all over the country. These stories go by Teletype machines which make for speed and accuracy. And they travel over telephone wires—another Western Electric product.

### Western Electric made the first commercial telephoto equipment

Many newspapers publish photographs which come over the telephone wires—and by means of sending and receiving apparatus which Western Electric made. Here illustrated is an operator about to transmit a picture to a group of newspapers.

### Many newsreels are recorded and reproduced by Western Electric Sound System

The sound newsreel and, indeed, the talking picture itself were made possible by the pioneering work of Bell Telephone Laboratories and Western Electric.

### Most radio news travels over Western Electric telephone wires

Many radio stations broadcast over Western Electric apparatus. Moreover, network programs come to your local station over telephone lines and through control centers equipped by Western Electric.

* * *

Though it plays these varied parts in your daily life, this Company is of greatest importance to you in its primary role—that of source of supply to the Bell System. As such, it is the telephone users' assurance of equipment high in quality, low in cost, dependable in operation.

# A SWITCH IN TIME SAVED 3 MILLION FACES

*Why not save your face, and time, and temper with this 30% QUICKER slicker NEW Schick?*

Here's one that beats the old story about water wearing away stone—

The average man stands to lose about a pound of face during a lifetime of shaving by ordinary methods.

But 3 million men have found how to save their skins—the Schick way! And they're getting the *quickest*, closest shaves possible.

Convince *yourself!* Try the wonderful *new* Schick with its still faster "Whiskwik" motor that operates on both AC and DC. See for yourself how Schick's sensational 2-M Hollow-Ground Head arches the skin and makes the whiskers stand up to be slicked off right down to the skin line.

Your dealer will sell you the new Schick on trial. Use it for two weeks. If you're not completely satisfied, take it back and he'll refund every penny!

SCHICK INCORPORATED, Stamford, Conn., U.S.A.

# WING TALK

**Navy test pilots must be accomplished airmen and engineers as well. One above is putting seaplane through rough-water tests**

UNDER the pressure of war, when equipment must be produced superior to the enemy's, the most audacious projects are undertaken and often accomplished in a fraction of the time needed in peacetime. Word is trickling back here from the other side that new methods of aircraft propulsion are being worked on by the Germans and the British. R.A.F. pilots tell a story of trapping a German fighter. Suddenly a cloud of black smoke blasted out of his exhaust, and he went away from there with more speed than the R.A.F. boys ever saw. One guess is that some kind of gas or fluid is carried aboard and when fed into the engine, gives a tremendous increase in horsepower for a short enough interval to accomplish the objective.

On the British side, rocket propulsion as a means of assisting take-off is known to exist, particularly as an aid to heavily laden bombers forced to operate out of tight fields. The idea is not brand-new to this country.

USED to be that the Army and Navy would test-fly any new plane but now, and for several years, they have required the company test pilot first to demonstrate the plane's ability to fly, pull out of dives, spin and what not. When the Army and Navy do take it over there is no question about the airplane flying, so the test pilots of both services see what it will do as a military or naval plane. (An exception was made in the case of the mammoth B-19 when Vice-President Carl Cover of the Douglas Company, who has piloted the first flights of most new Douglas models, was prevented by illness from taking off the big bomber. He recommended that Major Stanley M. Umstead, the Army's Chief Test Pilot, be the first to fly it and he did.)

These Army and Navy test pilots receive no more pay than the regulation 50 per cent extra that all Army and Navy airmen get, and they volunteer for the job. The volunteer part does not signify that the duty is so hazardous they cannot be ordered to it. The qualifications have so many intangibles that not until the applicant has had a go at service test flying are his superiors able to conclude he is test-pilot material.

Army test work is done at Wright Field, Dayton, Ohio. The Navy test pilots, in addition to testing planes that operate from land, must also test types for operation from carriers, catapults aboard cruisers and battleships, and from rough seas.

They do the carrier work at Philadelphia, where a reproduction of a carrier deck with arresting gear is laid out on the ground. The rough-water tests for seaplanes and flying boats are carried out at sea off Norfolk and catapult tests are also made there. For general flight characteristics, the new planes are tested at the Naval Air Station, Anacostia, D. C., across the river from Washington.

Frequent departures from this general Army and Navy procedure are made to speed up the testing of new models, and when this is necessary the Army and Navy test pilot is sent to the factory to conduct the tests where any changes he recommends can usually be made immediately.

IT'S difficult to report on what airline pilots do for fun when they're off duty except at a remote place like Wake Island, out in the Pacific where the Pan American clippers lay over for the night. The coral reefs surrounding the islands abound with bizarre tropical fish, many of them good to eat. The clipper crews, equipped with rubber-mounted glass face masks, a four-foot barbed steel spear, a short length of bamboo with a piece of inner tube as a sling shot, go underwater and shoot fish. They have become quite expert at knocking off a toothsome fish dinner at fifteen feet. But there are other diversions, night tennis, sailboating, rowboating and ping-pong. The crews always hope for bad weather ahead so they can stay over and have more fun.

BEFORE they can get to Wake Island to shoot fish, the clipper crews have got to find the place. It is so insignificant that an ordinary cloud shadow on the water looks exactly like it from a distance.

On the island is a transmitter with a special antenna arrangement which can receive the flying boat's radio waves and measure accurately the direction

*(Continued on page 47)*

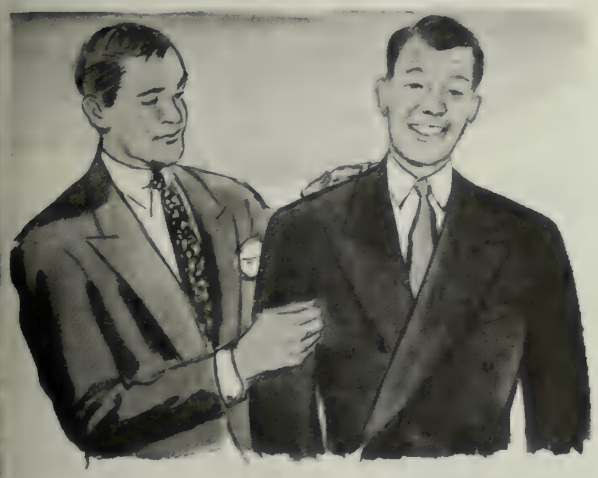
# If you're FIT TO BE TIED

***because your clothes don't fit you properly...***

**here's a fit to be tried—**

**DOUBLE W CHECKED FIT***

**by HART SCHAFFNER & MARX**



***1. FUNNY THING ABOUT SOME CLOTHES.*** They seem to fit pretty well when you try them on in the store. But after a few weeks, subtle and mysterious changes take place. For instance . . .

***2. THE SLEEVES CREEP UP.*** The shoulders hunch. The neck gapes. The vest gets so uppity it isn't on speaking terms with the trousers. What can you do about it? Simple. Next time you buy a suit get yourself a Hart Schaffner & Marx *double-checked fit!*

***3. WHAT IS DOUBLE-CHECKED FIT?*** It's your guarantee of perfection of fit! For every Hart Schaffner & Marx suit is checked *twice* for fit . . . first in the Hart Schaffner & Marx shops where it is tailored (it goes through twenty-seven different inspection operations for accuracy of size, fit, etc., in the process of its production) . . . then *again*, before you are ever allowed to wear it, by an expert tailor in the store that features Hart Schaffner & Marx clothes in your town! (The store where you ultimately should buy if you want to be assured of clothes that *do* fit you perfectly.)

***4. YOU DON'T EVEN HAVE TO ASK*** for double-checked fit. You get it *automatically* at any store that sells Hart Schaffner & Marx clothes. And that goes, no matter what your build may be. For regardless of whether you're unusually tall, or short, or beginning to get convex where you used to be concave, Hart Schaffner & Marx have developed specialties and sizes to fit men of *all* types of stature. Stop in and invite your Hart Schaffner & Marx dealer to show you what double-checked fit can mean to the fitting qualities of *your* clothes . . . this week!

***P. S.*** **Ask to have Double-Checked Fit demonstrated to you in the famed value-suit . . .**

***Triple Test Worsted***

**This Hart Schaffner & Marx ace value is ready for you now in a wide, new variety of colors and patterns for fall at a price that, dollar for dollar, unquestionably offers you one of the best clothing buys in the country. And remember . . . this Triple Test suit . . . like every Hart Schaffner & Marx suit . . . FITS.**

*Registered

# HART SCHAFFNER & MARX

*You may be good but out you go . . . when you have the* double O

COMPETITION'S fierce these days, and ability alone often isn't enough. If an employer has to let a girl go, and has to pick from two girls of equal ability —which one gets the pink slip? The one with a clean, attractive smile and pleasant breath, or the one with "Double O" (Offensive-looking teeth and Offensive breath)? You know the answer.

Yes, you may be the most fastidious girl in the world in other things, but if you're careless about the "Double O," young lady, you're in for some bad times!

*What To Do About It*

But why risk offending, when there's a delightful daily precaution that so many popular, sought-after girls use every day.

For the teeth, the new Listerine Tooth Paste. Here's a dentifrice made specially to help bring out the natural sparkle, the clean, flashing brilliance of your smile.

*New Tooth Paste . . . New Formula*

The new Listerine Tooth Paste is an entirely new formula that attacks cloudy, loose deposits, goes to work on dull, dingy teeth. Many girls say they can actually see its beautifying effects in a surprisingly short time.

And for the breath—Listerine, of course. It halts food fermentation in the mouth, a frequent cause of halitosis.

*Delightful Daily Double*

If you want to get ahead, don't neglect the "Double O." Start in today with the delightful Listerine Daily Double: the new Listerine Tooth Paste for a clean, attractive smile, and Listerine Antiseptic for a more appealing breath.

LAMBERT PHARMACAL CO., *St. Louis, Mo.*

*the double precaution against* double O — *Offensive Breath, Offensive looking Teeth*

PRICELESS PROTECTION

THE NEW *Safti-Sured*

# Firestone

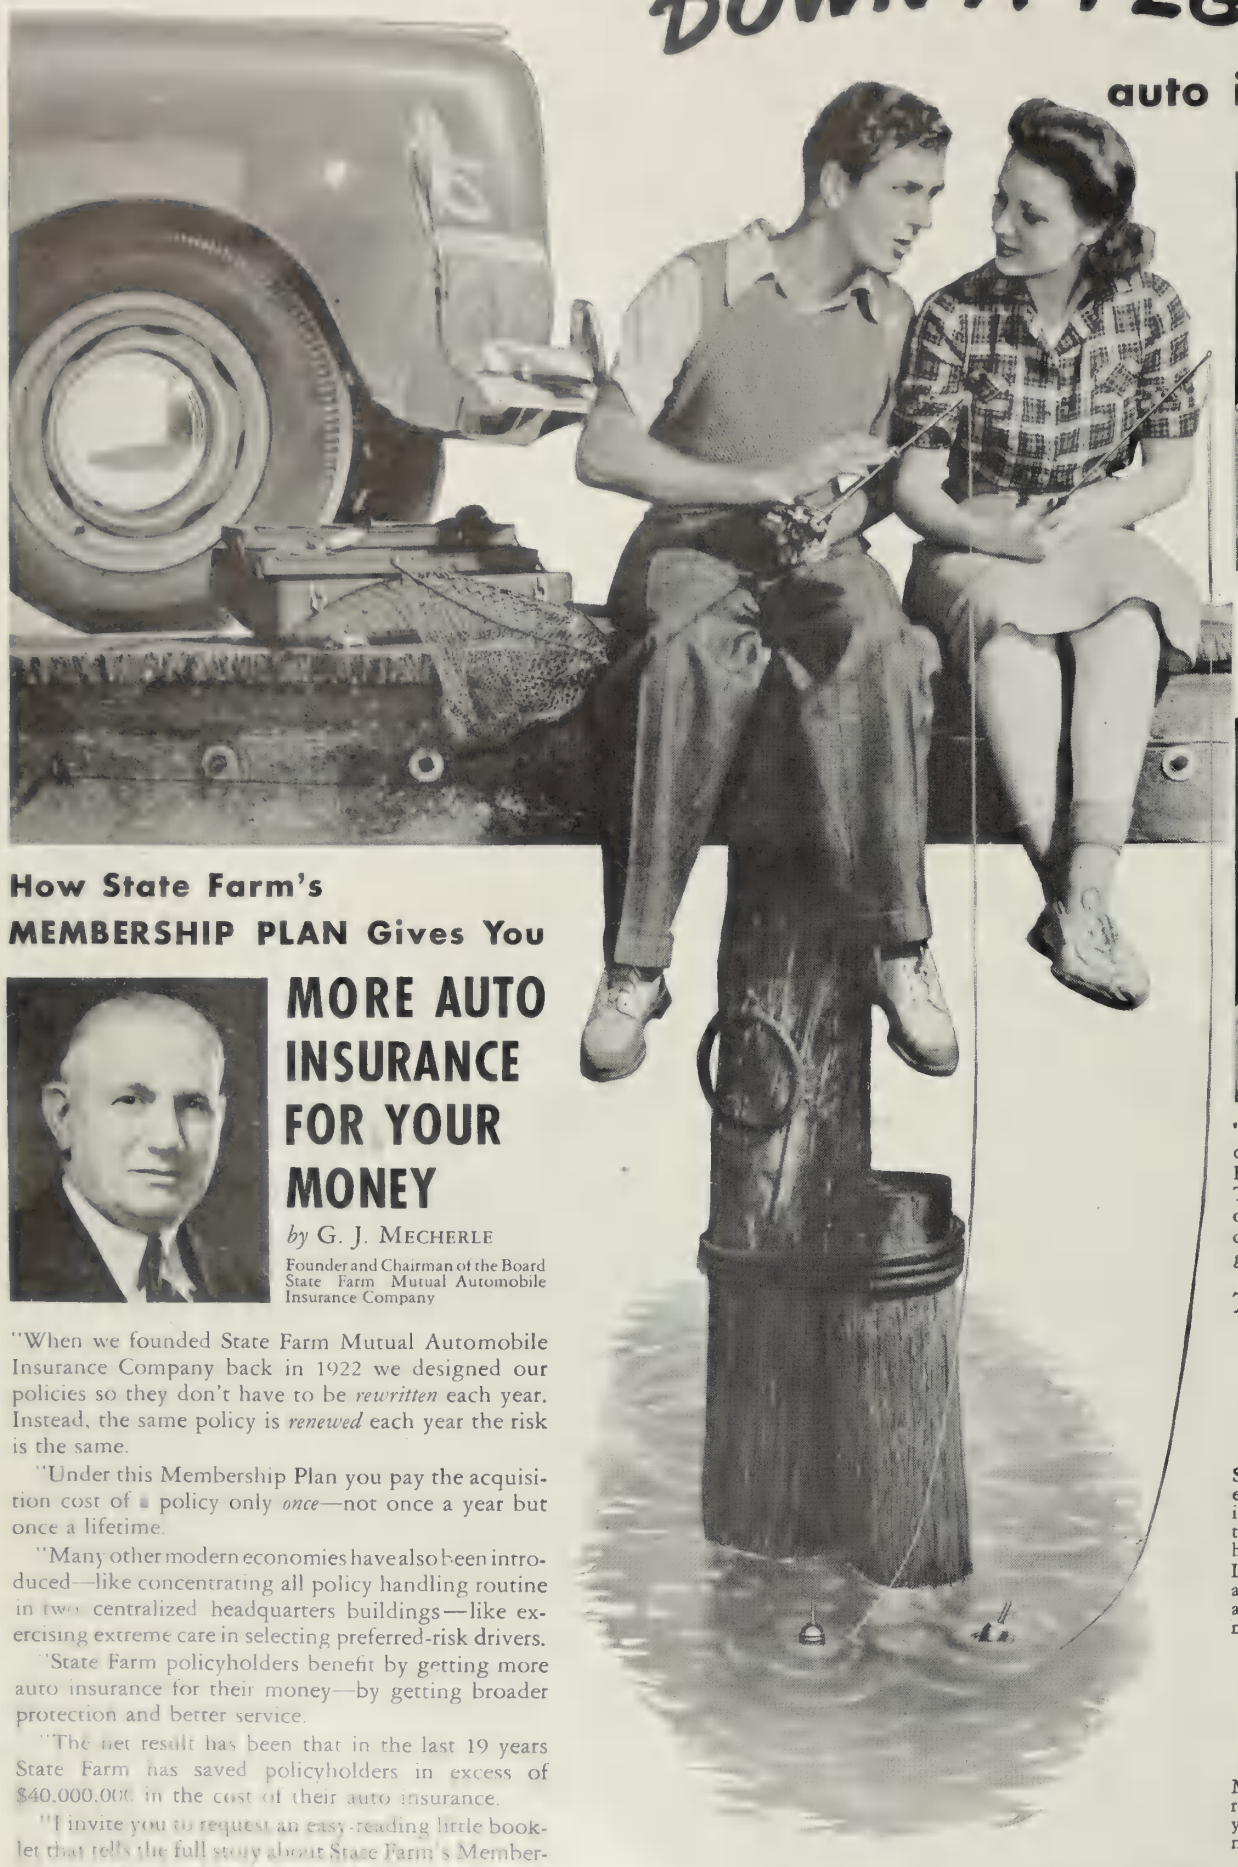
*DeLuxe* CHAMPION TIRES

HANDS that grip the steering wheel also hold the destiny of precious human lives. Yet too few car owners realize the serious responsibilities that rest upon them to keep their cars in safe driving condition.

Each year thousands of men, women and innocent children are victims of unsafe tires. Why take chances with mankind's most priceless possession when it costs so little for the priceless protection of the world's *first* and *only* tires that are *Safti-Sured*.

They are *Safti-Sured* against blowouts by the patented Safety-Lock Gum-Dipped cord body — *Safti-Sured* against skidding by the remarkable Gear-Grip tread — and *Safti-Sured* for longer mileage by the exclusive new Vitamic rubber compound.

Protect your life and the lives of your family by having your nearby Firestone dealer or store equip your car today with a set of new *Safti-Sured* Firestone DeLuxe Champion Tires — the only tires made that are safety-proved on the speedway for your protection on the highway.



**FOR THE BEST IN MUSIC**

The Voice of Firestone with Richard Crooks, Margaret Speaks and the Firestone Symphony Orchestra under the direction of Alfred Wallenstein, every Monday evening over N. B. C. Red Network.

THE ONLY TIRES MADE THAT ARE SAFETY-PROVED ON THE SPEEDWAY FOR YOUR PROTECTION ON THE HIGHWAY

# "HE SURE TOOK ME DOWN A PEG!... He showed me all auto insurance is NOT alike!"

**"Remember the arguments** I used to have with your father! told him auto insurance wasn't necessary for careful drivers. Wel you finally sold me off that—even though you had to smack a other car to do it! But it took a perfect stranger to blast my notio that all kinds of auto insurance are alike!"

**"It was a lucky day** for us when the State Farm representati came our way. It didn't take him long to prove to me why the St Farm Membership Plan can give you more insurance for your mon Their practice of not writing a new policy each year but to renew t old one as long as the risk remains the same sure is an economy. operates just like my Life Insurance—and we car owners ought to grateful!"

## How State Farm's MEMBERSHIP PLAN Gives You MORE AUTO INSURANCE FOR YOUR MONEY

*by* G. J. MECHERLE

Founder and Chairman of the Board
State Farm Mutual Automobile Insurance Company

"When we founded State Farm Mutual Automobile Insurance Company back in 1922 we designed our policies so they don't have to be *rewritten* each year. Instead, the same policy is *renewed* each year the risk is the same.

"Under this Membership Plan you pay the acquisition cost of a policy only *once*—not once a year but once a lifetime.

"Many other modern economies have also been introduced—like concentrating all policy handling routine in two centralized headquarters buildings—like exercising extreme care in selecting preferred-risk drivers.

"State Farm policyholders benefit by getting more auto insurance for their money—by getting broader protection and better service.

"The net result has been that in the last 19 years State Farm has saved policyholders in excess of $40,000,000 in the cost of their auto insurance.

"I invite you to request an easy-reading little booklet that tells the full story about State Farm's Membership Plan. Just mail the coupon below for your copy."

*This is NEWS to many car drivers!*

State Farm Mutual is the largest exclusive writer of automobile insurance in the world. More than a million car owners have been insured the State Farm way. Last year State Farm settled agreeably over 200,000 claims—a claim was paid every 2.6 minutes!

More than 7,000 State Farm representatives are ready to serve you in case of an accident. These men are located all over the country so they can come your assistance whether you thousands of miles from ho or in your own driveway.

State Farm does business toc in 40 states, in the District Columbia, and the province Ontario, Canada.

State Farm is a mutual compa operated solely for the ben of policyholders. *State Farm M tual policies are absolutely n assessable.*

This is the home office build of State Farm Mutual in Blo ington, Illinois. This enorm 12-story building is owned occupied exclusively by S Farm Insurance Companies.

# SUB CONSCIOUS

**By Richard Howells Watkins**
ILLUSTRATED BY HARDIE GRAMATKY

**Mr. Paley, second mate of the Ernestine Hobart, demonstrates conclusively that there is more than one way to skin a cat**

**They came pouring aboard in a rush that made the big lifeboat heel dangerously. The men in the bow floundered aft and joined the others**

NOBODY volunteered to man the Ernestine Hobart's lifeboat. Nobody wanted to go, not even Rob Paley, the second mate, who had first sighted those mariners in distress.

Mr. Lott, the mate, had jerked the glasses out of the smaller man's hands to look long at the distant object. "It's a Nazi sub, all right, bow up an' flying a distress signal," he said. "Well, it's deep enough around here. Don't let the skipper know or the old rooster'll be rescuing 'em."

"I've got to notify the old man," said Mr. Paley.

Lott, an uncompromising realist, turned eyes like blue ball bearings on the watch officer.

"What is this?" demanded the mate. "'The Honor Boys on the Ocean'?" He pointed a thick finger at the speck on the horizon. "D'you want Gilmore to pick 'em up an' risk their seizing the ship?"

"They'll drown if we don't," said Mr. Paley.

Mr. Lott made an impatient noise. "Sure, that gang of underwater thugs haven't got around to torpedoing American ships yet. But we're on their list. Know about the Lease-Lend Act, don't you? Would they rescue us?"

"No, but maybe that's what the war's about," Rob Paley said uncomfortably. Lott's eyes were peering suspiciously at him. "We're different from them. Anyhow, my standing orders are to report anything unusual to the old man this side of the Azores."

Mr. Lott argued. He also threatened. Both men knew Lott would be succeeding frail old Captain Gilmore at the end of five months. Already he was assuming a lot of authority. His threats meant something.

But Mr. Paley, somewhat pallid under his sunburn, called the old man anyhow, and the ship boiled with the news.

In spite of the violent reaction of the crew, Captain Gilmore, stiff-necked as a ventilator, became emphatic in his orders.

"There's still such a thing as mutiny on the high seas," the Ernestine's master said. "And there's still the cure. Get away that sta'board lifeboat!"

Snarling, cursing, the men rode the boat down the high side of the six-thousand-ton freighter. The sea that warm afternoon, some four hundred miles west of the Portuguese coast, was blue and placid.

Mr. Paley, sadly leaning his scrawny body on the steering oar, encountered concentrated hate in eight men's eyes as they sluggishly swung the oars. He looked beyond them, at the foundering submarine. That was concentrated hate, too, that submarine, and it bred hate among seamen far faster than it sank ships.

The thing was awash and out of trim. The tall conning tower was no higher

**"First I catch a glimpse of a Nazi sneakin' out o' this boat," said Mr. Lott. "Then I find you in it"**

above water than the bow. The stern was nowhere. The men, about thirty in all, in two clusters, clung to the net-cutting cable forward on deck and to the conning tower.

As Mr. Paley watched, a man, coughing violently, came scrambling out of the hatch at the top of the tower. There was a quick clanging of steel as the cover was closed behind him by two of the crew.

"Take your time, boys," said Knupple, an oiler. He had taken plenty from the crew because he was of German birth. "We can spare 'em."

Olafson, the boatswain, a big Norwegian, turned back impatiently from a look at the submarine. "Ar! Hell won't have 'em!" he said.

"Way enough!" said Mr. Paley. The lifeboat drifted. Bearing hard aport on his oar he hailed the undersea boat.

"Who's master of that ship?"

"I am, Mister Mate!" A big man in dungarees, with a uniform cap on top of his broad, closely clipped head, raised his hand, carefully avoiding the appearance of a salute. "Lieutenant Erlich."

"One at a time!" said Rob Paley. He had heard of Lieutenant Erlich. The Germans reported he had sunk fifty-four thousand tons on one cruise. "One at a time," he repeated. "No guns! No tools! Fend off, forra'd!"

The lieutenant spoke swiftly in German to his men. On the heels of his words he switched to English: "But the ship iss sinking fast!"

The men on the submarine's deck moved together, laying hold of the gunwales.

They came pouring aboard in a rush that made the big lifeboat heel dangerously. The men in the bow floundered aft and joined the others. Lieutenant Erlich clambered in close beside Paley. He smiled brightly at the second mate. "Your pardon for my lack of discipline, Mr. Mate!" he said. "They felt her settling under them—and it wass too much."

He cursed the men in instantaneous rage. Thirty men, a pallid lot compared to the brown crew of the boat.

The face of the only German-speaking man in the Ernestine's crew, Knupple, the oiler, betrayed an urgent intent to blurt out something to Mr. Paley. The second mate, shielded by the confusion in the overcrowded boat, managed to kick him on the leg and flicker an eyelid.

"Give way together!" said Mr. Paley, as if that were possible in the midst of that jam.

LIEUTENANT ERLICH blandly ignored the unwillingness of his rescuers at the oars. He introduced to Paley his two subordinates, Muhlen and Reichert. He explained at length how his ship, shelled during an attack on a convoy, had escaped into the night with a bad leak aft.

They had blown all tanks and kept the pumps going but the water steadily got the upper hand.

"We are lucky to haf a neutral ship pick us up," he said, with a wave at the American flag painted on the Ernestine's side.

"Luckier'n the men you've sunk without warning!" Olafson, the big boatswain, yelled at him with sudden fury.

Lieutenant Erlich gave Mr. Paley's thin arm a confidential squeeze and laughed aloud. "Your discipline, mister, seems no better than mine, nicht wahr?"

Mr. Paley grunted. His reticence had no effect on Erlich. The sub commander made it plain that Paley was his friend, whether Paley liked it or not. Paley's feelings did not count. He, Lieutenant Erlich, was pleased with the second mate.

All hands free of other duty were standing by on deck when Paley brought the lifeboat alongside. Mr. Lott had rigged one pilot ladder. As the mate waited his flat face wore a hard-boiled expression and his lower jaw stuck out underneath. He had seen what had happened alongside the submarine.

"One at a time!" he commanded, leaning over at the head of the ladder. He had a steel marlinespike in his hand and an automatic strapped to his waist. "One! Nobody else on the ladder till I give the word."

"Good!" said Lieutenant Erlich in a hearty voice. "I co-operate with you!"

Mr. Lott and a quartermaster frisked every man and every bundle that came over the rail. Lott did a job on it.

Before Mr. Lott had finished searching the men, the submarine slid under. None of the men Paley had under his eyes showed any sorrow over losing their ship.

Clear of his passengers, Mr. Paley hoisted and secured the lifeboat. Knupple edged up. His broad face was creased.

"Sir," he said rapidly, "that wass no panic. Erlich ordered his men to pile into the lifeboat like a mob."

"Ordered?" said Mr. Paley. "What was Erlich's reason?"

"I don't know," said the oiler. "Mr. Lott didn't find a gun on one of 'em." His scratching fingers shoved his cap nearly off his head. "You got to watch Nazis all the time."

He studied Paley's face. "Us Germans know that better'n anybody, sir," he said earnestly. "It was our country the Nazis stole first of all."

He made his way off the fiddley deck alone.

MR. PALEY'S regular afternoon watch was ending by the time he reached the bridge. Captain Gilmore and Mr. Lott were overseeing the moving of the deck force aft into the black gang's quarters in the poop.

"The whole length of the ship between our men and these Nazis is little enough to avoid trouble," the old man said. "Lieutenant Erlich gets that empty stateroom in the bridgehouse. His two officers share the third's room. Mr. Paley, Mr. Coburn will be moving in with you."

He lowered his reedy voice and raised a wrinkled finger in admonition. His eyes were on Mr. Lott:

"I wish no controversy, gentlemen. These men are our guests. We must maintain neutrality. They must be treated with the strictest politeness. I have received from Lieutenant Erlich and the other two officers in exchange for their liberty of movement on board a pledge of good conduct."

Mr. Lott laughed.

Captain Gilmore's thin face reddened. "I am not a fool, Mr. Lott," he said. "I am not unaware of Hitler's attitude toward pledges. We must, of course, keep an eye on them."

# Gateway to War

## By Frank Gervasi

BY RADIO FROM MANILA

**Thailand (Siam) is more than the home of the sacred elephant and the famous twins. For months now it has been teeming with Japanese "tourists," the advance guard of an impending invasion that may touch off the Asiatic bomb**

A KLM airliner, Batavia-bound from Rangoon, dropped me out of war into peace at Bangkok. The effect was startling. It was like flying out of a black cloud and torment of winds into sunlight and smooth air. I was surprised to see a Chinese National Airways plane there loading mail and gasoline. Bangkok is the southern terminal of the CNAC line that flies mail, money and vitamins into China. The plane was smeared with camouflage paint and beside the silvery Douglas of the Dutch line, with its bold red, white and blue flag painted on the fuselage and its clear markings the CNAC machine looked tired, military, misplaced. I felt a kinship to that plane. It had just arrived from Chungking and I had just come from war too.

The heat was wet and thick. It induced drowsiness and accentuated a sense of relief. A cigarette tasted good. War in Egypt, the desert, the wreckage in Alexandria where bombs fall every moonlighted night, the black-out in Cairo, the raucous voices of sullen resentful Arabs in the dark streets, the geometry of searchlights in the skies over Egypt's capital, the restaurants and cafés noisy with leathery men on leave, that noise and excitement of war that buzzes in your brain even when there aren't any bombs and when you can't see the dead, the wounded nor the revolting litter of smashed tanks, trucks, guns, planes and men—all that dropped away like a dry husk.

It was good to feel the spring of turf underfoot. The Siamese are very neat about everything and they keep the grass of the big, modern Dom Muang airport clipped and rolled as carefully as though it were one huge tennis court. The modern, low-lying white building of the airport offices, waiting rooms and restaurant would have looked perfectly at home anywhere in the United States and, except perhaps for Singapore, Bangkok is the best air station from Cairo to Manila on either British or Dutch empire routes. For one fleeting moment you think maybe you have landed somewhere in Florida when you've landed at Dom Muang, but a tidy Siamese in a white uniform that smelled of soap and hot iron was saying: "Have you anything to declare?"

I said I didn't and prepared to open my bags for his inspection but he said not to bother and I must have looked incredulous for he smiled with two rows of white teeth and said:

"Well, you say you have nothing to declare—no firearms, tobacco, opium, ammunition, cameras or radios and it is not necessary to look, therefore."

He made cabalistic scrawls on my bags with white chalk and directed me to the police and I said to myself, "Here's where the spell breaks. Here's where I go back to that damned war." When you've crossed some twenty or thirty wartime frontiers you hate frontier policemen—tough, suspicious, unfriendly as barbed wire. You look into a frontier cop's eyes and you know you're a spy. But this cop had black, unprejudiced eyes. He wore a Dutch laundered khaki uniform which also smelled of soap and hot iron and he was small and compact, and might have been the twin brother of the customs inspector. Later you discover all Siamese, a pleasant unbelligerent people, might be twins. Few are taller than five feet, three inches.

All look like well-trained speed swimmers but the characteristic which most distinguishes them from Chinese or Japanese is their eyes. There is none of the Chinese sleepy bleariness and none of the nearsightedness of the Japs. It is rare that you see Siamese wearing glasses, which means they're potentially good fliers.

I offered Mister Cop an American cigarette. That's always a good gambit. I got into a highly reluctant Spain once on three packages of cigarettes and two chocolate bars. The Siamese—or Thai as he would prefer to be called in his new-found nationalism—accepted, and, using the data in my passport, filled out a long red blank, a long white blank and made duplicates. Usually you do this yourself. He asked me how long I wished to stay in Thailand and before I could answer he suggested I stay a month or two. "You can't see much of Thailand in less than a month," he said. I just nodded my head stupidly and thought what a cinch for the Japs. When I left Thailand some ten days later that same policeman looked at me reproachfully. They're the world's most hospitable people.

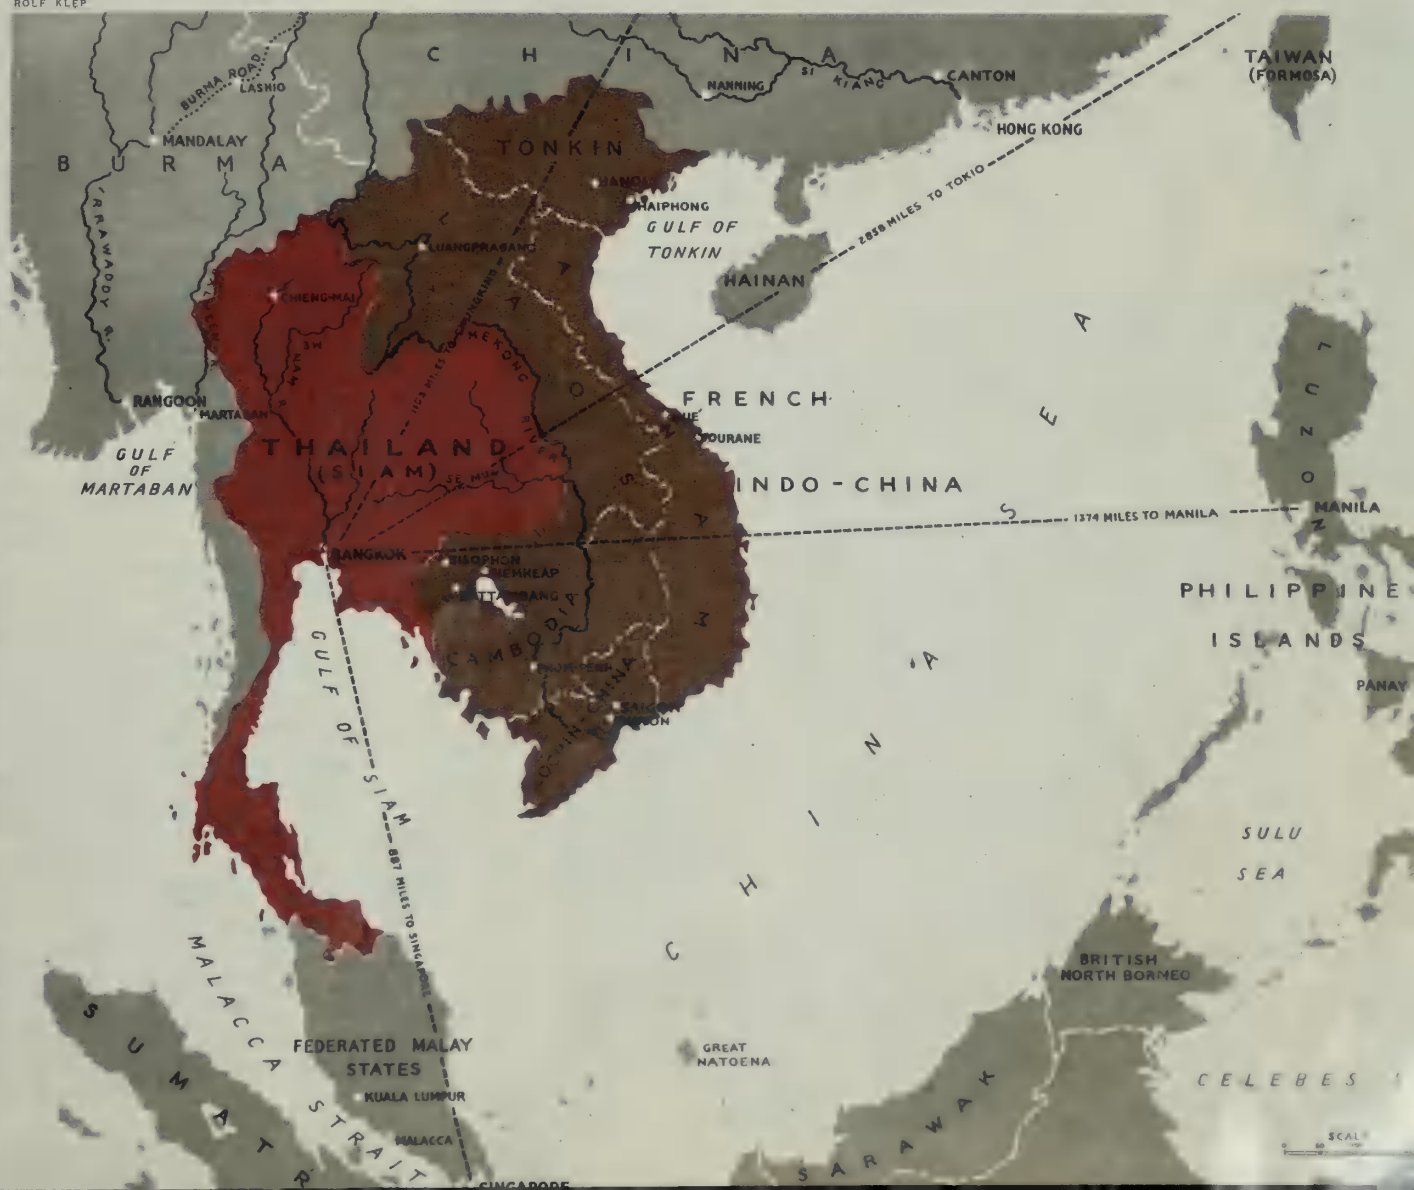
### The "Land of the Free Men"

Most of Thailand is about one hand high above sea level. From the bus windows you can see miles of rice paddies wetly green, yellow and brown and Thailand makes you think of freshly laid decalcomania. Bamboo huts with thatched roofs stand on stilts. You glimpse gleaming floors and bare-breasted women playing with naked children with fat bellies. Sampans float in canals and huge oxen which further dwarf tiny Thais stand in the mud of paddies and pull crude plows. Sway-backed pigs with long snouts wallow in muck under stilted houses. The peasants' yards are reasonably clean and their muddy ugliness is camouflaged by a profusion of flowers and lilies that grow wherever there's a puddle. Thailand isn't dirty, only muddy.

The passing of the bus is an intrusion. Chickens and geese raise a rumpus and pigs squeal and women come to doors holding babies and men poling sampans break the rhythm of their work to stand and stare. Coolies set down burdens by the roadside and grimace at you. Their teeth are stained with betel juice but the Thai in the seat next to you says betel chewing is being discouraged. School children are being taught how to clean their teeth as Westerners do.

As the bus nears the city, coolie traffic thickens. Tricycles crowd the road. There are no rickshas in Thailand. Their place in transports is taken by tricycles, which carry one European but are built for two Thais. You ride behind a coolie who pedals and on level roads can keep up a twenty-mile-an-hour pace. You see Buddhist priests with shaved heads and bright yellow robes. There are Thai women with straight black hair, clear cocoa skins, wearing tight, short, white vests and black panungs.

The panung is a bloomerlike skirt which drapes about the waist and once around each leg and ties in a loose knot over the stomach. It's going out. Nine years ago Siam discovered the principle that people shall have a voice in government. They had a revolution which converted an absolute into a constitutional monarchy and they banned the panung.



The revolution, like all things Thai, was a mild affair. The only casualty was an obstreperous colonel who was shot in the shin. But quiet as it was, Thais found themselves in 1932 when they bade benevolent King Prajadhipok, remembered by Americans principally for his much-publicized cataracts, quit and invited him to continue as a democratic king instead of a totalitarian ruler.

To Thais their absurd little revolution is as important as the one that began in Boston and ended at Yorktown is to Americans. With it began an acceleration of the process of Westernization and hence the ban on panungs. Also, women must wear hats with their Western skirts and dresses but there is as yet no law about wearing shoes, so you see cute Thai women in bargain-basement dresses, dollar hats and no shoes.

What is more important, however, is that Siam became Muang Tai, or Thailand, which means "Land of Free Men."

*(Continued on page 56)*

ROLF KLEP

**Thailand, wedged in between British Burma and Japanese-controlled French Indo-China, is the fulcrum whereon the peace of the Far East seesaws If the Japs move into Thailand, they will be in a good position to threaten Burma and the Burma Road, Singapore and the Dutch East Indies**

# BOOTED OFF THE LOT

## By Kyle Crichton

**Marsha Hunt sailed into Hollywood as a New York model who didn't want a job in pictures. It worked. Now she's all set**

PHOTOGRAPH FOR COLLIER'S BY GEORGE DE ZAYAS

HOLLYWOOD has as many native rites as an African tribe. When ecstatic cries of "*dah*-ling" greet an actress entering Ciro's, she knows that her last picture has been a success. By the same token when she finds that every diner in the place has his eye glued to his plate, apparently frantic at the thought of starvation, she knows that the end has come.

After four years of comparative success in the town, Marsha Hunt went through the mastication ritual. The minute she came into Ciro's everybody began eating furiously and nobody seemed to see her. Old friends suddenly bent their heads reverently over their victuals and began to work their jaws. The headwaiter was polite but regretful; the ringside tables were reserved but he might squeeze them in somewhere at the rear. Miss Hunt sat at the rear with her husband, Jerry Hopper, and enjoyed full solitude.

"Who are those charming people with their faces full of soup?" asked Mr. Hopper savagely.

"Those are our dear, dead past," answered Miss Hunt, grimly.

"We will note them carefully in this little black book," replied Mr. Hopper bitterly, taking out the little black book and a stub pencil and going to work. "There are certain individuals here I should like to remember in case a change in your fortunes ever comes."

The change came soon after when Miss Hunt was signed by M-G-M, making one of the most remarkable comebacks in film history. There are directors like Mervyn LeRoy who swear that Marsha Hunt will be the next Bette Davis of the screen. At the period of the Ciro episode, however, her cinema career had been going downhill with all the velocity of a carpenter falling off a roof. She had come out originally for Paramount, had been the pretty girl in dozens of pictures and had ended by being booted off the lot. The best she could get after that was a picture at Republic and another at Grand National. When even that source of income dried up, she started doing "quickies."

"It's track work," reports Miss Hunt. "You just run in and out in front of cameras."

At this juncture she had an apologetic phone call from her agent. He didn't think she would be interested but he could get her one day's work at M-G-M in The Hardys Ride Hard. He didn't want her to think he was insulting her but . . . While he still sat there, jiggling the phone foolishly and trying to get some word out of her, she was half-way to Culver City. She did the role of a spendthrift wife and later learned that the inspiration for giving her a character part after years of being a sappy pretty girl came from Lou Ostrow.

"I asked Mr. Ostrow how he came to think of me," reports Miss Hunt, "and he just looked wise and tapped his head. He didn't have to prove to *me* he was a wise man. I know he was a genius."

As will be seen by gazing at Miss Hunt, she resembles every dainty little ingénue that ever simpered through a Hollywood double feature. She is tall and thin and doesn't simper, but she looks like the girl who is eventually going to be kissed by the guy with the wavy hair.

M-G-M forgot about her almost immediately but she did the part of a professor's wife in Walter Wanger's Winter Carnival and felt that she was getting somewhere. Where she was getting was home. She sat around there for three months waiting for the phone to ring. When it finally rang it was the C. B. DeMille office and they didn't want to hire her. They merely wanted her to go along to Omaha and help shoot up the town on behalf of the Union Pacific opening. They admitted frankly that they needed names, even ex-names, and the ride was free.

"Omaha is a nice town," says Miss Hunt, "and it is also halfway to New York."

Back on Broadway she was trying to line up some summer stock work when her agent called again and went into his apology routine. There was a bit in Those Glamour Girls at M-G-M but they couldn't promise her anything. If she wanted to pay her own way (*Continued on page* 39)

# Say It Isn't So

## By Holmes Alexander

ILLUSTRATED BY JOHN FLOHERTY, JR.

**It took a lot of strenuous pitching for Dipsey Buford to learn that he wasn't any better than the man who was catching him**

THE big man walked from the door of the office building and paused on the sidewalk to fill his lungs. The crisp October air went into him and seemed in a measure to cleanse him of the filth that clogged his soul. He moved to the gutter and spat. Then with a loathing glance at the office building he walked hurriedly on.

About this office building there was nothing to give the impression that it might dirty a man's soul. It was façaded of chaste marble on the outside. Up on the twentieth story was a suite of rooms filled with handsome stenographers and fine maple-wood furnishings. This big man, named Buford, had been sitting in the largest and fanciest of the rooms. Across the desk from him reposed Mr. Martin Flack, a portly and well-jowled financier. It is necessary to insist that Mr. Flack was a "financier." He was president, it is true, of the Eagles Baseball and Exhibition Company, Inc., but this was owing to a business merger lately consummated. In no sense was Martin Flack a baseball man, else he would not have brought about the conversation of which Dipsey Buford was party of the second part, and which ran as follows:

"I'm told," said Mr. Flack in his friendly way, "that Manager Burnham intends starting you in the first game tomorrow and back again in the fourth."

"Yep," said Buford.

"And there is more than a chance," said Mr. Flack, "that there will be only four games to this world series. From the players' point of view that's all very well. You men only get your split on the first four games."

"So what?" asked Buford.

"Look at it from my angle," Mr. Flack continued. "The first two games are played in our stadium which seats upward of eighty thousand. The series then moves west to Panther Park—a mere hatbox with a capacity of thirty."

"It'll make tough pitchin' that fourth game," Buford observed. "It'll be Sunday with ground rules, and all."

Then Martin Flack had said, "A pitcher could lose that game and not be sorry, Buford. It'll be a tightwad series for us all unless we get another chance to fill the stadium."

SHORTLY afterward Buford issued into the street feeling about as unclean as a man could who'd had a bath and shave not two hours before. He walked rapidly to his hotel where he undressed to the skin and bathed again.

"I should've let him have one," Buford was thinking while he soaped and sponged.

He hadn't, though, and this sin of omission still irked him next afternoon when he put his right foot in the pitching stirrup and upped his left foot nearly to the level of his eyebrows and roared one through there like the fast express. It made strike one on the Panther, and the big show was on.

"'At's makin' 'em like it, Dipsey . . . Hey, Dipsey, this is where we came in."

The last remark, which emanated from Montague Bates at shortstop, had to do with the big show of the year before. The Eagles had won that series in four straight with Buford taking the first and final contest. The papers, in fact, were making considerable play of the Buford string. He had never lost a world-series game and he had won seven during his twelve-year stretch with the Eagles.

"John (Dipsey) Buford," one sports columnist wrote, "is half of the greatest battery in operation today. One may as well mention Lee without Jackson or Ike without Mike as to divide the name and fame of these super-inseparables —Dipsey Buford and Beany Magee."

Buford caught the hard-flung ball from the man behind the plate. The force of the throw stung his gloved palm. Magee always pegged the returns as if he meant to knock the pitcher down. This annoyed Buford, but not as much as remembering that squib in the sports column. Buford snorted as he set himself to pitch.

"Hokum," he muttered. "Where do they get that inseparables stuff? Like I couldn't get along without Magee. If I never saw him again, I'd miss him like the measles."

HE WENT into his windup and took the signal. Somewhere between the time his hands came up and his arm went down, Buford adjusted his fingers on the stitches. A batter had no chance to see this done. There was a sharp, downward arc as the ball flicked in and the batter lashed at it. The curve had fooled him. Magee smothered the easy pop-up.

"One away, Dipsey . . . Round the horn."

While the infielders crisscrossed the diamond with their throws, Magee walked out to the pitching box. He was a small man as catchers go. He had quick brown hands and sharp eyes in a high-cheeked, leathery face. He was known as a man of brains—hence his nickname. All but one of his teammates affectionately called him Beany.

"Well, Magee," said Buford. "What d' you want now?"

"This next guy," said Magee. "Don't feed him nuthin' high. Curve him low."

Buford curved the fellow low and struck him out. . . .

It was not until late in the game, and coasting to a 3 to 0 shutout, that Buford got around to thinking about Mr. Flack. It did seem when you stopped to add it up that the club owners had a raw deal in the world series. With half the games played at Panther Park there wouldn't be much of a melon to slice anyhow, and Flack had the stockholders to think about. "A pitcher could lose that fourth game and not be sorry." What did that mean if not what it seemed?

"He'd have to gimme what I asked for," thought Buford. "I could get doubles on my winner's share. Maybe five, six grand—the heel!"

He tried to forget all this while he worked. Sweat oiled the big, flat-lying muscles through his shoulders and back. His fast one skipped and his curve ball was like coming round the mountain. He worked methodically, pacing himself, following Magee's signals, keeping ahead of the batters and sometimes sloughing off a third strike with his change of pace. But in the ninth inning he thought again of Martin Flack: "Five, six grand. Who's it goin' to hurt? The fans see more baseball. We still win the championship and—"

His thoughts went skyward with a batted ball, and suddenly he was running to back up the outfield relay into

*(Continued on page 52)*

**"Beany," said Dipsey Buford. He knelt, supporting the fellow's head. "It's nothin'— just an ankle. You'll be back"**

**Karen took the needles. She tried to remember how her mother had held them. "You're not eating with them," Bitsy said. "They ain't chopsticks"**

# Knit One, Purl Two

**By Pat Frank**

"WHAT makes it so good," said Bitsy Biggers, "is it's simple, see. My best flashes are always simple. Like calling you 'America's Midnight Date.' Where'd you be without that?"

"I don't know," said Karen March, examining a runner in the eighty-nine-cent stockings that sheathed one of her hundred-thousand-dollar legs, "where would I be?"

Bitsy Biggers tossed his tiny, elegant hands at where the ceiling would have been, if the set had had a ceiling. "You'd be in the B's, that's where you'd be! Now this is the way it goes—a sort of slow build-up keyed on National Defense and Aid to England. All you've got to do—"

"Bitsy," said Karen, "I was tied up with National Defense last week. Remember—Karen March buys bonds." This was as much as she dared protest, because Bitsy was chief of public relations, and a power on the lot.

The Blimp, who shot the studio stills, began to unlimber his tripod. The Blimp was her shadow. Wherever she was—at the Troc or in her own kitchen, in a box at Santa Anita, or riding a circus carrousel—the Blimp trailed in her wake like a loaded barge behind a trim yacht. She said, "All right, what is it?" It was like arguing with a freight train going downgrade.

"All you've got to do," said Bitsy, "is knit a sweater and send it to an R.A.F. pilot through the British War Relief. You do it anonymously, sort of. You don't use your screen name. If you used your screen name the British might catch wise that it was a gag, and not go for it. The British have got no sense of publicity."

"What name do I use?"

"What was that name you had when you came here?"

"Mertz—Katherine Mertz."

"Use that one. Well, you put a note in the sweater and, of course, the flier writes to you, and you write back, and a romance springs up."

"I knit?" asked Karen.

"Yeah, you knit. A romance springs up, and he asks you to send your picture. So you send one of your pictures—and, of course, he recognizes you. The story will break out of England."

"What story?"

"Oh!" Bitsy groaned, and put his face into his hands. "Don't you get it? Screen star, British ace knit together by sweater romance! It'll be Page One everywhere!"

"I'm all set up," said the Blimp. "Just take this chair over here, will you, Miss March? It looks kind of homey. And cross your legs so that runner won't show."

"Got the props?" Bitsy asked. The Blimp found a ball of yarn and two knitting needles in his camera bag and put them on Karen's lap. "All right, Miss March," said the Blimp. "Knit."

Karen took the needles in her hands. She tried to remember how her mother had held them, back in Oakwood, Iowa.

"You're not eating with them," Bitsy said. "They ain't chopsticks."

THE wardrobe mistress came, finally, and showed Karen how to hold the wool, and the needles, and she even showed her how to knit a few needle lengths. The Blimp made his pictures, and Karen asked, "Well, what do I do now."

"You quit knitting," said Bitsy. He turned to the Blimp and said, "You run up to town and buy a pull-over sweater. Better get a pretty big one. I guess these pilots are pretty big, like Cooper or Gable. Better get a Gable size."

Karen didn't feel very good about the letter. She was only twenty-one, but she had been in Hollywood three years and she felt much older than that. "They're just kids," she told herself. "They're just kids, and maybe he'll only be twenty or so and I'll be darned if I'm going to hurt him."

The reply came more quickly than she had expected, because it came by air, via Lisbon. He was very grateful for the sweater. It was by far the finest sweater that had come to his squadron from America. It was, however, a bit large, but that was really his fault. "I'm only five-eight," he explained. She must have a fascinating time, living in Hollywood with all the cinema stars. He hoped their correspondence could continue. His name was Pilot Officer Jeffrey Glendenning.

So she wrote, and he wrote, and she came to know a good deal more of him. He was twenty-four, and a Cambridge man, and he might have been a barrister had not the war come along, and he flew a Spitfire.

In the third letter he mentioned, casually, that he had been credited with his fifth Jerry. Then for a long time no letter came, and Bitsy Biggers was worried, and Karen found herself crying in her dressing room.

THE fourth letter came from a hospital. A Messerschmitt's shell had exploded against his back armor, and he had splinters in both arms. "They got all the stuff out of me," he said, "and I'll be back with the squadron in a week." As a postscript he said the only thing which had really been ruined was her sweater. Would it be too much trouble for her to knit another? There was a second postscript. He'd been thinking of Katherine Mertz a good deal in the hospital. He didn't have any other girls. Would she send her picture?

"We've got him!" said Bitsy Biggers as if he'd hooked a tuna off Catalina. "You, Blimp, go buy him another sweater."

"No," said Karen. "I'll knit this one myself."

Bitsy took a look at the funny shade of green in her eyes, shrugged his shoulders, and said, "All right with me, but hurry it up."

She bought the heaviest, softest wool and each day held a conference with the wardrobe mistress, so there would be no uneven rows or dropped stitches, and when it was finished she found a pro boy who was five-eight, and made him stand in for her so she could see that it would surely fit. Then she took the picture, the one anyone would recognize as Karen March, "America's Midnight Date," and Bitsy mailed them off together. Then they waited.

"Dear Katherine," his letter began. "If you had to send me the photograph of an actress, why not Dietrich or Lamarr instead of that empty Karen March? You know we don't like her very much over here, and I'm the job of the mess."

Bitsy began to swear. "If this ever gets out," he warned, "this'll ruin you. What're you laughing about?"

When he had gone she went to the Blimp's darkroom. "Blimp," she said, "do you remember what I looked like when I first came here?"

"Yes," he reflected. "You were pretty awful. Freckles—hair sort of half blond and done wrong—well, pretty awful, except sort of cute."

"Blimp, let me have one of the stills you made of me then."

"Nope. Studio has ordered they're never to go out."

"Please, Blimp, one."

"Who's it for?" he asked suspiciously.

"It's for myself," she said. "Blimp, how long's the war going to last?"

### WAR . . . AND NEUTRALITY

**In this introduction to the 1939 volume of his "Public Papers and Addresses" the President tells about the part that Congress' refusal to repeal the arms embargo played in the coming of war when it did**

IN 1939 there started another general war, for which Germany had been preparing since 1933, and for which Italy and Japan had been preparing for years before. It is a war which had been definitely and unmistakably foreseeable since 1936, when the Nazis marched into the Rhineland.

I think that historians will record the fact that, ever since 1933, the United States and its government had persistently and actively sought to prevent this conflict, and to preserve peace in the world. This search for peace was the very keystone of our entire foreign policy. It was dictated not only by a natural humanitarian desire to prevent the bloodshed and horrors of war, but also by a realistic appreciation that any European war would be a definite danger to our own peace and security, and to the welfare of the entire Western Hemisphere and the rest of the world.

In the Western Hemisphere we have been committed to and have consistently and conscientiously practiced the role of the good neighbor. We entered into Pan-American conventions embodying the principles of nonintervention. We abandoned the Platt amendment which gave us the right to intervene in the internal affairs of the Republic of Cuba. We withdrew the American Marines who had been stationed for many years in Haiti. We signed a new treaty with Panama upon a mutually satisfactory basis. We engaged in several inter-American conferences productive of many agreements of mutual advantage. We entered into many trade agreements with other American countries to our mutual commercial profit. At the request of neighboring republics, we helped to settle various boundary disputes between American nations. As a result of these and many other instances of similar nature, each member of the American family of nations has come to look upon the United States as its good neighbor.

It was our aim that this policy should establish the solidarity of the Western Hemisphere on a permanently peaceful basis. That aim is being realized. It was also our hope that this example of these twenty-one republics, of different size and strength and resources, living together in peaceful co-operation, would have its influence upon the rest of the world. Unfortunately, that hope has proved to be in vain.

In other ways, too, the government of the United States actively sought to preserve the peace of the world. The two great obstacles to world peace in modern times have always been: first, the piling up of armaments, particularly weapons of offense; and, second, the erection of tariff barriers to prevent reciprocal trade and commerce between nations.

Both of these obstacles to peace had been growing in effectiveness during the last ten years. Time and again, the United States tried to break them down and clear the way toward peace.

With respect to disarmament, this administration took the lead as early as May 16, 1933. On that date I addressed an appeal to all the nations of the world in an endeavor to obtain some definite result from the disarmament conference which had been meeting rather ineffectively in Geneva since 1932. Armaments in nondemocratic governments had been persistently increasing. International trade had been continually falling off because of newly imposed quotas and other trade barriers. In my message to the nations of the world, I pointed out that only a very small minority of governments and of peoples have any desire for aggression or for enlargement of their own territories at the expense of others. I pointed out that if armaments of offensive warfare were eliminated, the fear of invasion then held by so many other nations would necessarily disappear. I appealed, therefore, for drastic reduction in offensive weapons. I also asked that "all the nations of the world should enter into a solemn and definite pact of nonaggression."

In this same message there was also discussed the necessity of breaking down international trade barriers, which always go hand in hand with increase of armaments as a cause for war.

#### The Unwilling Ten Per Cent

The difficulty with this appeal and with subsequent appeals was this: although ninety per cent of all the people of the earth were content with the territorial limits of their respective countries, and would have been willing to reduce their own armed forces if every other nation in the world would agree to do the same thing, the possibility that the remaining ten per cent would seek, by force of arms, territorial expansion into the lands of their neighbors provided an ever-present danger which could not be disregarded by anyone. That small ten per cent, under various pleas and pretexts, remained unwilling to reduce their own armament or to stop their vast programs of rearmament, even though the other ninety per cent were more than willing.

Obviously, unless every nation were willing to eliminate weapons of aggression and offensive warfare and to bind itself not to invade any foreign territory, it was useless to expect any other nation to disarm.

I am convinced that if the particular nations which are now generally

# Murder in Retrospect

By Agatha Christie

*The Story Thus Far:*

CONVICTED of the murder of her husband—Amyas Crale, an English artist—Caroline Crale dies in prison. She leaves a letter, addressed to her young daughter, Caroline; in the letter (to be read by Caroline when she is twenty-one) she asserts that she is innocent.

Sixteen years after the trial, Caroline (known as Carla Lemarchant) reads the letter. She calls on Hercule Poirot, noted Belgian detective, in London. She implores him to investigate the case and, if possible, *learn the truth.*

Poirot promises to do what he can. Then, in a series of interviews with various persons—including Sir Montague Depleach, who had been in charge of the defense; George Mayhew, son of the solicitor who had "briefed" Sir Montague; and Ex-Superintendent of Police Hale—he learns these facts:

The Crales had lived in Alderbury. On the afternoon of the day preceding the day of the murder, they had had tea with a neighbor: Meredith Blake, an amateur chemist. The other guests had been: Angela Warren, Mrs. Crale's young sister; Philip Blake, Meredith Blake's brother; and Elsa Greer, a beautiful girl who had been a house guest of the Crales. Everyone had inspected Blake's laboratory; and *someone* had stolen a bottle of poison: coniine.

The following day, Crale—madly infatuated with Elsa Greer—had been painting the girl's portrait in the garden, when his wife had given him a glass of beer. Crale had drunk the beer. A few hours later, when he had been alone, he had died in the garden. Analysis had revealed *that the beer had contained coniine!* And an almost empty bottle, which had once held coniine, *had been found in Mrs. Crale's bedroom!* . . .

It is Ex-Superintendent Hale who gives Poirot the most detailed account of the murder. Like everyone else who had figured in the case, Hale feels sure that Mrs. Crale had been guilty. After reviewing the evidence with the Belgian, he pauses. Then: "In a way," he says slowly, "it was a premeditated crime, and in a way it wasn't. I don't believe she really thought it out, you know. She just went on with it blindly."

Poirot stares at him deep in speculation. "I wonder," he murmurs.

Miss Warren turned out to be a very distinguished woman. A traveler to weird places

## III

HALE looked at Poirot curiously. "Have I convinced you that it was a straightforward case?" he said.

"Almost. Not quite. There are one or two peculiar points. . . ."

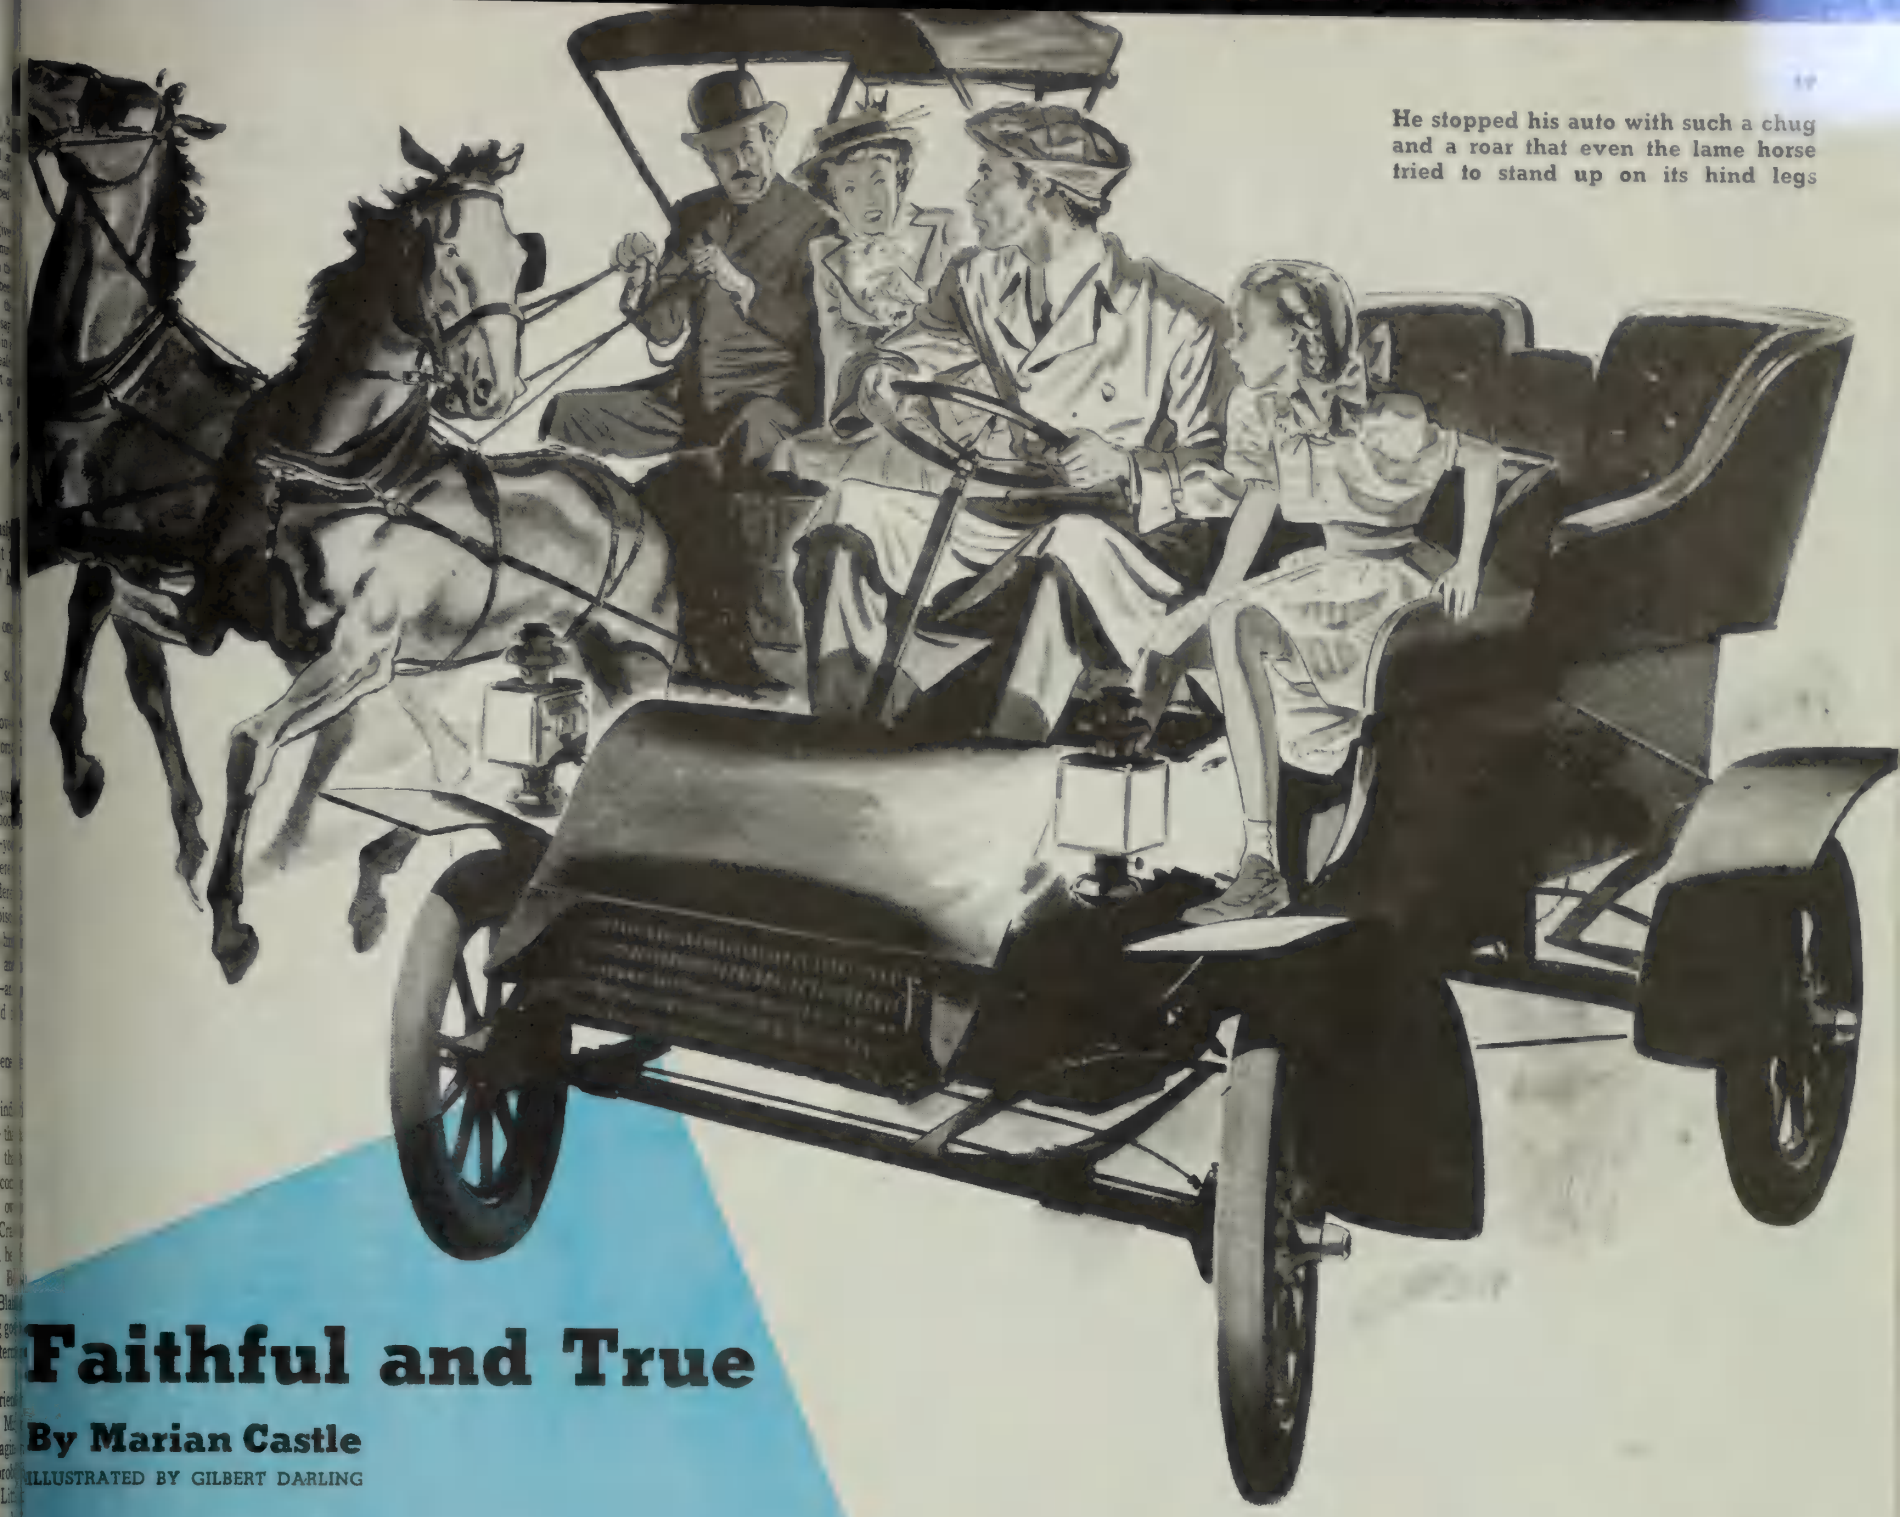
"Can you suggest an alternative solution that will hold water?"

Poirot said, "What were the movements of the other people on that morning?"

"We went into them, I can assure you. We checked up on everybody. Nobody had what you could call an alibi—you can't have with poisoning. Why, there's nothing to prevent a would-be murderer from handing his victim some poison in a capsule the day before, telling him it's a specific cure for indigestion and he must take it just before lunch—and then going away to the other end of England."

"But you don't think that happened in this case?"

"Mr. Crale didn't suffer from indigestion. And in any case I can't see that kind of thing happening. It's true that Mr. Meredith Blake was given to recommending quack nostrums of his own concocting, but I don't see Mr. Crale trying any of them. And if he did he'd probably talk and joke about it. Besides, why *should* Mr. Meredith Blake want to kill Mr. Crale? Everything goes to show that he was on very good terms with him. They all were.



"Mr. Philip Blake was his best friend. Miss Greer was in love with him. Miss Williams disapproved of him, I imagine very strongly—but moral disapprobation doesn't lead to poisoning. Little Miss Warren scrapped with him a lot—she was at a tiresome age—just off to school, I believe—but he was quite fond of her and she of him. She was treated, you know, with particular tenderness and consideration in that house. You may have heard why. She was badly injured when she was a child—injured by Mrs. Crale in a kind of maniacal fit of rage. That rather shows—doesn't it—that she was a pretty uncontrolled sort of person. To go for a child—and maim her for life!"

"It might show," said Poirot, "that Angela Warren had good reason to bear a grudge against Caroline Crale."

"Perhaps, but not against Amyas Crale. And, anyway, Mrs. Crale was devoted to her young sister—gave her a home when her parents died and, as I say, treated her with special affection—spoiled her badly, so they say. The girl was obviously very fond of Mrs. Crale. She was kept away from the trial and sheltered from it all as far as possible. Mrs. Crale was very insistent about that, I believe. But the child was terribly upset and longed to be taken to see her sister in prison. Caroline Crale wouldn't agree. She said that sort of thing might injure a girl's mentality for life. She arranged for her to go to school abroad."

He added, "Miss Warren turned out to be a very distinguished woman. Traveler to weird places. Lectures at the Royal Geographical—all that sort of thing."

He stopped his auto with such a chug and a roar that even the lame horse tried to stand up on its hind legs

# Faithful and True

## By Marian Castle

ILLUSTRATED BY GILBERT DARLING

**Papa said she ought to marry a good, reliable fellow like Fred Tait. Papa just didn't know what it was like to have a sensitive nature that nobody but Mama could understand. Not but what Mama had told him all about it, often enough**

PAPA always used to say that only fast girls went down to meet the trains, and no daughters of his were going to get talked about for lallygagging around the depot with drummers. So it was a special dispensation that sent my older sister Alta hurrying down Main Street to the depot that hot July noon, looking proud and important. To this day I can remember her big Merry Widow sailor and the butterfly hatpin that jiggled up and down when she walked. Her cheeks were pink from excitement and the stuff I called red salve that she kept hidden in the back of the bureau we used together.

I was hurrying to the depot too. But I was keeping to the alley so Alta wouldn't see me and send me home. No matter what I did, she and Mama were sure to say, "Lois honey, you're too young," though I was twelve and felt very grown up since I was wearing Ferris waists; and Papa would call me Miss Lipscomb, who did our sewing and poked her nose into everybody's business. Nevertheless, I *had* to see the noon train come in that day. So when I reached the depot I scrooged down behind a pile of boxes to wait.

The chautauqua was coming to town! For weeks and weeks everybody in Jeffersonville had been selling tickets to everybody else. Red and yellow pennants, like those my sister Alta brought back from Pemberton College, flapped on a string across Main Street, spelling out the words Five Days of Fun and Uplift. The store windows were full of cards with pictures on them of the performers showing their teeth. And that morning the crew boys had put up the big brown tent. Oh, was there ever a thrill like seeing the chautauqua tent go up?

From behind my pile of boxes I saw Fred Tait. I knew he was waiting for a shipment of bicycles for his shop. I liked Fred. He had promised me one of the packing boxes for my lemonade stand. He and Alta had been going together for a long time. The winter before, he came over to see Alta almost every night, while she embroidered lazy daisies on things for her hope chest.

But lately, ever since Alta had begun taking lessons in drama and expression, she had seemed to lose interest in her embroidery and Fred. Sometimes she even looked at him the same way Mama looked at Papa when she talked about women that threw their lives away on men that didn't appreciate their artistic temperaments. Alta had even stopped blushing. Once, she would turn red clear down to her lavaliere when you mentioned Fred's name. But this day it was Fred who got red when he looked at Alta, while Alta was busy watching the tracks where the train would come around the bend. Alta could hardly wait to meet the chautauqua people because they were very cultured and rode in Pullmans and were an Inspiration to the Community.

Papa said they took a lot of money out of town that might have been spent in his hardware store for foot scrapers and coal hods. But he went right on being chairman of the ticket committee every year because Mama said it was his civic duty. But he always made her meet the train that brought in the first day's talent—the performers—and the superintendent—the man who stayed in town the whole five days and introduced the talent on the platform, and then came over to our house for supper near the end of the chautauqua and got Papa to sign up for the next year even though Papa was always very upset and muttery over something called a deficit.

Mama would have been meeting the train this time except for Grandma's broken hip. A letter had come from Grandma that morning asking if Nettie, who was Mama, couldn't please come over and stay till she got used to her crutches and the new girl broken in.

Alta had spoken right up and said that of course it was Mama's duty to go; and that she, Alta, could manage just fine if Mama would tell our hired girl Della to take orders from her. I knew what that meant. Della couldn't put the pie on with the meat and potatoes, and

# Mercator Island

## By John P. Marquand

ILLUSTRATED BY ELMORE BROWN

*The Story Thus Far:*

"PASSED over" for promotion, Bob Bolles, a young American naval flier, resigns his commission, purchases a sixty-foot cruiser (the Thistlewood), and, with a one-man crew—Tom, a colored boy—starts on a long, aimless cruise.

Out of funds in Kingston, Jamaica, he meets a wealthy couple from New York City—Malcolm Kingman and his wife, Helen—who engage him to take them to out-of-the-way Mercator Island. Then, while he is preparing to sail, he hears an interesting story; it is told to him by Captain Burke, an American naval officer; and, summarized, it goes somewhat like this:

Carrying a crated airplane, a French ship had left an American port, a few weeks before. It had left the plane at some Caribbean port; then, sailing on, it had gone down off France. Nazi agents are searching for that airplane; so are various Americans. And the reason? Attached to the plane is an apparatus—a small but extremely potent bit of war mechanism, the only thing of its kind in existence.

The Thistlewood—with a passenger list of three: the Kingmans and Oscar, Mr. Kingman's valet—sails. Before it weighs anchor, Bob has a surprise: Mrs. Kingman tells him that she is not happy; she implores him to run away with her. Once they are on their way, Mrs. Kingman continues her advances; *and she warns Bob that he is in peril! . . .*

As the Thistlewood speeds along, a big cabin cruiser approaches. Seeing it, Mr. Kingman says to Oscar, "Go down and fetch the Bren gun."

But there is no trouble. The cruiser speeds past the Thistlewood; and there is no shooting. Convinced, however, that Mr. Kingman is not just a tired New Yorker out for a long vacation, Bob goes to his quarters. There he looks for a shotgun, a rifle and an automatic pistol that he had hidden under a blanket. The weapons have been removed!

Realizing that Bob is becoming suspicious, Mr. Kingman takes him into his confidence. He tells the young American that, representing a shipping company, he is looking for some freight left on Mercator or one of the near-by islands. . . . As they approach Mercator, Tom (obedient to Bob's orders) leaps overboard and swims to land. . . . They land on a beach, find a fire burning. But no one, no human being, is to be seen. Not far away, there are some huts. Mr. Kingman stands staring at one of the huts. "By Jove, Helen," he exclaims, "look at that, will you! *Look!*"

### V

MRS. KINGMAN looked and Bob Bolles looked too. The front wall of the hut was thatched with the leaves of the coconut palm, but the side wall and the rear wall were constructed from the wood still fresh of a packing case—heavy plywood, roughly sawed and nailed to the framework. Bob could even see the remains of stenciling and the word "France" had been painted on the wood with a black brush.

**"I don't know whether I've ever known a spy," Bob told her. She laughed up at him as though he had said something amusing**

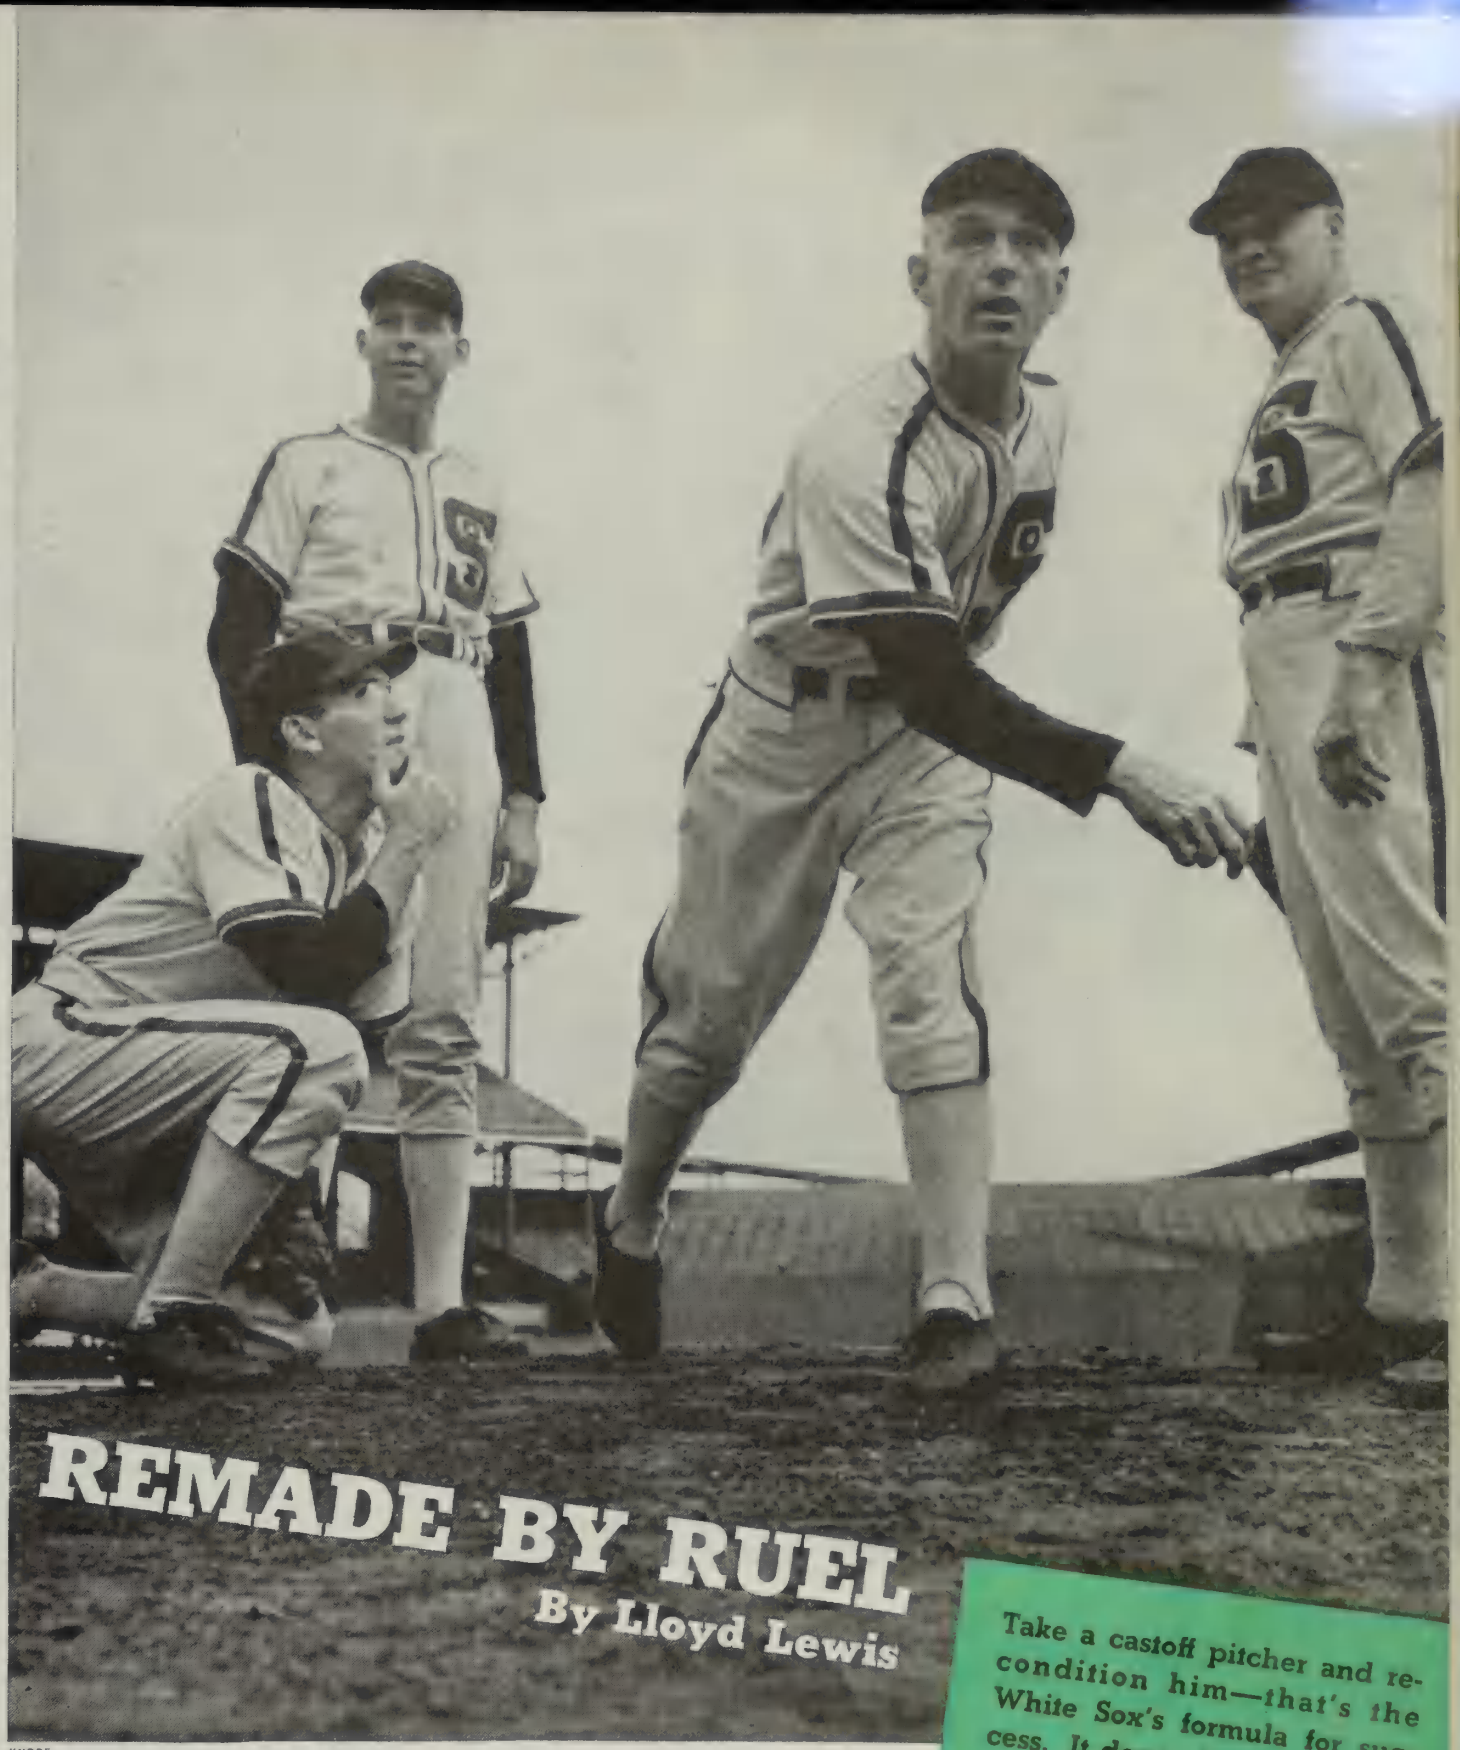
"Oh," said Mrs. Kingman, "why—"

Mr. Kingman gave a low, excit laugh. "I think it's here, my dear," said. "Yes, I think our troubles a nearly over. By jove, look! There's t name Aquitane on it!"

"Yes," said Mrs. Kingman, "it's t packing case."

"You see what it means," Mr. Kin man said. "They broke it out right h on the beach. They carried it fartl ashore. It's here. You've led us to my dear!"

Bob Bolles could see what he mea There was no doubt about the plywc and the writing that now formed side of that native hut, and eve thing that he had thought was com closer together. That plywood had o formed the side of a packing case, s as was used for shipping an airpla He had seen natives use those pack cases in other parts of the world. A one could read its story. The Aquita the French ship which had interes Captain Burke, had anchored off reef of Mercator Island. A plane been taken from her and had b placed on shore. The plane had eit been uncrated on deck and a part the crate had drifted in, or it had b uncrated on the beach.



"Well, this fixes it," Mr. Kingr said. "It's stowed away somewhe and he laughed again, a happy laug complete relief.

"Now," he said, "this is certainly luck. If it's here, naturally we'll fin The main thing is to—to keep our sh on, isn't it?" He turned to Mrs. K man, still smiling: "We've beaten Japs, my dear. It will simply be a pl ant walk and a picnic in the cour Oscar can go back and get us a few visions." He looked up at the p trees and up toward the house on hill. "Oscar, you might go back to boat and get the food and the o rifle, although I can see no trouble.

Except for Mr. Kingman's rifle—for the familiar way he handled it—for that occasional hardly notice hesitation over words and phrases, Kingman might still have been an telligent, good-natured tourist, anx to get the most out of an unusual expensive vacation. He was genial ease while they waited for Osca come back from the Thistlewoo ease and in very high spirits. He c Mrs. Kingman's attention to a fligl parrots and he asked Bob Bolles c and intelligent questions.

"And now," he said presently, "

*(Continued on page 61)*

**Harold "Muddy" Ruel demonstrates a point to a pair of his protégés—left, Bill Dietrich; right, Edgar Smith. In back, Monty Stratton, the pitcher who became a coach after losing a leg in a hunting mishap**

# REMADE BY RUEL

## By Lloyd Lewis

**Take a castoff pitcher and recondition him—that's the White Sox's formula for success. It depends on one man, Harold Ruel, who can take almost anyone who has one arm left and make him win games**

IF YOU ever wonder why the Chicago White Sox get such good pitching from men cast off by other clubs, all you need to know is that back there in the Sox dugout somewhere squats a coach, a teacher, a psychologist named Harold "Muddy" Ruel.

When you have that firmly fixed in your mind, take a look at this picture: the scene is Briggs Stadium, Detroit, and Bill Dietrich, the Sox pitcher, has the out in the ninth with a no-hitter in his grasp. At bat is Hank Greenberg, angry for home-run honors, the batting championship and maybe Babe Ruth's record. Down at the end of the Sox bench sits Jimmy Dykes, White Sox manager, taunting and jeering not only the Tigers but all Detroit, its mayor, its council, its people, even Henry Ford. Back in the shadows of the dugout is Muddy Ruel, just a middle-aged, gray-haired counselor, thin and wispy, and now looking out on the diamond, his face pale with intensity. He has been preparing Dietrich for this game for days.

"When you face Greenberg," he had been telling Dietrich, "don't let him take that toe hold. He digs both feet in and he can hammer you off the mound. That mound is yours. Stay on it! Throw that first one in under his chin. Make him loosen up. Who's he to make light of you?"

Dietrich's eyes would wince behind his spectacles when Ruel would say that and he'd answer:

"I might hit him."

"No, you won't," insisted Ruel. "You've got control. Don't be afraid. Just drive him back; that's all. All good batters expect it when they take that toe hold."

### So Hank Took a Toe Hold

Dietrich was really Ruel's creation. He had been a flop at Philadelphia and not good enough for Washington, although both teams were desperate for pitchers. Ruel had brought him back and made a winner of him. But what Dietrich didn't know was that when Ruel spoke of "loosening up" a hitter, he always had in mind the terrible day when Carl Mays had tried that with Ray Chapman at the plate. The pitch had been wild, Chapman dropped like a tree mauled by an ax. Ruel had been behind the plate that day and Chapman had practically died in his arms. But it was still the way baseball had to be played, and Ruel had stuffed Dietrich with it.

From the dugout Ruel sees Big Hank get his feet, dig in, take a toe hold and brandish his war club. Only two more hitters to go and Dietrich has his no-hitter. Now is the time for the fast one. The time for the loosening-up has gone.

Ruel sees Dietrich face the issue, shrink from it and, pulling away, pitch pathetically over the plate. Greenberg swings and the poor ball, screaming and tumpering, flies into center for a hit—and Dietrich's chance for glory is gone. Ruel's face, already lined with patience, creases into new lines. Tomorrow he must start teaching all over again.

And that's really all you have to know about the man who is rated by his manager, as well as plenty of other baseball men, as the greatest of today's baseball coaches. Dykes has missed few chances to make public Ruel's unique position.

KNOPF

He says over and over, "Muddy runs my pitchers. He handles them, trains them, and I ask him before a game, 'Who is it today?' and he tells me. He has more responsibility than any other coach in baseball history, and he gets more money for it. Yep, more money than Art Fletcher, coach of the Yankees, and Muddy's cheap at the price."

Incidentally, it is this quality of generosity, even more than his dynamic leadership and his humor, that makes Dykes one of the very top executives in the game. Without a bank roll with which to build a farm system or buy stars, Dykes has had to assemble a team by picking up discards from other clubs and by outsmarting rival managers in trades. Daily throughout the season he and his coach study opposing teams for "sleepers"—players who are going badly, yet who, with different advice and inspiration, could become far more effective. Behind Dykes' picturesque generalship on the field, and behind that boisterous personality which makes men like to play for him, is the cool, calculating mind of a surgeon, diagnosing problems and turning constantly to his consultant, Ruel.

It was Dykes' capacity for stirring men that kept Ruel from being a banker today.

In 1934 when Dykes, the White Sox third baseman, was named manager of the club, Ruel was second-string catcher. Muddy had tried to quit baseball in 1933 when the chance had come to cash in on his law degree and his license to practice before the U. S. Supreme Court. A new bank, starting in St. Louis, had offered Ruel the post of assistant trust officer with the prospect of speedy advancement. The bankers figured that if a man could inspire trust in umpires, they had a place for him. The salary was attractive, and Ruel knew that his playing days were nearly done. He had seen about all there was to see in baseball; he had, in his span, caught for the Boston Red Sox twice, the St. Louis Browns twice, and for the Yankees, the Washington Senators and the Detroit Tigers. So he had obtained his release from the league and had started preparing for the bank job. But the wily general manager of the White Sox, Harry Grabiner, had enticed him, in the spring of '34, into putting on a uniform for one more season. The bank had told Ruel they would hold the job for him and so he had gone.

But when the '34 season was over Muddy told the bank he was ready and the Sox that he was through. Dykes faced the task of rebuilding the White Sox and needed new men, not veterans. This time the decision was to be final. But before Ruel could get the trust-officer cushion under him, there came a Sox contract in the mail, with a note reading, "Sign this and get it back. What do you want to do, grow old with whiskers

**A cavalry division is self-sufficient with 11,676 men, 1,430 moto and a complete range of weapons and all services to back up its 6,5**

# OUR NEW ARMY

## FLORIDA

CAMP BLANDING, Starke. Just a year and one week ago Blanding was typical high pineland, with thick underbrush, swamps and knee-deep sand. Today it's a whale of a place, boasting statistics that would take two men and a boy three days to digest. A few months ago the cantonment was the target for repeated threats of Congressional investigation. "Waste" was the battle cry. Snoopers—official and otherwise—visited the site and gave out with blasting broadsides that delighted the penny-pinching fraternity. Then, suddenly, the unbridled row died down. Everybody has been wondering how come. Here is how come:

While the uproar was going on, somebody took time out to do some figuring and came up with the hitherto ignored fact that Blanding's construction cost was only $505 per-man-to-be-accommodated as against a high of $1,200 elsewhere. As construction progressed the cost actually decreased until it hit a low of $380 per man, in February. These facts dusted off, a comparison of the per-man cost of all other camps showed that only six were built more economically than Blanding and that these six were designed for only one division. Since Blanding was built to house 55,000 men without bulging there was nothing for the critics to do but pipe down, sit tight and hope the public wouldn't catch wise. There it is.

MACDILL FIELD, Tampa. Hedy Lamarr, Lana Turner, Ann Sheridan and Ann Sothern have been parachute jumpers here ever since Sgt. R. Hygh, the gent in charge of parachute rigging, hit a snag in testing chutes. Wooden dummies shattered when they hit the firm terra, and blocks of lead didn't work out because they didn't prove whether or not a jumper would get tangled up in the shroud lines being tested. The sergeant finally rigged up four dummies of rope, canvas and lead weights and decorated them to resemble the movie stars, heaven help him.

HE bombing and gunnery range detachment here, composed largely of lectees from Camp Shelby, Miss., sn't a buck private in its roster. Every an has some kind of rating. Are there y other such outfits in the Army?

TORRISON FIELD. Members of the 49th Pursuit Group here have answer for possible forced landings the Everglades west of West Palm ach over which they fire at aerial gets. What they've contrived is a t-bottomed "swamp sled," powered h a World War I type Curtiss OX-5 ter-cooled motor, equipped with a oden propeller mounted high in the r. The apparatus hits forty-five p.h. on water and on slick mud really s to town. Master Sgt. Martin mmings, heading the crew, says it's te a gadget.

## SOUTH CAROLINA

AMP CROFT, Spartanburg. It pains us to report that the motto of the h (heavy weapons) Infantry Training Btn. is The Quick and the Dead, doubtless adopted following an estimate, supposedly made by authorities, that the life of an antitank gunner in actual warfare is something under five minutes. This estimate isn't official; if it is, nobody'll admit it. Anyway, the Quick and Dead boys have been given plenty of room in which to use their newly delivered weapons. A good thing too; the guns toss a one-pound projectile with enough behind it to plow through one-inch steel ■ mile away.

## MASSACHUSETTS

26TH DIV

FORT DEVENS, Ayer. When the Yankee Division moved into ■ hastily erected tent camp on the impact area of the Sheridan Artillery range, officers warned the men to be careful about duds. "Don't," the orders were, "kick, handle or molest any unexploded shells you may find." The boys immediately began scouting around for duds. Men of the 101st Infantry had no luck with duds but found a shell case, which they promptly buried so that only one part of its side was visible. The captain, notified of the "discovery," hurried to the scene, ordered a tripod of sticks and ■ warning flag placed over it, then lectured the assemblage on the precautions to be taken. The gag rolled along in fine shape until the C.O., proud of his outfit's acquisition, posted a twenty-four-hour guard over it and then hit the hay. Forced to mount guard, the 101st sentries carried on until 11:30 P. M., finally decided to dig up the "dud" and tell the captain it had "disappeared." The skipper didn't react the way the lads hoped he would. He roused the whole company into formation and quizzed the personnel until a corporal confessed and was promptly busted.

## MINNESOTA

FORT SNELLING. The Reception Center's Sgt. J. G. Fair is stiffened by the names of Indian selectees. The one that got him the most is John Shot-To-Pieces, a full-blood Sioux from Wounded Knee, S. D. Runners-up are Willie One-Skunk and Albert On-The-Tree, Chippewa tribesmen from upstate.

## CALIFORNIA

7TH DIV

FORT ORD. Soldiers who didn't go up to western Washington for the maneuvers swallowed all the yarns brought back by the fellows who made the trip. "Until," reports one of the swallowees, "a 17th Infantry corporal named Jud Brady goes too far. Uh-huh. Everything sounds on the up and up until this Brady, dead pan, says he saw two genuine tanks up there."

FORT MACARTHUR, San Pedro. The admonition of Pvt. Harry N. Press is that any soldier reporting to the Reception Center here from San Bernardino had better keep his face buttoned when he's around HQ. Co., Corps Area Service Command 1959. A dozen company members, Pvt. Press complains, were stopped, while on leave in Los Angeles, by ■ bashful kid who handed

# Murder in Retrospect

Continued from page 18

"And no one remembers the trial?"

"Well, it's a different name for one thing. They hadn't even the same maiden name. They had the same mother but different fathers. Mrs. Crale's name was Spalding."

"This Miss Williams, was she the child's governess or Angela Warren's?"

"Angela's. There was a nurse for the child, but she used to do a few little lessons with Miss Williams every day, I believe."

"Where was the child at the time?"

"She'd gone with the nurse to pay a visit to her godmother. A Lady Tressillian. A widow lady who'd lost her own two little girls and who was devoted to this kid."

Poirot nodded. "I see."

Hale continued: "As to the movements of the other people on the day of the murder, I can give them to you. Miss Greer sat on the terrace near the library window after breakfast. There, as I say, she overheard the quarrel between Crale and his wife. After that she accompanied Crale down to the battery and sat for him until lunchtime, with a couple of breaks to ease her muscles.

"Philip Blake was in the house after breakfast and overheard part of the quarrel. After Crale and Miss Greer went off, he read the paper until his brother telephoned him. Thereupon, he went down to the shore to meet his brother. They walked together up the path again past the battery garden. Miss Greer had just gone up to the house to fetch a pull-over, as she felt chilly, and Mrs. Crale was with her husband discussing arrangements for Angela's departure to school."

"AH, AN amicable interview," said Poirot.

"Well, no, not amicable. Crale was fairly shouting at her, I understand. Annoyed at being bothered with domestic details. I suppose she wanted to get things straightened up if there *was* going to be a break."

Poirot nodded.

Hale went on:

"The two brothers exchanged a few words with Amyas Crale. Then Miss Greer reappeared and took up her position, and Crale picked up his brush again, obviously wanting to get rid of them. They took the hint and went up to the house. It was when they were at the battery, by the way, that Amyas Crale complained that all the beer down there was hot, and his wife promised to send him down some iced beer."

"Aha!"

"Exactly—aha! Sweet as sugar she was about it. They went up to the house and sat on the terrace outside. Mrs. Crale and Angela Warren brought them beer out there.

"Later, Angela Warren went down to bathe and Philip Blake went with her.

"Meredith Blake went down to a clearing with a seat just above the battery garden. He could just see Miss Greer as she posed on the battlements, and could hear her voice and Crale's as they talked. He sat there and thought over the coniine business. He was still very worried about it and didn't know quite what to do. Elsa Greer saw him and waved her hand to him. When the bell went for lunch he came down to the battery, and Elsa Greer and he went back to the house together. He noticed then that Crale was looking, as he put it, very queer, but he didn't really think anything of it at the time. Crale was the kind of man who is never ill—and so one didn't imagine he would be. On the other hand, he *did* have moods of fury and despondency according as to whether his painting was not going as he liked it. On those occasions one left him alone and said as little as possible to him. That's what these two did on this occasion.

"As to the others, the servants were busy with housework and cooking lunch. Miss Williams was in the schoolroom part of the morning, correcting some exercise books. Afterward, she took some household mending to the terrace. Angela Warren spent most of the morning wandering about the garden, climbing trees and eating things—you know what a girl of fifteen is—plums, sour apples, hard pears, etc. After that she came back to the house and, as I say, went down with Philip Blake to the beach and had a swim before lunch."

Superintendent Hale paused. "Now, then," he said belligerently, "do you find anything phony about that?"

"Nothing at all," Poirot said.

"Well, then!"

The two words expressed volumes.

"But all the same," said Hercule Poirot, "I am going to satisfy myself. I—"

"What are you going to do?"

"I am going to visit these five people—and from each one I am going to get his or her own story."

Superintendent Hale sighed with a deep melancholy. He said, "Man, you're nuts! None of their stories are going to agree. Don't you grasp that elementary fact? No two people remember a thing in the same order anyway. And after all this time! Why, you'll hear five accounts of five separate murders!"

"That," said Poirot, "is what I am counting upon. It will be very instructive."

PHILIP BLAKE was recognizably like the description given of him by Depleach—a prosperous, shrewd, jovial-looking man—slightly running to fat.

Hercule Poirot had timed his appointment for half past six on a Saturday afternoon. Philip Blake had just finished his eighteen holes, and he had been on his game—winning a fiver from his opponent. He was in the mood to be friendly and expansive.

Hercule Poirot explained himself and his errand. On this occasion at least, he showed no undue passion for unsullied truth. It was a question, Blake gathered, of a series of books dealing with famous crimes.

PHILIP BLAKE frowned. He said, "Why rake up these things?"

Hercule Poirot shrugged his shoulders. He was at his most foreign today. He was out to be despised but patronized. "It is the public," he murmured. "They eat it up—yes, eat it up."

"Ghouls," said Philip Blake. But he said it good-humoredly—not with the fastidiousness and the distaste that a more sensitive man might have displayed.

**"That's another thing I like about this electric blanket—Kennesaw can have a nice, hot snack at midnight without gettin' up!"**

REAMER KELLER

Hercule Poirot said with a shrug of the shoulders, "It is human nature. You and I, Mr. Blake, who know the world, have no illusions about our fellow human beings. Not bad people, most of them, but certainly not to be idealized."

Blake said heartily, "I've parted with my illusions long ago."

"Instead, you tell a very good story, so I have been told."

"Ah!" Blake's eyes twinkled. "Heard this one?"

Poirot's laugh came at the right place. It was not an edifying story, but it was funny.

Philip Blake lay back in his chair, his muscles relaxed, his eyes creased with good humor. Hercule Poirot thought suddenly that he looked rather like a contented pig. A pig. *This little pig went to market . . .*

What was he like, this man, this Philip Blake? A man, it would seem, without cares. Prosperous, contented. No remorseful thoughts, no uneasy twinges of conscience from the past, haunting memories here. No, a we fed pig who had gone to market—a fetched the full market price. . . .

But once, perhaps, there had be more to Philip Blake. He must ha been, when young, a handsome m Eyes always a shade too small, a fr tion too near together, perhaps—b otherwise a well-made, well-set- young man. How old was he now? A guess between fifty and sixty. Near forty, then, at the time of Crale's dea Less stultified, then, less sunk in gratifications of the minute. Ask more of life, perhaps, and receiv less. . . .

Poirot murmured as a mere ca phrase, "You comprehend my positio

"No, really, you know, I'm hanged do." The stockbroker sat upright aga his glance was once more shrewd. "W *you?* You're not a writer."

"Not precisely—no. Actually I ar detective."

The modesty of this remark had pr ably not been equaled before in Poir conversation.

"Of course you are. We all know t The famous Hercule Poirot!"

But his tone held a subtly moc note. Intrinsically, Philip Blake too much of an Englishman to take pretensions of a foreigner seriously. his cronies he would have said, "Qu little mountebank. Oh, well, I ex his stuff goes down with the womer right."

And although that derisive, patro ing attitude was exactly the one w Hercule Poirot had aimed at induc nevertheless he found himself anno by it.

This man, this successful man o fairs, was unimpressed by Hercule rot! It was a scandal.

"I AM gratified," said Poirot unt "that I am so well known to you. success, let me tell you, has founded on the psychology—the nal *why* of human behavior. That Blake, is what interests the worl crime today. It used to be rom Famous crimes were retold from angle only—the love story conn with them. Nowadays it is very d ent. People read with interest tha Crippen murdered his wife becaus was a big, bouncing woman and he little and insignificant and therefor made him feel inferior. They re some famous woman criminal tha killed because she'd been snubbe her father when she was three year It is, as I say, the *why* of crime th terests nowadays."

Philip Blake said, with a slight "The why of most crimes is ob enough, I should say. Usually mo

"Ah, but my dear sir," Poirot "the why must never be obvious. is the whole point!"

"And that's where *you* come in

"And that, as you say, is wh come in! It is proposed to rewri stories of certain bygone crimes– the psychological angle. Psychol crime, it is my specialty. I hav cepted the commission."

Philip Blake grinned. "Pretty tive, I suppose?"

"I hope so; I certainly hope so

"Congratulations. Now, pe you'll tell me where *I* come in?"

"Most certainly. The Crale monsieur."

Philip Blake did not look st But he looked thoughtful. He "Yes, of course, the Crale case .

Hercule Poirot said anxiously,

# "Correct again, Noah Webster!"

THE DICTIONARY says that a "profession" is a "calling in which one professes to have acquired some special knowledge used by way either of instructing, guiding, or advising others . . ."

Under that definition, the proper sale and service of life insurance is a profession, for the trained life insurance agent is a man who has acquired special knowledge which he uses in guiding and advising others.

Because his calling is highly specialized, the agent has become more and more a career underwriter who works constantly to increase his knowledge and thus improve his ability to serve policyholders properly.

The Metropolitan agent, for example, is trained how to judge a family's life insurance needs and how to help each family buy the type of insurance best fitted to its needs. He learns to help distribute the protection properly among the members of the family.

The agent strives to keep the insurance protection fitted to the family's situation. He also learns to arrange modes of settlement so as to achieve most effectively the hopes and ambitions of the policyholder. On some policies, he collects premiums and sees that dividends are credited.

The agent often acts as trusted friend and advisor in problems connected with the family's policies. When a policyholder dies, the agent frequently helps the bereaved family by preparing the necessary papers and by getting the claim check promptly to the beneficiary.

The Metropolitan agent is interested in the health of policyholders and of the community in which they live. Because of this interest, he plays his part in Metropolitan's welfare service. During 1940, Metropolitan agents helped to distribute more than 52,600,000 booklets on health and safety problems. In addition, agents are instrumental in bringing Metropolitan's Nursing Service to policyholders eligible for this service. Last year, more than 3,100,000 nursing calls were made in over 7,500 American communities.

In short, the life insurance agent is more than a man who sells life insurance. More often than not, he is a career man, devoting his life to providing policyholders with the kind and amount of insurance protection they should have at the lowest cost consistent with safety.

not displeasing to you, Mr. Blake?"

"Oh, as to that." Philip Blake shrugged his shoulders. "It's no use resenting a thing that you've no power to stop. The trial of Caroline Crale is public property. Anyone can go ahead and write it up. It's no use *my* objecting. In a way—I don't mind telling you—I do dislike it a good deal. Amyas Crale was one of my best friends. I'm sorry the whole unsavory business has to be raked up again. But these things happen."

"You are a philosopher, Mr. Blake."

"No, no. I just know enough not to start kicking against the pricks. I daresay you'll do it less offensively than many others."

"I hope, at least, to write with delicacy and good taste," said Poirot.

Philip Blake gave a loud guffaw but without any real amusement. "Makes me chuckle to hear you say that."

"I assure you, Mr. Blake, I am really interested. It is not just a matter of money with me. I genuinely want to recreate the past—to feel and see the events that took place, to see behind the obvious and to visualize the thoughts and feelings of the actors in the drama."

"I don't know that there was much subtlety about it," Philip Blake said. "It was a pretty obvious business. Crude female jealousy, that was all there was to it."

"It would interest me enormously, Mr. Blake, if I could have your own reactions to the affair."

Philip Blake said with sudden heat, his face deepening in color, "Reactions! Reactions! Don't speak so pedantically. I didn't just stand there and react! You don't seem to understand that my friend—*my friend,* I tell you—had been killed—poisoned! And that if I'd acted quicker I could have saved him."

"How do you make that out, Mr. Blake?"

"Like this. I take it that you've already read up the facts of the case?" Poirot nodded. "Very well. Now on that morning my brother Meredith called me up. He was in a pretty good stew. One of his hell brews was missing, and it was a fairly deadly hell brew. What did I do? I told him to come along and we'd talk it over. Decide what was best to be done. 'Decide what was best.' It beats me now how I could have been such a hesitating fool! I ought to have realized that there was no time to lose. I ought to have gone to Amyas straight away and warned him. I ought to have said, 'Caroline's pinched one of Meredith's patent poisons, and you and Elsa had better look out for yourselves.' "

BLAKE got up. He strode up and down in his excitement.

"Do you suppose I haven't gone over it in my mind again and again? I *knew.* I had the chance to save him and I dallied about—waiting for Meredith! Why hadn't I the sense to realize that Caroline wasn't going to have any qualms or hesitancies? She'd taken that stuff to use—and she'd use it at the very first opportunity. She wouldn't wait till Meredith discovered his loss. I knew—of course I knew—that Amyas was in deadly danger and I did nothing!"

"I think you reproach yourself unduly, monsieur. You had not much time—"

The other interrupted him:

"Time? I had plenty of time. Any amount of courses were open to me. I could have gone to Amyas, as I say; but there was the chance, of course, that he wouldn't believe me. Amyas wasn't the sort of man who'd believe easily in his own danger. He'd have scoffed at the notion. And he never thoroughly understood the sort of devil Caroline was. But I could have gone to her. I could have said, 'I know what you're up to. I know what you're planning to do. if Amyas or Elsa dies of coniine poi ing, you'll be hanged by your ne That would have stopped her. C might have rung up the police. there were things that could have b done—and, instead, I let myself be fluenced by Meredith's slow, caut methods! 'We must be sure—tal over—make quite certain who c have taken it. . . .' Old fool—n made a quick decision in his life good thing for him he was the el son and has an estate to live on. If ever tried to *make* money he'd lost every penny he had."

"You had no doubt yourself who taken the poison?" Poirot asked.

"Of course not. I knew at on must be Caroline. You see, I Caroline very well."

"THAT is very interesting," Poirot "I want to know, Mr. Blake, kind of a woman Caroline Crale

Philip Blake said sharply, "She w the injured that innocent people th she was at the time of the trial!"

"What was she, then?"

Blake sat down again. He said ously, "Would you really like to kn

"I would like to know very muc deed."

"Caroline was a rotter. She v rotter through and through. Mind she had charm. She had that ki sweetness of manner that deceives ple utterly. She had a frail, he look about her that appealed to pe chivalry. Sometimes, when I've r bit of history, I think Mary Que Scots must have been a bit like Always sweet and unfortunate and netic—and actually a cold, calcu woman, a scheming woman who pl the murder of Darnley and got with it. Caroline was like that—a calculating planner. And she h wicked temper.

"I don't know whether they'v you—it isn't a vital point of the but it shows her up—what she her baby sister? She was jealou know. Her mother had married and all the notice and affection w little Angela. Caroline couldn't that. She tried to kill the baby— its head in. Luckily the blow fatal. But it was a pretty ghastl to do."

"Yes, indeed."

"Well, that was the real Caroli had to be first. That was the thi simply could not stand—not beir And there was a cold, egotistical c her that was capable of being sti murderous lengths."

He paused.

"You'll say that I'm bitter—t unduly prejudiced against Caroli *had* charm—I've felt it. But I k always knew—the real woman And that woman, M. Poirot, w She was cruel and malignant grabber!"

"And yet it has been told r Mrs. Crale put up with many har in her married life."

"Yes, and didn't she let eve know about it? Always the Poor old Amyas. His married one long hell—or rather it wou been if it hadn't been for his exc quality. His art, you see—he had that. It was an escape. W was painting he didn't care; h off Caroline and her nagging the ceaseless rows and quarrel were endless, you know. Not passed without a thundering r one thing or another.

"*She* enjoyed it. Having row lated her, I believe. It was a She could say all the hard, bitte ing things she wanted to say. Sh tively purr after one of those set off looking as sleek and well-

cat. But it took it out of *him*. *He* wanted peace, rest, a quiet life. Of course, a man like that ought never to marry; he isn't cut out for domesticity. A man like Crale should have affairs but no binding ties. They're bound to chafe him."

"He confided in you?"

"Well—he knew that I was a pretty devoted pal. He let me see things. He didn't complain. He wasn't that kind of man. Sometimes he'd say, 'Damn all women.' Or he'd say, 'Never get married, old boy. Wait for hell till after this life.' "

"You knew about his attachment to Miss Greer?"

"Oh, yes—at least I saw it coming on. He told me he'd met a marvelous girl. She was different, he said, from anything or anyone he'd ever met before. Not that I paid much attention to that. Amyas was always meeting one woman or other who was 'different.' Usually, a month later, he'd stare at you if you mentioned them, and wonder who you were talking about! But this Elsa Greer really was different. I realized that when I came down to Alderbury to stay. She'd got him, you know—hooked him good and proper. The poor mutt fairly ate out of her hand."

"You did not like Elsa Greer either?"

"No, I didn't like her. She was definitely a predatory creature. She, too, wanted to own Crale body and soul. But I think, all the same, that she'd have been better for him than Caroline. She might conceivably have let him alone once she was sure of him. Or she might have got tired of him and moved on to someone else. The best thing for Amyas would have been to be quite free of female entanglements."

"But that, it would seem, was not to his taste."

Philip Blake said with a sigh, "The fool was always getting himself involved with some woman or other. And yet, in a way, women really meant very little to him. The only two women who really made any impression on him at all in his life were Caroline and Elsa."

"Was he fond of the child?" Poirot asked.

"Angela? Oh, we all liked Angela. She was such a sport. She was always game for anything. What a life she led that wretched governess of hers! Yes, Amyas liked Angela all right; but sometimes she went too far, and then he used to get really mad with her, and then Caroline would step in—Caro was always on Angela's side and that would finish Amyas altogether. He hated it when Caro sided with Angela against him. There was a bit of jealousy all round, you know.

"Amyas was jealous of the way Caro always put Angela first and would do anything for her. And Angela was jealous of Amyas and rebelled against his overbearing ways."

He paused.

"IN THE interests of truth, Mr. Blake," Poirot said, "I am going to ask you to do something."

"What is it?"

"I am going to beg that you will write me out an exact account of what happened on those days at Alderbury. That is to say, I am going to ask you to write me out a full account of the murder and its attendant circumstances."

"But, my dear fellow, after all this time? I should be hopelessly inaccurate."

"Not necessarily."

"Surely."

"No, Mr. Blake; for one thing, with the passage of time, the mind retains a hold on essentials and rejects superficial matters."

"Oh, you mean a mere broad outline?"

"Not at all. I mean a detailed, conscientious account of each event as it occurred and every conversation you can remember."

"And supposing I remember them wrong?"

"You can give the wording at least to the best of your recollection. There may be gaps, but that cannot be helped."

Blake looked at him curiously. "But what's the idea? The police files will give you the whole thing far more accurately."

"No, Mr. Blake. We are speaking now from the psychological point of view. I do not want bare *facts*. *I want your own selection of facts*. Time and your memory are responsible for that selection. There may have been things done, words spoken, that I should seek for in vain in the police files. Things and words that you never mentioned because, maybe, you judged them irrelevant, or because you preferred not to repeat them."

Blake said sharply, "Is this account of mine for publication?"

"Certainly not. It is for my eye only. To assist me to draw my own deductions."

"And you won't quote from it without my consent?"

"Certainly not."

"H'm," said Philip Blake. "I'm a very busy man, M. Poirot."

"I appreciate that there will be time and trouble involved. I should be happy to agree to a—reasonable fee."

There was a moment's pause. Then Philip Blake said suddenly, "No, if I do it I'll do it for nothing."

"And you will do it?"

Philip Blake said warningly, "Remember, I can't vouch for the accuracy of my memory."

"That is perfectly understood."

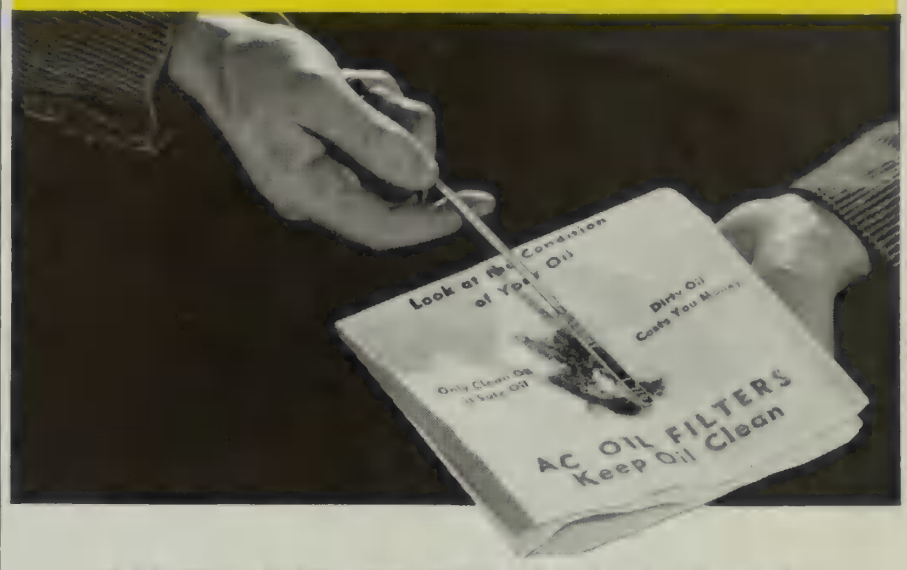
"Then I think," said Philip Blake, "that I should *like* to do it. I feel I owe it—in a way—to Amyas Crale."

HERCULE POIROT was not a man to neglect details.

His advance toward Meredith Blake was carefully thought out. Meredith Blake was, he already felt sure, a very different proposition from Philip Blake. Rush tactics would not succeed here. The assault must be leisurely.

Hercule Poirot knew that there was only one way to penetrate the stronghold. He must approach Meredith Blake with the proper credentials. Those credentials must be social, not professional. Fortunately, in the course of his career, Hercule Poirot had made friends in many counties. Devonshire was no exception. He sat down to review what resources he had in Devonshire. As a result he discovered two people who were acquaintances or friends of Mr. Meredith Blake. He descended upon him, therefore, armed with two letters—one from Lady Mary Lytton-Gore, a gentle widow lady of restricted means, the most retiring of creatures; and the other from a retired admiral, whose family had been settled in the county for four generations.

Meredith Blake received Poirot in a state of some perplexity.



As he had often felt lately, things were not what they used to be. Dash it all, private detectives used to be private detectives—fellows you got to guard wedding presents at country receptions, fellows you went to, rather shamefacedly, when there was some dirty business afoot and you had to get the hang of it.

But here was Lady Mary Lytton-Gore writing: "Hercule Poirot is a very old and valued friend of mine. Please do all you can to help him, won't you?" And Mary Lytton-Gore wasn't—no, decidedly she wasn't—the sort of woman you associate with private detectives and all that they stand for. And Ad-

ENOUGH OIL IS NOT ENOUGH—

See IF IT'S DIRTY, TOO!

DIRTY OIL COSTS YOU MONEY

Sludge and dirt in engine oil clog piston rings. Then, oil and gas are wasted, carbon forms faster, and repairs become necessary more quickly.

It's *easy* to check your oil for dirt. Here's all there is to it:

1. Drive into any of the 30,000 AC Oil Filter Service Stations,—there's one near you.
2. Tell the attendant to check your oil with an AC Oil Test Pad.
3. Look at the spot on the Oil Test Pad. If it's dirty, your oil needs changing, and you should either renew your oil filter or have a filter installed.

Always see if it's dirty, too, when you have your oil checked for quantity. You'll be money ahead.

AC Oil Filters save you money every mile you drive because they keep oil free from sludge and dirt. Your own service man will tell you that this is good insurance against expense. So, it is just as necessary to drive with *clean* oil as it is to have *enough*.

So, change your oil as your service man recommends. Between changes, keep it clean with an AC Oil Filter. Why not have an AC installed—or your present filter renewed—today?

# Most important announcemen

FOR 1942—a year when quality and long life are of paramount importance in motor cars—Pontiac brings you new models that not only give you the things you liked so well in last year's great Pontiac, *but 15 improvements too!*

That's why we say that this is the most important new car announcement Pontiac has ever made!

Yes, a mighty pleasant surprise awaits you when you see and drive these new "Torpedoes." With their greater beauty, their improved riding comfort, increased over-all length and weight—without sacrifice of Pontiac's famous gas and oil economy—they are indeed Pontiac's greatest quality achievement.

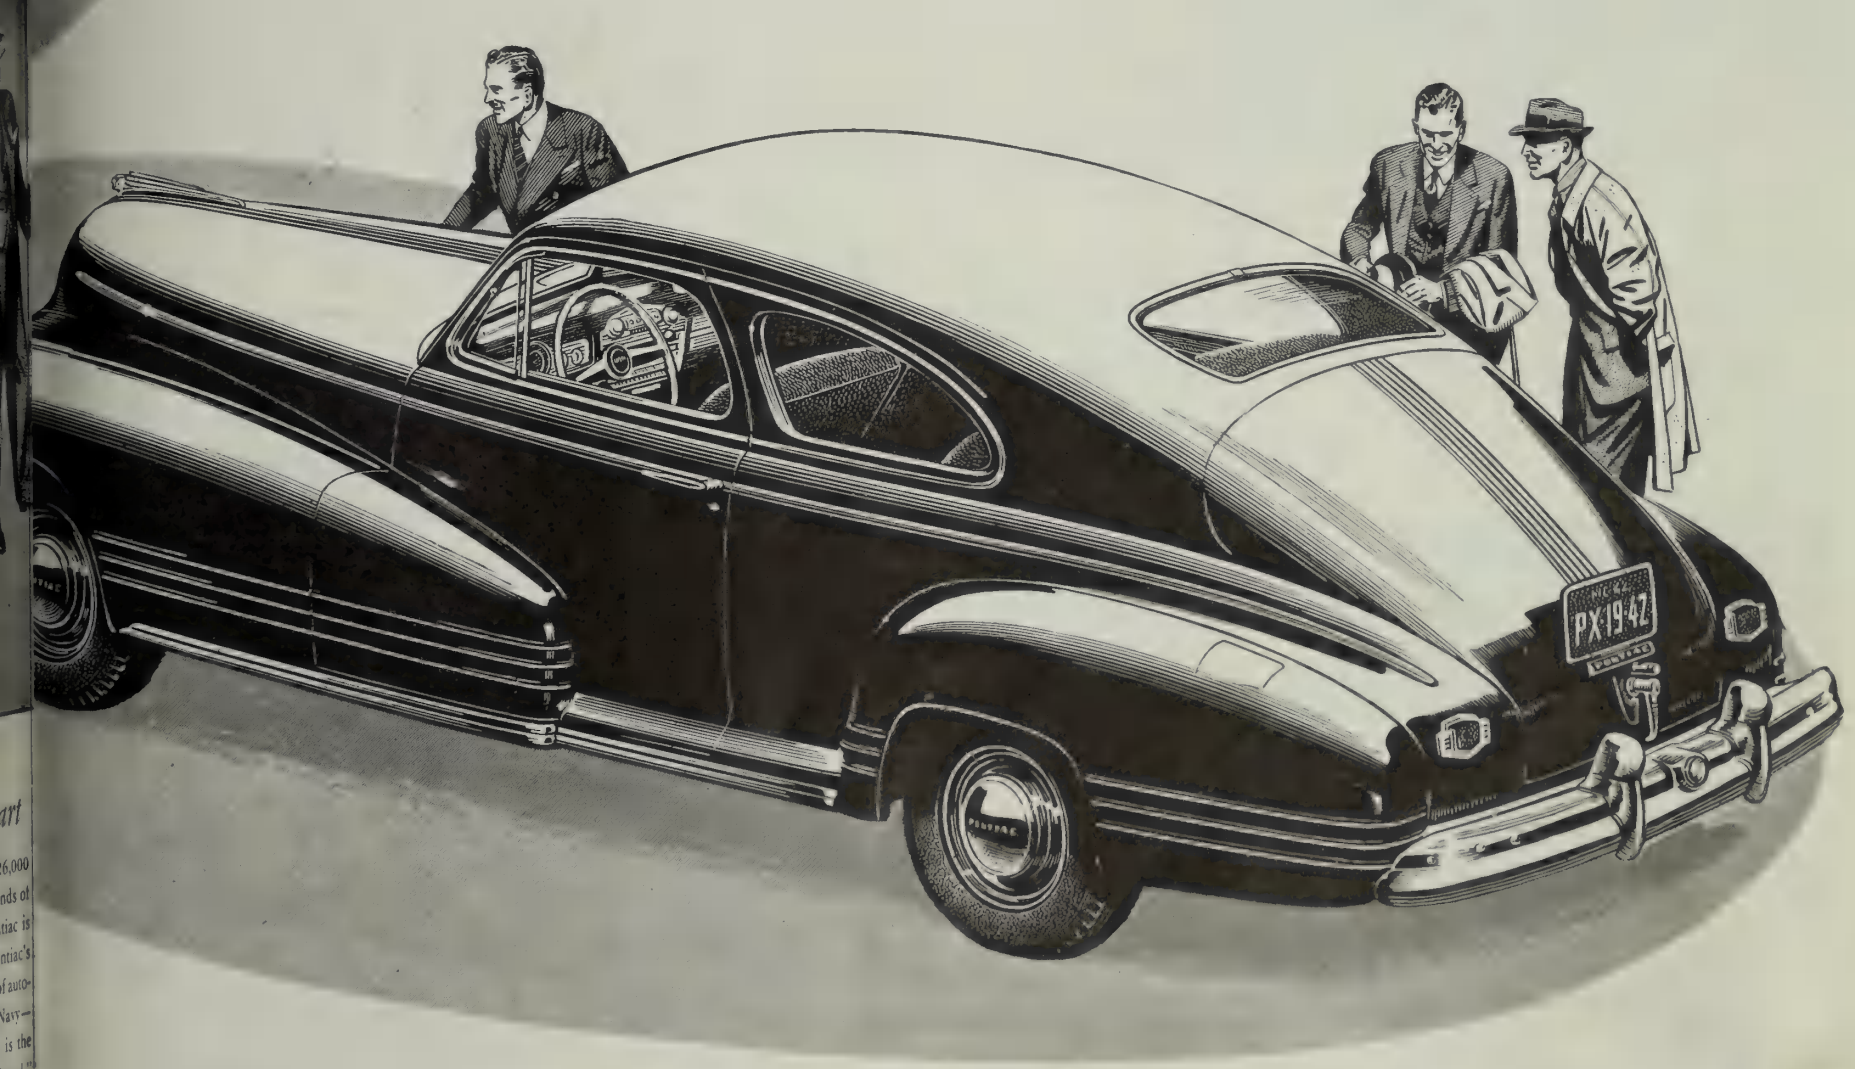
And—most important of all—all the vital parts of Pontiac's great engines—*bearings, pistons, connecting rods, and many others*—are exactly the same as those which have built Pontiac's nation-wide reputation for long life. No wonder Pontiac is the choice of those who are buying for not only today, but the future as well!

See these new "Torpedoes" today. And don't forget—Pontiac is still just a few dollars more than lowest-priced cars!

★ *Proud to be Doing Our Part*

Two complete plants . . . over 426,000 square feet of floor space . . . thousands of skilled craftsmen—that's what Pontiac is devoting to National Defense. Pontiac's job is the production of a new type of automatic cannon for the United States Navy—a weapon which naval experts say is the "most effective of its size ever produced." Pontiac is doing its part and doing it well

ONLY $25 MORE FOR AN EIGHT IN ANY MODEL



# PONTIAC has ever made!

*In addition to 15 important improvements,*

GENERAL MOTORS' MASTERPIECE

**THE FIRST RADIO** time signal ever broadcast was read from the face of a Longines Chronometer by an announcer on N.B.C.'s Station WJZ in February, 1927. That Longines Chronometer was an important instrument in broadcast station operation. To switch programs from one studio to another or to join several stations in a hook-up—in 15 seconds or so—the watches in each place had to agree to the second with all other watches in the system. This was a major time problem. The problem was solved through the use of Longines Navigational Chronometers, hundreds of which went into broadcast station service. Then, the broadcast stations bought hundreds of Longines 1/5 second timing watches to measure radio programs bit by bit, so that they would fit to-the-second into the time allotted for them. Truly, in radio broadcasting also—Longines is the most honored watch.

Longines
THE WORLD'S MOST HONORED WATCH

For seventy-five years Longines has concentrated on the single problem of making fine watches, better and better; watches for radio broadcasting, watches for the navigation of airplanes and battleships; and millions of watches for the service of discriminating men and women throughout the world.

Longines Watches have won 10 world's fair grand prizes, 28 gold medals, and more honors for accuracy than any other timepiece.

Longines jewelers now show the 75th Anniversary Longines Watches representing the peak of Longines perfection, priced $40. upward; also Wittnauer Watches from $24.75, products of—Longines Wittnauer Watch Co., Inc., New York, N. Y. and Montreal, Canada.

miral Cronshaw wrote: "Very good chap—absolutely sound. Grateful if you will do what you can for him. Most entertaining fellow—can tell you lots of good stories."

And now here was the man himself. Really a most impossible person—the wrong clothes, button boots, an incredible mustache! Not his, Meredith Blake's, kind of fellow at all. Didn't look as though he'd ever hunted or shot—or even played a decent game. A foreigner.

Slightly amused, Hercule Poirot read accurately these thoughts passing through the other's head. He had felt his own interest rising considerably as the train brought him into the west country. He would see now, with his own eyes, the actual place where these long-past events happened.

It was here, at Handcross Manor, that two young brothers had lived and gone over to Alderbury and joked and played tennis and fraternized with a young Amyas Crale and a girl called Caroline. It was from here that Meredith had started out to Alderbury on that fatal morning. That had been sixteen years ago. Hercule Poirot looked with interest at the man who was confronting him with somewhat uneasy politeness.

Very much what he had expected. Meredith Blake resembled superficially every other English country gentleman of straitened means and outdoor tastes.

A shabby old coat of tweed, a weather-beaten, pleasant, middle-aged face with somewhat faded blue eyes, rather a weak mouth, half hidden by a rather straggly mustache. Poirot found Meredith Blake a great contrast to his brother. He had a hesitating manner; his mental processes were obviously leisurely. It was as though his tempo had slowed down with the years just as his brother Philip's had been accelerated.

As Poirot had already guessed, he was a man whom you could not hurry. The leisurely life of the English countryside was in his bones.

He looked, the detective thought, a good deal older than his brother, though, from what Mr. Johnathan had said, it would seem that only a couple of years separated them.

HERCULE POIROT prided himself on knowing how to handle an "old-school tie." It was no moment for trying to seem English. No, one must be a foreigner—frankly a foreigner—and be magnanimously forgiven for the fact. "Of course these foreigners don't quite know the ropes. *Will* shake hands at breakfast. Still, a decent fellow really. . . ."

Poirot set about creating this impression of himself. The two men talked, cautiously, of Lady Mary Lytton-Gore and of Admiral Cronshaw. Other names were mentioned. Fortunately, Poirot knew someone's cousin and had met somebody else's sister-in-law. He could see a kind of warmth dawning in the squire's eye. The fellow seemed to know the right people.

Gracefully, insidiously, Poirot slid into the purpose of his visit. He was quick to counteract the inevitable recoil. This book was, alas, going to be written. Miss Crale—Miss Lemarchant, as she was now called—was anxious for him to exercise a judicious editorship. The facts, unfortunately, were public property. But much could be done in their presentation to avoid wounding susceptibilities. Poirot murmured that before now he had been able to use discreet influence to avoid certain sensational passages in a book of memoirs.

Meredith Blake flushed angrily. His hand shook a little as he filled a pipe. He said, a slight stammer in his voice, "It's—it's g-ghoulish the way they dig these things up. S-sixteen years ago. Why can't they let it be?"

Poirot shrugged his shoulders. "I agree with you," he said. "But what will you? There is a demand for such things. And anyone is at liberty to reconstruct a proved crime and to comment on it."

"Seems disgraceful to me."

Poirot murmured, "Alas, we do not live in a delicate age. . . . You would be surprised, Mr. Blake, if you knew the unpleasant publications I have succeeded in—shall we say—softening? I am anxious to do all I can to save Miss Crale's feeling in the matter."

BLAKE murmured, "Little Carla! That child! A grown-up woman. One can hardly believe it."

"I know. Time flies swiftly, does it not?"

Meredith Blake sighed. He said, "Too quickly."

Poirot said, "As you will have seen in the letter I handed you from Miss Crale, she is very anxious to know everything possible about the sad events of the past."

"Why?" Meredith Blake said with a touch of irritation. "Why rake up everything again? How much better to let it all be forgotten."

"You say that, Mr. Blake, because you know all the past two well. Miss Crale, remember, knows nothing. That is to say, she knows only the story as she has learned it from the official accounts."

Meredith Blake winced. He said, "Yes, I forgot. Poor child! What a detestable position for her. The shock of learning the truth. And then—those soulless, callous reports of the trial."

"The truth," said Hercule Poirot, "can never be done justice to in a mere legal recital. It is the things that are left out that are the things that matter. The emotions, the feelings, the characters of the actors in the drama, the extenuating circumstances—"

He paused and the other man spoke eagerly, like an actor who had received his cue:

"Extenuating circumstances! That's just it. If ever there were extenuating circumstances, there were in this case. Amyas Crale was an old friend—his family and mine had been friends for generations, but one has to admit that his conduct was, frankly, outrageous. He was an artist, of course, and presumably that explains it. But there it is—he allowed a most extraordinary set of affairs to arise. The position was one that no ordinary decent man could have contemplated for a moment."

Hercule Poirot said, "I am interested that you should say that. It had puzzled me—that situation. Not so does a well-bred man, a man of the world, go about his affairs."

Blake's thin, hesitating face had lit up with animation. He said:

"Yes, but the whole point is that Amyas never was an ordinary man! He was a painter, you see, and with him painting came first—really, sometimes, in the most extraordinary way! I don't understand these so-called artistic people myself—never have. I understood Crale a little because, of course, I'd known him all my life. His people were the same sort as my people. And in many ways Crale ran true to type—it was only where art came in that he didn't conform to the usual standards. He wasn't, you see, an amateur in any way. He was first class—really first class.

"Some people say he was a genius. They may be right. But, as a result, he was always what I should describe as unbalanced. When he was painting a picture, nothing else mattered, nothing could be allowed to get in the way. He was like a man in a dream—completely obsessed by what he was doing. Not till the canvas was finished did he come out of this absorption and start to pick up the threads of ordinary life again."

He looked questioningly at Poirot and the latter nodded.

"You understand, I see. Well, that explains, I think, why this particular situation arose. He was in love with this girl. He wanted to marry her. He was prepared to leave his wife and child for her. But he'd started painting her down here, and he wanted to finish that picture. Nothing else mattered to him. He didn't *see* anything else. And the fact that the situation was a perfectly impossible one for the two women concerned didn't seem to have occurred to him."

"Did either of them understand his point of view?"

"Oh, yes—in a way. Elsa did, I suppose. She was terrifically enthusiastic about his painting. But it was a difficult position for her—naturally. And as for Caroline—"

He stopped. Poirot said, "For Caroline—*yes?*"

*(To be continued next week)*

JOHN MILLIGAN

# "most popular cup in my trophy room!"

"Sure—many of my cups are admired, but the most prized cup of all is the one that contains this *Custom Ground* A&P Coffee!"

You won't realize till you try A&P Coffee what a tremendous difference it makes to have your coffee *Custom Ground* . . . to exactly the right fineness for your own coffee-maker. Only in this manner do you get all the magnificent flavor to which you're entitled.

Grinding the fresh, flavorful coffee beans to your order is only the last step in A&P Coffee Service. The quality of this famous coffee is guarded from *source to sale*. And so is the quality of scores of fine foods that are sold exclusively by A&P. Jane Parker Rolls, Cakes and "Dated" Donuts are other good examples . . . Marvel "Enriched" Bread still another . . . or White House Evaporated Milk . . . and the 33 Ann Page Quality Foods.

Yet instead of being expensive, these fine A&P brands offer you definite savings. That's because they're brought direct to you, with many costly in-between steps eliminated. You share the savings in lower prices for high quality foods.

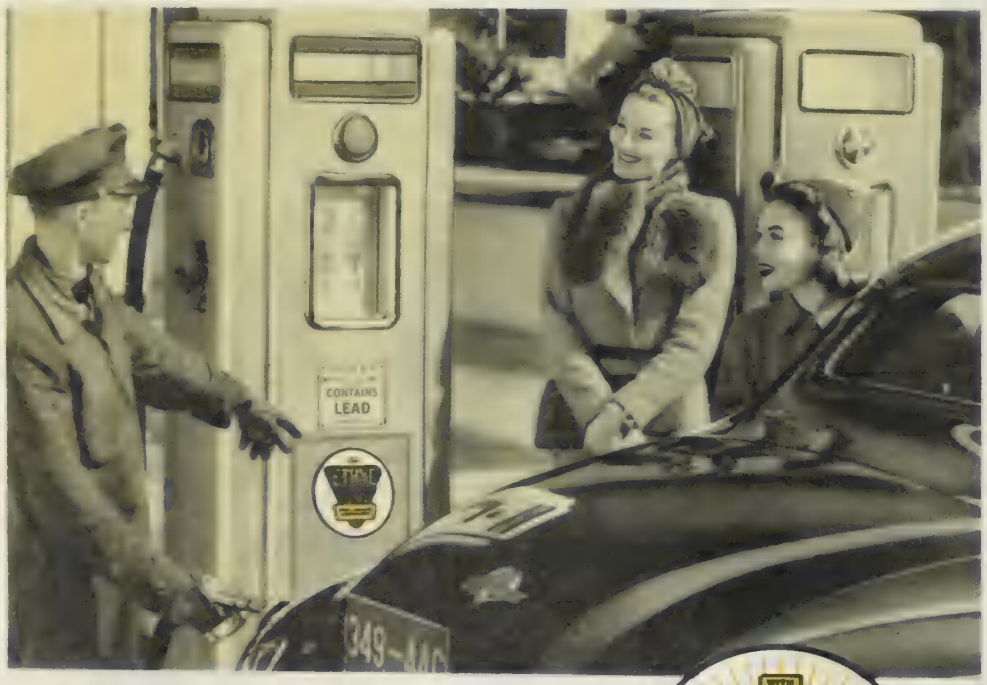
Convince yourself of this today—and a perfect product to start with is *Custom Ground* A&P Coffee—the coffee of magnificent flavor!

*Many A&P brands bring you savings up to 25% compared to prices usually asked for other nationally known products of comparable quality. Try Marvel Bread and Jane Parker Cakes, Rolls and Donuts—the 33 Ann Page Foods—A&P Coffee and Teas—White House Evaporated Milk—34 A&P Canned Fruits and Vegetables—dexo 100% Pure Hydrogenated Vegetable Shortening—and many others.

**SOLD EXCLUSIVELY AT A&P**

**CUSTOM GROUND A&P COFFEE**
**BOUGHT BY EVERY 7th FAMILY IN AMERICA**

**CONSUMER FACTS:** Each type of coffee pot brings boiling water into contact with ground coffee for a different length of time. Hence coffee should be *Custom Ground* a different degree of fineness for each type of pot. That's why "any grind for every pot" is wrong. That's why you get more flavor, better flavor with *Custom Ground* A&P Coffee.



*THE COFFEE OF MAGNIFICENT FLAVOR*

EMBLEMS OF EXCELLENCE

**HEISMAN MEMORIAL TROPHY.** Each year the Downtown Athletic Club of New York presents the Heisman Trophy to the man voted by leading sports writers and sports broadcasters as the outstanding college football player of the season. Winner's names are also engraved on a duplicate trophy (right) which the Downtown A.C. keeps as a perpetual record. The player who merits the trophy this year will be a headliner for performance on the gridiron—he'll have to be better than good!

**ETHYL EMBLEM.** There is an award for excellence in gasolines too. It is the Ethyl emblem. Gasoline in a pump which bears this emblem has to be better than good. It must be "tops" in anti-knock (octane number) and all-round quality. "Ethyl" means a quicker-starting engine in cold weather; extra power throughout the year. When you stop to buy gasoline, the Ethyl emblem tells you which pump contains the best.

# Faithful and True

Continued from page 19

she'd have to say "the Cornwall residence" when she answered the phone.

So Mama was packing to leave for Grandma's, and I thought what a shame it was that she would have to miss the chautauqua and seeing me in the children's pageant on the last day, put on by the Story Lady.

And that's how Alta got to meet the train.

All of a sudden the train came in so loud that I had to cover up my ears. There was that exciting, gassy smell; and a lot of people got off. Alta went right up to them and held out her hand and showed the dimple she'd been practicing in front of our hat-rack mirror.

I RECOGNIZED the chautauqua folks, though they didn't look as young as their pictures. The Hawaiians had on regular suits instead of those paper boas I had been expecting. The lecturer looked tired and mussed up. There was another man who was evidently the superintendent. And the Story Lady was young and smily.

I hurried right over to her and asked if I couldn't be the Magic Princess this year. I explained that my hair made very nice crimps when it was unbraided, and my freckles hardly showed at night. But she said she had a much more important part she thought I could fill. It was that of the Wicked Crone, which took a face with lots of character.

Then she went on to the hotel, and I looked around for Alta. She was talking to the superintendent now. I moved up close, for Alta was so taken up with him I could have tramped on her best lace stockings and it wouldn't have made any difference.

He was smiling down at her, holding his straw hat under one arm, and saying his name was Gordon Strickland and that he wasn't used to such a beautiful reception committee.

Alta blushed the way she used to when she talked to Fred. She said she was only a substitute for her mother, and that she did hope the accommodations at the hotel would prove satisfactory.

I saw that Fred was piling his boxes of bicycles on his handcart now. Alta seemed to have forgotten all about him. So I went with Fred as far as his bicycle shop.

I remember that he walked the whole way without saying anything, and that he leaned against the handles of the cart as though the load was too much for him.

I said, "Don't you feel well, Fred?"

He didn't answer at first. But his mouth pressed together the way it does when you're having a splinter dug out. He said, "Well, Lois, I'll feel a darn' sight better when the chautauqua gets out of town!" Which didn't make sense to me, because hadn't Fred sold more tickets than anybody else?

Before I left him I reminded him to bring up the box for my lemonade stand when he came to take Alta to the chautauqua that night. He said he would and that he'd fix a canopy over it to keep off the sun. Fred always acted as though my problems were important.

The whole family took Mama to the afternoon train for Grandma's. She kept telling Papa he must take an interest in the Finer Things of Life and go to the chautauqua meetings every night and be polite to the talent.

Papa grunted and kissed her and said, "By Tophet, Nettie, stop your stewing—everything will be hunky-dory!"

Which turned out to be anything but the case. If Mama had ever dreamed of all that was going to happen while she was away, she'd never have stepped foot out of Jeffersonville, broken hip or no broken hip.

That night, when the evening program started, I sat with the other children on the hard board benches down in front. Mr. Strickland came out on the platform wearing lovely white pants and when he told how his heart had been gladdened by the welcome the chautauqua had received, he looked right at Alta.

Then he introduced the Hawaiians and they had on their colored paper boas this time. They sang to their guitars that sounded like telephone wires humming in the wind, and the loveliest chills went up and down my spine. After that the lecturer lectured. But he mostly told funny stories, and it wasn't tiresome at all like a sermon. When it was over, everybody said wasn't it inspirational?

I found Papa in the ticket booth afterward helping count the money. Alta and Fred came up, bringing Mr. Strickland whom Alta had invited over to our house to have lemonade. We all walked home together under the dark summer trees.

I wondered if there'd be enough lemons, on account of my lemonade stand. But there was a big pitcher of lemonade on the ice, so Alta must have thought of it ahead of time. We sat around on the leaf-patterned porch, and nobody remembered to send me to bed.

Mr. Strickland talked and talked—you could tell he enjoyed it. Papa cleared his throat. Fred broke matches into little pieces. And Alta moved over nearer to Mr. Strickland on the top step and asked him a lot of questions about the talent, like what would they do after next week when the chautauqua season closed for the summer, and wasn't it wonderful to feel you were a Great Cultural Influence?

PRETTY soon she went into the house. When she came back she switched on the porch light to show Mr. Strickland those photos of her when she was Cicely, Mr. Brambleton's daughter, in the high-school senior-class play.

Mr. Strickland said, "Nice make-up, Miss Cornwall."

But Fred said with a grin in his voice, "Will you ever forget that last act, Alta, when you went to rest your arm on the mantel, and the whole thing broke down and fell smack dab on your foot?"

Fred and Papa and I laughed and laughed. But Alta didn't laugh. She just grabbed up the photos and rushed into the house with them.

When she came back, Fred said he guessed he'd have to hit the hay. He stood up to go, but Alta didn't get up to say goodby. She acted as if she didn't know he'd been there, and didn't know now that he was leaving. Papa called loudly for him to come again, the latch-string was always out.

Pretty soon Mr. Strickland said he'd better be going too. Alta got right up this time and said, "Oh, but first you must see our view from Water Tank Hill."

They started off together. Papa said to me, "Scoot to bed, young'un, and don't tell your mother how late you stayed up. By Tophet, my feet are killing me!" But he gave a big sigh and started down the street after them.

I remember waking up later, startled by the sound of quarreling. Papa was saying, "—won't play fast and loose with

a good man like Fred Tait—not if I know it! Traipsing off with the first fly-by-nighter that comes along—I don't care if he is the chautauqua superintendent!"

He was standing in the doorway of our bedroom, and Alta was taking down her hair. She threw her barrette and side combs down on the bureau so hard they bounced. She was crying and talking back to him, all at once. And you could tell she was crying because she was so mad, and she was mad because she couldn't stop crying.

Papa said that he positively put his foot down on her seeing this Strickland alone again. Then he went on and on about what a good steady fellow Fred Tait was, and how any girl with a lick of sense ought to be glad to get him.

ALTA was brushing her hair that she was proud of because it was long enough to sit on. I can see her yet, in her flowered-challis combing jacket with the baby-ribbon edging. Her soft, light hair flew every which way, and her eyes were a deep blue, like the pictures of Billie Burke. She said, "I wish Mama was here. She understands me!" Brush—brush. "She knows what it means to have a sensitive nature that—" brush—brush—"nobody understands!"

Papa didn't answer. He just looked at her, kind of tired and old, the way he always looked at Mama when she said that she never had had any encouragement to keep up her music and china painting.

So Papa went off to bed, and Alta stayed up and tried her hair in the new psyche knot. But her fingers were all thumbs that night, because her hair kept falling down and she kept putting it up. And all the while she was talking to herself about how only A Man of the World could really understand. And, young as I was, I knew she *didn't* mean Fred. And how she was never cut out for a humdrum round—and then I knew she *did* mean Fred.

The rest of the chautauqua was one long underneath battle between Papa and Alta. But Papa was licked from the start because, while he could see that Mr. Strickland didn't drink any more lemonade on our front porch, he couldn't watch Alta every minute without shutting up his store. Yet even though Alta knew she had him licked, she didn't look exactly happy. She'd jump if you spoke to her suddenly, she got dark circles under her eyes, and she'd toss and mumble in her sleep as though she were having nightmares.

Several times I saw her coming out of the dressing room at the back of the tent. I knew that in the mornings when I was practicing with the other children for the pageant, she was off taking long walks. And she had something locked up in the tin box where she kept her diary. I couldn't find out what, because she took to carrying the key around her neck instead of hiding it in her jewel box.

The chautauqua grew better every day. I couldn't decide which I liked most—the chalk-talk artist who turned the picture of the old tramp into a church with a steeple, or the man who imitated emptying a jug of applejack and then told how strong drink just *ate out* the lining of your stomach.

But Alta, who was artistic like Mama, was crazy about the lady reader with the pink willow plume and the white kid gloves that came up to her shoulders. And she could scarcely wait for the final night when there was to be a real play called The Winning of Millicent Lane.

Papa grew watchfuller and watchfuller. That last night he didn't let Alta out of his sight. And when the midnight train whistled as it pulled out, carrying the last day's talent and Mr. Strickland, too, I remember that Papa put his head in our bedroom door for a last make-sure look. Alta pretended not to see him.

But after he had gone to bed, her eyes shone like the sets in Mama's brooch, and she whispered something about such sweet thirst filling her veins. I couldn't tell whether she was talking to herself or practicing for her drama and expression class.

In the morning when we three sat down to breakfast, Papa was his old self again. And every day he relaxed more and more. But what he didn't know was about the locked tin box, or those long walks Alta took by herself to read something she carried in the front of her corset that rattled like letters, or how she hung around the post office waiting for the mail. This was the last week of the chautauqua season, and I knew Mr. Strickland couldn't be very far away.

And then—I'll never forget—it was the Thursday morning after the chautauqua was over that I woke up and put out my hand to touch the warm lump that was Alta—and she wasn't there! I can still recall my scared feeling. I ran in and told Papa. It took him a while to understand. He had to come in and look at the one pillow that wasn't even dented; he had to see for himself that her matting suitcase and her white serge suit and her pink celluloid comb-and-brush set were gone.

"Maybe she and Fred have eloped," he said, as though he wished it were true.

I was shivery with excitement. Nobody in our family had ever eloped before. And yet I doubted that it was Fred she'd eloped with. But I thought of a way to find out. I hunted in the back of her bureau drawer and, sure enough, the jar of red salve was gone, so I knew it wasn't Fred. "Because Fred disapproves of face paint," I told Papa. "She must have eloped with Mr. Strickland who is A Man of the World and understands her."

Papa's hands shook, but he managed to get dressed and go down to the depot. When he got back he said that Mr. Whipple the agent had told him Alta had taken the midnight train, but she hadn't bought a ticket. She knew she could pay her fare on the train.

THEN I found the note propped up on our mission library table. There was a little ring box beside it. I remember how different the ring looked in the box, instead of on her finger—sort of final and impressive. I hurried to read the note before Papa could tell me I wasn't old enough. It said:

"Dear Papa: You'll never understand why I'm doing this—though Mama will. But I must live a larger life and mingle among cultured people and express my true self. At last I have found someone who understands! Please give my ring back to Fred and ask him to forgive and forget. Lois can have my fish net. Your loving daughter, Alta."

I could have her fish net! Ever since she had brought it home from college and tacked it up on our bedroom wall and filled it full of dance programs and souvenirs and snapshots of her and Fred, I had been crazy to have a fish net of my own. But now, all of a sudden, I couldn't swallow past a lump—I wanted Alta back more than I wanted any old fish net. And Papa, who had been standing there reading the note, sat down heavily as though his knees wouldn't hold him up any longer. And I knew that Papa wanted Alta back, too, more than he wanted anything else in the world.

"Maybe—maybe you better telephone Mama and tell her to come right home," I said.

He looked at me, surprised and also

## Score Two for All-Bran's Better Way!

**"CALL THE FIRE DEPARTMENT!"** is, figuratively speaking, the way my family and I used to treat constipation. We'd rush to the medicine cabinet for *emergency relief*. It never occurred to us to look for the *cause*, or to try ALL-BRAN's better way.

**STRAIGHT TO THE MARK!** Then I discovered that KELLOGG'S ALL-BRAN goes straight to the *cause* of common constipation, the kind that's due to lack of proper "bulk" in the diet—and wholesomely, naturally prevents it.

**EXCUSE MY BACK,** but I'd rather not illustrate the way those laxative doses used to taste. And to think I never knew what crisp, delicious, toasted ALL-BRAN could do.

**HAPPY DAYS!** And, if your trouble is this common kind of constipation, may you discover the same enjoyable way to "Join the Regulars"! Crunchy, toasted KELLOGG'S ALL-BRAN is not only very effective, it's a lot more pleasant than the "hurry-up" remedies we used to take. Eat it with cream and sugar every morning, drink plenty of water, and get yourself in tune again.

# "Million Dollar Beauty"

## It's the 1942 Nash . . . and it Goes 25 to 30 Miles on a Gallon of Gasoline *at Highway Speed*

TODAY, a "Million Dollar Beauty" arrives in the lowest-price field — the 1942 Nash. A car so big, bold and dazzling, so massive in front, so clean and swift of line, that not even this picture can tell you what it's like.

But what this beauty *does* is even more thrilling. Right in line with America's need for lower motoring costs, it offers even greater savings than the record-breaking economy of last year's Nash.

• It goes *25 to 30 miles on a gallon* at highway speed . . . more than 500 miles on a tankful of gasoline.

So economical, you could drive all the way from New York to California with only *five* stops for gas! And save money on oil, tires and repair costs, every single mile you go!

And there's still more news! Steering is even *easier* than last year's Nash that owners claimed was the easiest car in the world to drive. In merely a short trip, the ease of Nash's new Two-way Roller Steering actually saves you tons of effort.

• Fleet as was last year's Nash, this new "Million Dollar Beauty" has even better pickup.

Never have you felt a car ride like it! Around sharp curves, it fairly grips the road. On a rutted country lane the bumps are smoothed away. Nash is the first low-price car to have soft coil springs on *all four wheels*.

From the very way it's built — body and frame *one* welded unit — it's a *new kind* of car. No other is like it, or offers so much.

You can have a "Sedan Sleeper" Bed for summertime trips . . . a Weather Eye Conditioned Air System to forever banish chills and dust and stuffy air.

• In design, in engineering, in features, this is the finest car ever to carry the Nash name. The car it will *pay you* to drive. The car that offers everything you want — and still costs you the *very least to own and run!*

See it today — the most beautiful car ever built for the *lowest-price* field. Then take a "million dollar" ride in this "Million Dollar Beauty". Better place your order *quick*—there may not be enough to go around!

**New Engine Development in the 1942 Nash Ambassador "6" and "8"**

Companion cars to the Nash "600", the 1942 Nash Ambassador "6" and "8" are greater than ever. See and test the amazing new engine principle that increases economy, pickup and speed as much as 11%.

*Life begins with*

VITAMINS PLUS

...is a cheerful, direct way of saying that science has now proved that buoyant health can follow the right selection of a well-rounded, nutritious diet plus additional vitamins in a supplementary form, such as VITAMINS *Plus*.

Don't take a chance on vitamin deficiencies which may lead to listless, under-par days that would rob your life of zest and sparkle. Edginess and nervous irritability caused by lack of vitamins are hard on you — *and* a definite handicap to your success.

Why not begin — today — to take VITAMINS *Plus!* The two tiny, pleasant-to-take capsules, which constitute the VITAMINS *Plus* routine, contain high potencies of essential vitamins A, B, C, D and G—especially high in all-important vitamin $B_1$ . . . with liver concentrate and iron for added effectiveness. Don't chance a lack of the vitamins you need. It's so easy to be sure. Ask for VITAMINS *Plus*, at your drug or dept. store. Discover the difference...18 days' supply, $1.50; 36 days' supply, $2.75; and 72 days' supply, $5.00.

thankful. "You're right, young'un, I will. But first I'll telegraph that chautauqua company and find out what town Strickland is in today."

The minute he got Mama on the telephone, he looked different. He told her—being careful of our Central, who was worse than Miss Lipscomb—that he needed her. Could she come home on the noon train? No, nobody was sick. Just a little—problem

Mama knew it wasn't any *little* problem, because I could hear fast squeaks coming over the phone. Papa nodded and said, "I'll meet your train, Nettie."

It was almost time for her train when the telegram came from the chautauqua company saying that Gordon Strickland would be in Omar till after the night program, when he was through for the season. So if the matter was urgent, it would be best to communicate with his wife in Peoria.

Wife! All at once, everything stopped being exciting and started being awful. I remembered Effie Treadwell who had run away the winter before with a drummer, and he had turned out to be A Married Man. And when she got back, nobody but the minister's wife would speak to her. . . .

Papa wouldn't let me go to the train. So I waited until I saw him and Mama coming along the street.

I ran up and hugged Mama around the waist. But she unloosed my arms and hurried into the house. Papa had his watch case open. He said, "We couldn't reach Omar before morning by train, Nettie. But with a good two-horse livery rig we might do the forty miles across country before the evening performance is over. You be ready when I get back."

I had on my leghorn hat when Papa drove up. But Mama said no, I must stay home.

I watched them drive off, the horses kicking up the dust in soft little puffs. I felt lonely and sad and forgotten.

AFTER supper, when Della had gone to her room, I sat out on the front porch because it was empty and scary inside the house. My, but I was glad when I heard a chugging noise down the street and I knew it was Fred Tait's auto. Of course I realized he was on his way to see Alta; but I hoped that when he found she wasn't home, he'd take me for a ride.

There were only two other autos in Jeffersonville then—the banker's and the doctor's; though the doctor kept a horse, too, for bad roads and baby calls. Fred had practically made his auto himself out of bicycle parts and things. He said he expected to sell and repair autos as a business some day. Papa said he'd better stick to his last, that autos were only a passing fad, and couldn't Fred see that the only men in town rich enough to own autos already had them?

I went out to meet Fred. "Alta home?" he asked.

"No, she's—she's away," I told him.

"You mean she's gone out of town?"

"Well, kind of—"

"What do you mean by kind of?" He grabbed my shoulder until it hurt.

The way he looked at me scared me so that I forgot about illness in the family. The first thing I knew, I was telling him about Alta's note and how Papa and Mama had rented a livery rig at a dollar and a half an hour and gone to Omar, and did Fred think Alta would be like Effie Treadwell that nobody spoke to?

Fred was already cranking up the auto, and I climbed into the front seat. We went lickety-split out of town and Fred said if nothing happened, we'd do the forty miles to Omar in three hours and get there before the chautauqua program was over.

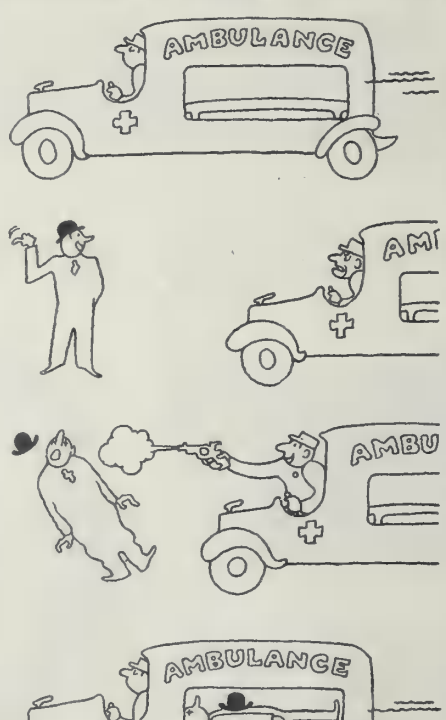
But twice something did happen, and Fred had to lie on his back under the auto and pound. Then we went all the faster, and the wind blew so hard my braids unraveled and I could hardly see. Fred slowed down when the lights showed a buggy just ahead.

"Looks like the livery-stable rig," he said.

"It looks like Mama's hat with the three bluebirds on it and the veil tied over them," I said.

"Their off horse is lame. They'll have to come with us."

He stopped his auto with such a chug and a roar that even the lame horse tried to stand up on its hind legs. I'd expected Mama to be surprised, or even mad, when she saw me. But she just passed me over and said, "Oh, Fred, I'm so glad you came! Maybe now—we can make it!"



PAPA left the team at the next farm. When he got in with Mama he leaned forward and said solemnly, "So help me, Fred, I'll never again yell 'get a horse' when I pass an auto stuck in the mud!"

I climbed over into the back seat with Mama and Papa. Papa had his arm around Mama and she was crying against him. There was the sound of wind rushing and the feeling of the auto jouncing along. I went to sleep with my head on Mama's lap. But once in a while words came through my sleepiness . . . Mama's words: "Oh, Ira, this is a judgment on me! For making out you didn't understand me—that I threw myself away—" . . . And Papa's words: "But I never was good enough for you, Nettie. You deserved the best. I'm only a clumsy old—" . . . And Mama's words: "Hush—don't talk that way. I've always been happy, Ira. I just didn't have sense enough to make Alta realize it—and that being married to a good man is the sweetest thing on earth!"

Next thing I knew, we were stopping beside the chautauqua grounds in Omar, where the men were rolling up the tent.

Fred asked where the chautauqua folks were, and a man said, "They're taking the eleven-fifteen. You'll have to hurry. There goes her whistle now."

Everybody sat up straight and stiff. I was goose flesh all over as Fred raced the auto around the corner. We could hear the train. The depot was down at the far end of the street. Fred drove so fast over the bumps that I nearly bounced out. But we were too late. The train was already pulling out.

By the time we stopped beside the depot, the light on the back of the train was growing littler and littler until finally, it went out like a firefly.

I remember how we sat there in the awful stillness. My teeth were chattering, and I could tell that Mama was shaking inside too. The light from the depot shone out the open door onto the platform. I could hear the telegraph ticking like a cricket on a lonesome night.

Then I heard something else. I heard crying. I looked at the rest! They were listening too. I said, "It's Alta!"

We all jumped out and ran up the bank toward the crying. Alta was sitting on the side of her suitcase, all hunched over. The depot light shone on her, and her hat was over one ear and her face was streaked from crying.

Mama and Papa reached her first. Fred hung back in the shadow, and I stayed with him. I felt around for his hand, and he held mine tight in his.

"My baby!" said Mama, which seemed strange to me then, as I was her baby. She put her arms around Alta. The new hat fell off and rolled a little way toward us, and Alta cried on Mama's best lace jabot, and Papa patted her shoulder.

"Oh, I was terrible—simply terrible—when I got up against real professionals—"

"Real professionals—" said Papa in a weak voice.

"Yes, I forgot my lines—and muffed my cues—and they couldn't hear me beyond the front rows. Mr. Strickland took me out of the play, and it went on without me. If only I hadn't been such a conceited fool! But I begged for the part when he happened to mention that there'd be an opening in the cast here in Omar—"

I remembered how Alta had looked up at Mr. Strickland that night on the porch and asked him question after question.

Papa was remembering too. "Play the part—Omar—? Why in tunket didn't you tell us?"

"Because—I was afraid you'd put your foot down and say it was all foolishness. I wanted to show you! I studied my part so hard—all that week I studied it. Then tonight after I made such a mess of it, Mr. Strickland tried to comfort me by saying that, after all, I had a very nice parlor knack that would be an asset in the young married set. He said I ought to be thankful I'd gotten it out of my system so early—and that my—my husband ought to be thankful too—"

Papa drew a long sigh and said "Amen," and I guess he was thinking that Alta's husband would never have to hear about women who threw their lives away—

BUT Alta didn't sound thankful. She said, "And all the time I was sitting here waiting for the train, I kept thinking about Fred and—and wishing I never stopped working on my hope chest. And now I've lost Fred—and everything—" She choked up and couldn't go on.

"I'm here, Alta," said Fred in a voice that sounded as if he were coming down with a cold. He went over to her. And even if he did sign his letters "As ever yours, Fred," there was something in his face. . . .

Alta lifted her head and looked up at him as if she couldn't believe it. Then Fred put his arms around her, not caring who saw them. . . . And Alta was crying and Fred was crying and Mama was crying and even Papa was crying. And I said to myself, "By tophet, what a lot of crying!" Then I remember feeling something splash down on my hand, and if I wasn't crying too!

# FROM ROAD TO RAILS...a natural step!

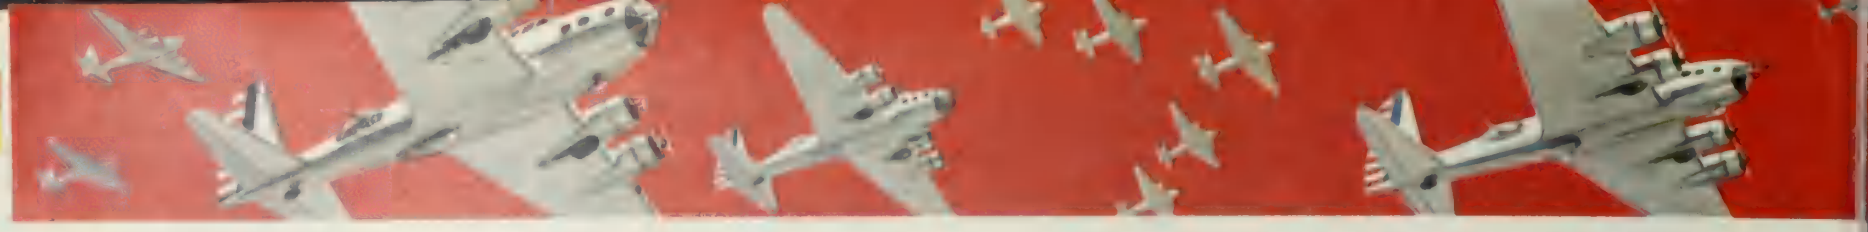
## Why General Motors became the biggest builder of locomotives in the world

HOW much does this streamliner of the rails owe to the modern motor vehicle?

Each of them provides, of course, faster and more economical transportation—which is in itself a logical reason why General Motors should build them both.

But railroad management quickly saw still other reasons of greater import.

They considered the soundness of General Motors research—responsible for the development of this modern locomotive—a soundness proved by its impressive achievements in every other field of transportation on land and sea and in the air.



They considered, too, our practical experience in manufacturing motors, generators, frames, bodies and hundreds of other parts—all of which are now made and assembled into complete locomotives in our La Grange plant, the only self-contained locomotive factory of its kind.

And railroad management has lost no time in putting the advantages of this new equipment to work.

The fact is that today General Motors locomotives for switching and passenger service are taking to the rails at a faster rate than any other kind—and the newest of them all, the GM freight locomotive, is already proving a record-breaker, on the railroads' biggest job.

# STUDEBAKERS FOR 1942

*The President 8 • The Commander • The Champion*

ORIGINATOR of the thrilling new Skyway Styling that has been the talk of motoring America for months, Studebaker now strides still farther forward in design.

And thanks to the resourcefulness and research of Studebaker's engineering and production staffs, materials critical to national defense have been released for that purpose—without any impairment of Studebaker's traditional standards of quality.

Brand-new Studebaker models for 1942 are now on view at Studebaker showrooms all over the nation—the finest motor cars Studebaker has ever offered the public.

Raymond Loewy, star stylist, has given these colorful new Studebaker creations the flight-streamed contours of pursuit planes—and Studebaker's master craftsmen have built them with the rugged staying power of battleships.

See your local Studebaker dealer now and go for a trial drive. You may use your present car as part payment—C. I. T. terms.

Continued from page 14

it and could be there next morning, ney'd let her test for it. She took the st money she had, grabbed the night lane and was on the lot next morning efore the make-up man could get the gs out of his beard. The part was of neurotic, psychopathic, losing-her-ip, prom-trotting post-deb who even-ially commits suicide.

"The hell with the test," said the ameraman. "She *looks* like suicide."

She got that part and then went into e and Ethel Turp Call on the Presi-ent, where she played a dame who arts at sixteen and ends bedraggled at xty. That was tough going because e had to age gradually but the techni-al men again bolstered up her morale. "What a bag!" they cried admiringly.

There was a slight interlude in which e played another pretty girl in Irene t RKO but that was the clincher for er. She raised her right hand piously ith the two front fingers pointing aloft, nd cried: "May I spend the rest of my ays working at a drive-in if I ever lay another ingénue!"

M-G-M brought her back for twelve nes in Pride and Prejudice, in which e wore spectacles and sang an off-ey version of Sweet Afton, but she got ig notices for the performance.

### A Job She Couldn't Refuse

She then did a crime short in which he played a pregnant woman, had the mall role of a little dumb Southern girl n Flight Command, and refused a part n a Maizie picture because she wanted o play another eighteen-to-fifty woman n Cheers for Miss Bishop. That was hen M-G-M woke up. When they ouldn't get her, they started to holler. he'd either sign with them and stop his free-lancing nonsense or she'd ever get a role on that lot again.

"What do you do," she asks, "when a nan holds a pistol at your head and ays, 'Take this pocketbook or I'll shoot ou?' "

In the Trial of Mary Dugan she layed a blond chorus girl from the re-orm school who testifies for Mary. That equired a New York accent and that is where we get back to the beginning of the Hunt story. She was born in New York, acted all over town as a kid—in Sunday schools, summer camps, Elks lodges and neighbors' front parlors—and never had any doubt that she was to be an actress.

After high school she took a lofty attitude toward formal education and was placed in Theodora Irvine's school to study for the theater. On the side she did dress modeling for Bob and Sarah Mack, photographers, because she was tall and skinny and just right for the clothes of ten years ago. She got five bucks a session for that work and found that fashions never are photographed at the right season. Sports clothes are invariably done during the winter to be ready for the summer and among her worst memories is a February day on a Bermuda ship on the North River when it was so cold that she got carbuncles on her knees wearing shorts and froze so tight to a tennis racket that they feared that she might come away from the venture with catgut where her knuckles should have been.

Gabriel Pascal, who has been lately doing the Bernard Shaw motion pictures, met her at this period and cried to the heavens that this was the girl of all time for the movies.

He also entered her at the Royal Academy in London and then went off to Hollywood himself. She was too late for the current educational season and, while she was waiting, the Macks, who had also gone out to Hollywood, wired her to come on and take up her modeling again. She jumped at that.

"When I got off the train at Los Angeles, Bob and Sarah were there waiting for me, waving their arms frantically and rushing me off the platform before they bothered to say 'hello.' "

The Macks had an idea, a great idea. She was to go back to San Bernardino and wait for a signal. Then she was to sail in again in style. In the meantime they hired a press agent and he had reporters down to meet her. The idea in the Marsha Hunt case was simple: she was to be the New York model who *didn't* want a job in Hollywood.

"Haven't you something I can't afford even more?"

It wasn't much of an idea but Hollywood doesn't require great ideas. She was met, she expressed the proper disdain, she was taken to a hotel and hidden. Matters were complicated by the fact that Marsha was the guest of an uncle who had lived in southern California for years and cordially detested all motion-picture people. When the newspapers carried the story and the phone began to ring, he handled the calls. To all approaches from such as Mr. Jack Warner and Mr. L. B. Mayer, he merely bellowed into the phone:

"By the laws of the Continental Congress, I warn you . . . Touch not a hair on the head of this fair young thing!"

When it reached a point where Marsha saw that matters were going too far, she managed to elude the protection of her genuinely devoted relative. By some effort she allowed the anxious talent scouts at Paramount to understand that she *might* listen to a real screen offer, none of this petty contract-player stuff. It was finally arranged and she started on a career that has probably had no parallel for ineptitude.

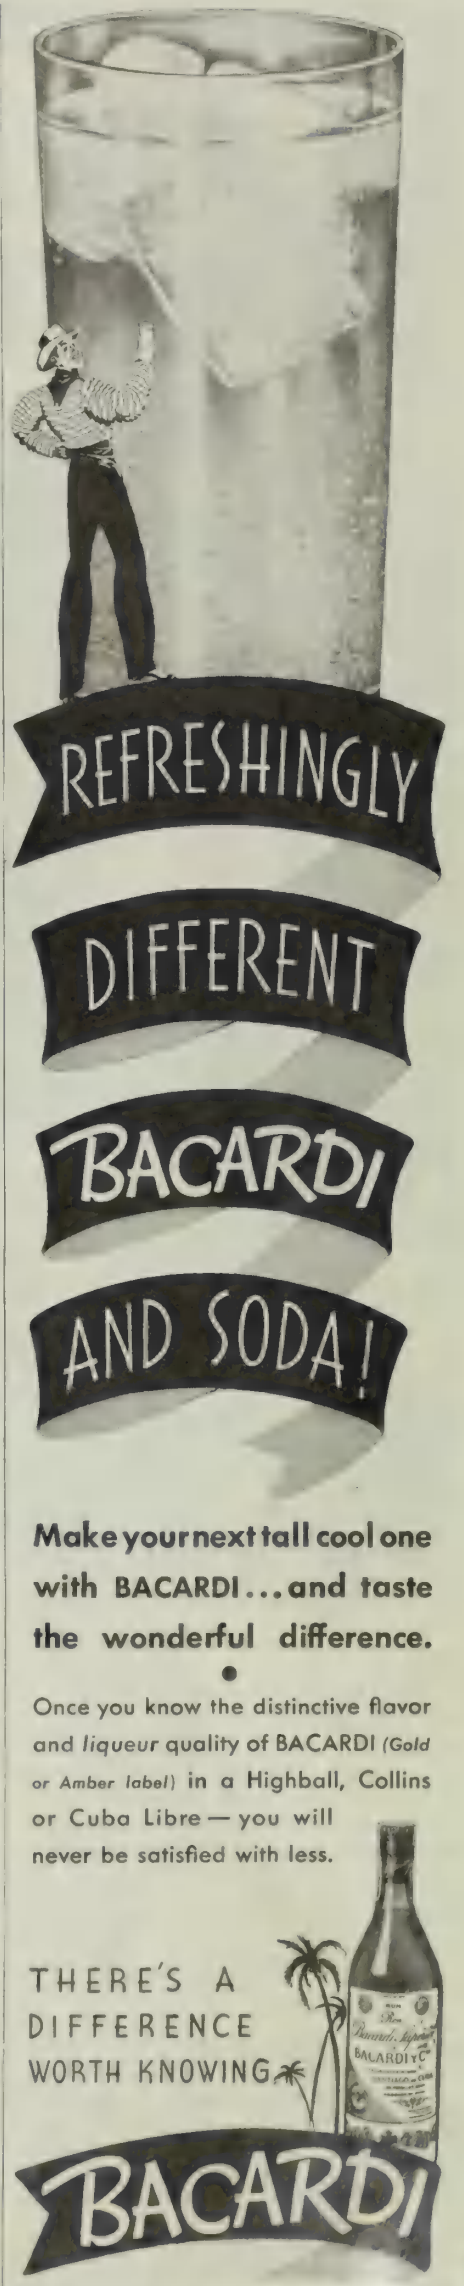
From the dozens of pictures she made with that company, she remembers only one with pleasure: College Holiday, in which she sang a song and was finally won by Lief Ericson. In this gluey masterpiece she was the sweet thing; in every picture she was the same.

### Then She Was Washed-Up

At the end of her second year, she was signed for a third year—and never allowed to make a picture. She had obviously made the wrong answer to somebody. The pay arrived every week promptly but nobody spoke to her and she didn't work. This may seem like fun but when it plainly means that you are through, washed-up, a dead pigeon, the laughs come haltingly.

And, as if that weren't enough, there was the Melanie episode in Gone with the Wind, the real crusher. The whole story is too long to repeat but it can be said that the part was hers until the exact moment when Warner Brothers finally permitted Olivia de Havilland to do it. Miss Hunt made tests, she read for David O. Selznick in a way that brought tears to the eyes of everybody within hearing.

The contract was to be signed next morning and they were to send a car to bring her over to make final costume tests. She was up at seven o'clock waiting. She sat by the phone until noon but nobody called. Finally a friend phoned to ask if she had seen the morning papers: Olivia de Havilland had been signed for Melanie.



"To this day I've never had a call from the Selznick Studio," she says. "They never said I didn't have the part, they never explained—they simply never called."

Anyhow things are all right now. Her role in Blossoms in the Dust was small but it won critical acclaim and brought her featured billing in Unholy Partners with Edward G. Robinson. She shudders a bit at the thought that she is doing another ingénue role but listens with attention when the M-G-M big shots tell her she's a wonder with a great future.

She hasn't been back in Ciro's since her bad days but she is looking forward to it. Will she snub the individuals of the little black book?

"Don't be foolish," she cries. "If they dah-ling me, I'll dah-ling them right back. I know *something* about Hollywood after being here four years."

BACARDI

Rum 89 Proof—Schenley Import Corp., N Y Copr. 1941

*America's defense program demands greater fuel economy and greater dependability from its motor cars, trucks and buses—and you'll get them with Champion Spark Plugs*

Today Champions provide advantages, not found in other spark plugs, which are not only present in the plugs themselves but are transmitted to the engines they equip in real, tangible results in operating economy and better engine performance.

In the forefront of Champion's many exclusive and patented features is the revolutionary *Sillment seal which banishes troublesome gas or compression leakage *common to ordinary spark plugs.* Since leakage in even one spark plug in a set will cause rough, uneven and wasteful engine operation, you can see how vital this development is in securing the best performance with greatest economy from your engine.

If your car is not performing as it should, have the spark plugs tested by a Champion dealer. Remember, it's sound practice to change all spark plugs, Champions included, at least every 10,000 miles. Remember, too, Champions are the choice of racing champions and most motorists everywhere.

Champion's exclusive *Sillment seal is your safeguard against a widespread outbreak of engine troubles due to spark plugs. This patented seal prevents troublesome gas or compression leakage at these two vital points. When such leakage occurs it causes overheating, preignition, rough, sluggish and wasteful engine operation. Remember only Champions are Sillment sealed.

*You're always ahead with Champion!*
SPARK PLUGS

# The Fight Goes On

Continued from page 17

conceded to be the aggressor nations in the world had been willing to co-operate in this armament and nonaggression in 1933, the present conflict could have been avoided; and any just grievances and fair demands which they might have had could have been worked out by international conference and negotiation.

It is now a matter of history that pleas for disarmament were disregarded; and that the race for further armament became accelerated year by year.

With respect, also, to breaking down the barriers of trade between nations, the government of the United States has, since 1933, taken the lead in the promotion of reciprocal trade agreements between the nations of the world. Year after year, the President, under congressional authority, has been entering into reciprocal trade agreements with other countries on behalf of the United States. By these agreements, the United States and other countries have permitted the importation of the products of each other on a fair and equitable basis. They have had far-reaching results in the stimulation of world trade, the reduction of unemployment and the establishment of international peaceful relations.

Unfortunately, however, the aggressor nations are never interested in a fair exchange of international trade on a just basis. They have shown that they much prefer to conquer weaker nations by force of mechanized warfare, and then compel their victims to trade with them on terms imposed by them unilaterally as victors of war.

The efforts of the United States to prevent war were continued year in and year out. It became evident, however, as the years went by, that although these efforts were having their effect in the Western Hemisphere, they were unable to overcome the insistence of dictators upon increasing their own mechanized armaments on land, on sea, and in the air. This small handful of ruthless men, it became more and more apparent, were determined to use force instead of the normal processes of trade and conference to attain their own ambitions of territorial and commercial expansion and domination.

### The Mounting Threat to Peace

This trend of affairs, which became worse and worse after the Italian conquest of Ethiopia and the Japanese aggression against China, called forth repeated official warnings throughout the world. Here in the United States, it was clear to this administration and to a great many of our citizens in public and private life that events in Europe and Asia were heading quickly and almost inevitably toward war. There were, unfortunately, many Americans, however, as there were many citizens in other democratic nations throughout the world, who refused to believe that war was probable, or even that it was possible. Nevertheless, I deemed it my duty constantly to keep before the people of the United States the ever-growing menace of a general European war. Time and again, I called attention to this mounting threat, not only to the peace of Europe but to the peace and security of the Western Hemisphere as well.

For example, in my annual message to the Congress in 1935 I said, "I cannot with candor tell you that general international relationships outside the borders of the United States are improved. On the surface of things many old jealousies are resurrected, old pa sions aroused; new strivings for arm ment and power, in more than one lan rear their ugly heads." In my annu message to the Congress for the follov ing year, 1936, I called attention to th "growing ill will . . . marked tren toward aggression . . . increasing arm ments . . . shortening tempers—a situ tion which has in it many of the elemen that lead to the tragedy of general war I pointed out also that some natio "seeking expansion, seeking the recti cation of injustices springing fro former wars, or seeking outlets for trad for population" instead of peaceful n gotiations to attain legitimate obje tives, had "impatiently reverted to t old belief in the law of the sword, or the fantastic conception that they, a they alone, are chosen to fulfill a m sion, and that all the others among t billion and a half of human beings the world must and shall learn fro and be subject to them."

### An Epidemic of Lawlessness

The peace of the world was bei jeopardized by a handful of relentle men who sought selfish power for the selves. American efforts to limit wo armaments, to bring about peaceful s tlement of disputes among nations, a to exert the moral influence of t United States against autocracy, int erance and repression, in favor of t freedoms of the average citizen—th efforts were quite apparently not go to prevail in the world.

Although this conclusion was beco ing almost irresistible, our governm continued steadfastly to seek to assist international movements to prev war, and our work in this direction c tinued until the very time when armed catastrophe broke upon world.

In October, 1937, I suggested, in speech at Chicago, that something done about the then existing "reign terror" and "international lawlessne which had begun a few years before I pointed out that the recent systema violation of treaties, the indiscrimin bombing of civilians, the waging of declared warfare, were wiping away very landmarks of law, order, and j tice which had characterized our c lization. I warned that "if those thi come to pass in other parts of the wo let no one imagine that America escape, that America may expect me that this Western Hemisphere will be attacked." I called upon the pea loving nations to "make a concer effort in opposition to those violat of treaties and those ignorings of mane instincts which today are crea a state of international anarchy and stability from which there is no esc through mere isolation or neutrali For the acts abroad were not only vi tions of specific provisions of treaties international law. They involved whole question of world security, w humanity—the whole question of w war and world peace. To meet "epidemic of world lawlessness" I posed that the community of nat throughout the world act the sam communities do when "an epidemi physical disease starts to spre namely, join in a quarantine "in o er to protect the health of the commu ty against the spread of the disease."

Unfortunately, this suggestion ell upon deaf ears—even hostile and esentful ears. The pronouncement came the subject of bitter attac at home and abroad. It was hailed as ar

ongering; it was condemned as at-mpted intervention in foreign affairs; was even ridiculed as a nervous search nder the bed" for dangers of war hich did not exist.

In spite of these attacks, however—cluding some bitter personal abuse -the government of the United States ntinued to call attention to the ap-roaching danger, and to do what it uld by example, by trade treaties, and y informal as well as formal discus-ons with representatives of foreign na-ons to ward off this growing threat to vilization. At the same time, however, e United States proceeded realistically d cautiously to embark on a program increasing its own national defense. or it was becoming clear that the nited States would itself have to re-m against this increasing threat of gression.

In my annual message of 1938 to the ongress, I again warned of the menace general war in Europe.

### Peace That Couldn't Endure

During 1938 there came the Czecho-ovakian crisis. On September 26 and eptember 27, 1938, I sent messages to itler and to the heads of the Czecho-ovakian, British and French govern-ents, seeking a peaceful solution of at threat of war. The crisis was verted, not by the round-table discus-on I suggested, but by a yielding to reats and superior armaments. That why I stated at the time, "it was [is] ecoming increasingly clear that peace y fear had [has] no higher or more en-uring quality than peace by the word."

Three months later, at Lima, Peru, e twenty-one American republics, in-uding our own, agreed to stand to-ether to defend the independence of ach one of us in the Western Hemi-phere. That declaration at Lima was a rther step toward continued peace and ommon defense in this hemisphere, ut it did not have any effect on matters Europe. In 1939 international affairs Europe grew steadily worse.

In my annual message to the Congress n January 4, 1939, I pointed out that ll about us undeclared wars were rag-ng, deadly armaments were growing, nd now aggression was being threat-ned. Although we in the United States anted peace, it was obvious that "no ation can be safe in its will to peace so long as any other powerful nation refuses to settle its grievances at the council table." I therefore urged again upon the Congress the necessity of increased national defense to protect ourselves against attack.

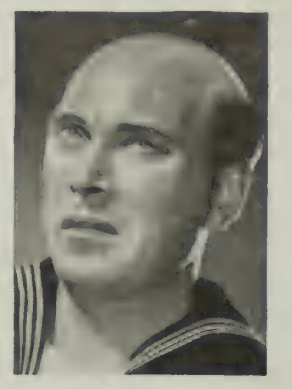
During 1939, on April 14th, on behalf of the American people, I again sent messages to Hitler and Mussolini, suggesting another approach to the solution of the problem of avoiding war and preserving the peace of the world. By this time three nations in Europe, and one in Africa, had already had their independent existence terminated by aggression from more powerful neighbors. Besides, vast territory in Cnina had been occupied by aggression from a neighboring state. Further acts of aggression were obviously being contemplated against other independent nations. My suggestion was that the many existing international problems all be submitted at the council table for solution. As the head of a nation far removed from Europe, I offered to serve as a "friendly intermediary." I asked for assurances from Hitler and Mussolini, however, that their armed forces would not attack or invade any of the independent nations of Europe or the Near East for a period of ten years. I stated that I was reasonably sure that if such assurances were given, each of the other nations would give similar reciprocal assurances. I suggested that a peaceful discussion follow this exchange of guarantees, in which the government of the United States would be willing to take part—with two essential objectives in mind: first, reduction of armaments; second, opening up avenues of international trade. At the same time all governments—other than the United States—directly interested in territorial and political problems, could undertake to discuss those problems in this peaceful atmosphere.

In other words, to use a colloquial expression, what I was suggesting was a peace conference with everybody's guns "parked outside."

I received no direct answer to this suggestion for world peace from either Hitler or Mussolini.

A few days before, on leaving Warm Springs, Georgia, after a short vacation, I said: "I have had a fine holiday here with you all. I'll be back in the fall if we do not have a war." This remark by me was again attacked by many newspapers and politicians as war monger-

"She does that whenever she's not sure" OTTO SOGLOW



# THE FLEET'S IN
## but only one "gob" made the grade

**He Douses His Hair:** So she dropped him. The fleet's No. 1 Gunner, but the lady said, "No". Because he soaks his hair with water. Leaves it looking like a mop. Should have used Kreml.

**He Greases It:** So she left him. Bosun's mate and best-liked by the men...but his hair—ugh! Sticky and gooey. A refreshing rub with Kreml and he'd have gone "full speed ahead."

**He Shines It:** So she spurned him. Simple seaman. He looks so old with his waning hair. Can't get a girl in *any* port. Too bad. Should have tried Kreml. It checks excessive falling hair.

**He Uses Kreml:** So She Hooked Him. She runs loving fingers through his handsome hair. Daily use of Kreml, the trusted tonic-dressing, keeps his hair looking naturally well groomed—without being greasy. Removes dandruff scales, too.

*DON'T USE WATER USE*

# KREML

REMOVES DANDRUFF SCALES—
CHECKS EXCESSIVE FALLING HAIR
NOT GREASY—MAKES THE HAIR BEHAVE

FOR everyday hair protection—use Kreml. Kreml checks excessive falling hair. Removes ugly dandruff scales. Kreml keeps your hair neat and *natural-looking*. Gives it a silky, soft sheen.

Women like Kreml, too. Find it wonderful before and after permanents.

Ask for Kreml at any drug or department store. Insist on it at your barber shop.

A fine follow-up for the daily use of Kreml is the once-a-week wash with Kreml Shampoo. It's made from an 80% olive oil base. Cleanses your scalp tingling clean. Leaves your hair soft and lustrous—easy to comb. Try Kreml Shampoo this weekend . . . try Kreml Hair Tonic *today!*

*Nature gives a clue to your enjoyment*

The beautiful graining of these pipes has been called Super-Grain, and the name is appropriate. It comes from briar that has been cut from the "prime cut" of selected, old imported briar burls.* Your enjoyment in smoking one will be whole-hearted, because the sweet smoking quality of the pipe is in direct proportion to the beauty of the grain: nature decided that. The Apple, shown above, is a chubby, agreeable shape that pipe smokers have long shown a predilection for.

*Kaywoodie briar is dug out of the ground years in advance; so the war has not interfered with our supply.

SUPER-GRAIN

REGULAR GRAIN

Observe the distinctive grain markings of the specimen briar from which Super-Grain pipes are made. Only the "prime cut" from fine old briar burls yields briar of this exceptional beauty. This is the clue to the sweet-smoking quality of Super-Grain pipes.

Yours for the asking: *The Kaywoodie Pipe Almanac*, which tells how to get the fullest pleasure from pipe-smoking.

ing and unjustifiable apprehension. But it had become clear beyond question that war was on the way.

I mention this refusal on the part of many people, many newspapers and many public officials to believe that war was coming, and their ridicule of these warnings of war sounded by me, not in order to vindicate the position of the President and the State Department of the United States, based on the official information which they had received. On the contrary, I repeat these facts rather to explain the refusal of the Congress to adopt certain legislation, which this administration urged in 1939, to discourage and perhaps prevent the outbreak of the war or to place the United States in a more advantageous position if war should come that year. I refer to legislation repealing the embargo provisions of our so-called "neutrality" law.

I recommended the repeal of these arms embargo provisions in a special message to the Congress dated July 14, 1939. This recommendation was one of the last formal efforts made by the administration to prevent the war in Europe—which came only a month and a half later. I cannot say that the repeal of these arms embargo provisions would by itself have stopped the war. I do believe, however, that, at least, it would have been a strong factor in preventing the outbreak from occurring as quickly as it did. The refusal on the part of the Congress to repeal the arms embargo was based in part upon the belief by practically all of the Republican membership in the Congress and about 25 per cent of the Democratic membership that there would be no war in 1939. That is the reason why I mention the fact that the repeated warnings of war during 1938 and early 1939 went unheeded.

### A Law of Doubtful Value

To discuss this question of repeal of the arms embargo legislation it is necessary to go back to 1935, when it was first adopted.

It was embodied in Senate Joint Resolution No. 173 (49 Stat. 1081), which was approved by me on August 31, 1935. It provided that, upon proclamation by the President that a state of war existed between two or more foreign countries, it should thereafter be unlawful for Americans to sell arms, munitions and implements of war to any of the belligerent countries. The Resolution provided also that it should thereafter be unlawful for American vessels to carry arms to belligerents; and that, if the President so proclaimed, American citizens could travel on the vessels of belligerent nations only at their own risk. It set up a system of national supervision and control of the manufacture and traffic in arms and munitions, in the form of an Office of Arms and Munitions Control in the State Department. It was later amended so as to prohibit, with certain exceptions, loans and credits to belligerent governments.

Although I approved this legislation when it was passed originally and when it was extended from time to time, I have regretted my action. I have particularly in mind that portion of the resolution which deals with the embargo on the export of arms and munitions and implements of war to belligerent nations. When I signed it on August 31, 1935, I pointed out that this portion of it would require further and more complete consideration; particularly since situations might arise requiring more flexibility of action than it would permit, and that its inflexible provisions might conceivably "drag us into war instead of keeping us out."

As time went on and as the provisions of the Act were studied further in connection with the Italian invasion of Ethiopia, the civil strife in Spain, and the Japanese aggression in China, and as the possibilities of a European conflict developed into probabilities, the executive branch of our Government became convinced that the arms embargo did not promote the cause of world peace, that it would not serve to guarantee the neutrality of the United States, and that it could be made to encourage the very intentions and objectives of the dictators and the aggressor nations. I had indicated my growing belief in these conclusions from time to time, as had the State Department.

The arms embargo was at complete variance with the old principles of international law governing the rights and conduct of neutrals in times of war. Under international law, neutrals had always been permitted to trade with belligerents, and belligerents with neutrals. The arms embargo arbitrarily prevented any such trade in any event; and its operation could easily result in a lack of neutrality. For instance, two belligerents, by reason of their relative geographic location, or their relative superiority on land or sea, or through other circumstances, might have certain relative positions of strength with respect to each other. By applying an arms embargo on both, the United States might very well create an overwhelming advantage for one rather than for the other. To take an example, if Great Britain has the superior sea power which enables it to carry war supplies to a greater extent than Germany, and if that sea power has been built up over the years with that end in view, the application of an arms embargo might destroy a major part of that relative advantage by refusing to sell Great Britain the necessary war supplies to be carried. In other words, far from being neutral, the practical operation of the statute would bring about a decided lack of neutrality by taking away from Great Britain the one great advantage which it had built up for itse to offset other advantages which t land and air power of Germany had cr ated against Great Britain.

We had come to the conclusion al that the arms embargo provision wou not be instrumental in keeping us o of war. In fact, the arms embargo d permit us to sell all kinds of raw m terials which went into the manufactu of ammunition—such as cotton for e plosives, and steel and coppe.. or cann and for shells, and gasoline for airplan —although we could not sell the expl sives or cannon or shells or airplar themselves. As further examples, could sell aluminum, but not the a plane wings made out of aluminum; could sell brass tubing in pipe for but not in shell form; we could sell m tor trucks, but no armored motor truc Therefore, if selling raw materi were not going to get us into war, c tainly selling the manufactured pr ucts would not get us into war.

### An Advantage for Aggressors

Above all, our arms embargo play right into the hands of the aggres nations. The aggressor nations kn that under our arms embargo the pea loving nations of the world, which h not piled up as much armament as aggressors had, were prevented fr buying any war materials from us. T aggressors knew that as soon as t would declare war upon their victi their victims would be shut off fr obtaining implements of war from n tral nations. Of course, the aggress had spent many years and a la portion of their wealth in piling armaments, and did not have to l materials outside. The victims of t aggression, however, who had not b up armament to the same extent, wc have to look to neutral nations to the implements of war to them. It clear, therefore, that so long as our a embargo statute prevented the Un States from helping all belligerents,

ERNIE G

# "That's Our Boy!"

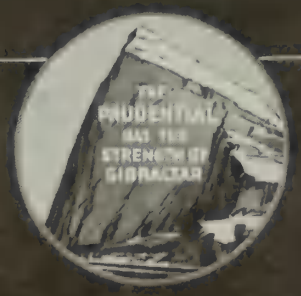
To Bob's dad, this is one of the proudest moments of his life.

It seems only yesterday that his boy was a curly-headed little tyke, learning to take care of himself in childhood battles with the bully of the block.

Now he's 180 pounds of husky halfback, respected by classmates and faculty alike, as a man, an athlete, and a student.

But there's even more than pride in his father's heart today . . .

He's thankful for his foresight years ago when he promised himself his boy would have the opportunities of college . . . the day when, with his Prudential agent's help, he made sure that promise would come true—even if he were not here to take care of the expense.



**How Can a Man Use Life Insurance to Assure the Education of His Child?**

Men who already have life insurance to provide for the future support of their families, often take out additional protection to assure a special educational fund for each child.

In most such cases, The Prudential recommends a whole-life or term policy issued on the father's life. This will provide the necessary funds if he should be taken away before his children have completed their education.

The Prudential will pay the insurance money in one lump sum or as installments spread over the four college years.

aggressor nations were given a tremendous advantage by it, and, to that extent, were actually encouraged by our laws to make war upon their neighbors.

Germany and Italy, both of which had spent so many years, and had sacrificed so much food and leisure and decent living and so many individual liberties to the task of building up vast stores of tanks and guns and planes, counted very heavily upon the fact that under our arms embargo law we could not sell a single plane or tank or gun to Great Britain or France once war was declared.

That is why I was so anxious in July, 1939, for the Congress to repeal the arms embargo provisions of the neutrality law. For such a repeal would, in effect, say to the aggressor nations that if they did declare war they would find that their enemies would be able to obtain the needed war supplies here in America. I knew that the sale of arms by the United States could and would help the weaker nations resist attack from those nations which had built up these vast offensive striking forces.

Accordingly, on July 14, 1939, I recommended to the Congress that it repeal the arms embargo.

At the same time that I recommended the repeal of the arms embargo, the Administration was endeavoring to have other amendments to the neutrality legislation passed which would go far to avert the occurrence of incidents likely to lead to war. For example, our proposals were that, if the arms embargo provision should be repealed, a statute should be enacted to provide: that title to any materials sold by us to belligerents should pass on delivery of the merchandise on this side of the ocean; that no American ships should be permitted to enter the danger zone; that the travel of American citizens in combat areas should be restricted; that the solicitation and collection in this country of funds for belligerents should be regulated; that existing prohibitions on credits to belligerent nations should be continued; and that the licensing system under the National Munitions Control Board should be continued.

### Safeguards for America

The incidents likely to lead to war would not generally come from the sale of war supplies in this country, but would be the loss of American ships or American lives or American property while they were in neutral or combat areas of war. That is why the purpose of our proposals in 1939 was to make it impossible, or at least less likely, that American lives or property be lost. As long as title to the merchandise passed before it started across the ocean, and as long as American citizens and property were kept out of danger zones, and as long as loans of money to belligerents were prevented, the danger of being drawn into war was diminished. That was the attitude of the administration in 1939; and that was the attitude of the majority of the American people in 1939. Of course many things have happened in the two years which have elapsed since those days—and the American people's attitude toward strict neutrality has also greatly changed.

Congress was ready to adjourn in July, 1939, without passing the repeal of the arms embargo. We were convinced that the arms embargo was actually having the effect of hastening the war in Europe by the encouragement which it gave to the aggressor nations. I therefore called a conference at the White House of the Republican and Democratic leaders of the Congress to urge upon them further the necessity of the legislation, and to canvass the situation so as to learn whether such congressional action were possible. At that conference I pointed out how the arms embargo was encouraging to the outbreak of a general war, how it operated in favor of the aggressor nations of Germany and Italy, and how thoroughly it weakened the position and prestige of the United States as a motivating factor for peace. For we were hardly in a position to urge the aggressor nations to desist from attack, if we could not, under any circumstances, supply armaments to the threatened democracies of Europe.

It appeared clear at this conference, however, and was so stated by the Congressional leaders, that practically all of the Republican members of the Congress would vote against repeal, and that about twenty-five per cent of the Democratic members would. This opposition was based upon the belief that there would be no war in Europe before the following January, when the Congress would again assemble in regular session, and that, therefore, there was no need for immediate legislation. It was at this conference that Senator Borah of Idaho made the now famous statement that his own "private information" was more reliable than that collected by the State Department of the United States, and that his own "private information" was to the effect that there would not be any war in 1939.

### Cause—and Effect

Of course, it was useless to insist upon the legislation under those circumstances. It should be borne in mind, however, that the responsibility for this action properly lies with those who refused to repeal the arms embargo in July of 1939. I made it clear to them at the conference that the opponents would have to take the sole responsibility for the results of their opposition.

The Congress adjourned without acting on the arms embargo. I am convinced that this fact had much to do with the coming of war when it did—less than two months later.

As our information indicated that the prospects of war were becoming more imminent, on August 24, 1939, I sent another message to the European powers in the interest of peace—this time to Hitler, King Victor Emmanuel of Italy, and President Moszicki of Poland. On the following day I sent a second letter to Hitler. These were, of course, all unavailing; and war was begun on September first.

In order again to try to repeal the unneutral arms embargo provisions of the "neutrality" law, I called the Congress into extraordinary session. On September 21, 1939, I sent a message to the extraordinary session recommending again the repeal of this legislation. In this message I detailed again the efforts which the United States had made to avoid war in the world, and the efforts which it intended to make in the future to avoid being drawn into the conflict. I expressed regret that I had ever signed the arms embargo legislation. I referred to my attempts to have it repealed a month and a half before, convinced that it had operated against peace and against real neutrality, and in favor of aggression by the dictators. I recommended that, as steps toward real neutrality and toward prevention of American participation in the war, legislation should be adopted carrying out the "cash-and-carry" principle, that is, providing that title to the merchandise should pass on delivery on this side of the ocean, that it should be paid for in cash by the belligerent purchasing it, and that it should be carried away in the ships of the belligerent at its own risk. I also recommended legislation restricting the entry of American merchant vessels into war zones, preventing American citizens

om traveling on belligerent vessels or danger areas, forbidding war credits belligerent nations, regulating the llection of funds in this country for lligerents, and continuing the license stem governing imports and exports arms and ammunition.

This time, after a protracted debate, e recommendations were adopted, and new neutrality law was passed on No-mber 3, 1939—a month and a half ter my appeal.

The adoption of these recommenda-ons offered greater safeguards than e had before, to protect American lives id property from destruction and in at way tended to avoid the incidents id controversies likely to draw us into e conflict, as they had done in the last 'orld War.

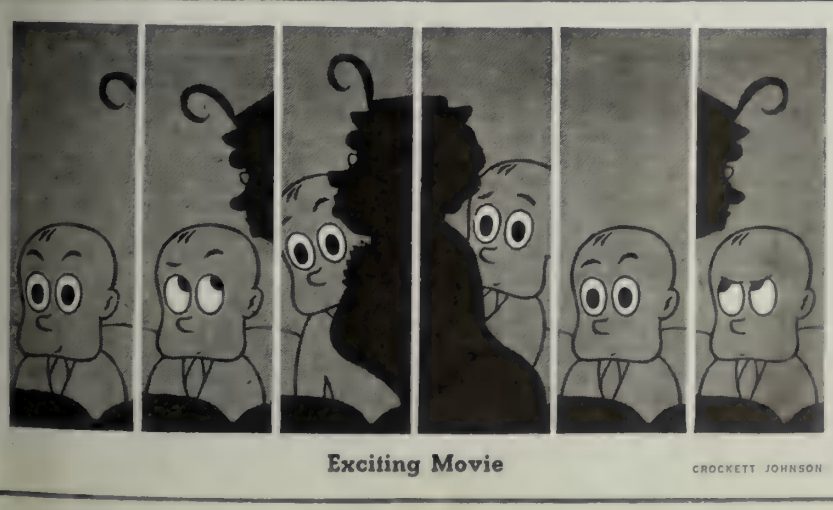
Pursuant to the new law, we were able sell implements of war to the democ-cies of the world resisting aggressors, l during the year 1940, up to the time hen the Lend-Lease Act of 1941 be-me effective and changed the method transferring such war materials.

On the following day, November 4, issued proclamations of neutrality un-er the new Neutrality Act of 1939, re-uiring compliance with its provisions hich had to do with American vessels id American citizens traveling in dan-er zones, with the extension of war edits, the definition of combat areas, ie collection of funds, etc.

This so-called "neutrality" legislation ould not be confused with the general rinciples of neutrality under well-es-ablished international law. For ex-mple, on September 5, 1939, which was few days after the war was declared, issued a general proclamation of neu-ality under international law. This roclamation was directed toward en-orcing the rights and limiting the con-uct of the nationals of a country which neutral in war; that is, which takes no ctive part on either side in the war, irect or indirect. There is a long list f such rights and limitations included the proclamation, and they are all a art of well-established international aw.

### The War as an American Concern

There can be no question that the eople of the United States in 1939 ere determined to remain neutral in act and in deed, although they had very efinite convictions as to where the guilt nd responsibility for the war lay. I elieve that the American people, how-ver, during 1939 and 1940 became ncreasingly aware of the fact that al-hough they did not want to become a art of the war, the war was, neverthe-ess, very strictly and emphatically be-oming more and more a part of their usiness and concern. They became radually conscious that the war, as it leveloped in its true colors, was not nerely a European conflict which meant othing to them. The acts of the Nazis in attacking and invading neutral countries, their violation of all principles of international law, the subjection of occupied countries to the persecution and brutality of their secret police, their ruthless domination of small and defenseless nations—all showed clearly that the Nazis had embarked on a definite program of world domination which was an immediate and serious threat to the United States and to the Western Hemisphere. This domination, it became clear, was not to be merely a domination of military might but a domination of ideas, in which the whole world was to be bent to the Nazi philosophy of force, of slavery, of antireligion.



The American people have gradually come to the realization that this is not exclusively other peoples' war, but that it is approaching dangerously close to their own shores. The modern type of lightning attack on land and in the air has brought the area of conflict physically so close to us that we now realize that we are the subject of potential armed attack as soon as the Axis powers come within striking distance. In other words, it is now clearly seen that it is no longer safe to wait until the enemy planes are overhead to start physically repelling the attack upon us. The attack has really been made as soon as any base is occupied from which the swift bombers can be let loose upon us. It is with that realization and with full appreciation of the true nature of the Nazi design upon the world that the feeling of strict neutrality and aloofness which influenced the American people in September of 1939 and during the beginning of 1940 has completely disappeared as of July of 1941, as this is being written.

International events have happened so quickly within the last year, within the last few months, within the last few days, that it is impossible to tell exactly what the relationship of the United States and its people to this world conflict will be next week, or tomorrow, or, indeed, even before the ink on this page will have dried.

With full appreciation, however, of the grave danger to the United States, to the Western Hemisphere, and to civilization itself, our people have resolutely determined to arm themselves to the teeth, and, at the same time, to help to the limit those nations which are still resisting the aggressors and which still stand between us and a Nazi attack. To that end, the people of the United States, clearly thinking their way through, have dedicated themselves—with all their resources, their industry, and their man power.

FUNNY about Herb:
He never believed an ad or a plug or a blurb!
He would read about Arrow Shirts in his favorite periodical
And say, "Pish-tosh, all shirts are peas-in-a-pod-ical!"
He grumbled that the body of *any* shirt gives your abdomen
Too much room to roam in.
He kept maundering
About laundering
And thinking
Evil thoughts about shrinking.

Well, we sent up a man with a couple of barrows
Of Arrows
And a note, as civil as you please,
Saying, "OK, Herb, try these."

Months pass. We get a letter from Herb,
(Who never believed an ad or plug or blurb.)
We open the first page an' see
He's working for an advertising agency!
We quote: "Forget what I said before.
Not only are those Arrows the best-looking shirts I ever wore,

But the bosoms don't bunch a bit —
Thanks to the 'Mitoga' figure-fit.
The fabric shrinks not 1%
when my laundries dunk it
For Arrow has Sanforized-Shrunk it.
And about advertising, in a word:
I erred."

So if you too are an advertising pish-tosher,
Get some Arrows, and see if they aren't all we claim, even after dozens of trips through your wonderful new automatic washer.

# Remade By Ruel

Continued from page 21

in a bank? Get out in the sunshine and live, Dykes."

Ruel couldn't resist; he stayed on and on, and by the end of the '39 season he knew, once and for all, that he would never take that bank job. By that time he knew that the teaching of baseball was his life. He must play out the string to the end. And so he thanked the bank and told them to take away that vacant chair for good.

It was Grabiner who first wanted the aging Ruel around to steady the team, but it was Dykes who first saw Muddy's unrivaled talent for making old lamps burn like new.

There was the case of Clint Brown who, after years with Cleveland, had sunk to the point where he was allowing opponents to earn around 6 runs per game. Ruel and Dykes, however, saw in him just what they needed, a veteran who could go in and save games which were being lost by the wabbly Sox pitching staff. So Dykes picked up Clint for a song, and he and Ruel explained to him just what he was to do—never start a game, and nearly always finish them. He must be the doctor, the fireman. Ruel handled him like a baby, never letting him work too much but seeing to it that he worked a little every day. Each noon he sent Clint out to pitch to four men in batting practice, then brought him back to the bench to stay until the sixth inning when, with a catcher (often Muddy, himself) Old Doctor Brown repaired to the bull pen, unlimbered his operating arm, and waited until Dykes, back on the dugout's edge, waved him to come in.

The result was that Brown became the most effective and celebrated of modern relief pitchers, appearing one season in the astounding total of 61 games.

Last year Dykes traded Brown for Johnny Humphries of Cleveland. Ruel had seen Humphries toiling in the Indian bull pen and noticed that he had a great fast ball when it was controlled. He thought he saw what made Johnny lose control: Humphries was trying to imitate Bob Feller and was copying Feller's big rear-back and high-kick delivery. When Humphries came with the Sox, Ruel worked him in the bull pen and in practice.

"We eliminated the peculiar sway he had been using at Cleveland," explains Ruel. "He was using it because the Cleveland squad kept telling him he wasn't a big-leaguer, wasn't fast enough and would never make the grade. His delivery was therefore desperation stuff. We talked him out of that, got his confidence back and when he went out as a starting pitcher he was a different man."

In the middle of the season, when the Sox made a temporary climb to second place, Humphries turned in sensational work. He pitched three straight shutouts, an amazing performance for the greatest pitchers and a fabulous deed when the former Humphries record is taken into consideration.

Then there is the case of Edgar Smith, who was merely a chunky thrower whom Connie Mack was apparently about to discard when Ruel whispered to Dykes that something might be made of him. Dykes got him for next to nothing and Ruel began working with him. Asking questions and planting suggestions without issuing orders is Ruel's technique with all his pitchers, but especially did he use this method with Smith, who had fire in him, even if Ruel was the only man who had detected it. Ruel had seen Smith, in the Athletics uniform, flash a great curve upon occasion, but never use it effectively, so, when he got Edgar into white sox, he began asking him, "Aren't you afraid the batters expect too many curves from you? Wouldn't they be more surprised if they saw it only now and then, always after you'd made them look at a fast ball and change of pace for quite a bit? And aren't you turning the ball loose when your hand is too far away from your body? I don't know, but let's try and hold it a little longer so it will sneak up on the batter with your body as a moving background for it."

Smith listened, snatched at everything Ruel hinted, and is now one of the best southpaws in the league.

And there is the case of Thornton Lee, who was merely a second-string, wild, awkward and undeceptive pitcher on the Cleveland staff when Ruel told Dykes, "That Lee's a victim of hard luck. Nobody's ever told him to put his body behind his pitches. He gets licked right along but he's got a heart in him. He could be quite a pitcher if . . ."

### It's a Confidence Game

Dykes maneuvered to get Lee in an inconspicuous little trade and Ruel began his reconditioning program. He stood behind big Lee in batting practice saying, "Try that pitch over again with the left foot an inch farther around as it hits the dirt, don't you think?" or "Hold that curve a little lower down in your hand as you let go, and see if that helps any."

Endlessly Ruel suggested to Lee things worth trying and Lee, in his turn, noting how firmly Ruel believed in him, got to thinking of himself as a pitcher who could go anywhere he wanted.

Today Thornton Lee stands second only to Bob Feller in the American League.

"We work it out together," Ruel explains when asked how he brings old pitchers back and young pitchers up. "If they merely obey orders, they'll never get to believing it in their hearts. They've got to convince themselves of the rightness of each pitch and fix it in their minds so they will instinctively use it when the time comes. The main thing is to encourage them to trust themselves when they're out there on the mound. Almost anybody of the right physical stature can be taught to throw a curve. The body is the least of the problems in baseball. What makes stars is application—application of the mind to the body.

"Two pitchers in my time have been conspicuous for ownership of the one most important trait of all—pride in every ball that is thrown. Walter Johnson and Dizzy Dean both had absolute confidence that anything they might throw up there was better than anything any batter could do to it. Both applied their minds to their bodies till they developed perfect pitching motions. They threw with such command of their muscles that the ball was on top of the batter before he knew it. Johnson never depended upon mental deception at all. He always threw two fast falls, then a curve, then two more fast balls and another curve if the batter lasted that long, which wasn't often. Every hitter knew what was coming, but Walter didn't care.

"I caught him for years and used to argue that if he'd vary this routine nobody would ever get so much as a foul. He'd listen, think and then conclude, 'Oh, I guess we'll go along like we have been.'"

Incidentally, it was Johnson's conclusion at the end of his career that Ruel was the best catcher he had ever had.

"This Dizzy Dean," continues Ruel, "added deception to his speed. He never quite reached Johnson's effectiveness, as I look at it, but he could at times become the perfect pitcher. Once—it was in the 1934 World Series—I saw him do a thing that shook me clear to my toes—made me open my mouth in admiration. He was young then, just a cotton-picking kid from the Southwest, and he was on the mound when Charley Gehringer came up to face him. Now this Gehringer had been hitting like mad all season, and it was a byword in the whole American League, 'Don't throw him a slow ball. He'll murder it.'

"Well, I knew the St. Louis Cardinals had scouted the Tigers ahead of the

**"George spends all his spare time notifying the draft board of his changes of address"**

KIRK STILES

World Series, and that Dizzy Dea knew all about Gehringer's strengt They met in a pinch when Gehring could bat in the deciding run, and Diz knew that too. But I saw him lo Gehringer right in the eye, and then d liberately throw him a slow ball, rig over the plate—right where Charl liked it. Gehringer bounced out weakl

"And then in another tight place th same game I saw Dean do it all ov again. He reared back and gave it Charley just the same. And again Ge ringer dribbled out.

"Dizzy had defied the old rule abo always pitching to a batter's weakne He challenged Gehringer's strength, a beat him."

Monty Stratton, whom Ruel w ripening into one of the greats of t game when a hunting accident cut sh the boy's career, was what Ruel ca "a theoretical pitcher" when he ca under Muddy's instruction.

"Monty knew that the low outs pitch is the hardest of all to hit," R explains, "so he took great pains

hrow it hard and true. The trouble as the hitters could see him take aim nd get set for it.

"One day in batting practice. I saw a hance to open his eyes. He was throwng this pitch free and easy, and it was oing right past the hitters. He turned o me, standing behind him, tossing him alls, and asked, 'Why can't I do that n a game?'

"I said, 'I wonder if it's because you're onchalant in batting practice. Maybe ou're too perfect in a game.' The next ay in a game he fired in that low outide hard one with a don't-care swing nd nobody ticked it.

"Monty's theorizing, too, told him that he pitch that cut the corners was ideal, nd he clung to it in spite of the fact hat umpires missed a lot of them. He ut it too fine, but he knew it was the ght theory just the same. My chance n that came one spring in California uring training. I said to him, 'Monty, I were you I wouldn't shave the corers so close this early. Those umpires re still slow; they haven't got their yes opened yet after their winter's leep. Get more of that plate under ach pitch till the umpires get in conition.' By summer Stratton was so ccustomed to making the corners good hat he never went back to the closehaving again."

Jack Knott, whom Dykes obtained rom St. Louis in a cheap trade, had ine deliveries when he came to the White Sox, and a plentiful lack of conrol for each of them. After a few weeks vith Ruel, Knott had cut him down to hree and a new effectiveness. The Browns, staring at him, said to Ruel, Why, he used to walk 70 to 90 men a eason. Now he's going at a 40-per-eason clip. What'd you and Dykes do o him?"

In Bucky Ross, that newest piece of nediocrity whom Dykes has obtained, Muddy detected a thing that Ross' nanager, Connie Mack, had either not een or been unable to correct—a habit of pulling back just at the moment of lelivering the ball. Today Ruel is drilling into Ross a "follow-through" motion hat will, he feels, give the Sox another tarting pitcher soon.

One of the many things that Ruel has lone to make John Rigney the pitcher he is has been to make him pitch in batting practice. Now, no other club risks its regular pitchers so often in these pre-game bombardments, and Dykes bellows loudly against it. But Ruel answers him, "The danger is there, Jim, but it's slight compared to the benefits. You aren't fair to a pitcher when you let him see the plate, the batter and the catcher's mask only once in every five days. He needs to feel the rubber under him every day. He needs to keep the feel of the distance to the plate in his mind all the time. A pitcher must get out and throw a little the day after he's gone nine innings. He's got to break up the adhesions that come after a long, hard workout."

### The Perennial Sand Lotter

At this Dykes throws up his hands, says, "What can I do?" and grins that wide, ironical, mischievous grin at whoever is standing near.

"Ruel can talk you out of anything," Dykes will say, gesturing toward the coach who, so serious, so devout, so gray, looks anything but a "con man."

"Good heavens, you should have heard him talk back when he caught for the Senators and I was with the Athletics. I'd be batting and hear him, the big lawyer, pleading his case with the umpires. And, boy, how he'd work on 'em!

"Say it was Tom Connolly who was there behind him in the mask and protector. It would be, 'Now, Tom, that wasn't a ball. That was a strike. He caught the corner. Give one, once in a while, to that kid out there. Tom, that pitcher out there on the mound is eating his heart out every time you won't give him his share of the corners. His whole future is at your mercy!' "

What Dykes fears is that some club will eventually persuade Ruel to become a manager and cost the White Sox their "reconditioner of pitchers." So far Muddy has turned down such offers. It makes small difference to him what title he holds so long as he can teach younger men to play the game he worships.

"Really, I'm still the sand-lot kid in St. Louis, thirty years ago," says Muddy, summing it all up. "It's true I caught over 100 games a season for eight straight years—149 with Washington in 1924—but I never got over the wonder that I was in the big leagues. I never quite believed it. There never was a time in all my playing days that I wouldn't look at stars and wonder how I got up there among them. You know when both teams crowd through the runways after a game on their way to the showers? Well, I'd find myself marching between big-shouldered fellows like Babe Ruth and Lou Gehrig, or Tris Speaker and Walter Johnson, and I'd say to myself, 'What are *you* doing here?' "

## Wing Talk

Continued from page 6

from which they are coming. When the navigator of the clipper wants to check his course, he tells the radio operator aboard to get a bearing. The operator calls the island station, then sends a steady dash for one minute. A few seconds later the island sends a code message meaning "Your direction from the island is 235 degrees." As a double check, the clipper has a direction finder of its own, a loop antenna that it can swing on any transmitter the receiver can tune in.

ONE night one of the clippers was flying from San Francisco to Honolulu and the radio operator heard the Pan American station in Manila, about 7,000 miles away. Being positive of his position, as he had just taken a shot on the stars, the navigator asked Manila for a radio bearing. Manila took a reading, flashed back the bearing, and when the navigator plotted it on the chart it was exactly right. That's a long-distance record that isn't made every day but it is a satisfying demonstration of the capabilities of direction finders under ideal conditions.

THE American-made four-engined bomber was ferrying back a load of British and Canadian pilots when it encountered a terrific storm in mid-Atlantic and in the middle of the night. The going was so tough at one point that the pilots were confident the ship would break up. It could not be expected to hold together under such a beating. But it did and when the landing was made on this side the pilots asked the navigator, an earnest little Canadian, how he liked the trip.

"Well, sir," he replied, "this is my second round trip. The first was very pleasant, but after this I don't think it's wise to keep more than ten dollars in the bank."

# Sub Conscious

Continued from page 12

He added slowly, "I have never understood how a man can reconcile his conscience to discharging a torpedo at an unwarned passenger ship. It violates the rules of war. Watch 'em, gentlemen, but remember: we are not their judges."

"An' we ain't goin' to be their victims," said Mr. Lott. "They're headin' for a Portuguese internment camp pretty peaceful, it seems to me." He looked intently at the old man. "We're tellin' the world at once we got 'em on board, aren't we, sir?"

"I have already advised the line and the American consul at Lisbon," said Captain Gilmore.

Mr. Lott repeated brusquely the course Mr. Paley gave him and indicated the second mate was relieved of the bridge watch by ■ jerk of the thumb.

Mr. Paley retreated. Mr. Lott's hostile and plainly suspicious eyes followed him as he encountered and was heartily greeted in passing by Lieutenant Erlich. The Nazi officer was coming from the neighborhood of the starboard lifeboat.

Mr. Paley moved along slowly in the direction of the radio shack.

Alf Renick, the radio man, eagerly awaited the coming of his friend in the door of his room, at the nearest distance permitted by the connection of his headset. He started talking now as soon as Mr. Paley got within reasonable hailing distance.

"Y'know those Nazis?" he said. "Well, the last guy out o' that sub must ha' been the operator, because I heard him talking till your boat was near alongside."

Renick lowered his voice and backed into the shack as Rob Paley reached the door: "He was hooked up with another Nazi—prob'ly another sub—an' they were talkin' some code—fast. The other fella sounded close but I don't mean just over the hill." He lifted a hand to indicate the horizon. Rob Paley involuntarily paused to sweep the blue sea with his eyes. He saw nothing. "That was fast sendin'," said the operator. "What I mean, those guys were jerkin' lightning. But this bunch would never ha' abandoned if there was a chance o' being picked up by another sub."

Mr. Paley nodded. "A man came out of the conning-tower hatch as we pulled alongside," he said. "Probably the radio operator."

THE conversation was interrupted by Mr. Lott's arrival from the bridge whereon he was supposed to be standing the watch. "Are the British onto this, Sparks?" he asked, ignoring Paley.

"The limeys are no slouches on their job," Alf Renick said. He glanced at his log. "It wasn't seven minutes after I'd sent the old man's first message that I had a destroyer—H.M.S. Snapdragon—askin' our position an' course."

Mr. Lott nodded in great satisfaction. "Seven minutes," he said. "That's fast—for a navy. Well?"

"The old man give 'em the dope," Sparks said. "I'd say, guessin' on signal strength, that the Britisher was as close as the Nazi. I figure the skipper wouldn't mind havin' a destroyer around in case this other Nazi sub stuck up ahead an' got tough with us."

Alf Renick looked at a long, low swell as if he expected a conning tower to thrust up into view. "We got a day an' a half to go for Lisbon, ain't we, Mr. Lott?"

The mate nodded. He was frowning in the intensity of his thought.

"If a British destroyer stopped us and took off these Nazis over the protest the old man would be sure to make, it wouldn't be too good," Rob Paley said. "The roar from some people at home would do more damage to the British cause than Erlich could do to British ships and American cargoes."

Mr. Lott turned his frown Paley's way. "You think the British ought to let Erlich and his talented crew trickle out of a Portuguese internment camp and get back to Germany to drown more seamen, hey?" he said. "Sort of pally with Erlich, ain't you? Also with that Nazi oiler—Knupple."

"Knupple's no Nazi," said Rob Paley.

"An' neither are you," said Mr. Lott, turning on his heel. "You just like 'em—that's all."

Alf Renick stared at Rob Paley with narrowing eyes.

Mr. Paley retreated to the afterwell. There he busied himself with an examination of the sheaves of the cargo gear under his care. While he was at it Lieutenant Erlich came strolling out onto the deck.

"You vork all the time, my friend," he said to the second mate. "There should be a law."

Of ■ sudden Mr. Paley raised his eyes from the wire around the barrel of a winch. To his ears had come the familiar, distant thunder of a plane. He glanced at Erlich. Already Erlich had spotted the plane above the barrier of the poop, flying many thousands of feet high.

The throb of the motor quickened. The plane was coming down—diving. The thing grew big and detailed. Paley watched tensely.

When the plane was only a few hundred feet above and astern it pulled out of the dive. It roared past on the starboard hand. It circled the ship several times. Paley caught a glimpse of the crooked crosses on the under side of the wing. A Nazi plane—a single-motored seaplane of moderate power.

Erlich jumped up on Number 4 hatch, snatched off his hat and waved it vehemently. "My friends," he said to Pale "They want to know I am safe. Se they are reading your name from t counter."

The plane circled far astern and th approached again, throttled down what was probably bare flying spee It was flying exactly the same cour that the Ernestine was on.

In lining up the Ernestine Hobar course the plane made four or five ru and reverses over the ship. Then, qu distinctly, the pilot revved up his mo and waggled his wings.

Lieutenant Erlich grinned broadly a waved again as the plane headed off the northwest. "See!" he said. "All t way from Germany my friends fly see that I am well."

He watched Mr. Paley's face a laughed suddenly. "You think that pla is a spotter from a surface raider," said, and squeezed the second mat scrawny arm. "Your face tells me."

"Does it tell you I know the raid too far away to start anything?" Pa asked. "That plane took a long time get here. And I'm betting you have got a sub much nearer."

"You are smart!" said Erlich. But was not to be tempted to talk.

MR. PALEY, too, was content w silence. He shook off Erlich's gers and glanced upward.

At the break of the bridge house Lott was standing looking blackly d at Mr. Paley. His scowl was as p ishing as a blow. Erlich laughed so deliberately patted Mr. Paley on shoulder and strolled away.

Mr. Paley continued work on cargo gear. Of a sudden the piece waste on which Mr. Paley was clean off his greasy hands dropped to the d unregarded. With a rush, Mr. Pa started for the fiddley deck. He m for the starboard lifeboat, resting i chocks but still uncovered. He clim into the boat, dropped to the floor bo and searched, not neglecting the loc

ıe water breakers, the big canvas cone ıat was the sea anchor, the sail and ther equipment.

"Lott searched the men and the bun-les they brought aboard," he said oftly. "But nobody searched the life-oat. That mob could have bunked guns nder this stuff while they were milling round in the boat."

His efforts brought nothing to light. ut as he was climbing out of the boat gleam of brass caught his eye. He bent nd picked up a heavy-caliber pistol artridge.

"Well?" said somebody.

Mr. Lott, with Captain Gilmore a few aces behind him, was beside the boat. he mate again carried his automatic rapped to his belt.

"First I catch a glimpse of a Nazi ıeakin' out o' this boat," said Mr. Lott. Then I find you in it. What you got ıere?"

Rob Paley showed him the cartridge. ott grabbed it. "German—or I'm Hit-r's double," he said, and passed it on the old man.

"I should have searched the boat as on as it was back on the davits," said ob Paley sadly. Mr. Lott snorted.

Captain Gilmore nodded and dropped ıe cartridge into his pocket. His face as bleak and grayer than usual. "Mr. aley, you will relieve Mr. Lott on the ridge," he said. "Mr. Lott, you will uietly assemble a search party, arming ıem with such guns as we have. There re two revolvers in my room. Then ather all these U-boat men on the well eck under guard. Keep them there hile our party looks for weapons. Do a ob, Mr. Lott. The safety of the ship de-ends on it."

"Right!" said the mate. He jerked a nger at Rob Paley. "An' keep that—eep him on the bridge out o' harm's ay, sir. I've heard o' Quislings."

"Never mind that, Mr. Lott," said the ld man, but his voice was not emphatic. Get your search party together."

At the first sign of a search Lieuten-nt Erlich assembled his men on the ell deck. He lined them up in double anks and then politely requested Cap-ain Gilmore to receive him.

"Come up," said Gilmore.

Ostentatiously Lieutenant Erlich pro-uced an automatic pistol from a pocket f his dungarees and handed it to Muh-en, his engineer officer. Muhlen romptly put it away in his pocket. hen Erlich ascended to the bridge. The ld man, the hard-eyed Mr. Lott and Mr. Paley, very unobtrusive, awaited im in the chartroom.

THE submarine commander started talking at the very door. His manner as most confident. "You see the situa-ion, Captain," he said. "We are now ell armed and we are well trained to ight. But," he smiled broadly, "we ompromise. You leaf us alone and we eaf you alone. You do not use the adio. We go peacefully to Lisbon. Is t—a—a deal?"

"A deal!" shouted the red-faced mate. It's a blasted—"

"One moment, Mr. Lott," said the old nan. "Please wait outside, Lieutenant Erlich."

The mate hardly waited until Erlich ad gone. "We've got thirty-eight men, ir," he said. "All but a couple"—he lowered at Paley—"are spoiling to take hese Nazis apart. You ain't going to let em take you over without a fight, sir?"

The old man's eyes were troubled. He looked at Rob Paley. "What is your pinion of this situation, Mr. Paley?"

"We're on our course and making nots," said Mr. Paley. "No good get-ing trimmed till we have to be. They've ot more than an edge on us. I sug-est—"

Mr. Lott turned a thick shoulder to Rob Paley and addressed the master. "I'd like to speak t'you privately, sir, concerning the safety of the ship," he said, coldly official.

"I have an idea of how we could get rid of these Nazis, sir, without violence—" Rob Paley began again.

"I've been watching this man, sir!" Mr. Lott said, stabbing his finger at Paley. His anger was bursting out from under his momentary coolness. "I tell you he's been—"

"Mr. Paley, please take the bridge," Captain Gilmore said without expression.

Mr. Paley left the chartroom. Lieutenant Erlich joined him promptly and walked with him toward the bridge. Eyes in the chartroom followed them.

Lieutenant Erlich did not mount the bridge. Feet apart and hands clasped behind his back, he surveyed his close-ranked men down on the well deck. Then he glanced aft and Mr. Paley, looking, too, saw that Lieutenant Reichert was standing outside the radio shack with both his hands out of sight.

Lieutenant Erlich laughed softly. "I don't believe your captain will try to disarm us, Mister Second Mate."

"There's no need to disarm you," said Paley. "Our job is simply to land you at Lisbon."

Erlich nodded and turned away a little too late to hide the smile broadening on his face.

CAPTAIN GILMORE, walking with a heavy, wooden stride, came from the chartroom and faced Lieutenant Erlich. "It is not my intention to permit any British force to take you off this ship," he said. "That would be illegal."

Erlich smiled again with a derisive twist of the lips. He said nothing.

"You and your men will not be required to surrender your arms, Lieutenant Erlich," the old shipmaster said. "If, however, you attempt any aggression against the ship I promise you a bloody fight."

Lieutenant Erlich bowed and clicked his heels, a facile gesture strange on that merchant ship.

"The radio will not be used and the ship's course will not be changed and her speed will be the same, Captain," he said quickly. "Also, we are permitted to make sure that these things are so? It is agreed."

Captain Gilmore hesitated. That added condition made him a mere prisoner on his own ship.

"No reasonable alternative exists, Captain," the submarine commander said. He smiled.

Gilmore did not reply. He looked like a very tired old man as he turned away.

Lieutenant Erlich ascended the steps to the bridge. Ignoring Paley, he took a turn from wing to wing on that high platform of command. Then he leaned over and hailed his lieutenant, Muhlen, on the well deck, in German. Muhlen relayed his words to the men in sharp command.

Half the men broke ranks immediately. The others grouped themselves in small units, each with a leader. Three men moved toward the radio shack, another group headed by Muhlen himself disappeared into the working alleyway from which entrance to the engine room could be had. Four men came up and stood by on the lower bridge. Erlich remained on the bridge.

The third officer relieved Mr. Paley for supper. Captain Gilmore, the chief engineer and Mr. Lott stood in the messroom. Lott, red-faced and breathing hard, swung around on the second mate.

"How about you, Paley?" he said. "Will you fight?"

"No," said Paley. "I won't."

The rumble of the engines, the vibration of clinking glasses, became steadily more unbearable.

Paley looked at Captain Gilmore and

"LITTLE TOMMY TUCKER SANG FOR HIS..."

YES, he still sings — but now it's for his ice cream Dixie. And today the Tommy Tuckers and Little Miss Muffetts sing so lustily that these famous Dixie Cups of oh-so-good ice cream disappear to the tune of many, many millions . . . year after year.

To the youngsters of America the Ice Cream Dixie is tops in treats. And to their mothers and fathers it's the treat they prefer their children to have.

Why? . . . because ice cream is good for children . . . and because the ice cream companies who use the famous paper cup marked "Dixie" are pledged to pack in it, only their top-grade ice cream. The Dixie Cup brings it to the youngster, clean and without chance of contamination.

DIXIE CUPS

DIXIE VORTEX COMPANY, EASTON, PA., CHICAGO, ILL., TORONTO, CAN.

*DIXIE CUPS are safe guards of health at all times . . . everywhere. In the office, in the shop, in public places, at soda fountains, on trains and airplanes, the common drinking vessel is a thing of the past. The expanding uses of Dixie Cups are but an indication of the trend of the times.*

spoke rapidly, as if fearful of being silenced. "Sir," he said, "Erlich's insistence on course and speed confirms what we know—that there's a submarine intercepting us to take off these men. We also know that the British destroyer Snapdragon is about as close to us, and probably faster. Now—"

"What is all this chatter?" Mr. Lott cut in. "A cover for not bein' willin' to fight?"

Somebody knocked on the door with something harder than knuckles. The door opened almost at once and Lieutenant Erlich stepped in. He had his automatic on his belt now. He stood to one side of the door, revealing three of his men, all similarly armed. All three had their hands on the butts of their pistols. Two focused their eyes on Mr. Lott, the third on Captain Gilmore.

Lieutenant Erlich bowed to the master. "I haf come to suggest, Captain, that during the night you, Mr. Lott and the chief engineer remain in this room," he said curtly. "We rely on the junior deck and engineer officers to work the ship. In that way there is less danger of a misunderstanding arising. Also, Mr. Lott will surrender his pistol for the same reason."

Lott was no fool. He looked from one to the other of the men watching him and licked his lips.

"May I?" said Erlich. He stepped toward Lott, avoiding the line of fire, and drew Lott's gun swiftly from its holster. Without another word he and his men left the room.

SILENCE hung over the messroom like an impending explosion.

When Captain Gilmore moved to the opposite door he was confronted by a cold-eyed guard who motioned him back.

At midnight Muhlen escorted the third mate into the room and beckoned to Mr. Paley.

"Your vatch," he said, and walked with Paley through the mild, black night past a motionless guard to the bridge. There Erlich, buttoning on a watch coat and waking himself up with draughts of coffee, repeated the same words and added, "No change of course."

Mr. Paley took over for the middle watch. Stars, no moon, no lights, little wind and an easy swell. In the wheelhouse the regular quartermaster of the watch was standing behind the binnacle. His sullen face showed vaguely in the light reflected upward from the compass card.

"They got Knupple, that heinie oiler," the helmsman said without moving his lips perceptibly. "Clubbed hell out o' him when he cussed them out in German. Nobody else has been touched."

Rob Paley nodded and lifted his eyes from the compass. Outside, Lieutenant Erlich had recovered from his nap. He had taken the night glasses from the box and was sweeping the sea slowly.

On this black night the illumined American flags painted on the sides of the ship cut down fine vision somewhat except ahead. There the sable curtain hung over the sea unrelieved save by star glints on the swell.

An hour of the bridge watch passed. Lieutenant Erlich continued his search. Of a sudden Mr. Paley stopped beside him and chuckled softly. Erlich jerked his head around. Paley was staring past him at the sea.

"You ought to eat more carrots," said Rob Paley. "There's nothing where you're looking, Lieutenant, nothing but the sea."

"No?" said Erlich. "You have good eyes?"

"At night I can see like a cat," said Paley. He nodded toward the western sky. "Can you pick out the beehive in Cancer even with those lousy glasses?" He stabbed upward almost at the zenith. "How many stars in Hercules can you see?"

"We will dismiss the stars," said Erlich. "You understand you are to report to me every"—he hesitated—"everything you see during your watch."

Mr. Paley grunted and turned away. Erlich's head followed him. Again they resumed their separate watch keeping.

The moment came when Paley's eyes, probing the blackness to starboard, focused on something more solid than the night sky close above the water—a distant and blacked-out ship. A ship—not a submarine. Then, quickly, as Erlich looked toward him, Paley pivoted and faced ahead. He stared past the staff at the Ernestine's bow into empty seas.

"Let me use the glasses, Lieutenant," he said in a thin voice. "I think I see something ahead."

Erlich handed him the night glasses. The submarine commander was tense and wary.

Rob Paley took the glasses, raised them to his eyes and let them fall. They hit the rail and bounced off. They crashed loudly on the steel plates of the well deck.

"Sorry," said Rob Paley.

"You did that with a reason," said Lieutenant Erlich.

HE TOOK a step toward Paley and his hand dropped threateningly toward his automatic pistol.

"You sighted—something—with those sharp eyes of yours, Mister Second Mate," he said. "But it was not ahead. No! It wass on the port quarter that you saw something. Yes!"

He stopped. He turned his head and stared with the utmost effort out over the black night to port. Mr. Paley stood still, facing woodenly forward.

Lieutenant Erlich turned toward him again. "What wass it you saw?"

"Forget it!" said Mr. Paley in an abruptly loud voice. "I've got good eyes at night. But my imagination's better'n my eyes. It didn't even look like a running light."

"No!" said Lieutenant Erlich. He drew close and towered over the short figure of the mate. "It didn't look like a running light. It was not the right color to be a running light, wass it? And it was not a fixed light. No! What did you think you saw?"

Mr. Paley was sullenly silent.

Erlich laid hands on him, big hands that knew their strength and used it momentarily on Paley's throat.

"I give you ten seconds," said Erlich. "What color?"

AS ERLICH'S grip relaxed to allow Rob Paley to speak, Rob suddenly thrust up his fist in an uppercut that landed solidly on Erlich's heavy chin. Even as his fist jolted against the bone he wrenched his neck out of chancery.

Ducking, he tried to lunge past Erlich toward the ladder.

But Erlich was not out. His hand darted at the fleeing officer and his fingers closed on Paley's coat collar. His grip jerked Paley off his feet. He sprawled on his back.

Erlich dropped on him with one knee on his chest. His fingers gripped Paley's scrawny throat.

"Now tell me!" Erlich panted. "Tell me! What color light?"

"Blue light," croaked Paley. "Blue. Don't choke—me! Blue! Don't—"

"Ha—blue!" cried Erlich. His voice was triumphant: "Blue!" He leaped to his feet and called sharply to the guard below. The man came bounding up the steps.

Erlich stopped him with a burst of guttural words and waved him away. The man ejected two quick syllables of assent and ran.

"Come with me," said Erlich. "No noise, now." He shoved the limp Paley ahead of him down the ladder. With impatient speed he forced Paley aft to the starboard lifeboat.

Some of his men were already there. They were swinging the davits and preparing to lower.

Of a sudden the shudder of the engines stopped. Then the Ernestine shook violently as the screw began going hard astern. Her way was checked.

DANIEL ALAIN

The voice of Muhlen, quickly calling the roll of the submarine's crew, came through the subdued noises of the launching. Men answered. More men, panting from the long climb from the engine room, joined the party. Muhlen spoke to Erlich.

"We leave you," Erlich said jubilantly to Paley. His voice flowed like a brook. "We leave you, smart American, and you haf from us no excuse for war. A little impoliteness perhaps—what is that? We go now not to Lisbon but under the sea to Germany where another submarine awaits me. Perhaps some day, Paley, I see you again—through a periscope when your ship shows against the cross wires. Who knows?"

"You'll remember me—if you do," said Paley. He fondled his fist.

"Your ship even now is under German guns and torpedoes," said Erlich. "So—as you say—be good!"

He climbed into the boat and gave the word to lower away.

Mr. Paley pelted toward the wheelhouse. He got to the engine-room telegraph and slapped it over to full ahead.

Feet came thudding up outside. Mr. Lott burst in and, a few paces behind, Captain Gilmore.

"What's— They've gone?" the mate gasped.

Mr. Paley nodded. "Yes," he said. "With a little persuasion they left to be picked up by a British destroyer." He nodded again. "Instead of by a Nazi submarine that isn't there."

"A sub that isn't there!" said Mr. Lott.

"We'll need the searchlight to spot the lifeboat for the Snapdragon," Rob Paley added. "Maybe we'd better keep out o' pistol range while we're doing it. I have an idea that Lieutenant Erlich is going to be mad at me when he does not find that submarine or any blue lights in port."

IT WASN'T until after the men of the Ernestine had watched H.M.S. Snapdragon cool Lieutenant Erlich's martial ardor with a couple of careful near misses that Mr. Paley got around to talking.

"Why get your skull shot at unless he won't think you out of the hole?" said Rob Paley, looking at Mr. Lott.

"Erlich would have had to arrange by radio for the rescuing submarine to make some surreptitious signal," said Captain Gilmore slowly. "I see that. Erlich couldn't tell whether he'd be able to smuggle arms aboard to take command of us or would have to make a surprise rush for the boat."

"But how did you know it was a blue light Erlich was watchin' for?" Mr. Lott pressed Paley with lingering suspicion.

"It wouldn't be the color of a running light because Erlich might mistake some other boat for the sub," said Rob Paley. "That eliminated yellow, white and green. What other color have we got to pick but blue? That's what Erlich wasn't bright enough to realize."

"If Erlich had found out how you were working him he'd—" Mr. Lott stopped suddenly to visualize that picture. "Paley, I guess I got you all wrong."

Mr. Paley looked across the vivid illumined water to where a lifeboat, waving a strip of white cloth from an oar, was pulling sullenly toward a destroyer. International complications were over. He sucked the cut knuckles of his right hand contentedly. "You got me even more wrong than Erlich did," he said. "You thought I wouldn't fight; Erlich thought I couldn't fight much. It took real will power not to knock him down and ruin the whole works."

# Say It Isn't So

Continued from page 15

third. He hadn't meant to lay that one in there, but some rift in his concentration had done the damage. You couldn't expect control when you went woolgathering.

"Three-bagger with nobody down," Magee was growling at him. "What to hell, you lunkhead? I told you not to give that big bum nothin' across the letters. What happened?"

"Just I laid it in there," Buford confessed unwillingly. Your catcher was like your doctor or your priest. You didn't lie to him.

"All right," Magee said not unsympathetically. "It can happen. Bear down now."

Buford brooded as he went back to pitch. Again his thoughts were shattered. A Panther had hit deep to shortstop and the run went over. Buford waved back Beany Magee, who had started to the box. "Beany—nuts! I don't go for that good-guy stuff. It makes me sick the way those writers build us up together. Who throws this thing past the hitters—me or him? I could pitch to any catcher—sure I could."

He took the signal from Magee and settled down. In ten more minutes the game was over; and later, riding downtown in a taxi, Buford read the headlines: "Buford Baffles Panthers." That, he thought, was all right too. He'd rather have a shutout but 3 to 1 was plenty good. His eighth straight win in series competition. Hell, you got lots more than money out of the game. You got plenty.

A crowd of autograph hounds mobbed him in the hotel lobby. In the dining room he joined his teammates over beefsteak and baked potatoes. On each napkin lay a telegram reading: "Congratulations on a notable victory. Three more in a row. Martin Flack."

A PITCHER named Joe won the second game and Lefty Thorne took a ten-inning thriller on the opening day at Panther Park. That evening Buford went to an early movie with Monte Bates, his roommate, and the manager Luke Burnham. They came out and walked together, three abreast, through the dark, murmuring streets of this strange city. They were in hostile territory, a long way from their separate homes.

"Be tough tomorrow," offered Monte Bates.

"Yeah," said Buford.

The manager said, "You feel okay, Dipsey."

"I feel good."

"That's good," said Monte Bates.

They reached the hotel where the Eagles stopped. Earlier at dinner there had been the telegrams again. "Congratulations . . . Martin Flack." This seemed a little odd since Mr. Flack was stopping at the same hotel. Not with the players, of course; but up in the penthouse suite. Martin Flack did things grandly.

The three men went to the elevator well. The indicating arrow of one car pointed at the penthouse digit. The other car was at the tenth floor, but the penthouse lift descended quickly, picking up no passengers. The iron door opened and Beany Magee emerged. He was alone.

"Goin' to bed soon?" asked the manager. "Better had."

"Soon as I get some air," said Beany Magee.

Buford would have thought nothing of this except for remembering his own need of air that time he talked to Martin Flack in the office building. Next morning he stayed late in bed. He always did so on a pitching day, eating a late breakfast and no lunch. When Monte Bates had left, Buford put on a bathrobe and dealt a hand of solitaire on the table by the window. A lot of hokum, he thought, got said and written about ballplayers. The club owners only paid as big a salary as you shook them for. The way things were you had to get it while you could; the rest of your life you couldn't be sure.

He played the jack of diamonds on the queen and dealt himself a ten-spot. You had these chances, now and then, to be your own dealer—in baseball. Not very often—but now and again; and mostly it wasn't worth it.

"But five, six grand," Buford murmured. "Cripes, I might have a family one o' these days! Now what would Magee be doin' up in Flack's room last night?"

Magee did have a family. He had five dependents.

A knock sounded on the door. Buford got up and admitted Martin Flack. The door was closed, and Mr. Flack moved stiffly to the table. He shook his head as Buford motioned to a chair.

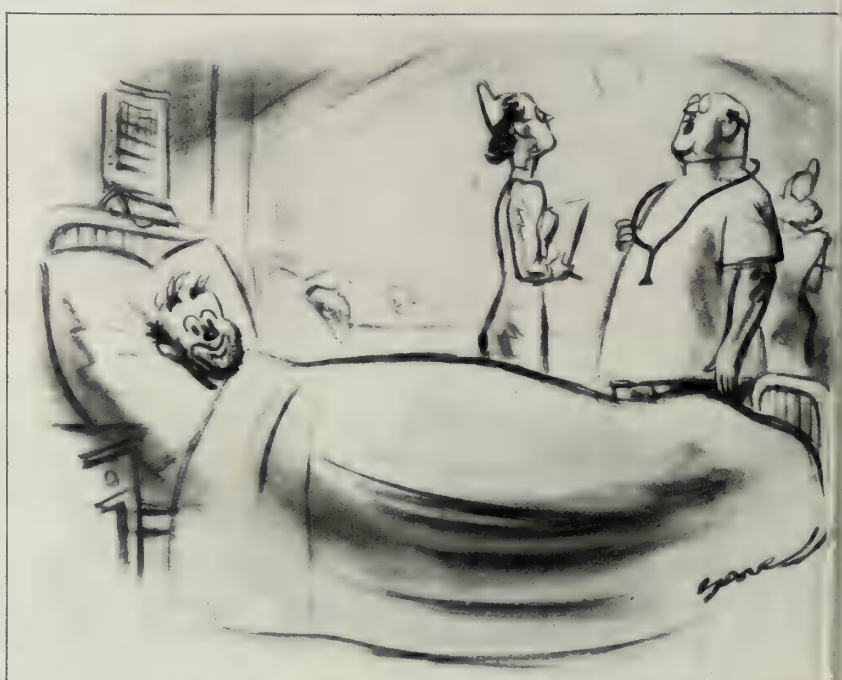
"I heard you were still in bed," said Mr. Flack. "I got worried. You're not ill?"

"No."

"I'm glad of that," said Mr. Flack. "I've been looking forward to seeing you go today. There'll be a great crowd—all of thirty-two thousand with the outfield roped off for standing room. It'll make tough pitching as you said before."

"Yeah," said Buford.

He reached for the doorknob and turned it quickly. That pitcher named Joe could maybe win the fifth game. Or Lefty Thorne could take the sixth. Just to stretch the series out a little wasn't the same as what had been done by Joe Jackson and them. But the time to say it wasn't so was now, and that was what Buford meant by jerking the door open the way he did. He stood there scowling while Martin Flack, very red about the jowls, went past him into the corridor. Buford repressed a strong desire to plant a swift kick where it could be felt but would not show. He thought he'd have done so, only he didn't have his shoes on.



"Hi, there," someone said; and Buford turned to see Magee coming down the hall. Buford nodded a greeting a retired into his room. He took a shower but it wasn't any good. With a tow around his middle he threw the windo open and let the cool morning air into his lungs. Downstairs in the di ing room, he found he wasn't hungr He drank three cups of coffee, but the beefsteak grow cold on his plate. was the wrong way to begin the day, knew; so he was standing wet and nak by an open window. When he reach the park at one o'clock, his shoulc hurt him.

"You don't have to work today," t manager said as Buford warmed "It's only that the boys got their hea set on making it four straight. You our ace, Dipsey, but I could shoot w a southpaw if you need more rest."

"I feel good," said Buford. "Son thin' tells me I'll be hot today."

HE PITCHED to ten men in the f three innings. It would have b nine if Monte Bates hadn't stuck finger in an easy grounder. Luke Bu ham had said a lot of things in th few words before the game. The b "had their hearts set." They wanted grand sweep, and Buford underst about that. The feeling he'd had night while walking with Bates Burnham was a good deal sharpened belonging to a club like the Eag They'd won the pennant by eight games. The Eagles hadn't lost a w series since the Cardinals took the back there when Old Pete did that mous relief job. It meant somethin wear this uniform, and four straight in the tradition of great champion teams. He ran his hitless inn through the fifth. The Eagles led 4 to 0. His arm ached only a little

The Panthers hit him in the six two scratch singles. All the same it enough to arouse the bitter cr These people liked their home-t boys. The Panthers hadn't won t pennant by any eighteen games as the Eagles, but by an inspired driv the September stretch. It had g them delusions of grandeur. Now crowded park reverberated with ch and stompings. Two men on base nobody down. Buford took a stretch and a moment later the up reached crescendo when the base ners pulled a double steal. That d

often happen against Beany Magee. The catcher walked out to the mound.

"They could have stolen Brooklyn Bridge while you took that stretch," he said to Buford. "Cut it down some. Want to walk this guy or pitch to him?"

"I'll pitch," said Buford. "What's he like, bonehead?"

"High and hard," the catcher said. "Don't tighten up, showboat."

They talked this way to each other—these famous battery mates. The papers might call them Inseparables, but it wasn't any secret around the dugouts that Buford and Magee didn't get on. Professional jealousy, maybe. You take a pair of prima donnas, and they aren't apt to like a double billing. But in this case, as Buford always remembered, there was a special grudge. He'd come up to the Eagles twelve years ago when Beany Magee was already a three-year man. And there was that grapefruit game against the A's when the rookie was sent in for relief with the bases loaded. Magee had met him as he reached the box.

"Now, kid, this Foxx—"

"Cut the gab," young Buford said. "I'll break it past that broadsides."

"Listen, busher—"

"Yah!" jeered Buford. "Ain't you never learned to read? I had a strike-out record with the Orioles last season—and it's a hitters' league. I got a dipsey-do ball this Foxx will never see."

BUFORD didn't like remembering. It wasn't a thing you could easily forget. Foxx homered on him—a grand slammer. Simmons homered. So did Cochrane. So did Haas. Luckily it was an exhibition game and didn't go into the records, but—four straight homers off the same pitcher! Buford knew why the manager had left him in there— a fresh kid to get his lumps. Thereafter, he'd always let Magee call signals, but the nickname stuck—Dipsey Buford. He didn't mind it any more, but its use helped him to remember.

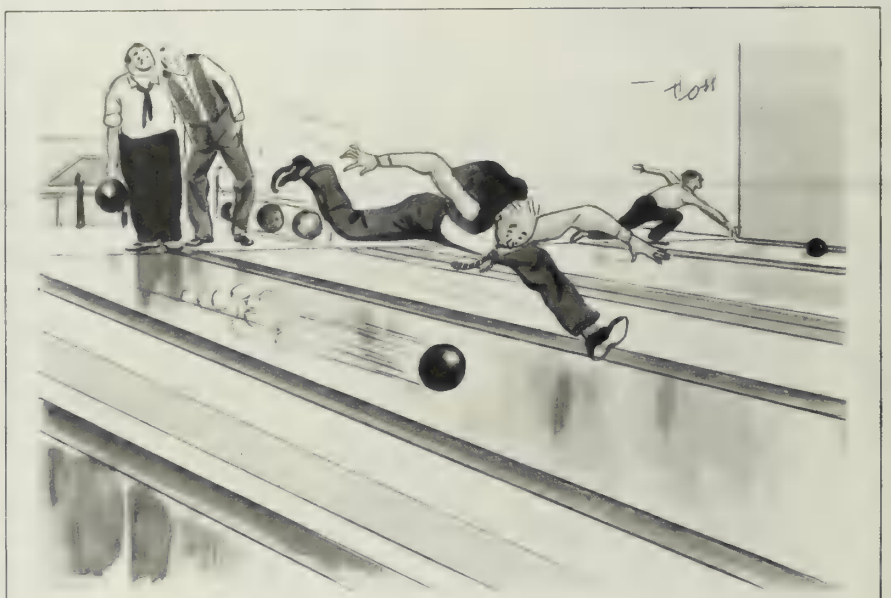
"Come on, Dipsey," yapped Monte Bates. "Pour it down the line."

He poured it down there and the Panther hit. Out in right field the Eagle picket man dove over the ropes into the crowd. He came up with the ball in his gloved hand, but the umpire waved the base runners on. A ground-rule double—! The infield gathered to console their pitcher.

"Never mind, Dipsey. It's stilla two-run lead. Mike would've camped under that pop-up at Eagle Stadium. Yeah, this damn' hatbox."

But there it was just the same, thought Buford. His shutout gone. He walked around to let his nerves settle and spied Martin Flack in the box just over the dugout. He was standing up staring at Beany Magee. Magee was staring back.

Buford took a new ball from the umpire. Funny! The infield had come to the box to talk and soothe him. . . . Magee hadn't. Buford rubbed the ball between his palms, trying to remember. What pitch had Magee called for? "High and hard"—and the batter lammed it. Of course, a thing like that could happen. Still—that double steal! Magee riding down from the penthouse last night!



"Nuts," thought Buford. "A fellow who's worn this uniform for fifteen years—it ain't possible. He might think it over like I did, but when it comes to a showdown—"

He stretched and took his signal. The habit of the years set his fingers on the stitches. His fist shot down; his wrist revolved. He stepped in line with the throw as he released it. Magee had taught him this way of supplying a white background for the ball. It was spinning as it left the bat. The Panther hadn't hit it squarely but there was "top" on his grounder. You couldn't blame Monte Bates when the ball hopped over his shoulder for a blooper hit. The crowd went lunatic as the runner from second slid home. The game stood 4 to 3.

That was all that inning—it was plenty. Buford sank down on the bench and swabbed a wet towel on his face. Luke Burnham said something about relief, but Buford shook his head. He was going to finish—had to finish! He didn't believe that thing about Magee, but the firing line was the place to see what went on. His arm still ached as he trudged back to the mound, but not as much as his throbbing head. The thoughts there were knocking at his temples.

"It ain't possible," he kept telling himself. "I don't like the guy, but he's all sorts of a ballplayer. Gosh—so was Joe Jackson and them!"

Suddenly the air was split apart. Sirens, catcalls, tinpans, whistles—it was the seventh inning! He tried to work calmly on the Panther batsman. Seventh inning—and delusions of grandeur. You couldn't tell what a gang like this would do to you. He tried his downer on the 3-and-2 count. It was outside and the batter walked. The tumult grew

"Mike's trying to see what's the matter with his hook" AL ROSS

deafening as the man was sacrificed to second—to scoring position. Buford hesitated as he caught the signal for a fast one across the letters. Hadn't Magee told him in the first game: "Don't throw him nothin' letter-high?" Was this the same hitter? Buford wasn't sure. He thought so. But he threw the fast one.

WELL, you couldn't be sure. You really couldn't. He stood and watched the ball drop among the standees in left field — another double — another run. Magee had walked out. The catcher's face was pale beneath its coat of sweat.

"You ain't right today," he said to Buford. "I'm askin' Luke to take you out."

"Like hell you are," Buford answered in a cracking voice. "You called for that pitch and you got it. A fast one letter-high—"

"Fast? Jeepers, Buford, that's the trouble—there wasn't steam enough on that one to blow a whistle. You got arm trouble?"

"No, I ain't. And if you ask Luke to yank me, I'll tell him why. Get back where you belong, little man. From now on I call my own pitches—see?"

The catcher's mouth came open, and there was more than surprise in his glance. He seemed about to speak, but Monte Bates came trotting in and the conference ended. Buford set himself to throw and Magee had laid a signal in the mitt—a pitchout. Yes, it was sound strategy. With first base open you might as well walk the man and set up a double play. But Buford remembered that double steal just an inning ago—the beginning of all his trouble. He wouldn't give Magee another chance. He had lied to the catcher about his arm, but maybe Magee had something there. The hop goes off your fast ones when you favor an aching shoulder. You couldn't always tell when you were doing so. Buford stretched to get plenty of height and came down with everything he had. He saw it go through—inside and wicked—and he was down on his knees with a pulsing agony down his right arm from collarbone to fingers.

He struggled up and laughed aloud as Monte Bates ran in.

"Fell over my feet," Buford chortled. "I got my stuff back, Monte. Just relax."

LATER, when it was possible to think it over, Buford guessed this seventh inning was the greatest stretch he'd ever pitched. Out here on his own—with a sore flipper and a ground-rule outfield. There wasn't much you could do about it except strike them out. He fanned three men and strutted to the bench. He'd never in his life found it so hard to strut.

It was like that again in the eighth—only worse. He fanned the first batter and hit the next one in the ribs. The sweat, supposed to lubricate his muscles, wasn't hot and greasy anymore. On this warm afternoon his teeth were chattering and he had to puff on his pitching fingers to give them feeling. He wild-pitched the base runner all the way to third. Luke Burnham came out to the box.

"I better lift you, Dipsey."

"No, Luke. Please."

Maybe all the moisture on his cheeks wasn't sweat just then. Burnham stared at him and cussed and walked away.

"What am I doin' this for?" Buford wondered. "I'll rook my arm, and then what? Why don't I just tell Luke what's up, and get both of us out of the game?"

But he knew all the answers, and they weren't a bit complicated. Walking last night with Bates and Burnham . . . the feeling you had for men you'd been through the wars with. Sure, a guy could make a mistake, and that's what this feeling was all about. You'd crawl out on a limb for a fellow who wore your uniform. Buford glanced toward the box where Martin Flack was still standing up and watching intently. A high hopper went past a swinging bat and Buford gasped. What was the cro clapping about?

"Hear that?" yelled Monte Bates they walked to the dugout. "Even wolves had to give you a hand, Dips Say, bo, you've fanned six men in innings."

And that would be all right, too there wasn't another inning coming Just one? More maybe. This tie ga could stretch on and on. He had to this time. Taking his stick, he went to stand on deck behind Magee. B men glanced toward Martin Flack. fellow was still standing—for good Buford guessed; showing off, like se ing those telegrams. Suddenly Buf had to say it. He grabbed Magee by sleeve.

"Look," he said. "I lied about arm. It'll drop off if the game goes e innings. And look—a guy might himself a crooked hand, but it ain't late to kick the table over. Say it so, Beany! Say it with a loud knock."

The nickname had slipped out of He had never used it before. Mag mouth seemed trying to swallow it Salt water stood out on the leathery

"Yeah," he said; and then he ad "Gosh, Dipsey."

It was next to impossible to h triple in this park, but Magee's banged against the scoreboard in ce field, and the way he went into base was a caution. He stood up flapped the dust out of his pants, then lifted both fists toward a field over the Eagle dugout.

ONE could only guess what Mr. F thought of this gesture, and Di Buford hadn't time to think. He w bat and the squeeze play was on. B didn't miss the signal—he missed ball. He just couldn't get his arms time, and Beany Magee was cha down the base line. You couldn' which catcher was hurt the wor they came together. Something lik had happened before in a world s The Panther hindsnatcher was eve as big as Lombardi. He rolled o back—lost the ball, and Beany M lay across the plate with his face i dirt.

"Beany," said Dipsey Buford. knelt supporting the fellow's head. nothin'—just an ankle. You'll be next season. A guy might make a take—but if he changes his mi time—"

"Aw, hell," the catcher panted seen him comin' out of your roo mornin', but I knew you'd never. when it came to a showdown. Dipsey."

Buford gulped. So that was it thought that Beany—and Beany th that he!

"Him with his busted ankle. M this arm. Ain't we a pair of inse bles, though?"

He didn't fan three men in the but he fanned two with the bases l He'd never have got into the ja thought, with Beany behind th And he mightn't have got out either, but looking toward the be saw Beany Magee squatting ther the injured foot in a bucket of and his fingers flicking signs agai skin of a catcher's mitt. After was easy.

"Here's all I don't understand, Buford in the hospital room tha ning. "That heel propositioned u and there ain't a mark on him should've kicked him in the teeth

To which remark Beany grinn answered, "Did you take notice? stood up the whole game. He ne sit down in that box seat of his."

"Then you—?"

"Yeah, I kicked him, Dipsey. wasn't exactly in the teeth."

# *Folks draw closer together over good food and Wine*

With dinner, serve a light California red or white table wine—such as the *Burgundy* you see here, or a golden *Sauterne*. Between meals, the refreshment wines like *Port* or *Muscatel*. And as an appetizer, *Sherry*. Your wine dealer will be glad to help you with your selections

**NATIONAL WINE WEEK, October 12-19**

## *The wine that comes to dinner helps everybody to relax the moderate way*

IT'S SOMETHING we all feel nowadays. We want to spend quiet evenings with those near to us. Over the dinner table and by the fireside, to ease up and enjoy our families and friends.

This is one reason, maybe, why wine serving has grown so popular. For wine is made to give everyone a chance to relax a moderate way. Wine is made for friendship.

An interesting new booklet on wine serving is available now. Your copy will be mailed free, if you will write the Wine Advisory Board, 85 Second Street, San Francisco. The Board represents every wine grower in California.

You will find California wines are well-developed, sound and reasonable in price. Connoisseurs will tell you these wines of our own country are good by any standard in the world.

When friends and family gather together, try serving wine. You'll see why so many people are finding it a considerate thing to do.

That's from the master's private stock of SHARP cheese

# Gateway to War

Continued from page 13

Until a few days ago Thailand was still the land of free men. It was one of the handful of truly independent nations in all Asia but its future as a sovereign state was dubious. As I cable this I don't know whether I'm writing a timely biographical sketch of an amazing country of fantastic porcelain pagodas that seem to have been designed by some distant Disney, of peace, prosperity and "happiness," or an obituary. I don't know, but when I think back to the day I registered at the Oriental Hotel in Bangkok and saw what names were written there above mine and looked into the bar and saw smug yellow men with eyeglasses and fatuous smiles and cameras slung around their necks, I think that perhaps this is an obit. Those buckos were the Mikado's tourists. In show-business they precede circuses and carnivals and they "case the pitch" and put up posters and wherever necessary they put in the "fix." In show business they're called advance agents. In diplomacy they're called tourists.

The tourist technique is German. It was employed effectively in Europe and the Balkans. German tourists in the Middle East and Arab countries were so numerous you were struck by the stimulus war seemed to have given to travel and to the intellectual curiosity of the German people. They had an enormous advantage over the Japanese. Germans could travel with Hungarian, Czech, Rumanian or Bulgarian passports. The Japs can't disguise themselves. Anywhere in Asia a Jap's a Jap and he can't pose as an Arab, Indian, Chinese or Malay. He stands out among his fellow Orientals like a Texas cowboy at a ladies' club tea party.

### So Japan's Broke?

You spotted them easily in Bangkok. They filled the shops where they bought Niello ware trinkets, old lace and jade jewelry. They paid asking prices, which shopkeepers upped a hundred per cent. Honorable relatives back in Kobe and Yokohama ought to see their honorable sons and cousins throwing yen about in shops and night clubs.

After all you've heard about how Japan is going broke it's amazing to see the amount of money Jap tourists have to spend in Thailand. I saw one large, burly Jap hand a hotel desk clerk a packet of Thai *ticals* large enough to choke a sacred elephant. "Here," he said. "Put these in the safe." Tourists always spoke English in the presence of Americans or Englishmen. The manager later told me there was the equivalent of $2,000 in the packet the Jap handed him and that he received such a wad every two or three days. He said he didn't know what his guest did with the money but he added, "Well, he entertains a lot."

The Japanese population of Thailand has increased steadily since 1935, when statistics listed 67 Japs residing in Bangkok, none elsewhere. Bangkok's Japanese census by the end of last August ranged between 300 and 3,000. Concerning the exact number there were many rumors, some completely false such as the one which insisted that Japs were buying or renting houses on streets and corners so they could dominate the streets with machine guns when *Der Tag* arrived. But it was true that Europeans had difficulty renting houses. The Japs would pay double the normal rents to obtain living quarters. They had also taken over the old Hotel Royal, comprising sixty rooms, where Japs lived two and three to each room. A partial reason for the increased influx of Japs into Thailand is the fact that with world markets and credits closed to Japan, Tokyo has had to turn increasingly to Thailand for money and raw materials and food. This has meant the expansion of the staffs of Japanese trading firms operating in Thailand. These include Mitsui & Co., Toko Mining Co., and the powerful firm of Mitsubishi. A number of new agencies selling machinery and manufactured goods of all kinds have sprung up and along Bangkok's business streets can be seen Japanese signs freshly painted with the invariable English translation underneath the Japanese legend and often a reminder that the above company was previously a Swiss, French or some other foreign firm.

Among the new employees, however, there is undoubtedly a large proportion of strong-arm boys, fixers and propagandists. At least six of Thailand's seventeen newspapers have come under the direct "Axis influence." They receive German Transocean news and Domei Japanese wire services and try as it might the British Reuter's News Agency can't compete with the enormous volume of pro-Axis propaganda which the Axis pours into newspaper offices free of charge. On the reading-room table of the swank Bangkok sports club you will always find the latest Axis literature. There was the July 9th Italian *Illustrazione Italiana* there. A glance through it indicated very strongly that Italy was winning the war. The newest British magazine was dated early in April and consisted largely of pictures of military weddings in London.

To meet the Japs in Bangkok is to receive an object lesson in how Japanese have spread themselves in the Far East since democracy walked Nippon to an imperial first base in Manchukuo in 1931. In Bangkok, Japs are 3,000 miles from home as the Japanese air service flies. The Japs, by the way, maintain a daily passenger-plane service into Bangkok from Tokyo and daily it dumps from twelve to twenty-four new arrivals. Always the passengers are Japanese. Rarely a Tokyo plane brings in a German or an Italian diplomat or a businessman. An American can't get passage on the plane. It's always "full up, velly solly." The best the British and Dutch can do is two services weekly.

From Thailand the Japanese obt rice, rubber, tin and teak. They obtain money in cash and credits. Th land produces an exportable supply 1,600,000 tons of rice yearly. Adde a 1,200,000-ton supply insured by occupation of neighboring Indo-Ch Japan will have all the rice it need feed its far-flung armies and its pe at home. Thailand's 40,000 tons of r ber will at least help to keep Jap armies shod, while there is ample t in Thailand's hills to cover the deck whatever warships Nippon intend build for the rest of time.

### Tin's the Thing

Whether Japan will be able to ob all Thailand's tin is another ma Most of the country's tin mines owned by British capital. Only mine is owned and operated by J nese. Thailand's tin output is w about fifteen per cent of the coun total exports which are valued at a $80,000,000, more than fifty per ce which is accounted for by rice. T Thailand's second most important port but while the country controls production and export the tin th dredged up from river beds is Br property. The rice industry is nati ized and the tin industry is not. J can be deprived of Thailand tin b simple process of the British ref to sell to Japs.

So far that's the way it has wo out. But in precisely such situa advance agents demonstrate their ity. By "influencing" the right p in Thailand's government it is pos that decrees will be forthcoming na alizing the tin industry. In that the Thai government would seiz tin output and pay the British owners what it pleases for ore, s to the Japs at a huge profit as it now with rice and rubber, which is chased by the Japs at from twen forty per cent above normal m prices. Thai rubber, for instance, is of inferior quality, is so high-p on Thailand's rigged market American buyers won't even look

Should Thailand nationalize th industry it is probable the Japanes be receiving what is technically B tin. British officials in Bangkok saw precisely that probability o

"It takes the monotony out of the work!"

eeks ago. It won't be the first time happened. There is plenty of etically British oil from Rumania's which goes to Germany. So far he Russians have had the decency mb those wells, except for a few were sabotaged by American en- rs. The British waited too long in reluctance to protect invested capi-

t the importance of this distant ittle-known country in southeast- sia called Thailand goes beyond conomic significance of its rice- ogs, its teak-timbered hills and its h in rubber and tin. All its com- ties could disappear from the l's markets and they wouldn't be d. Not even the rice would be d by anybody except the Japanese. uld work a little hardship on some 0,000 people who live there, but could lift Thailand out of the map oss it away like a piece out of a jig- uzzle and the lives and the way of f the people of the rest of the world dn't be changed at all.

other ways, too, Thailand is a can- e for the world's least important n. Its contribution to art, literature science equals zero. Measured by yardsticks as power, wealth and ige, Thailand fails to come up to imensions of a bush-league Balkan n, although in area it is as large lorida, Mississippi, Alabama and gia combined. Its army is puny, avy a marine absurdity and its air wouldn't cause a potential enemy Japan any great concern. What ern planes (fifty souped-up 1936 iss seventy-fives) Thailand pos- s are Japanese built. Thailand's th is gauged by the total of its citi- deposits in the country's savings s, equals about $9,000,000, and s out at roughly sixty cents cash person.

to the prestige Thailand enjoys in national councils—well, it's doubt- whether any other power would ever Thailand's permission before under- g an alliance, trade pact or war. gkok was traditionally in a diplo- c tank-town league and for the dip- ats of such nations as the United es, France or England an assign- t to Bangkok meant an assignment blivion.

### Poland of the Far East

evertheless, the country that was Siam and remembered by our dparents almost exclusively as the hplace of the famous Midway freaks be known to us as the birthplace of in the Far East. Economically Thai- l is important only to Japan. Geo- hically Thailand is vitally important he entire world, for geography has gned to this "distant and little- wn country" a potential heroic role. Prince of Appeasement, Neville mberlain, once referred to Czecho- akia as "that distant and little- wn country." In the Far East nchukuo was worthy of that designa- nine years ago. Thailand might be Poland of the Far East.

hailand lies wedged between indis- able British Burma and theoretically nch Indo-China. On the map it is ped roughly like a crudely drawn, py-eared elephant with a long trunk gling southward between the Bay of ngal and the Gulf of Siam toward the th China Sea. The trunk dips into Malay Peninsula below which is tain's fleetless fortress—the Singa- e base. So long as Indo-China re- ined indubitably French, Thailand a spring between the jaws of the nco-British pincer of Western im- ialism in southeastern Asia. But one of that pincer broke when France and Vichy capitulated to Berlin and Berlin's partners in Tokyo. The Japanese replaced the French in Indo-China. They poured up to 150,000 troops into Indo-China, acquired air bases deep in Cambodia from which they can strike at the Burma Road at Bangkok and at Singapore and the Dutch East Indies.

Thailand overnight became the Western civilization's frontier with the Eastern imperialist. It became the fulcrum whereon the balance of peace in the Far East seesaws precariously. British diplomats such as astute Sir Josiah Crosby, his Brittanic Majesty's minister to Thailand, at the end of August counted "in weeks" the period of peace remaining to Thailand and the Far East. American observers were less hurried. They put it in months. "Three months, maybe, maybe six months."

Thais themselves—I talked with undersecretaries of the ministries of foreign affairs and propaganda and with businessmen who were growing richer daily by trading with the Japs—felt insecure. They resented the inroads of the Japanese but felt powerless to prevent their country's economic absorption by Tokyo. A few were interested only in profits. These traded actively with their potential enemy and deplored that they had to.

### The Kiss of Death

The common people didn't seem to have the foggiest notion that they lived under the shadow of death's wings. Meanwhile, in Thailand, as in those countries now dead, advance agents burrowed and bribed and browbeat and flattered their way into positions of power over their victims. The Japanese legation was raised to the status of an embassy. Pro-Japanese Thais suddenly were injected into the cabinet. Japan demanded and obtained a loan of ten million *ticals* and a few weeks later prepared to ask more credit from what was until then one of the few if not the only nation in the world with a balanced budget and no external debts.

"We've got to give in at least economically," an undersecretary of foreign affairs told me. "What else can we do? We need machinery, oil, certain foodstuff and jute sacking. We need spare parts for such American and British machinery as we own. We cannot obtain these items from Britain, which hasn't ships to spare for such cargo and we cannot obtain them from the United States which forbids American exporters to ship merchandise without export permits. These export permits are granted under your priorities system only for such goods or materials as are vital to Anglo-American defense.

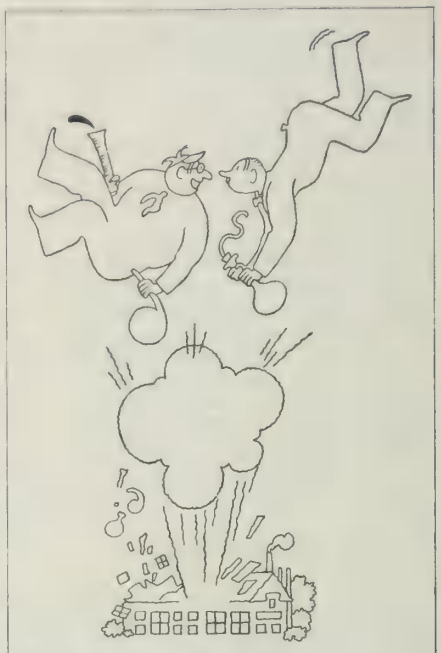
"We have had to buy new machinery from Japan for our industries and our railroads so as to be certain of obtaining spares for repairs. They're willing to take our rice, rubber, tin and teak in exchange and pay us an advantageous profit above the market prices. Tell me what would you do if you were in our shoes?"

Japan's grip on Thailand closed when the Thais embarked on their "war" to regain from Indo-China territories taken by France by force in the late nineteenth century. Altogether Thailand lost 467,500 square kilometers of land to the French, which compares to Thailand's total area of 513,447 square kilometers.

Thailand needed arms and munitions. They ordered ten patrol bombers from the United States. The order was accepted and Thailand paid the United States government $1,500,0000 on account, but the bombers got only as far as Manila and Thailand was informed the bombers couldn't be sent any farther because they were needed elsewhere. This of course, together with brass-knuckle demands that Thailand refrain from upsetting the "status quo in the Far East" washed out what prestige

America enjoyed in Thailand. Thais are very logical people. They couldn't see why they couldn't grab theirs while the grabbing was good in view of the fact that the territorial readjustments they desired had been promised them anyway by France and that Uncle Sam hadn't done anything effective to maintain the "status quo" in the Far East anyhow, and had been selling oil and scrap to Japan and assisted in making Japan the potential ruler of the Orient.

Moreover, one of our former ministers to Thailand, whose principal qualification for his diplomatic post was the fact that he had once been associated with a person now holding high office, offended Thai by arriving late for formal functions and directing the Thai foreign office never to invite legation subordinates to social functions, no matter how private they might be, unless he had also been invited or they had obtained his approval. The Thai government strongly suspects that if its point of view had been differently presented at Washington, those bombers would have reached Bangkok and Thailand would have been spared the necessity of purchasing Japanese weapons. Injudicious handling of the legation's affairs wiped out, in a short while, twenty years of good will built up by sound diplomatic policies and by American businessmen whose advice was frequently sought by members of the Thai government on everything from building railroads to what might be the best kind of refrigerator to buy for the prime minister's house. Such loss of good will is a wonderful footnote on what happens to American prestige abroad when political appointees are assigned to delicate tasks.



Economically Thailand is a small market for American goods. The country buys about six million dollars' worth of stuff from us yearly. But right now its strategic importance surpasses whatever profit value a country might have. Every admiral, general, politician and diplomat I've talked to who knows anything about Thailand agrees that if the Japs move into Thailand, Burma and the Burma Road, Singapore and the Dutch East Indies are threatened. One look at the map and the air distances between Bangkok and Rangoon and Mandalay and Singapore proves they're right. The least the Japs could do from Thailand is so to harass the road that runs from Rangoon into China—and which is the main intake for the supplies that keep China fighting Japan—that it would become useless.

British diplomats assured me that Britain is ready to fight for Thailand, whose occupation by Japan would bring the Japs right up to India's flank as well as in a position to threaten Malaya. American authorities demonstrated instead an inclination to regard Thailand as too little and unimportant to fight about. The Britishers almost unanimously felt that Thailand is "America's show, old boy" and that if war comes we ought to take on somehow the task of defending Thailand. The least the British ask is a joint American declaration with British government saying something to the effect that "England and the United States stand together for defense of the rights of small nations in Asia" or otherwise indicating Anglo-American naval military unity in the Far East. They figure this will scare the Japs stiffer than when they've had three whiskers—which is very quick, for Japs can't drink.

Whether Thailand will fight if invaded neither the British nor anybody else seemed to know. Within that small privileged clique that rules Thailand—most cabinet members are also directors or large shareholders in Thai business firms—pro-Jap Thais said, "W should we fight?" and pro-British T said "Yes, we will fight."

To oppose Japan's formidable machine Thailand has thirty or f thousand troops who have never maneuvers and who believe that t red undershirts will make them pervious to bullets. Its navy consis three submarines which have n submerged because its crew aren't tain they will return to the surface a number of small, poorly armed sloops and gunboats. Thailand's weapons are its new Bofors anti guns. These are better than their sonnel. Thais have never perm foreign instructors in their country though they have sent a few me West Point and several to Berlin, and Tokyo for military instruction, are woefully weak in officers.

Their tanks are old British three-seven-tonners. Their artillery m on wooden wheels. They have few equipped with high-speed axles. own several old Vickers Armstron mored cars and their air force consi those fifty Jap-built Curtisses a hodgepodge of machines of other n —British, American and French—w won't cause Japan much damage. I may seem a hasty underestima Thailand's military strength I am s But shortly before I arrived in Ban two Thais were executed for givin formation to foreigners concernin nation's army and I didn't want t any Thais executed. They're such people living in a little dream where the cereus blooms nightly, that world with an amazing fragi

**"Now, if you can only remember just what you did, Mr. Hoskins, we might be able to sell it to the Army"**

them a slip of paper bearing a San Bernardino girl's address. "It's my sister," the kid gulped. "She wants some soldier to write to her." Nine of the guys have already received identical answers. Each starts: "My name is Bonnie Mae. I am six years old. I—"

SANTA MARIA. This prosperous and attractive agricultural and oil town, about midway between San Francisco and Los Angeles, is enjoying a boom and preparing for a lot of clanking. The first armored division in the West will be stationed within a few months at the new $24,250,000 Santa Maria-Lompoc cantonment, one of four recently authorized. (The others will be at Fort Smith, Ark., Neosho, Mo., and Augusta, Ga.) At the peak of construction, 6,000 workers will be employed on the camp, which also will have an antitank battalion and ordnance, quartermaster and other personnel. On its 90,000-acre site the cantonment will be able to handle 16,200 officers and men upon completion, but will be built to allow for expansion to house 35,000. Santa Maria's 10,000 citizens, making plans for playing hosts to members of the new division, are experienced along the recreation line, for Santa Maria isn't far from Camp San Luis Obispo (40th Division), Fort Ord (Seventh Division) and rambling Camp Roberts (Replacement Center). Civilians visiting the layout get an idea of what a job it represents when Construction Quartermaster Lieut. Col. Harry D. Stetson informs them that a complete set of plans and specifications weighs 160 pounds.

CAMP SEELEY, Imperial Valley. "We're the lowest cavalry outfit in the Army," says Pvt. Arthur Redelsheimer, Troop B, 11th Cavalry, "but our efficiency is the highest." By lowest he refers to camp's altitude, which isn't, because the place is below sea level. Has it been hot there? "Well," says Pvt. Redelsheimer, "Cooks Carl E. Johnson and Walter C. Miller whipped up a cake a while ago, then set it out in the sun to bake while they crawled into the ovens for a siesta."

CAMP HAAN. There's only one way to do anything in the Army, so Corp. Wallace Guido, former professional gardener, was in quite a fix. Ordered to create a smart, sharp lawn for camp headquarters, Corp. Guido requested seed and was told that the Army buys seed only for Army cemeteries. The corporal might have buried a few mascots in the plot and transformed it into a cemetery but the purchasing officer helped him out by ordering the seed anyway. So now the Army has one more cemetery than it knows about. Corporal Guido is proud of his handiwork but squirms a little every time somebody calls him the Italian Gravedigger.

THE fastest hockey on the West Coast has been played in an open-air rink about fifteen miles from Haan, by members from three antiaircraft regiments here from Minnesota, the home of tough hockey players. Local teams are still wondering what up and hit them.

## TEXAS

SAN ANTONIO. To take care of the increasing personnel at Brooks and Kelly fields and at Fort Sam Houston, the government got busy with defense-housing projects in San Antonio. Five hundred units went up; 100 near Brooks, 200 near each of the other two posts. With rental tags of $1.15 a day—the exact amount of the quarters allowance for master, technical and staff sergeants—the new four-room homes were offered to married enlisted men of the top three grades. A month later Landlord Uncle Sam found most of his For Rent signs still out and only eighty tenants on his hands. Reason was that inexpensively built and cut-to-pattern defense homes are without such gimmicks as garages, front porches and adequate landscaping. Though some rents in San Antonio have been hiked slightly, no acute housing shortage has yet developed, and many Army sergeants found they could rent better-looking quarters from private landlords for the same money. The defense-housing men went into a huddle and the houses are now being offered to civilians under a graduated rental charge, based on the income of the renters. For those drawing $800 or less per year the rent will be $13. For higher pay brackets the rental charges are increased until a charge of $50 per month is set for civilian employees earning $3,000 per year. Civilian renters must pay for their own gas, water and electricity. Third priority in renting the houses will go to enlisted men below the three higher grades—to sergeants and men of lower rank. In case all the houses are not rented to men of the first two groups, soldiers in the third group will be permitted to rent them on the same rental scale as that set for civilian defense workers.

## GENERAL

MORE slang. Snow Whites are nurses, Attic Cleaners are aspirin tablets. The Iron Inn is the hoosegow, a G. I. Mickey Finn is castor oil and the Zombie Meat Wagon is a military police truck.

SERGEANT GEORGE RUSSEL the Panama Canal Zone's F Field, started something when h pealed through this department f ters from girls in the States. # Striped for Action

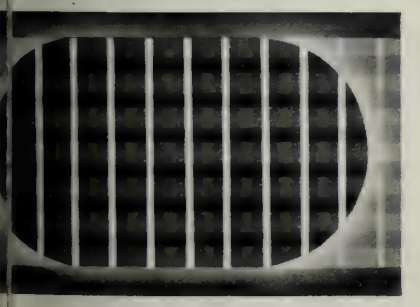
PUBLIC LIBRARY



**SUREFOOTED** and husky as a star ball-carrier is the new *Fisk Safti-Flight Tire*. Hundreds of tread blocks in the *Safety Stripe Tread* are always ready to go into action to help you stop, start, and hug the turns—while the smooth, silent ride of its continuous 7-rib design gives you many more miles of safe driving.

**MORE GRIP.** The instant brakes are applied, block #1 grips pavement; block #2 piles up against block #1 and grips; block #3 jams against block #2 and so on, in a continuous wedging, squeezing, gripping action that stops you quicker! (Note how strips of soft white cushion rubber, inlaid the full depth of non-skid tread, link the blocks together firmly, yet permit extreme flexibility of movement!)

**STRENGTH.** The independent spring action tread block, absorbs small road bumps, protects against outside bruises. Inside the tire, anti- cotton cords, safety-sealed in pure latex, re- th temperatures generated by constant flex- e greater protection against blowouts! (The light Rayon, at extra cost, runs even cooler, less vulnerable to blowouts at high speed!)

**MILEAGE.** Smooth-rolling, silent Fisk light Tread puts more rubber on the road, ot print above), distributes weight over a area to give you a big gain in mileage. thicker under-tread makes possible effec- grooving after the original tread has worn —important when you are looking for tires ill last safely for a long, long, time.

THERE IS NO SENSATION ON EARTH quite like that when your tired body sinks gently into a Beautyrest. Your aches and weariness seem to float away . . . you become instantly, completely, *blissfully* relaxed. No wonder the buoyant support a Beautyrest gives you has been called the "supreme thrill of *luxury* comfort."

# *Things you probably never knew about a mattress*

**1. Springs are joined in the ordinary mattress.**

Mattresses may look alike—but there's a vast difference in the *comfort* they give. That's because comfort depends on the kind of "*insides*" it has. And there are two main types of mattress insides.

This is the "ordinary" type. As you see, the springs are joined together. When you push one down, others around it must go down, too. Thus, the mattress must *slope* toward the spot where your greatest weight lies—give you "sag" support.

**2. But Beautyrest's 837 coils act separately.**

Each one of Beautyrest's 837 coils is like a tiny mattress in itself. Set in its own cloth pocket, each coil yields separately and independently to every whim of your body. That's because it's *not* joined to its neighbor.

And that's why Beautyrest gives you *buoyant* support. However you may lie or turn, your body is *cradled*—evenly, completely, naturally. That's the secret of Beautyrest's *luxury* comfort!

**3. Sit on a Beautyrest all you want!**

Thanks to a patented "sag-proof" border, the edges of the Beautyrest can never break down. Sit on them all you want. Those deep, deep sides stay firm and even and resilient.

Lumps and hollows just won't form on a Beautyrest, either. So, the whole mattress stays smooth and neat-looking throughout its long, long life. That's why you have to turn your Beautyrest only 2 or 3 times a year!

**4. This 10-year guarantee is conservative!**

If any structural defect occurs within *ten f* your Beautyrest will be rebuilt free of Which is a promise you'll probably nev hold us to. For these are the findings of a independent laboratory:

The United States Testing Company the 17 leading popular-priced makes on th tress Endurance Machines (Cert. Test No *No other make lasted one-third as long as Be*

**5. Why Beautyrest stays "fresh" inside.**

Some mattresses will get stale and musty in time. Not the Beautyrest. The ve around its deep sides are not just ornamer really *ventilate*.

Prove this to yourself. Put your hand of these openings as you sit down on a Be You'll feel the air come breathing out. As you'll feel fresh air being drawn back in the mattress fresh and clean and sanitary

*This is the Beautyrest label.*

**6. Beautyrest costs only a penny a night!**

Different from other mattresses, the Bea always the same price *wherever* you g (within the United States).

The Beautyrest is a *real* bargain at t Figure it out for yourself. On our con 10-year guarantee alone, it comes dow *a penny a night* . . . for the most luxuriou comfort known to man! Is that a bargain

es good old Oscar. Help him with picnic hamper, will you, Bob?"

scar was coming up the path from beach, grunting and puffing beneath avy load. He carried a canvas pack- on his back, filled with canned ls and bottles. There was a rifle g over his shoulder, in one hand he a heavy suitcase and in the other a ic hamper.

Why," Mrs. Kingman said, "Oscar s like Santa Claus."

Good old Oscar," said Mr. Kingman, t like Santa Claus. Not that bag, , the other—the picnic hamper. ll try the house first." Mr. Kingman ed at Oscar's canvas packsack. "Ah, e bottles of Ruedesheimer. We can them in some spring. They may e us sleepy after lunch, but then at is so rare as a day in June'?"

EY were all in a little group in that earing near the pier, and Bob Bolles embered later, when he tried to re- struct the scene, that Mr. Kingman's had been fixed on the tangled vines bushes in front of him, until he had nined the wine that Oscar was car- g. When he had turned to look at wine bottle his head had moved ways away from the beginning of old road which led from the dock. road was nothing but a grassy trail wound beneath a gigantic candle- d whose heavy roots ran through the s like enormous hands. Suddenly Bolles saw Oscar's body stiffen.

Achtung," Oscar said sharply, —" and Bob remembered later Oscar had never spoken a German d before. Suddenly Oscar was not wede but a German. Mr. Kingman whirled about before Oscar could finish and Bob Bolles turned too, moved by that sudden urgency in Oscar's voice. A moment before there had been nothing on the path but now beneath the cool black shadow of the candlewood, not twenty feet away, a small man in a grass-stained white suit was standing, holding a short, blunt automatic pistol.

"Please," he said sharply, "Mr. Kingman, please." His last word ended in a gentle persuasive hiss, and before he spoke Bob Bolles recognized him. It was the Japanese from Kingston—Mr. Moto.

There was a silence—a strange, shocked, stony silence. Bob Bolles was standing just a pace behind Mr. Kingman, so that Mr. Kingman's silk coat, his pith helmet and his shoulders were like the foreground in a picture beyond which were the glade and the candlewood and Mr. Moto. He could see Mr. Kingman's muscles beneath the coat taut and absolutely motionless. Mr. Kingman was holding his rifle ready at his hip, but the line of its slender, dark barrel was a little off the mark, although an instantaneous flick of Mr. Kingman's wrist would bring it bearing straight on Mr. Moto's body. An almost imperceptible motion, a pressure on the trigger—and there you were.

Yet Mr. Kingman waited and Bob Bolles knew what he was thinking, as he watched the back of Mr. Kingman's head. He saw a little bead of perspiration roll down Mr. Kingman's neck. He could not see Mr. Kingman's eyes, but he knew that they were boring into Mr. Moto's eyes and Bob knew that any moment something might break that perfect equilibrium of time. Mr. Kingman was standing there, figuring it to a hairbreadth. He was estimating his chances if he moved and fired and Bob Bolles was completely sure that no consideration was disturbing Mr. Kingman, except the possibility of success. Then Mr. Moto spoke again.

"Please," Mr. Moto said, "no reason for this now. Later perhaps, but not now, please," and suddenly he smiled. "If we start it will be so very, very difficult. So few of us will be left."

"Oh," Mr. Kingman said, "do you think so?" His voice was unshaken, almost unchanged.

"Oh, yes," Mr. Moto said, "I think so. It is so nice when number one people meet on missions. You and I we are first class. We are thinking of the end. I was so relieved when I knew it was you, Mr. Kingman. Please, it is better to wait, for now so few of us might be left that nothing could succeed for any of us."

"Oh," Mr. Kingman asked, "what makes you so sure?"

The gold in Mr. Moto's teeth glittered again. "There was a combination so very like this in Singapore," he said, "an associate of mine was so impetuous. He shot before he thought, so much better to think."

Mr. Moto paused, but he had not moved his dark, narrow eyes from Mr. Kingman's face. "I have been waiting for some minutes for this chance to talk. I could so very, very easily have shot you from cover, Mr. Kingman, but I think this way is better."

"Oh," Mr. Kingman said, "why is it?"

"I am not an airplane mechanic, Mr. Kingman, and you are," Mr. Moto said. "So much better that we work together."

"Oh," Mr. Kingman said, "so that's it, is it?" But neither of them moved.

"Yes, please," Mr. Moto said. "I should be so sorry. If you move now I think that I should kill you before you have your rifle pointed. In the meanwhile the other man with the bags, he would have a shot at me of course. It is so very dangerous. Do you see? We might be so very much hurt that there might be no result for any of us. So too bad, Mr. Kingman, after so much trouble."

THE tension about Mr. Kingman's shoulders relaxed. "I can see your reasoning," he said. "What do you suggest?"

"That is so nice," Mr. Moto said. "I was so sure it would all be so happy. It would be so much nicer if we could make some arrangement for a little while. I should be so honored to take your word—to do nothing for ten minutes."

"Well," Mr. Kingman said, "all right. There isn't any hurry."

"So nice to be working with nice people," Mr. Moto said.

Mr. Moto put his pistol in his pocket and Mr. Kingman put his rifle in the crook of his arm.

"It was careless of me," Mr. Kingman said. "I should have seen you. I thought I was better in the bush. All right, Oscar. So that was you on the boat last night? She wasn't anchored here."

Mr. Moto took a purple handkerchief from his breast pocket, took off his Panama hat and wiped the band. "Excuse, please," he said. "So very hot, I think."

Mr. Kingman also took off his sun helmet and mopped his forehead. His eyes were coldly blue, but his voice was unruffled and agreeable.

"I was looking for that confounded motorboat," he said. "You did it very

well. I'm not generally so easy to—to get a drop on. I knew you were on the job, of course. You Japs get nearly everywhere these days, don't you? You almost picked Mrs. Kingman off in Kingston, too, didn't you? I wasn't quite ready for that either."

Mr. Moto gave the crown of his hat a gentle pat.

"It was an effort, please," he said. "You were recognized when you got off the boat. The English police were quite stupid, I think. But, please, it was not to pick Mrs. Kingman off. Simply to extract the location. We knew she had it, please."

"I see," Mr. Kingman said. "I wonder if you tried the factory in the States."

Mr. Moto nodded. "Just as you did, Mr. Kingman. It was too well guarded, was it not?" He walked toward them, fanning himself with his Panama. May I introduce myself, please?" he asked. "So much nicer," but Mr. Kingman looked puzzled.

"Have I ever seen you anywhere before?" he asked.

"So sorry," Mr. Moto said, "only for so little time. Ha-ha, the Japanese they look so much alike—Vladivostok, in 1934, and then in '38 in Berlin."

Then Mrs. Kingman spoke. "Why, Mac," she said, "that year—what were you doing in Berlin?"

"My dear," Mr. Kingman said gently, "never mind it now," and Mr. Moto bobbed his head.

"I am Mr. Moto," he said. "So very honored to represent the interests of my government, so glad to be acquainted, Mr. Kingman, and the lady—she is German? So sorry she is here."

"German?" said Mrs. Kingman sharply. "We're French from the Vichy government."

"Oh," Mr. Moto said, "I understand. I had always heard that Mr. Kingman worked for himself—not for any government—and then sold. So very businesslike—" and he bowed again, and Bob Bolles found himself wishing that he would not keep bowing. "I am sorry, very, very sorry you are here, Miss—" Mr. Moto paused and waited. "So much better if you had stopped in the silk shop." Mr. Kingman shrugged his shoulders.

"She is Mrs. Kingman—just at present," he said, "and that's my man Oscar working with me, and this is the skipper from my boat," he jerked his head sideways toward Bob Bolles. "Now you've got us straight, if you hadn't before."

MR. MOTO was still smiling, but there was no humor in his eyes when he looked at Bob Bolles. "An American," he said. "Yes, we've met. So very sorry he is here. We are searching for the same thing, of course."

Mr. Kingman's voice was suddenly sharp: "You haven't found it yet?"

"Not yet," said Mr. Moto gently, "but I am very sure it is here."

"Look here," said Mr. Kingman, "would you mind telling me how you found this island? I thought our information was exclusive."

"Yes," said Mr. Moto, "no reason why I should not tell you. I was sent to watch for you in Kingston after we tried the factory—so unpleasant at the factory. When I saw you take your boat I took a plane and watched your course. When I saw where you were pointed, I was so sure, please, where you were going. There was no plane to charter for the distance, without disturbing the police. I hired a motor cruiser in Kingston. It took me two days. The English are so very suspicious. We landed here early this morning."

Mr. Kingman drummed his fingers softly on his rifle stock. "Where is the crew now?" he asked.

The smile died out of Mr. Moto's face. "So sorry," he said. "It was better to send the boat back. I wanted no inside interference please. I am a scientist searching for butterflies."

"All right," said Mr. Kingman. "How are you planning to get back?"

"I shall arrange it later," Mr. Moto said.

Mr. Kingman laughed. "You don't think I'm going to take you, do you?"

Mr. Moto sighed and shook his head. "It is what I say," he answered, "this is so very serious. My trouble is that I am not a mechanic, Mr. Kingman. I am hoping so very much that we can work together to find an airplane which the French vessel the Aquitane left here. Mrs. Kingman, I think, brought you the information it is here. I hope to take from it the important new appliance and to find from you or Mrs. Kingman exactly what it is."

Bob Bolles rubbed the palms of his hands carefully on the sides of his duck trousers and he felt his heart beating in his throat.

"I see," Mr. Kingman said, "there is only one trouble Mr.—Mr. Moto."

"Yes," said Mr. Moto, "what is that?"

"I want it myself. I'm on a specialist job—you see."

Mr. Moto shook his head sadly. "So sorry," he said. "But one of us will have them, Mr. Kingman, in the end."

"And you're here all alone?" Mr. Kingman said. "You—you think you can tackle the whole lot of us?"

"So nice," said Mr. Moto softly, "so nice you understand."

"Well, thanks for telling me," said Mr. Kingman heartily. "You're a damned—damned cool customer." Mr. Moto looked slowly at the four of them, and then his eyes rested on Bob Bolles again.

"I can see," he said to Mr. Kingman. "why you brought the lady, for she no doubt has special information, but for this man who sailed the boat—I do not think it was wise of you. I am surprised to see him here, very much surprised."

They were all looking at him and never in his life had Bob felt so entirely alone. Mr. Kingman was half smiling, half frowning as though the remark annoyed him. Oscar licked his lips as though they were dry, but what alarmed him most was Mrs. Kingman. For the first time that morning Mrs. Kingman looked afraid.

"Mac," she said quickly, "you promised me. There isn't any need."

"Of course there isn't," Mr. Kingman said heartily. "Bob here is as right as —as rain, and Bob will back me up. It's four against one, Moto."

MR. MOTO'S face was wooden and expressionless. His voice was monotonously precise.

"So sorry," he said. "I think the lady might walk away for a moment. It would be nicer, I think."

"What do you mean?" Mr. Kingman asked. "No need to go, Helen."

"I say again, so sorry," Mr. Moto said. "Do you not know this man is formerly a lieutenant in the Navy of the United States?"

"Of course he was," Mr. Kingman said. "I know that, Mr. Moto. And he was—was busted out of it. He's a—harmless drunk, excuse me, Bob. He's being paid enough so he'll be happy for two years. It's all hunky—hunky-dory."

"What is that word, please?" Mr. Moto asked.

"Hunky-dory," Mr. Kingman said. "American slang. It means everything all right."

"Thank you," said Mr. Moto. "Your English is so very good, Mr. Kingman. I have studied at an American university and I do not speak so well. I am sorry."

"For Pete's sake," said Mr. Kingman, "don't keep on saying you're sorry. You're sorry for what?"

"So sorry for Mr. Bolles," Mr. Moto said. "Excuse me, you were not ve

ful. Do you know where Mr. Bolles
t after you saw him, Mr. Kingman?
why I am sure it will be so much
r for us to work together."
No," Mr. Kingman said. "Where did
o?"
r. Moto rubbed his hands together
y.
He went," Mr. Moto said, "straight
he hotel. So sorry for you, Mr.
es. And there he called on the of-
of the United States destroyer the
dley, and that is not all, please.
Smedley is inquiring for the French
el the Aquitane. So sorry."

E wrinkles on Mr. Kingman's face
eepened. He did not speak for a
nent, and Bob had never been so
cious of every personality.
Mac," he heard Mrs. Kingman say,
Mr. Kingman shook his head at
and Bob saw Mr. Kingman's fin-
move toward the lock of his rifle.
Please," Mrs. Kingman said, "*please,*
:"
Helen"—Mr. Kingman's voice was
genial and pleasant—"you know me
enough not to say 'please.' You are
e right, Mr. Moto. You're a nice
Bob, but it's the—the game, isn't
You today, Mr. Moto or me tomor-
Helen, go down to the beach. We
call you in a few minutes. Who
l it be, Mr. Moto, you or me?"
Ir. Moto pulled out his purple hand-
chief again. "Since it was your over-
t, please," he said, "it would be so
h nicer for you, Mr. Kingman, un-
of course you are too friendly."
Oh, well," said Mr. Kingman, "I was
ned stupid. Go down to the beach,
en. You wanted to pick up shells."
ut Mrs. Kingman still waited. When
spoke again Bob had a feeling of
itude that shook him, but it made
for the first time really believe in
t was happening.
But both of you were wrong," she
l. "Look at him. He isn't one of us."
Oh," Mr. Kingman asked, "what
es you say that, Helen?"
ven then, when all sorts of thoughts
e running through his mind, Bob
les was impressed by a discordant
lity in her voice.
How can one explain a matter like
t?" she said, and even her accent
different. "One can tell if one has
n in the profession. Why, one can
t out the others like us in a crowded
et. I saw it in your face even before
et you. Why, anyone can read it on
Japanese."
Madame has so very much intui-
n," Mr. Moto said.
It's the everlasting lying," she went
as though she had not heard, "the
rlasting trying to laugh and to smile
en you're afraid, the watching and
danger. I have talked to Mr. Bolles
l he hasn't it in him, not the per-
ality nor the capacity."
Then Bob Bolles spoke for the first
e. He must have been afraid—he
s certainly afraid—but he still could
get it through his mind that he was
person who was standing there.
That's right about my personality.
e experts say there's something
ng with it."
Mr. Kingman smiled sympathetically.
seemed politely, mildly interested.
So very nice to talk so," Mr. Moto
d. "It shows your personality is very
e."
No," said Mrs. Kingman, "it isn't
t. Can't you see he's too honest?"
My dear," Mr. Kingman said, "this
't like you, Helen, to give away to
otion. Or are you emotionally in-
ested in Mr. Bolles?"
Her face became a dull red. "No,"
answered, "of course not."
Then you had better go down to the
ch," Mr. Kingman said, "—unless,
course, you want to stay."

"No," she said, "I don't want to stay," and she turned quickly, as though she did not want to look at any of them, particularly at Bob Bolles, and walked past the palm-leaf huts toward the beach. They stood there waiting until she was out of sight.

"Too much emotion," Mr. Kingman said. "She is very good, but it is the difficulty with women. You are to be congratulated, Bob. You seem to have got further with her than I have."

It was only when he saw her walking away from them that Bob Bolles felt his first wave of panic. He had a sudden choking desire to run, to take the chance and to plunge into the bushes, and perhaps they hoped he would. He always thought that he would have run for it if Mr. Moto had not spoken.

"If you have any messages, please," Mr. Moto said, "we should be so very glad. So customary with all of us."

Mr. Moto's voice steadied him. He put his hands in his pockets so that no one could see that they were shaking and he cleared his throat. He had the most absurd desire that no matter what happened he wanted Mr. Kingman and Mr. Moto to think that he had done it well.

"There's just one thing," he began.

Mr. Kingman looked sympathetic and kindly. "Yes," he said, "go ahead, Bob. We don't want to hurry you."

It might not work, but if he could make them understand that they needed him, he might get out of it. He tried to keep his mind on that single point, although it was very hard to do, because his thoughts seemed to dart in all directions.

"This is all rather new to me," he said. "I guess everyone's been doing a lot of thinking. But have you thought who's going to sail that boat? You and Oscar can't do it, Mr. Kingman. You'll need a navigator to get out of here."

Bob Bolles felt his heart beating in his throat. There was no way of telling from watching them whether the idea was new or not. Mr. Kingman glanced at Mr. Moto. Mr. Moto's eyes grew narrow.

"So fortunate that I know navigation," Mr. Moto said.

"Perhaps you do," said Mr. Kingman. "That changes it a little. Perhaps you won't be going with us, Mr. Moto."

SUDDENLY Mr. Moto began to laugh. "It is funny," he said, and Mr. Moto laughed again. It was the perfunctory laughter or his race, which did not have much humor in it. It appeared to annoy Mr. Kingman.

"What in—in hell is funny?" Mr. Kingman asked.

"So amusing," Mr. Moto said, "how all life hangs on little threads, so very, very delicate. Let us put it this way, please," Mr. Moto raised one finger. "I did not kill you, Mr. Kingman, because you understand the airplane. You did not eliminate me, because there is as yet no chance. Besides if the Americans are coming we must all work together."

"If they were coming," Mr. Kingman said, "they would have been here before now. How about it, Bob?"

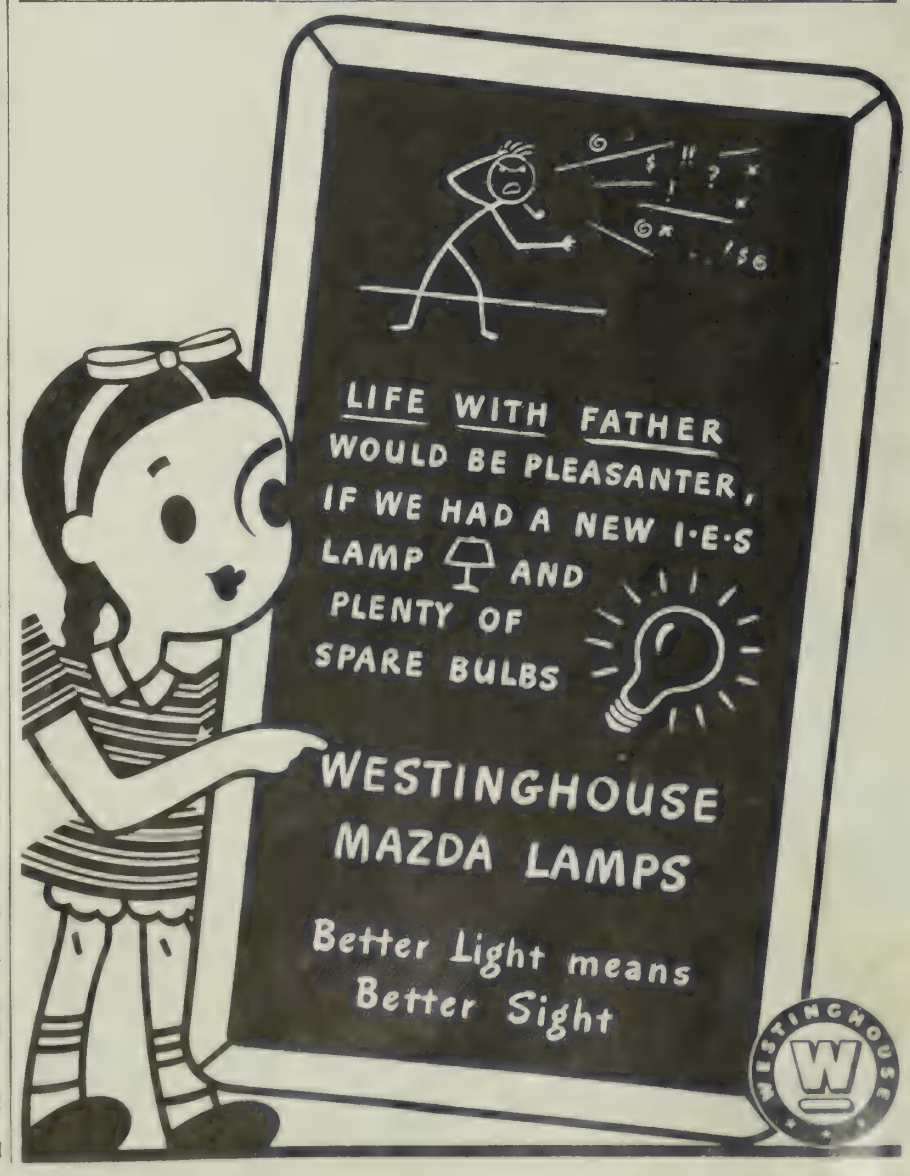
Bob Bolles shook his head. He had not the least idea where the Smedley was, but he could tell that things were looking better.

"I'm not telling, of course," he said, "even if I knew."

Mr. Moto raised another finger. "So serious," he said, "so very serious."

"Oh," Mr. Kingman said, "damn—damnation! I'm trying to think!"

"Yes," Mr. Moto said, "it is time to think. I am so sorry that I do not need him."



"Wait a minute," Bob Bolles said.

"Yes," said Mr. Moto, "yes?" And Bob Bolles grinned at him.

"Do you know the Caribbean well

NEW, EASY WAY
To Get Greater Breathing Comfort

Easy to carry, easy to use, the new Vicks Inhaler is mighty welcome to folks "on the go." It's packed with effective medication that makes a cold-stuffed nose feel clearer in seconds. And it's one inhaler you can use as often as needed.

enough to get away if you're chased? I know nearly every harbor, Mr. Moto, in these waters. I know where to hide."

Mr. Moto expelled his breath softly between his teeth. "No," he said. "I had not thought of that—if the destroyer is on its way—"

Mr. Kingman moved impatiently. "Moto," he said, "maybe you and I'd better talk for a few minutes in private."

"Oh, yes," Mr. Moto said, "yes, I think it would be very nice."

Mr. Kingman beckoned to Oscar. "Take Mr. Bolles down to the beach with Mrs. Kingman, Oscar, and keep an eye on him," and then he smiled. "Goodby, I'll see you later, Bob."

"Please," Mr. Moto said, "just a moment, Mr. Bolles. If this man with you should try to leave you, perhaps to shoot at me, will you call me, please?"

"With pleasure," Bob Bolles said, and Mr. Kingman began to laugh.

"By—by jingo, Mr. Moto!" Mr. Kingman said. "You really do think of everything."

Once, several years before, Bob Bolles had been piloting a training plane when the motor inexplicably had gone dead. He was losing altitude fast when, equally inexplicably, the motor had picked up again and he had been able to level off, but those few moments never wholly left him. His half-mechanical, half-pathetic efforts at the controls always came back to him, while the certainty had grown on him that it was all over. When he heard the roar of the motor again, there had been a sort of nauseous, giddy weakness which in its way had been worse than that sense that he was through, and now the same feeling was with him. When he walked across the clearing toward the beach with Oscar a pace or two behind him, Bob Bolles thought for a moment that he might be physically ill. The trees and the little bay, everything was blurred. He felt a sharp prod in the small of his back. It was Oscar poking him with the muzzle of his rifle.

"Get on, you," Oscar said, and Bob Bolles realized that he had stopped walking without knowing it. His vision cleared and Mercator Island and the bay were back, lonely, warm and beautiful. He heard the faint breeze in the palms again and the humming of insects and the chattering of birds.

"ALL right," he said, "all right, Oscar," and he began to walk again, and the sea and the air, everything had a new beauty. The Thistlewood was still anchored in the harbor. He had never thought until then of human life as a factor in an intellectual problem which could be eliminated as easily as you crossed out a mathematical symbol with a pencil. He had never associated before with individuals who considered life in just those terms.

"You today," Mr. Kingman had said, "and Mr. Moto or me tomorrow." They were spies, the secret agents he had read about, but he had never seen a spy before. He had never considered before that he had led an immature, protected life, and now life was like walking on a tight rope across a chasm. Mr. Kingman and Mr. Moto had been so trained to it that they could move as easily as gymnasts in a circus, but he had not been trained to it, and now he was out on a wire balanced somewhere over the gap of infinity. Halfway across the clearing he stopped again and faced Oscar.

"Say, Oscar," he said, "how about rowing out to the boat and getting a drink? I need a drink."

"We go out to no boat," Oscar said, "and we get no drink."

"Oh, all right," Bob said, "but don't be so gloomy, Oscar."

He would not have lasted for a single minute if he had not known how to sail the Thistlewood. If Tom took the Thistlewood away there would be no reason for him at all.

"Go on," Oscar said. "Keep walking."

"All right," Bob said. "I was just thinking about something, Oscar."

He was thinking that Tom was within earshot, watching them from somewhere. He had only to shout for Tom and Tom would come. He only had to tell Tom to forget what he had told him to do, and there was no reason why he shouldn't, for none of this business was his funeral. Yet he knew he would do no such thing. He would have to go ahead and take what was coming to him.

Mrs. Kingman was sitting on a log with her back toward them, looking at the sea. She did not move when she heard their footsteps. She did not move until he spoke.

"Hello," Bob Bolles said. Then she jumped up very quickly. She made a queer sort of picture in her gaily colored beach attire, because the color only emphasized the deadly whiteness of her face.

"It's all right," Bob said. "They haven't got me yet."

"Why—" she began, "why—"

"Because someone had to sail the Thistlewood," Bob said. "Oscar's down here to watch me so I won't get away, and Mr. Moto's having me watch Oscar so he won't get away."

She reached out her hand to him and he took it and her fingers gripped his very tight.

"Oh," she said, "I've been so—so sick! I'd have done anything, but there wasn't anything to do." When he thought of Mr. Kingman's eyes, he knew that she was right.

"Why, you did everything you could," he said. "I guess I'm in a bad way, but I'm glad you're not married to him."

"You behaved so well," she said. "I knew you would. Of course I'm n married to a man like that—or to an one else. Are you still glad?"

"Yes," Bob said, "I am."

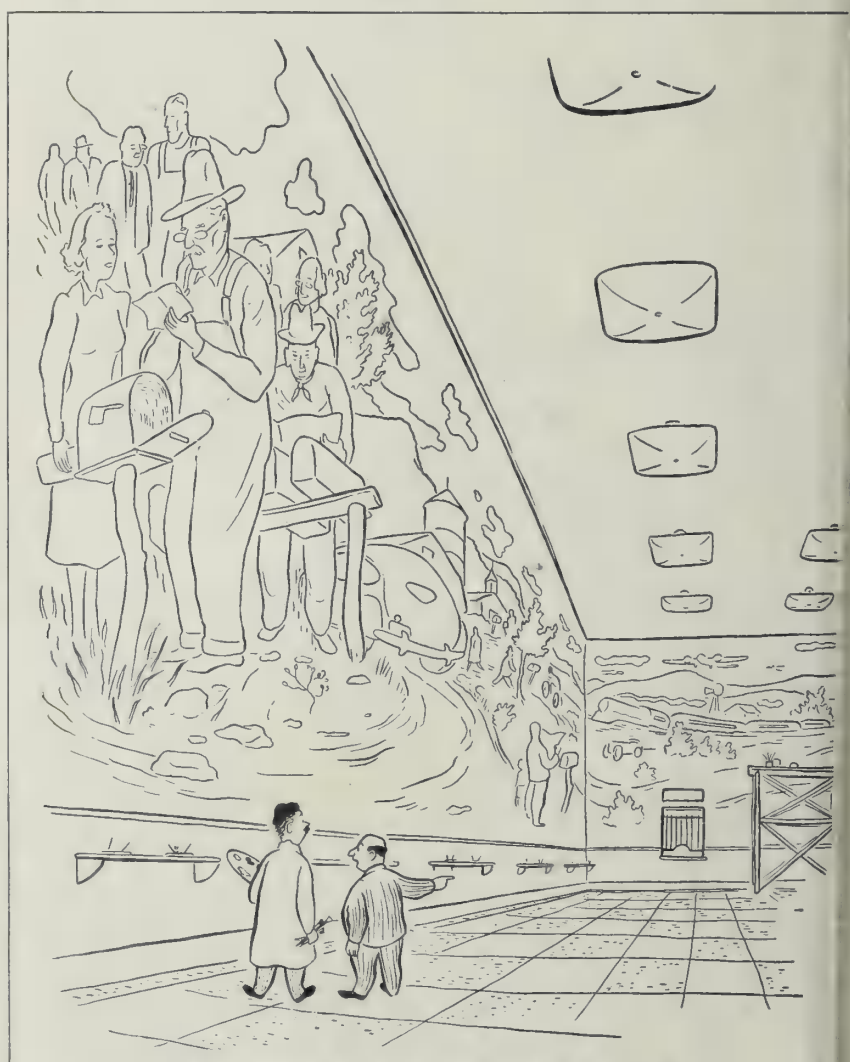
"If I'd been armed—" she bega "Where are they now?"

"Talking," he told her.

"Oh," she said, and she dropped l hand and turned to Oscar.

"Go and sit over by the bank," s said. "It's all right, Oscar."

"Yes, ma'am," Oscar answered, a he walked to the edge of the beach a sat down with his rifle across his kne



"We can talk," she said. "His Engli is very bad. I don't know where M picked him up. He's faithful and tha about all."

SHE had been shaken when he fi appeared but now she was entir different. It was as though she had herself away from any sentiment. S was beautiful, tranquilly beautiful, l now she had a new intensity, some p pose which he was sure had nothing do with him. She was looking tow the ruined pier, where he had left l Moto and Mr. Kingman, and her l were twisted into an enigmatic sm

"He'd better take care," she said. S was not speaking to him—she speaking to herself. Bob Bolles put thumbs in his belt. He had not yet l that sudden sense of gratitude that was still alive and his new appreciat of everything around him included l Somehow her disregard of him m him more completely conscious of than he had ever been before.

"Who are you?" he asked. His qu tion appeared to interrupt her train thought and first she looked almost patient at his interruption. Then looked straight at him, as though wanted him to have the truth whe he liked it or not.

"That's rather stupid of you," answered. "You must know who I

..."You mean, you don't trust him?" ... asked. "You're afraid he may take ...r himself?"

..."Yes," she said slowly, "that's just ...t I mean."

..."That's why you wanted me to take ... here alone?" Bob asked.

..."Yes," she said. "And now I'm going ...sk you something." She paused and ...voice had become insistent.

..."Go ahead," Bob told her.

..."Will you help me? Quickly. They'll ...coming back."

...ER words were slow, but they were ...perfectly distinct. Oscar was watch- ...them, but he was nearly out of ...shot.

..."I guess you're right not to trust him," ...o said slowly.

..."I shall get it anyway," she said. "But ...ould be easier if you helped."

...Bob Bolles drew a deep breath. "I ...ss you're quite a girl," he said, "if ... want to tackle Kingman. I'd like to ...p you, but I can't."

..."Why not?" she asked.

..."It isn't anything personal," Bob said. ...guess I used to be pretty selfish once, ... I've learned a lot on this cruise."

..."Hurry!" she said sharply. "I hear ...m," but he did not hurry. He was ...king up his own mind as much as ...aking to her.

..."You've been fair to me and I'll be ... to you. I don't know what this thing ... but my people want it—America ...nts it—and I'm going to try to get it ...hat's all." It was not all. It seemed ...nge for his mind to go back to it. ... was thinking of Captain Burke on ... Smedley and of his fitness report.

..."I thought you'd say that," she said.

"All right," he answered. "I'm glad you thought so."

"But you can't," she said. "You mustn't. You don't know—"

"You're right there," he answered. "There's a lot I don't know." But he was learning more and more. He had learned a lot in the last hour.

"Be quiet," she said. "Here they come."

Her whole attention was centered on the path near the pier and she seemed to have forgotten him entirely. Mr. Moto and Mr. Kingman were walking across the sand toward them, side by side, like old friends. Then he heard her speaking to him again:

"Don't do anything. Don't try. People like us are only alive because we think of everything. Don't try, my dear. There's no chance for you at all." Then she called to them and waved her hand and Bob Bolles could almost believe that it was a pleasant party and that everyone was having a lovely time. Mr. Kingman and Mr. Moto were both smiling.

"WELL, well," Mr. Kingman said, "here we all are again and everything is—is jake. Mr. Moto and I have been having a most constructive talk." Mr. Kingman paused and looked beyond the Thistlewood to the reef where the waves were beating and farther on out to the blank horizon. "There is this problem, my dear," he went on, "of—of possible outside intervention. Under the circumstances Mr. Moto and I have agreed to pool our resources temporarily."

"Oh," Mrs. Kingman said.

"I hope you'll rely on our judgment, my dear," Mr. Kingman went on. "We have agreed to join in accomplishing the first part of our mission here. Mr. Moto makes only one reservation."

Mr. Moto smiled, placed his hand before his mouth and drew in his breath. "Yes," he said, "yes, please."

Mrs. Kingman pursed her lips. "I don't like it, Mac," she said.

Mr. Kingman looked hurt. "My dear," he began, "there is really no reason for this personal pique, but let us—let us skip it. Now, you, Bob, it's a little different for you. You're here with us only because you have to be. Do you understand?"

"Yes," Bob said slowly, "I understand," but Mr. Kingman still seemed anxious to be plain.

"I hate to hurt people when it's unnecessary," he said. "No trying to leave us. No—no monkey business, old man. You must count yourself as lucky."

"Yes," Bob Bolles said slowly, "I know I'm lucky, Mac."

Mr. Kingman gave him a friendly pat on the shoulder. "Then we're all—all okey-dokey?" he said.

"Oh, yes," said Mr. Moto, "yes."

"And there's no reason why we can't be agreeable. Now, what we are going to do is this, my dear. The plane cannot have been carried far from this landing. Mr. Moto has not been able to look far. We have decided to try the house on the hill first. If it is not there we shall have a bite of lunch and then Mr. Moto and I can prowl about the grounds. It should all be in—in the bag in a very few hours. Don't you agree, my dear?"

Mrs. Kingman looked happy again. "Why, yes," she said. "Let's not keep standing in the sun."

"No," said Mr. Kingman, "we must—must speed it up. Heigh-ho, off to work we go!"

The suitcases and the hamper and the packsack were where they had left them. Oscar shouldered the pack and Bob picked up the hamper.

"Lead the way, Bob," Mr. Kingman said. "Heigh-ho!"

*(To be continued next week)*

MAKE A "DATE" WITH

*Clear-Eyed Morning Freshness*

## *Try It Yourself Tonight*

IF the strain of these strenuous times is tiring you out—if you wake up listless or logy—feel fatigued long before night—here is important news.

Today, throughout the world, there is a *new idea* of what to do to meet special strain. A revolutionary, *scientific idea* of how to build up increased vitality to stand physical and nervous stress. You've undoubtedly read about it in recent newspapers and magazines—know that scientists, governments of warring nations, and our own authorities all endorse it—the idea that people need special food in addition to the normal diet *to be at their best*—particularly those under special strain.

### *What To Do*

In light of this new knowledge, thousands are taking a cup of *new, improved* Ovaltine each night and morning. For Ovaltine is a special food-concentrate designed to do two important things:

*First:* When taken warm at bedtime, Ovaltine fosters sound sleep, in a safe, natural way, *without* drugs. It has the power to relieve that feeling of "nervous tension," thus helping to condition the mind for rest.

*Second:* Ovaltine supplies a special combination of food factors designed to replenish vitality *while you sleep*—rebuild worn-out muscle, nerve and body cells. It provides significant amounts of the rarer food elements everyone must have for vigorous health—in a food specially processed for easy digestion—protecting minerals, vitamins A, $B_1$, D and G, all the essential amino acids, pyridoxine, pantothenic acid—elements now known to be deficient in many foods. Thus acts as an insurance against strength-sapping food deficiencies which affect more than ⅛ of all people today.

So by all means, try this "special food" idea modern science is urging. Turn to new, improved Ovaltine at night and in the morning, starting tonight. See if you don't soon begin to feel infinitely "fresher" and more alive—with abundant vitality to face these strenuous times. Get a tin of Ovaltine, now.

*Mail for Free Samples*

OVALTINE, Dept. S41-C-10
360 N. Michigan Ave., Chicago, Ill.

Please send free samples of Regular and Chocolate Flavored Ovaltine, and informative illustrated booklet on nutritional values. One sample offer to a person.

## "OHIO"

SOME people are much worried about the "OHIO" (Over the Hill In October) clubs springing up in the Draft Army camps, but our best guess is that it won't come to much. We have a notion that patriotism will get the better of most of the OHIOans when their year-long hitches are up, and that fear will keep the bulk of the rest from seriously considering desertion.

Any soldiers who do desert rather than stick around to serve the extra time decreed by Congress should be collared and handed the customary penalties for desertion in peacetime, without fear, favor or attention to the squawks of their congressmen. An army can be built only on discipline; and we've got to have an army, and a big one and a good one.

Having said which, we'd like to say a word for a little more public patience with the way the new United States Army is coming along. A year ago we were getting set to better Hitler's army-building achievement practically overnight. Now, with our American love of going from one extreme to another, a lot of us have taken to believing the worst of the gossip about morale in the camps, with trimmings of their own.

There is no doubt that the morale is bad in spots. But what is to blame for that, and who?

Well, for one thing, there were long y following the previous war when the gov ment pinched pennies on the Army and taxpayers approved. For another, a big a training in a democracy without a war to g bound to have holes in its morale. For a t the British are getting a lot of stuff whic Army would be getting but for the urgent ish need of it. That's okay; but real men like to go on indefinitely playing at war stovepipe guns and imaginary tanks. An a fourth factor, we started shipping the bo camp before we had a sufficient number o notch officers to train them. As a result, of the officers are pip-squeaks who don't as much as the noncoms—and all the under such an officer invariably and infa have his number.

The point is, though, that all these short ings are on their way to being remedied. impossible to build the world's finest arm year, or anywhere near the world's finest. the Regulars, the National Guards, the dr and most of the reserve officers on active are doing, we believe from considerable mation on hand, a better job than could re ably have been expected a year ago. about holding the faultfinding to a min for at least another year?

## Uncle Sam and the Unions

THIS change in the management of the shipyard has been brought about solely because of the unwillingness of this company to accede to the demand of the union that we should agree to discharge from our employ any worker, a member of the union now or hereafter, who failed to pay his union dues or otherwise failed to maintain his membership in the union in good standing. We could not conscientiously agree to dismiss our old, faithful and tried employes on such a ground.

The above is quoted from an advertisement inserted in various newspapers the day after President Roosevelt ordered the Navy Department to take over the Federal Shipbuilding and Drydock Co.'s Kearny, N. J., shipyard. It was not a popular order; and we believe the reason why it was not popular was that it put the government in the position of endorsing the closed-shop, or checkoff, system.

The checkoff is undeniably efficient from the point of view of any union's officers. It insures payment of union dues at the source of each member's pay check. But that isn't all it can do, and does in some cases. It can put a bad strain on the integrity of the said union of

Instead of keeping the union a thing to the members like to belong and from they feel they get their money's worth, t ficers of a checkoff union may, and som do, take to misusing union funds, cutting benefits, hiking up dues, tossing union to politicians or racketeers or using it t other unions, and so on.

Not every labor leader is a paragon of Some of the boys are rats by birth, so them merely never heard about co honesty—and the checkoff system is ri such boys' alleys.

Persuaded though we are that labor are necessary, we do think it is danger the government to back labor leaders i human efforts to take over industrial m ment bag and baggage. The American are quite capable of reversing this whol ess, and of taking away the legitimate as the illegitimate gains of labor under th Deal. There are numerous signs that th even now is turning in that direction.

## A Piece from Pravda

IN THIS war of liberation we shall not be alone. In this great war we shall have loyal allies in the peoples of Europe and America, including the German people who are enslaved by the Hitlerite despots. Our war for freedom will merge with the struggle of the peoples of Europe and America for their independence, for democratic liberties.

Pravda, government-controlled newspaper of the Soviet Union, made the above remarks in its comment on the historic meeting at sea of President Roosevelt with Prime Minister Churchill.

Not wishing to sour relations with the new ally, or anything like that; but it seems to us it would be well for Americans and Englishmen to paste this remark of Pravda's in their hats, or somewhere, for exhumation when and if the Allies beat the Germans and it comes t talk peace terms.

Will Joe Stalin be as charitable tow mocracy in that great day as he is in t when the two biggest democracies are to the help of his hard-pressed regime? he try to slip his Communist ideas in w in part into the peace treaty or treaties he go on subsidizing subversive Com groups in other countries; or will he su wholeheartedly to the Roosevelt-Cl doctrine that every country has the the form of government its people pref

Let's not forget Joe's kind words for racy in the summer of 1941. Let's remi of them, vigorously, when and if he sho of going back on them.

# Do You See Happy-Go-Lucky Bill?
# No! I See a Future Leader of Men.

## Why is he Such a Success?
## Because he wins People so Easily.

## His Smile is so Confident and Bright . . . thanks
## largely to his Long, Faithful use of Ipana and Massage.

*A Product of Bristol-Myers Company*

**Keep your gums firmer . . . your teeth brighter . . . guard against "Pink Tooth Brush" . . . with the help of Ipana and Massage!**

**Q.** *What, exactly, is "Pink Tooth Brush"?*

**A.** "Pink Tooth Brush"—a recurring tinge of "pink" on your brush is a signal of distress from your gums—a sign that they are weak and sensitive.

**Q.** *What have weak gums to do with bright, sparkling teeth?*

**A.** A great deal! In fact, the brightness and sparkle of your teeth...yes, and the charm of your smile...depend largely on the health of your gums. That is why you should give your *gums* as well as your teeth constant, every day care.

**Q.** *How can gums be given this proper care?*

**A.** Dentists everywhere recommend *daily gum massage*. For today's soft foods deny gums the natural work they need for healthy firmness. They must have more exercise—more stimulation—and massage provides that extra work.

**Q.** *What should be done about "Pink Tooth Brush"?*

**A.** See your dentist. It may not mean serious trouble, but only your dentist can decide that. He may recommend more work for your lazy gums. And like thousands of dentists, his advice may be "the daily stimulation of Ipana and massage."

**Q.** *Why Ipana?*

**A.** Because Ipana Tooth Paste is specially designed to do more than clean teeth thoroughly, brilliantly. With massage, Ipana aids the gums to better health. That's why Ipana and massage is so effective in helping to keep gums healthier...in guarding against "pink tooth brush"!

# ANY WEEK

A NUMBER of ladies have written us of their intentions to make spiritual and physical profit of gasoline shortage and rationing. Their plans need a bit of co-ordinating and none has managed thus far to hook up with a national machine which would make the movement general instead of local. Most of them prefer anonymity at this stage, so we shall mention no names. But the general idea seems to be that the women of America should revive the old personal market-basket days and, instead of telephoning their grocers, butchers and other tradesmen to deliver the family's food, do their own shopping. We haven't the space to set it all out here but if all goes well our Main streets will soon be jammed with housewives on bicycles, on busses, on streetcars, lugging provisions for the family larders.

CERTAIN cynics—Mr. Brian Boru Dunne of Santa Fe, New Mexico, for example—will scoff. Mr. Dunne, an old friend of ours, writes that the art of walking is a lost one. He doubts whether the legs of the middle-aged housewife of these soft days would stand the relatively strenuous work of pedaling a bicycle to market and of supporting her from stall to stall after she'd got there. Mr. Dunne says that he can walk ten miles a day, and does so. For relaxation he flits around on a two-horsepower scooter that can do fifty miles an hour.

MOST of the ladies we've heard from admit that the ability of the American housewife to ride a bicycle or even a bus with a market basket on her arm may be quite a problem. Most of them, they admit, are overweight from too much telephoning. They don't know whether the housewife should reduce by doing her own marketing or take up reducing exercises before starting to do her own marketing. As we said at the outset, it's all pretty vague. In New Mexico, however, they have their eyes on Mr. Dunne. He has become so expert on his scooter that he can tie up a whole highway full of trailers, roadscrapers, storage vans, trucks and tractors and has hopes of seeing what he can do with a tank corps. We'll report any further developments.

HOWEVER, there is real reason to fear that our country is not wholly awake to the necessity for redoubled effort and greatly increased speed. Naturally, some error is bound to creep in—speed in an uncharted direction for example and increased energies expended in unexpected ways. We have a friend in the Civil Service Commission in Washington who tells us that the tempo in that hitherto leisurely bureau threatens to get out of hand. Hitherto when a memorandum was supposed to be expedited through the C.S.C. offices such paper bore the customary URGENT in large red letters. As things began to warm up it became VERY URGENT. Extra dash being desired, the words were changed to TODAY-URGENT. And still things failed to develop the desired zip. So now, hoping for the best, important memoranda fly from desk to desk bearing bigger and redder words—FRANTIC-URGENT.

AND two members of Congress, eager for some reason to avoid voting on the draft-extension bill, absented themselves from the House of Representatives that day. They engaged a motorcar and a colored chauffeur and treated themselves to a nice, invigorating ride into Virginia. They paused now and then for refreshment, after which they would get back into the car and discuss the draft law with renewed enthusiasm and increased vocabularies. Presently they stopped for supper, leaving the car and its driver waiting. The driver got into conversation with his mates and when asked about his employers he replied: "I dunno, boy, but fum what I hear them say they is big-shot draft dodgers." The other fellow suggested turning in the big-shot draft dodgers to the nearest authorities for a possible reward. "Boy," was the reply, "I would do it in a minute if it wasn't I aim to do some draft dodgin' myself when the man comes for me, provided I kin do it outside jail. My conscience won't let me squeal on brothers."

JIM MARSHALL and George DeZayas of this magazine's staff have been prowling our Western states in search of interesting nonmilitary items. They report a comforting sign on a café in Santa Maria, California: "Breakfast Twenty-four Hours a Day." Near by, another place had this notice posted on the wall: "You give us your car keys and we'll give you the fourth drink."

A FRIEND of ours who works in the Navy Department in Washington has just won ten dollars. As you know, all employees must wear numbered badges decorated with their photographs. Without these badges they cannot get into the department's offices and thus play hob with national defense. But our friend, who is no beauty, bet a fellow worker that he could insert any man's photograph in his badge and get away with it for at least two weeks. Being, as we have said, no beauty, he substituted for his own business a photograph of the truly beautiful Robert Taylor of Hollywood. He got away with it for three weeks. If he'd have been getting away with it yet had not the betting spread to other offices—even money that the guards would never get wise. Apparently it got as far down as the lobby who, after much scanning, called a friend. "Listen," said the lobby, "I finally caught up with our friend. It ain't a photograph of you. It's Clark Gable."

AND yet, in our opinion, the lobby set forth the true spirit of the thing. We'd offer anyone actually in Washington in that true spirit Mr. Tony La Correzza of Des Moines, Iowa. Mr. La Correzza's draft board had ordered him before it for possible induction into the Army, its members knowing Mr. La Correzza a number of years and concerning his family, his social status, his willingness to lay down his life and so on down the pleasant list. Finally the board had asked its last and most vital question it tried to wave Mr. La Correzza away for his physical exam. But Mr. La Correzza was not to be put off that. "So," said he, "you have asked about me. Now it's my turn to ask a few questions. What's your name?" When they informed Mr. La Correzza that cross-questioning by draftees was highly irregular he became impatient. "So it's irregular," he. "Listen, ain't a guy entitled to know something about the man he's working for?"

AND we see it again in a letter received recently by the Army Department from a young lady in Jacksonville, Florida. Writes she: "I and with a few girl friends I have received word that our boys need silk stockings we can spare. Please write and tell us what our boys do with our silk stockings. We have pairs ready to send if you will only tell us where they are to go. We are sorry that they have to wear cotton and some are mended, but they are for rough work. We are anxious to know what our boys are doing with them although we suppose it is a little late to send more no matter. Our motto is everything for our boys. . . ."

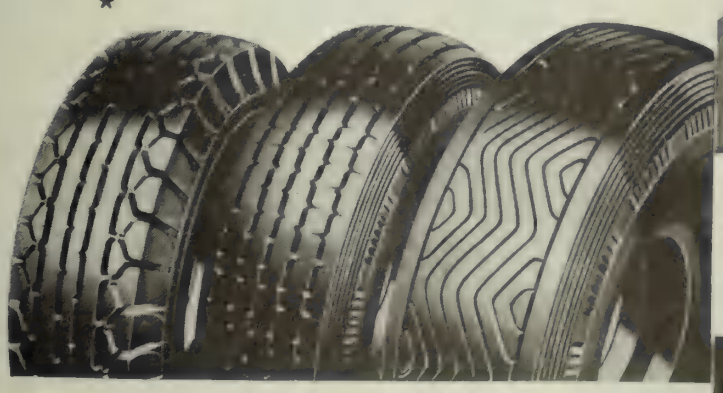
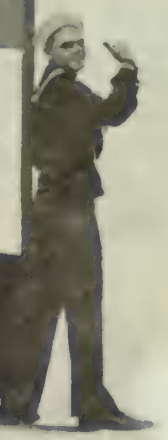
**SILVERTOWNS**

**ILVERTOWN.** Duramin longer wear, and top li-Flex cords make it han ever.



**ILVERTOWN.** Duramin- es the best combina- leage, safety, comfort, running.

**R SILVERTOWN.** No top you quicker, or afer from skids. 20% es than the *original* tire. Duramin-made.



SOME PEOPLE go right out looking for trouble. Others like to avoid it—and *do* avoid it with Silvertowns. When you put these top-quality tires on your car, you do two big things. You give your family the fullest protection any tire can offer. And you help save rubber, too—the rubber our country needs.

A poor tire takes almost as much rubber as a Silvertown. But a Silvertown wears longer, makes the rubber go further. Every Silvertown is made with Duramin—the B. F. Goodrich discovery that gives tires thousands of extra miles.

Riding around on tires that are worn to the danger-point is foolish. Unnecessary, too. For Silvertown prices are still very low. Trade-in allowances are high. And, if you prefer credit, all B. F. Goodrich Silvertown Stores, and many Goodrich dealers, offer the Budget Plan.

# "YOU GET FAR MORE PLEASURE FROM RADIO AND RECORDED MUSIC WITH A PHILCO"

*.... Only Philco has them!*

THERE'S a brand new thrill in store for you when you first hear the 1942 Philco Photo-Electric Radio-Phonograph in your own living room. As never before, you find new enjoyment in your favorite radio programs, new beauties in your phonograph records.

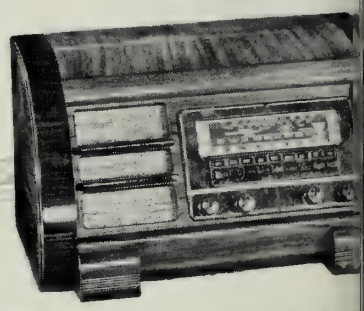
For the first time, you hear *all* the music that's in the recording—clearly, brilliantly, unmarred by needle scratch. Philco's amazing "*Music on a Beam of Light*" does away with the nuisance of changing needles. Philco's *Stroboscope Pitch and Tempo Control* gives you absolute fidelity of pitch. Philco's convenient *Tilt-Front Cabinet* makes it unnecessary to lift lids or move decorations when you want to play records. Only Philco brings you these modern, up-to-date features!

In radio, you get the glorious tone and outstanding performance for which Philco is famous . . . . plus Frequency Modulation *at new, low cost*—thanks to the Exclusive Philco FM System. Within a wide radius, depending upon the strength of the station, you enjoy FM with the regular built-in aerial of the radio. And even where signals grow weak, you may still tune in FM stations by the installation of a Philco FM Aerial at slight extra cost.

See the exquisite new cabinet designs at your Philco dealer's today. Ask about his liberal trade-in offer and easy payment terms.

**PHILCO 1013** (ILLUSTRATED ABOVE). An exquisite Photo-Electric Radio-Phonograph in a beautiful cabinet of authentic Hepplewhite design. Permanent, floating jewel plays any record on a Beam of Light. Philco Automatic Record Changer with Stroboscope Pitch and Tempo Control. Gets all Standard and Short-Wave broadcasts plus Frequency Modulation through the exclusive Philco FM System. Philco Home Recording Unit optional. *Yours on easy monthly terms.*

**RADIOS, RADIO-PHONOGRAPHS, PORTABLES, AUTO RADIOS—from $9.95 to $525**



*Prices subject to change without notice; prices slightly higher Denver and West.*

**Cameron chose a profession instead of a woman, a choice that doesn't make a hard man grow any softer**

THE news came through from department headquarters to the regiment in the proper channel of Army paper work, and simply said: "John Joseph Cameron, Captain Seventh Cavalry, will report for duty to his regiment as of June 16th."

In the course of the routine day the adjutant brought the order to the colonel and was considerably surprised to see the old man grin, for the old man was one of those testy frontier veterans impregnated with alkali and saddle soap, magnificent, profane and humorless.

"Lessee," he said, "you don't know him. He's been on detached duty four years and you've only been with us two."

"I have heard of him, naturally," said the adjutant with discreet inflections.

The colonel said, "Ah," and nothing more, but the amusement remained as a dry pucker of mahogany wrinkles around his eyes.

Later the regimental sergeant major dropped the information to Shannon, who was F Troop's top kick, and Shannon carried it to the company clerk. "You'd better get your paper work organized, my boy, and you better have it right."

"A tough old bird?"

"He was a buck in the Civil War and rose through the ranks. A young man for two bars, bein' about thirty-seven. But you'll see—"

At this moment the first lieutenant of the troop came into the orderly room. "We'll check the mess-fund record carefully. Shannon, be sure everything's in good order in barracks. Tell the stable sergeant I want him at once. The captain will pull an inspection as soon as he arrives."

That same afternoon Captain Morton brought the news to his wife Margaret on officers' row. "Cameron's coming back, old girl." Then he gave her a glance which, though affectionate, contained its edge of wonder. "Brings up memories, I suppose."

"Have four years gone by already? I wonder how he'll look."

"Hard to imagine much change in him. Rock doesn't wear away."

"Detached duty must have eaten his heart. Nothing ever meant anything to him except field service."

"Field service and you."

She saw that behind her husband's humorous manner was an old doubt and she touched his arm and smiled. "It was a long time ago. He will revive no painful memories."

**"Everything that used to be between us still torments you?" she asked. "You have the same memories, don't you?" he said**

First call for retreat was then sounding across the bare, dusty length of the parade. Morton changed into his dress coat and plumed hat and moved out to take his company. From the porch Margaret Morton watched the ceremony of retreat but her mind was on Cameron and she was thinking, "How will he look and how will he act, and how will I feel when I see him?" She was a married woman with a three-year-old son, a seasoned Army matron turned dark by the wind and entitled to a serene mind; the turbulence and heartbreak of her courtship was behind her. Yet the thought of Captain Cameron was as a hard wind blowing through her. "He has seen many pretty women in the East," she reflected. "I will look very common to him," and she felt the sharpest regret.

CAPTAIN CAMERON got off the train at Bismarck and scouted the raw frontier village until he found a man willing to drive him to the fort. The wagon was then hitched in front of a saloon and as the captain tossed up his portmanteau he saw a trooper emerge from the saloon. This man's shirt was greasy and his forage cap canted far to one corner of his unkempt red hair. He was an Irishman with a pitted, beet-red face and he looked upon the captain in a way that was respectful and yet was not, and since anything unsoldierly offended the captain he paused at once. According to the insignia on his cap the trooper was of the Seventh, F Troop.

"Straighten up, there," said the captain. "What is your name?"

"Cooney," said the Irishman, and added "sir" with a sly delay.

"You have permission to be here?"

Cooney's eyes were a bloodshot green which, under the captain's inspection, seemed to turn faintly yellow with rebellion. "No, sir."

"Get back to the fort immediately," said the captain. The rig took him to the ferry and to the row of saloons sprung up just outside the military reservation. Here he crossed the Missouri, entered Fort Abraham Lincoln by the old Fort McKean gate and presented himself to the adjutant at headquarters. "Cameron reporting back," he said.

The adjutant said, "I am very glad to meet you, Captain," and extended a hand which was received by Cameron, given a curt shak and dropped. The colonel at that moment came out of his room. "Hello, Cameron. Nice to have you with us again."

"Relief to be here, sir," Cameron answered, and washed away all need of conversation by the single phrase. The adjutant, who prided himself on his military carriage, had his secret envy; for Cameron had the tou easy and plank-straight carria long-seasoned soldier. He was under six feet, with wide, sharp- shoulders and a cavalryman waist. His forage cap sat at rake on black, close-cut hair scar of a saber cut drew its sho track across the left side of h He was the spare-fleshed type blouse fitted flat across a flat b had very long legs and very lo and his clothes clung neatly to h eyes were dull-steel gray lac iron flakes and expressive of what violent spirit held in rest

The adjutant said, "You rank Seavers and therefore are en the house he and his family occ will, of course, push everybo down one house on the row. I s them all notice to move."

"Since I'm single," said C "I'll live in bachelor's hall, and turb officers' row."

"Very generous of you to for right," commented the adjutan relieved. Notifying eight ladies would have been a disagreeab

"As long as a man functi soldier," dryly commented C "what does it matter where A potato cellar would suit me

The colonel said, "Take o company, Cameron."

"VERY well, sir," said Cam left headquarters. The slightly confused the adjutan scarcely knew how to square tain with the previous tales heard of that officer's sense pline; and now he saw the f blance of a grin on the steel-trap mouth. Leaving t the adjutant reflected that men had a certain common bi quality, a kind of realism tha niceties of life out of account Cameron was then halfway a parade, a straight shape in th of dust and the yellow blas light. "The devil not quite thought the adjutant. "Th though, seems to respect hin

Captain Cameron went in derly room and found both h ants, the top sergeant and the clerk, waiting. The first lieute "Happy to see you back, Ca tried to keep the company u

"Very well," said Cameron the obvious pleasantries of th "You're top now, Shannon? Custis?"

"Killed last year, sir."

"I want to see the duty r

dition to many other bitterly nors and jobs, Mr. Ickes is 's petroleum co-ordinator. He ested the Atlantic seaboard's ations to hang up the hose at nd sell no more gas until 7 A. M. esn't conserve enough gas, Mr. oposes to issue gasoline-ration ereby leaving all other entrants icial unpopularity sweepstakes the post. Mr. Ickes would then irst ration-card issuer in the t war Cabinet, an energetically ter honor in Washington. At ent of this writing it had begun that the railroads might defeat in this laudable aim, by the as-y simple expedient of hauling st enough gas to make further hortages futile. Mr. Ickes has nything to say about that—as give him time. And when he it, the situation may or may arified, but you can count on 's feelings getting hurt.

Secretary of the Interior with over public lands and waters, l forests. In this capacity he's balloon barrage plus a couple ns of ack-acks. And nothing ress Mr. Ickes so much as to of that no skulduggery was within his jurisdiction. He is nistrator of the country's soft-uction and more than willing ation's administrator of elec-

**l not squander nine tenths of** our allotted space in lists of the more important persons who carry the Ickes scars, but offer a sample or two. Where it is clear that Mr. Ickes might have done better, one must remember that he is ever pressed for time and usually has to fire from the hip.

Of the late Huey Long, Mr. Ickes said he had halitosis of the intellect. General Hugh Johnson, himself no bum at vilifying, has mental saddle sores, if you believe Mr. Ickes. Being a columnist, an admittedly inferior breed of scavengers whom Mr. Ickes calls calumnists, the general got the other barrel, this time being called a one-ring circus. Mr. Ickes' dislike for columnists does not necessarily extend to columns. It is merely that he intensely hates to see this form of individual expression, public criticism and character assassination in inept hands. That at least one newspaper column might be first-class. Mr. Ickes all but accepted a side job of columning offered by Mrs. Cissy Patterson, publisher of the Washington Times-Herald. But Mr. Roosevelt was in one of his less enjoyable brawls with Congress at the time and requested Mr. Ickes to decline the offer, somewhat fearful that an Ickes column might not make fewer enemies for the New Deal.

According to Mr. Ickes the Honorable Martin Dies of Texas is an outstanding zany. Mr. Dies' comeback to that was comparatively weak, calling Mr. Ickes a crackpot. Mr. Ickes, unable to hear merit in Mr. Dies' wolf cries, called upon Mr. Dies to quit his committeeing. Mr. Dies offered to swap quits, suggesting that Mr. Ickes set the example and thereby demonstrate a hitherto unsuspected will to serve the best public interest. Mr. Ickes' reply was to the effect that Mr. Dies' perception of public welfare was woefully limited. Amid this uproar, the Honorable Al Smith of New York called Mr. Ickes Old Father Hubbard and Mr. Ickes begged the public to be slow in its condemnation of Al because, said he, Mr. Smith's mind was that of an insanely jealous man. Whereat Mr. Smith begged the public to look who was calling somebody a jealous man.

WHEN the perennial quarrel tween ourselves and Japan into the growl-and-mutter a few weeks ago, nervous West C ers from Seattle to San Diego st looking under beds for slant-eyed and all the Japanese busted their dollar cameras and rushed arour the post office to buy defense bond spots there was an intensifying o boycott against Japanese goods; people fired their Japanese garde others stopped buying at Japanese and vegetable stands. The old menace" reappeared here and But no one got very much excitec

Least of all, perhaps, the U States Navy, which was, more anyone else, vitally concerned wit attitude of the Japanese and Japa Americans in Oregon, Washingto California. But before we look in Navy's reasons for comparative chalance let's glance at the situati the Pacific Coast. For years, the has had its Oriental problem, alt for a decade not much has been about it. Its basis was, of course nomic and rested on the fact that tals worked harder for scantier re and lived on a more lowly scale whites; and therefore upset, or t ened to, the West Coast way of l

The Coast idea always has bee Orientals can't be assimilated in life and can't become good ci This idea has resulted in the known fact that as a people we barred more than half the world coming to live with us. We barr the Chinese in 1882; Hindus an layans in 1917; Filipinos, exce fifty a year, in 1934. These barri almost forgotten, but the Japane clusion act of 1924 still is a live West of the Rockies. The Japane their government still resent it, a high opinion of themselves, se natures and bewilderment over o acceptance of our theory that a are created free and equal.

Japanese started coming in West a few years after the Chine excluded. They settled in the ri leys and in coastal spots; start ducing fruit and vegetables; a boats and went fishing. Branche Japanese concerns—Mitsui, Mit Nippon Yusen Kaisha, Yokohan cie Bank—were set up. And soo was hell a-poppin'. White farm cused the invaders of ruining t by overcropping, of overworking

lves and their women, of upsetting the onomic system. But the Japanese pt coming in in increasing thousands d in 1900, by a "gentleman's agree- ent," Japan agreed to stop the influx issuing no more passports. Whether s agreement was kept is a subject argument; the California Joint Com- ttee on Immigration, which watches e situation, says it wasn't.

Anyway, agitation continued and in 13 California passed a law forbidding liens ineligible to citizenship" to own lease land. This merely resulted in id titles being transferred to the chil- en of Japanese who, being born here, re citizens anyway. Other states took ried measures to prevent the Japa- se building up productive estates.

Because Japanese penetration was so great, there was not the bitterness Oregon and Washington that there s in California. There is, for example, y one real Japanese colony in Ore- —at Lake Labish, near Salem, the ital—and it has the respect of the ites. In the Washington valleys there been no trouble to speak of for rs. In California the question al- ys remained more or less pertinent. f you inquire on the Coast how many anese there are here, the anti-Japa- e forces will tell you about 150,000; Japanese themselves say 65,000. s is because the anti-Oriental peo- class American-born Japanese as anese. The Japanese, technically nt, say that the 85,000 born here are erican.

he argument is further clouded by fact that an unknown number of erican-born Japanese have dual zenship. The California Joint Com- tee says that about sixty per cent hem owe allegiance both to America Japan. The Rafu Shimbun—Rafu apanese for Los Angeles, and Shim- is newspaper—says that only five cent retain any ties with the empire, with other Japanese newspapers, ampaigning to abolish dual loyalty gether.

Naturally, West Coasters wonder, in e of trouble, which loyalty would be ermost. The joint committee and ction of the public suspects both the *i*—the original settlers—and the *ei* and *Sansei*—the second and third erations. There is some evidence to port this belief.

### A Declining System

he Japanese government has always ked more or less openly to acquire loyalty of the *Nisei*. For years it sidized, obliquely, the operation of anese schools in which, after Ameri- school hours, the children are taught anese and Japanese ideals. In 1939, e were 248 such schools, teaching ut 18,000 *Nisei* and *Sansei* at a cost he Japanese community of $398,- But the tendency for them is to me fewer. The *Issei,* who support n, are growing older and fewer each r; there will be none left in the s. And the kids who are sent to n rebel at double school work and t to be out playing with the white dren.

ut the school system is a black mark nst the Japanese because it dem- rates an unwillingness to throw in leheartedly with the country of their otion. The system isn't supported to extent by the second generation and the decline.

he Japanese government for years ed young Japanese-Americans "cul- l" trips to Japan at low rates. It uraged the older Japanese to send r children to Japan to be educated; fered *Nisei* loans at low rates and e easy for them entrance into Japa- universities. Just how many *Nisei* part of their education in Japan is unknown; the joint committee says 50,000, which seems high.

Japanese statesmen never could quite agree just what the *Nisei* should do. Some of them exhorted the youngsters to regard Japan as their spiritual home; others told them to be loyal to America. In Nippon the press almost unanimously tried to convince them they still owed allegiance to the emperor. In 1939 more than half the *Nisei* were nominally subjects of Japan, although most of them thought nothing of it, having been registered by their parents at birth.

Then the Japanese-American Citizens' League started a campaign of renunciation of all allegiance to Japan; the result is that dual citizenship is becoming less and less. Those *Nisei* who are having children—the *Sansei*—are not registering their offspring.

### Just an Old Tourist Game

Meanwhile, on the Coast, legends grew up about the Japanese. Anyone taking a picture of a sea gull was suspect as a spy and all Japanese-manned fish-boats were believed to spend most of their time taking soundings of harbors—although detailed charts were and are on sale for chicken feed in every port. In time, these legends became almost gags, and lost force.

It is a fact, though, that bales of information, most of it useless, *were* sent to Japan, most of it landing in the wastebaskets of the foreign office and army and navy ministries. Incidentally, a good many American tourists used to send in scads of "inside stuff" from all over the world to Washington. It's a sort of international game.

At one time there was a great to-do about Japanese fishing boats, especially around southern California ports. Some of these boats, indeed, did seem a trifle big and fast for their prosaic job; some of the big ones might possibly have been capable of conversion into small tenders for hostile warships—supposing our Navy to be sound asleep, which it never is.

For some time, all fishing boats have been under American registry and their crews under surveillance. These crews —some Japanese and some Japanese-American—doubtless know all about California waters, just as Scandinavian fishermen know all about Puget Sound and Finns are well acquainted with the Columbia River estuary. But the instant war was certain, the Navy would clamp down on boats and crews, and their potentiality for creating trouble would be practically nothing.

There are, too, Japanese-owned fishing vessels under foreign registry, operating off Lower California, but these, too, are well watched. There has been a great deal of suspicion, through the years, about the boats and crews on both sides of the border, but very little direct evidence that they were interested in anything except fishing.

Before we look at what the *Nisei* are doing to counteract adverse public opinion, let's digress for a moment: At one time, on the Coast, opinion was

# Murder in Retrospec

## By Agatha Christie

ILLUSTRATED BY MARIO COOPER

*The Story Thus Far:*

CAROLINE CRALE is tried on a charge of murdering her husband, an English artist. She is convicted and sentenced to life imprisonment. When she dies, one year later, she leaves a letter; in the letter (to be read by her daughter, Caroline, when she reaches the age of twenty-one) she asserts that she is innocent.

Sixteen years after the trial, Caroline (whose name has been changed to Carla Lemarchant) reads the letter. She calls on Hercule Poirot, noted Belgian criminal investigator, in London. She implores him to investigate the case and, if possible, *learn the truth.*

Poirot likes the girl. He promises to do what he can. Then, in a series of interviews with various persons—including Sir Montague Depleach, who had been in charge of the defense; George Mayhew, son of the solicitor who had "briefed" Sir Montague; Ex-Superintendent of Police Hale; Philip Blake and his brother, Meredith, who had figured strongly in the case—he learns these facts:

On the afternoon of the day preceding the murder, the Crales; Angela Warren, Mrs. Crale's young sister; Philip Blake; and Elsa Greer (a beautiful girl who had been a house guest of the Crales) had had tea with Meredith Blake, an amateur chemist. Everyone had inspected Blake's laboratory; and someone had stolen a bottle of poison: coniine.

The following day, Crale—madly infatuated with Elsa Greer—had been painting the girl's portrait in his garden, when his wife had given him a glass of beer. Crale had drunk the beer. Then, alone, he had died in the garden. The beer had been analyzed; it had contained coniine! And traces of the same poison had been found in a bottle that was in Mrs. Crale's bedroom!

Everyone feels sure that the accused had been guilty. Certainly, the evidence—presented to Poirot, after the passage of sixteen years—appears to be damning. Some of those with whom the Belgian talks say that Mrs. Crale had been an attractive woman—that she had poisoned her husband simply because she loved him and was insanely jealous.

But Philip Blake—who had been one of Amyas' closest friends—gives Poirot a very different picture of the woman; he characterizes Caroline Crale as "a rotter, through and through—evil, cruel, malignant and a grabber." Discussing the case, Meredith Blake refers to Amyas' love for Elsa. "It was a difficult position for Elsa," he says. "And as for Caroline—" He pauses, and Poirot says softly: "For Caroline—yes?"

### IV

MEREDITH BLAKE said, speaking with a little difficulty, "Caroline—I had always—well, I had always been very fond of Caroline. There was a time when—when I hoped to marry her. But that was soon nipped in the bud. Still, I remained, if I may say so, devoted to—to her service."

Poirot nodded thoughtfully. That slightly old-fashioned phrase expressed, he felt, the man before him very typically. Meredith Blake was the kind of man who would devote himself readily to a romantic and honorable devotion. He would serve his lady faithfully and without hope of reward. Yes, it was all very much in character.

He said, carefully weighing the words, "You must have resented this—attitude—on *her* behalf?"

"I did. Oh, I did. I—I actually remonstrated with Crale on the subject."

"When was this?"

"Actually the day before—before it all happened. They came over to tea here, you know. I got Crale aside and put it to him. I even said, I remember, that it wasn't fair to either of them."

"Ah, you said that?"

"Yes. I didn't think, you see, that he realized."

**I felt that she didn't really know what she was talking about. She was pathetic, somehow. So young and so self-confident**

"Possibly not."

"I said to him that it was put Caroline in a perfectly unendurable sition. If he meant to marry this he ought not to have her staying in house and—well—more or less fl her in Caroline's face. It was, I an unendurable insult."

"What did he answer?" Poirot a curiously.

Meredith Blake replied with dist "He said, 'Caroline must lump it.'

Hercule Poirot's eyebrows "Not," he said, "a very sympatheti ply."

"I thought it abominable. I los temper. I said that no doubt, not c for his wife, he didn't mind how he made her suffer, but what, I about the girl? Hadn't he realiz was a pretty rotten position for His reply to that was that Elsa lump it too!

"Then he went on: 'You don't to understand, Meredith, that this I'm painting is the best thing I've It's *good,* I tell you. And a coup jealous, quarreling women aren't to upset it—no, by hell, they're n

"IT WAS hopeless talking to h said he seemed to have taken of all ordinary decency. Painting, wasn't everything. He intern there. He said, 'Ah, but it is to

"I was still very angry. I said perfectly disgraceful the way h always treated Caroline. She ha a miserable life with him. He s knew that and he was sorry ab Sorry! He said, 'I know, Merry don't believe that—but it's the I've given Caroline the hell of and she's been a saint about it. B did know, I think, what she mi letting herself in for. I told he didly the sort of damnable, egot loose-living kind of chap I was.'

"I put it to him then very st that he ought not to break up hi ried life. There was the child to b sidered, and everything. I said could understand that a girl lik could bowl a man over, but tha for her sake he ought to break whole thing. She was very youn was going into this bald-headed, might regret it bitterly afterw said couldn't he pull himself to make a clean break and go back wife?"

"And what did he say?"

Blake said: "He just looked— rassed. He patted me on the s and said, 'You're a good chap, But you're too sentimental. Y till the picture's finished and yo mit that I was right.'

"I said, 'Damn your picture.' grinned and said all the neurotic in England couldn't do that. said that it would have been m cent to have kept the whole thi Caroline until after the picture ished. He said that that wa fault. It was Elsa who had insi spilling the beans. I said, 'Wh he said that she had had some i it wasn't straight otherwise. She everything to be clear and abo Well, of course, in a way, one c derstand that and respect the it. However badly she was b she did at least want to be ho

**nouncing the simultaneous gement of Willie Klein, allplayer, and Barnaby hammer, the big man in clothing, to a girl named lyn, who has become a sensation on Broadway**

**Marilyn spent most of the second day rehearsing with the male model. Never having played tennis, she felt that she needed to get in the mood**

THE rest of the early-morning uway crush it was probably only Monday, but to Willie Klein it was d/ he was to become Barnaby mmer, the theatrical producer. rnaby Toddhammer had been born before, halfway down page 278 elephone directory. It had been ny well spent.

skidded into the back door of Fine Men's Clothing—Every-t One Price—at five minutes ne. He noticed with relieved in-at Al had punched his card for ive minutes of nine. Mr. John-head bookkeeper, looked at him uspiciously as he came away e time clock and he hurried his stride toward the stock room. remembering that he was now Toddhammer, his walk be-bdued, elegant. As he passed mirror, he surveyed himself. the slight stoop in the shoulders, the wrinkled knees, and the ungartered socks, not even Mr. Hirsch, himself, looked better.

"That's one I owe you," he said to Al, after he had reached the privacy of the stock room.

Al rolled his eyes and implored the ceiling: "One, he says! Listen, Bright Boy, the way I punch your card every morning I should be drawing your pay."

The inner-office communications box beside them snapped and crackled. Above the whine of static from the elevators, they heard the rasping voice of Mr. Hirsch: "Al, see that the main-floor racks are filled, on the schedule from last week. That is all! If Willie has reported for work as yet, send him to my office. That is all!"

"That is all!" mimicked Al. "Ever since the old boy got that system, he thinks he's a police call."

Willie felt like telling Al about his being Barnaby now and about his quitting the firm to look for a job in the theater, but remembering some choice remarks Al had made about Marilyn, he decided to remain Willie, for the time being.

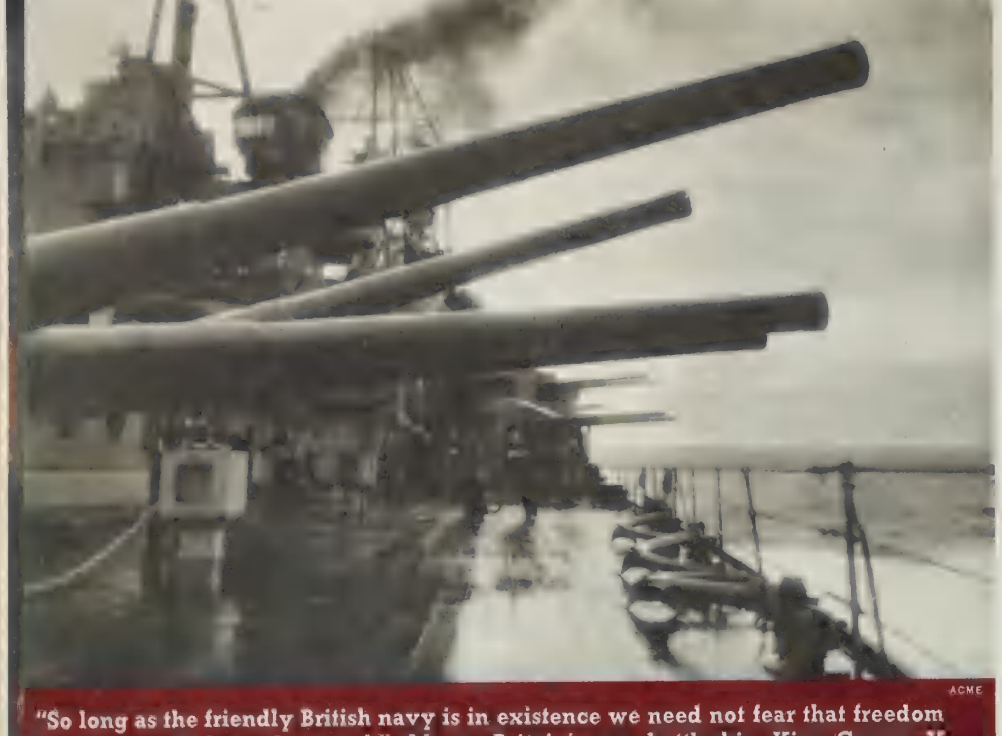
He ran a piece of broken comb through his blond hair, which had the early-morning appearance of a field of wheat after a cloudburst.

"You'd better hurry," Al warned. "That is all!"

WILLIE left the stock room, knocking over a rack of blue serge, two-button single-breasted, and a rack of mixed tweeds, in the popular English Drape, and threaded his way through the customers to the stairs.

Mr. Hirsch's door slammed behind him as usual and Mr. Hirsch almost jumped out of his swivel chair.

He addressed the walls with passion. "For three years this boy has been coming into my office! Must he always bang the door? Must my nerves always be shattered?"



"I'm sorry, Mr. Hirsch," Willie whispered. Then he thought of it. "Mr. Hirsch"—he cleared his throat because his voice was unsteady—"Mr. Hirsch, from today I would like to be known as Barnaby Toddhammer. Also I should like to be dissolved from the firm."

"Barnaby Toddhammer?" Mr. Hirsch rolled each syllable over very slowly, tasting each vowel carefully, savoring the full flavor. Then he spit it out: "Barnaby Toddhammer!"

It didn't sound quite as nice now as it had when Marilyn had suggested it after their long search through the telephone book, including Westchester and the Bronx.

Marilyn herself had changed her name almost as often as she had changed her hair. She was seventeen and, being six months older than Willie, and several years more persuasive, Willie had agreed when she combined the names of two of Westchester's leading citizens. He had also agreed to tell Mr. Hirsch that he was, with regret, leaving the store. Willie was now Barnaby—in spite of Mr. Hirsch.

### WAR . . . AND AID TO DEMOCRACIES

**Americans, in 1940, revised their opinions about neutrality as they came to realize what a Hitler victory would mean. Hard-headed self-concern led to our determination to give all-out aid to fighting democracies. In this article, the introduction to the 1940 volume of his Public Papers and Addresses, the President discusses the long-range objectives of our new foreign policy**

THE year 1940 witnessed a great change in the attitude of the American people toward the course of the war that was raging in Europe and Asia.

During the summer of 1939, while the threat of war was swiftly coming to a head, and after September, 1939, when the war actually began, and through the following winter, the prevailing sentiment in the United States can be best described as one of sympathetic aloofness. While there was no doubt where their sympathies lay in the conflict, they seemed determined not only to remain out of the war, but also to maintain a strict neutrality in the fullest sense of the word. Their attitude was merely that of a very interested spectator.

In fact, during the winter following the invasion of Poland, when there seemed to be but little fighting between the armies and navies of the Allies and the Nazis, many cynical persons in the United States began to refer to the conflict as a "phony" war.

A swift succession of events, however, commencing in April, 1940, with the invasion of Denmark and Norway, very quickly served to bring home to all of us a clearer realization of the position of the United States in the world of today.

Norway and Denmark had both been strictly neutral nations. They had both been determined, at least in their own minds, upon maintaining their neutrality. Their status of neutrality, however, had been completely violated. Added to this grievous injury upon them was the insult to everybody's intelligence, offered by the Nazis, that the reason the Nazis had invaded these neutral countries by treachery, propaganda, and force of arms, was to "protect" them from Great Britain.

This outrage was followed very shortly by the invasion of the neutral countries of the Netherlands, Belgium and Luxembourg. The mighty force of a war machine which had been seven years in the building quickly o France, and left Great Britain al face the terror.

Then came the almost unbeli defense of the British Isles agai seemingly overwhelming striking of the Nazi air force. The Nazi upon the British Isles during the mer of 1940, with its barbarous of civilians, including women an dren, was met by a gallant d which called forth the admiration entire civilized world. But it di than that. It convinced the wor Hitler's war machine could be It showed also that Great Brita able to hold off disaster until ad help could come to it in the form and planes and tanks and guns fr United States.

The quick tempo of the war o on sea and in the air soon brou conflict very close to home. Th ence of German war raiders

# The Long Chance

## By William Martin

ILLUSTRATED BY HARRY MORSE MEYERS

TAKES would be high, Ace Brandon knew, as he sat down at the open table of draw poker there in back room of the Abilene Hotel. ut of habit he ignored the set faces ınd him. Now was no time to try ppraise these men when they could d themselves against appraisal. The would come later.

randon seemed to center on the ng cards as the young rancher on eft dealt, yet Brandon's interest in cards was slight. Brandon gambled haracter. No man, Brandon had ıed, could conceal his nature when unexpected happened, and in that ıent, he could seldom escape the ern of himself in what he did.

andon watched the play. The young her opened and, after the draw, won hundred dollars on his opening ns from the big, red-faced man op- e Brandon.

ıe big man pushed back his hat and . The young rancher won on a small Brandon watched him hurriedly a cigarette as the half-drunk man Brandon's right fumbled through a Again the young rancher won the

hen Brandon shuffled for his own his sensitive fingers picked up the ible fingernail cuts on the cards. don's thin, white face showed noth- He had come to expect marked .. As he dealt, and a little later as ealt for the draw, his incredibly fingers made another nail mark, X, across each mark on the cards. andon leaned back, after the play, watched the young rancher deal with awkward rope-calloused hands. The young rancher won the pot from Brandon.

Brandon lighted a cigar and looked beyond the burning match at the hands of the big man opposite as he shuffled the cards. When the hands paused for a long second, Brandon looked slowly, coldly up into the big man's eyes. The man's eyelids lowered slightly as he tried to hide his recognition of the new marks.

Brandon felt a sudden contempt for this man hiding in a cattleman's clothes who was neither a cattleman nor a gambler. A man who used marked cards had to be sure of everything or he wouldn't play; he wouldn't take the long chance.

The big man dealt, and when Brandon picked up his cards he held a queen-high straight. He knew the caliber of the man then, for Brandon was thinking in his own way that a man with any kind of courage wasn't willing to compromise with an enemy. The deal had been intentional. The big man was willing to cut him in.

The drunk on Brandon's right opened. Brandon studied his hand briefly, then tossed it into the center of the table and watched the surprise and puzzlement come into the big man's face. Brandon looked at the ash on his cigar.

The young rancher stayed. The big man discarded his hand. This was supposed to have been Brandon's hand and the big man had dealt himself nothing to draw to.

After the draw the drunk bet his last chips and lost the hand to the young rancher. The drunk pushed unsteadily up from the table and made his way to the bar up front.

Brandon dealt a square hand and won seven hundred dollars from the young rancher on three tens. The big man stayed out.

The young rancher dealt. No one could open.

Then the big man took the cards.

Before Brandon picked up his hand he knew that this would be a cold deal, the kill.

The big man passed the open. Brandon held nothing and discarded his hand. The young rancher opened for a thousand dollars. The big man showed indecision, then stayed.

Both men took one card.

Brandon watched the young rancher count his chips, then shove in all his blues. "Five thousand," he said, and sat back.

The big man showed surprise, then he pulled a wallet from his shirt and let it clank on the table. "I'll call you," he said, "and raise it twenty-five thousand."

The young rancher glanced down at his remaining chips. "I haven't got that much," he said slowly, "but I've got land. Wait."

He called the barkeep up front who finally found a quill pen and a piece of paper. He wrote a note and sent it upstairs and then sat back studying his hand and hiding his uneasiness behind indifference.

BRANDON relighted his cigar and idly watched the match burn out at his finger tips. In a few minutes he saw the girl come through the doorway and past the bar—a slender, small, calm-faced girl who came and stood beside the young rancher in a way that told Brandon she had ridden uptrail with her husband, and their cattle.

Brandon saw anxiety come into her face as her quick eyes took in everything: the chips, the wallet, the big man's questioning look, her husband's unnatural, masked face. Slowly she handed the young rancher a long paper. Then she smiled. "You coming up to the room soon, Ed?" she asked.

"Right after this hand, Mary," he said, and unfolded the paper before the big man.

Brandon knew that she would still smile like that, later, up in the room, when the young rancher explained how he had lost their land.

The young rancher said, "This is the deed to my land south of the Brazos. It's good land and we've got grass and water the year round. . . ."

Brandon, watching his face as he talked, knew that the young rancher had lost his land. It was a cold hand. The big man wouldn't bet unless he was sure.

The big man interrupted. "It's good land all right, but I got all the land I need now," he lied. "Get the cash."

It was a long chance, but Brandon was a gambler and he took it. His thin hands unhooked his money belt from around his waist. He folded the belt and shoved it over to the young rancher. "There's cash," he said, "fifty thousand. I'll take a chance with you, son."

The young rancher nodded, and, as Brandon knew he would, he pushed the belt into the pot. "I'll call the twenty-five thousand," he said evenly, "and raise you twenty-five."

Brandon looked slowly across at the big man. The big man's eyes were already on Brandon. He had been sure but now he wasn't sure. Brandon saw puzzlement in the big man's eyes and then the growing uncertainty. He knew what the big man was thinking: that he, Brandon, could have marked all the cards alike; Brandon wasn't giving fifty thousand dollars away.

The big man glanced down at his hand again, then at his wallet. He wet his lips. Then he folded his hand and stuck it into the center of the deck. He got up and quit the game without a word.

The young rancher grinned in quick relief, then pointed to the pot. "Want some of this, stranger?"

"My fifty thousand's all," Brandon said, and reached for the belt.

The young rancher's grin broadened, "*You* knew I had him beat, and *he* knew it." He spread his hand of four jacks face up.

Brandon looked tired. He said coldly, "You took too long a chance with good land, son. He knew he had *you* but he wasn't sure about me. He couldn't get up the nerve to call."

Brandon's expert fingers cut the deck to the big man's hand, and he spread it face up and watched the surprise in the young rancher's open mouth as the young rancher looked down at the four queens.

**"It's good land, all right, but I got all the land I need now," the big man lied. "Get the cash"**

"You're very sweet," he told her. "You'll make somebody a wonderful wife." He was going to kiss her. . . . But, "Ah-uh, mustn't touch," he said

# M—A—N SPELLS WONDERFUL

## By Libbie Block

ILLUSTRATED BY ROBERT O. REID

**The legend of male superiority explodes in the beautiful face of Miss Minuette Mintern—a girl who just didn't know her own strength**

SHE walked across the tiled acres of the railroad station in Washington, D. C. She kept thinking of footprints on the sands of time, though tiling, of course, was more solid. Presidents, Cabinet members, ambassadors, they had all walked in this station, just like Miss Minuette Mintern, though on feet larger and more confident.

Ahead of Miss Mintern lay her first glimpse of Washington, which, as she had taught her pupils, was the most important city in the most important country in the most important world of the universe. Ahead of her, too, she now realized, lay a cold, la grippe or a touch of the flu, depending on how serious became the burning skin and aching bones which plagued her. Miss Mintern thought, "I feel awful."

Well, but she had to keep "up," she told herself, regardless of her health. She was in Washington upon important business. An eleven-year-old boy marched at her left: Marshall Bunty, whose head was full of prodigious knowledge and whose new long-pants suit was full of Marshall Bunty.

He could spell any word, whether or not he knew its meaning, and so the Otwanda, Nebraska, Express was paying his expenses and those of Miss Mintern, his teacher, to Washington and the great national spelling bee. It was hoped, by all who read the Otwanda Express, that Marshall Bunty would spell down the other contestants, thus covering himself, his school and his state with glory; winning several hundred dollars to further his education . . . if that were necessary . . . and perhaps having his picture taken shaking hands with the President of the United States.

Further, the Otwanda Express had sent with Miss Mintern and Marshall Bunty a real newspaperman, Lon Waterford, whose duty it would be to cover the great national spelling bee and particularly the activities of Marshall Bunty, therein. Lon Waterford walked at Miss Mintern's right hand—a lean young man of twenty-eight who knew what it was all about.

When the three came out into the mild May afternoon, Miss Mintern stood rock-still and said, "Washington, D. C.! I can't believe I'm here."

"Great town," Lon Waterford said without awe.

Marshall said, "I want to ride in a taxi."

Miss Mintern got into the taxi first, showing an excellent leg in a thin, tight stocking. She was the newest thing in teachers, having studied enough psychology to know that pupils work harder for a pretty woman than for a plain one. Fortunately, even before her psychology course she had had a deep dimple, brown eyes with lights in them, and a torso which was attractive above a desk.

Through the taxi window swelled a glinting, familiar shape. "Look! I see the gold dome!" She pointed, rising slightly as though she had he Star-Spangled Banner.

Marshall looked up casually candy bar. He was as good an he was a speller. Lon W laughed, rather disdainfully. " surprised what goes on under t itol dome."

"I know," she said, shining. " ate and the House . . ."

"Plenty politics go on ther Waterford said.

"Caucuses and filibusters." liked long words.

Miss Mintern sneezed.

THE Corona Hotel was the offi dence of the national spell Miss Mintern looked at the lot ing sure it stewed with import ple. Senators and congressmer even a foreign spy or two. Th several children walking abou ers, no doubt.

"Marshall, put your candy Miss Mintern whispered. "I any of the other girls and bo candy."

Marshall put it away. On t up in the elevator he looked res if well decorated with chocola

was a large mill of a boy who
ground exceeding fine. "How much money do I win?"

Miss Mintern subsided. "Five hundred dollars."

"That's okay," Marshall consented. "And you know who I want my picture with? J. Edgar Hoover."

FROM all over the country, thirty local champion spellers had come to eat, tonight, this banquet of fruit cup, spring chicken, mashed potatoes, new peas, salad, parfait and milk. Also served the same chaste dishes were forty adults, scattered among the children: teachers, reporters and parents.

All the spellers had scrubbed hands. The boy spellers had voices high, low and undecided. Some of the girls wore curls, some of them wore glasses, and most of them were beginning to be what is politely called developed.

Marshall was the hungriest. Mercifully, Minuette had given him her dessert in addition to his own, and without coaxing he had disposed of the plate of petits fours which had been set out for their section of the table. Lon Waterford, who had come in late, guarded Marshall's other side, but he had eaten his own dessert. Men had wonderful appetites.

Across the white cloth a young and nervous lady from Alabama was not eating much. She had a haircut like Deanna Durbin, a soft voice, and her name was Ruth Eleanor Graham. She had told Marshall that, but he had been busy with his chicken and Minuette had had to announce him as Marshall Bunty of Nebraska. Now that dessert was over, Ruth Eleanor was trying again in a persistent, pliant way to talk to him:

"Oh, I'm just scared to death about tomorrow, aren't you?"

Marshall, prodded by Minuette, lifted his head: "What about?"

"The spelling bee, silly. I'm awfully nervous. I'm so scared I'll miss the easy ones. Aren't you?"

"No," said Marshall.

It was not polite of him not to be scared of the easy ones, so Ruth Eleanor, who could only talk politely, had nothing more to say. Anyway, the speeches started then and she listened. Marshall didn't.

The speeches were all about the contest tomorrow: not to be afraid to ask that the word be pronounced again and again until you were sure you understood, how only one contestant could win first prize and for the others not to be disappointed, and about the interesting trips which had been arranged for the days after the bee, to the White House, the Congressional Library, Mount Vernon, the Mint. . . .

Across Marshall, Lon Waterford looked at Minuette, despair on his face. "Now that this is over I think we ought to put our champion speller to bed, don't you?"

Marshall was up from the table almost as Lon spoke, on his way to the door where he had seen a large plate of after-dinner mints. From the rear he had that look of efficiency which only small fat boys can manage. After him, Ruth Eleanor called: "Nighty-night, Nebraska. Certainly do wish you good luck tomorrow!"

"Wish her good luck, too," Minuette whispered.

He swiveled obediently at the dining-room door and called back, "Good luck"; then, under his breath, "for second place."

They put Marshall to bed, that is, they closed him into his room with a stack of salted nuts to prevent night famine. Minuette wanted to kiss him, but he moved quickly for a heavy boy and she contented herself with saying, "I'll wake you early, Marshall, and I'll have my fingers crossed that you win first prize."

"That's all right," he said, "I guess I'll win it all right."

As she closed the door she heard the rustle of cellophane. The nuts were already in retreat.

Lon was waiting in the hall.

"Come on out and let me show you my town."

"Oh! You got the job!"

He propelled her by the elbow to the elevators. It was a lovely sensation, like being rolled along. She oughtn't to go out with this cold coming on but still . . . she couldn't let him down in his celebration, could she? And besides . . . Washington, on the arm of a Washington correspondent! It would never happen again.

He hadn't quite got the job yet, he told her in the taxi. "The fellow wasn't in. Won't be, till tomorrow morning. I'll run over there before the bee. Try and get it settled early."

Meanwhile, with the air of a hotel proprietor showing his best rooms, he displayed Washington: "The White House . . . the Mint . . . that's the Lincoln Memorial, isn't it, cabby? . . . the new Congressional Library." Minuette recognized them, she had seen plenty of pictures, but she could not get over how well Lon Waterford knew them. In a quiet ecstasy, she rode with him to the Potomac, which he identified as the Potomac, and then back to the building of the Washington Press Club. The moon was shining on the street as he helped her from the cab; he seemed as uplifted as she. "Some stuff, huh?" he asked her, his voice deep and unsteady.

"Oh, it is." She looked up at him, he down at her and even the cab driver could afford to wait a minute to see what was going to happen.

"I'm going to take this town over," Lon Waterford said, and he looked away from Minuette. The cab driver drove off and they went into the Press Club to take that over.

THE café of the Press Club looked singularly like any other restaurant. That is, it had tables and chairs. But the people, oh, the people, Minuette thought, how interesting they looked, how they moved about from group to group dispensing world information. She sat hypnotized while Lon Waterford told her, "That skinny red-haired guy is Hugh Jerome, just back from China. And there's Ed Herbert—he's been in England. You must have heard him on the radio."

"I think it's just wonderful."

"You bet. And tomorrow, I'll be right up there with them."

"You'll be the youngest of all," she said, matching the experienced faces around them with Lon's. Something about the clean under line of his jaw filled Minuette with more emotion than she had ever felt in her life. "It's fine that you're so ambitious."

He was pleased. "Sure," he said. "Aren't you?"

She was, of course, ambitious to have a man and a home of her own. But it seemed very meager compared to his ambitions so she said, "Nothing special."

Funny, he read her thought. "You ought to be ambitious to get you a husband. Shouldn't be hard. You've got speaking eyes and legs that . . . well, why shouldn't I look at your legs?"

She didn't know why he should, why he shouldn't, or why it made her so happy that he had.

# The Sawdust Fusiliers

## By Quentin Reynolds

**You can't win a war without wood, and England needed a shipload a day from Canada. The hazards of the North Atlantic called for a simpler solution. Here's the answer**

THE Duke of Kent announced that he was coming to visit the Sawdust Fusiliers. The Sawdust Fusiliers, 5,000 Canadian lumberjacks (or woodpeckers) were very proud. They were the best woodsmen in the world and they knew it. They were also a fighting unit and in shooting contests they had beaten the Scottish Home Guard—no mean feat, for the latter is composed almost entirely of guides, gillies (deer stalkers) and sportsmen whose very life is spent in the Highlands shooting grouse and pheasant. The woodpeckers had rifles and machine guns but no heavy artillery, and they knew that the custom was to give royalty a 21-gun salute with a fieldpiece. The woodpeckers were equal to the emergency.

As the duke stepped out of his car he saw a puff of white smoke burst from the hills and then he heard a resounding boom. In perfectly spaced cadence twenty more puffs of smoke arose and twenty loud roars echoed in the hills.

"I didn't know that you had artillery here," the duke said, quite pleased about the whole thing, as royal dukes are when they get a royal salute which they know to be technically reserved for their brother the king.

The officers conducting the c smiled deprecatingly but said noth To this day the Duke of Kent does know that the 21 fieldpieces whic graciously welcomed him to the H lands were actually 21 tomato cans f with dynamite and set off by mear four-inch fuses. Once more the wo men of Canada had proved themse equal to an emergency.

Technically, the Sawdust Fusilier the Canadian Forestry Corps, Brig General J. B. White, D.S.O., comm ing. Actually, the Sawdust Fusilier the most interesting military un England and at the moment the useful.

To conduct a war you need aluminum, steel and concrete. none of these would suffice if you h wood. Munitions factories, barr bridges, airplane parts are mad wood. Wood is used to shore u vital mine pits of Wales and woo endow a hastily constructed trench some degree of permanency. The yards of England are constantly scr ing for wood. Nothing in warti more vital than wood. The nee realized early. Newspapers wer down to four pages to save the pre wood from going into newsprint. was not nearly enough lumber in land to satisfy the demand for There was timber but no lumbe tree is timber until it emerges fro saw mill.

### Lumberjacks Instead of Lumb

Canada, however, is the greates ber country in the world. Canada supply the mother country with How much did she need? At least load a day, the authorities said That would be about 230,000 f lumber to be transported across t carious wastes of the North A each day. Convoys do not leav day. Convoys are slow. Someon ceived the idea of shipping lumb to England instead of lumber. S was virtually virgin-timber te Let those Canadian woodpecker on that precious storehouse a sawdust would fly. The idea ca and the result was the Canadia estry Corps.

Only experienced woodsmen w cepted. They came from M Quebec, Port Arthur, the Kooten trict, Fort William, Ottawa V they came from Halifax and Van Every part of Canada gave its q husky men who handled an ax other handled a pencil. They we to Scotland to lumber but the going to fight too if need be. they had to go through the pr military training. This was a b cause woodsmen don't care muc discipline or regimentation. B found that their officers were standing. From General White the newest lieutenant with on pip on his shoulder, every one had lumber experience. The wasn't too arduous. They did to learn to shoot. Most of th spent many winters living by th And one bright day they said g Canada and packed up their ax saws, their mills, their caterpil the impedimenta of their tra headed for Scotland. They arri equipped. They asked nothing land but timber.

# A Beautiful New FORD

## 6 or 8 cylinders

**IN THESE UNUSUAL TIMES** we invite you to inspect an unusual new car—new in its beauty, its comfort, its choice of two fine 90 horsepower engines, 6 cylinders or 8.

See it and you sense at once that here is new style that will *stay* good for years. On a lower, wider chassis, we have designed new long, low, wide and modern lines.

Interior treatment is entirely fresh, distinctive, pleasing. The modern beauty of this Ford, seen from inside or out, will more than hold its own in any company.

Inside, the car is *big* in every way—wide across the seats, generous in knee-room, leg-room, elbow-room.

On the road this year you find the "new Ford ride" still further advanced in its softness, quietness, steadiness.

At the wheel, you will find driving easier than ever. Steering, gear-shifting, action of the big and sure hydraulic brakes have all been made smoother and easier.

In quality, the car is sound to the last detail. Defense requirements have all been met without a reduction in the basic and lasting ness of the Ford mechanically. Sor materials have replaced old ones, at greater cost to us, *but in every new is equal to or better than the old.*

If your family needs a new car, and drive this Ford. *For what it and for what it will be through the year we believe that you will find in and better transportation f money than you have ever foun*

## *he Story Thus Far:*

MBITTERED when he is "passed over" for promotion, Bob Bolles, a young American val officer, resigns his commission, buys a ty-foot schooner — the Thistlewood — and th a one-man crew (Tom, a colored boy) rts on a long, aimless cruise.

In Kingston, Jamaica, the Kingmans—Mal- m Kingman and his wife, Helen, who say y are New Yorkers—engage him to take m to out-of-the-way Mercator Island. Be- e he sails, Captain Burke, in command of Smedley, an American naval vessel, tells b a curious story: The Aquitane, a French rchant vessel, had foundered—*after* it had pped a crated airplane at some small Carib- n port. Burke has orders to search for that plane, attached to which, he says, is an ex- mely potent bit of war mechanism, of which re is no duplicate.

When—with a passenger list of three: the gmans and Oscar, Mr. Kingman's valet— Thistlewood reaches Mercator, Bob has t story called vividly to mind: on the side a hut (one of a small group) is the word: *quitane!*"

short time after they land, on a beach, a —a Japanese whom Bob recognizes as r. Moto, owner of a little shop in Kingston ddenly appears. He and Mr. Kingman, h of whom are armed, have a heated discus- , in the course of which Bob learns that, Captain Burke, the Kingmans (agents in employ of the Vichy government) and to are looking for the airplane. . . .

Kingston and, later, on the Thistlewood, Kingman had told Bob again and again she was unhappy. She had told him that loved him. Now, on the island, she stands dly while Kingman and Moto discuss an resting question: Shall they kill Bob es? He may possibly be an American spy ould they not shoot him at once?

he two men finally decide that, inasmuch Bob—with his knowledge of the Caribbean and his ability to navigate—may be of e to them later, they will spare his life, he time being at least. The two men agree o-operate—to work together in their quest the plane. Then Mr. Kingman speaks to "Lead the way," he says.

### VI

MR. MOTO scuttled over to the candlewood tree. "My own bag," he said. "Ha-ha, I so nearly for- about it."

e disappeared behind the tree, but few seconds he was back, carrying all, cheap fiber suitcase and rain-

By jove," said Mr. Kingman, "I for- that it might rain." But there was a cloud in the sky.

ob Bolles lifted the hamper to his lder and began walking slowly g the overgrown road that wound ugh the trees and vine-choked kets. In a few steps the breeze from sea was gone and it was stifling hot. few more his shirt was soaked with piration.

Heigh-ho," he heard Mr. Kingman ming just behind him, "heigh-ho!" uch lovely trees," he heard Mr. o saying. "Have you served before he tropics, Mrs. Kingman?" Then tone of his voice changed: "Ah, 's that?"

Where?" Mr. Kingman asked ply.

No matter, please," said Mr. Moto. hing."

t Bob Bolles had seen and it was Mr. Kingman's fault that he had for no one could look everywhere nce. The road was still a grassy ing, stretching before them through oods, and just as they had rounded ner Bob Bolles had seen copper- ed face staring at him from the et not twenty yards ahead. It was , with his long nose and his ugly For just an instant Tom looked at frightened and inquiring, but even e Mr. Moto had spoken Bob had to shake his head and to jerk his b in the direction of the sea, and Tom's face was gone. because . . . IT'S SURE TO RAIN!

felt his heart beat sickeningly in his throat.

"You look hot, Bob," he heard Mr. Kingman say.

"Yes," Bob answered. "I'm out of condition, I guess." His heart was beating very fast and the sweat was streaming down his face so that he had to blink his eyes. Tom was a good boy and he would do what he was told. The beach was clear and Tom would be down there in a little while. He would be in the dinghy, rowing to the Thistlewood. He would be out in the bow, slipping the anchor. Bob Bolles could hear his heart pounding.

THE old road had turned to the left and was winding steeply up the hill. You could see that it had been carefully built once, well surfaced with coral and shell, so that the heavy growth of trees and vines on either side had not yet grown across it. The road was open, and yet you could tell that it had not been used for years. Now and then a trail crossed it, made perhaps by wild pigs, but there was no sign of a footpath. Clearly the Negroes on the island did not use the road. He began to make out a border of trees along its edges and he saw that the giant candlewoods which rose above the undergrowth must have been planted to shade the avenue when it was a clean, white ribbon, winding up the hill.

"By jove, this is hot work," Mr. Kingman said. "Let's stop a moment for a —a breather, what?"

There it was again. He was speaking English when he thought he was speaking American. Bob Bolles halted and set the hamper down. The little party which was walking behind him single file looked very hot, all except Mr. Moto.

"You mean 'take the weight off our feet' for a minute?" Bob Bolles said.

Mr. Kingman mopped his face with a fresh white handkerchief and laughed. "Just what I meant to say, exactly!" he answered.

"Please, ah," Mr. Moto said, " 'take the weight off your feet,' does that mean to sit down, please?"

"Of course he means to sit down," Mrs. Kingman said, "and I think it's a very good idea."

"Please, ah," Mr. Moto said, "in the hot countries out of doors, so very careful where you sit down."

"Why not?" Mrs. Kingman asked him. "You mean there are nettles?"

Mr. Moto drew his breath in delicately. "Not vegetation always, please," he said. "In hot countries you sit and rest and many little bugs get in your, ah, garments."

IT WAS hard to take Mr. Moto seriously, or Mr. Kingman either, there on the side of the hill. Mr. Kingman mopped his face again and looked thoughtfully up the glade of the old avenue.

"Are those gateposts there?" he asked.

Mr. Kingman's eyes were very good. He had picked out two masonry pillars, perhaps fifty yards ahead of them, which were so thickly covered with ferns and vines that they were hard to notice. The pillars were the entrance to the main grounds.

"You see," Bob Bolles said, "this was one of the old English plantations. They were usually laid out in the English tradition, with gates at the entrance of the main avenue. The quarters would be somewhere near here and the stables and the tool houses. There must have been cane fields on either side of us."

"Well," Mr. Kingman said, "let us go." And Bob Bolles picked up the hamper again.

The fields had been choked and covered long ago, but the double row of candlewood still marked the old avenue and made the empty, grassy road silent and shady. You could see, once you passed the gate, heaps of rubble and the walls of outbuildings.

"It may take a bit of looking," Bob heard Mr. Kingman say. "They might have stored it anywhere here. Look at that yonder. It is like a factory."

Mr. Kingman pointed through the trees to the right. The bare walls of a large rectangular building were rising up above the brush; and where part of a wall was breached and falling you could distinguish a tangle of rusty metal.

"That would be the old mill," Bob Bolles said.

Mr. Kingman hesitated.

"Yes, it will take a bit of looking. That factory might be the place for it. I should not want to bring the thing any farther than I could help, would you, Moto? Shall we try in there?"

Mr. Moto stared at the ruins through the trees. There was something very lonely about the sight of those walls still rising above the choking vegetation, seemingly struggling silently against the vines and ferns and bushes that were trying to pull them down. There was an echo of old violence about them, a memory of destruction and burning and pillage. Bob Bolles heard Oscar clear his throat.

"Them niggers," Oscar said, "they burned it, what?"

It was more than Oscar had said for a long while. In some way the place must have impressed him and must have somehow shocked some innate sense of thrift and order. "Them dirty niggers!" Oscar said. "By damn, yes, it all was burnt!"

It must have all happened a century before, but there was still a strong impression of old destruction, the same sense of lost endeavor which Bob Bolles had once felt when he had visited the ruins of a great French estate in Haiti. On either side of the road were the crumbling remains of large and small buildings.

"I like it the way it is," Mr. Kingman said. "It is sad. It looks almost like a town."

Mr. Moto coughed and looked up at the sky and then at his wrist watch. "It was all so long ago," he said. "May I make a suggestion, please? If we go to the house first, there will be a view of the sea. I should like so very muc to be sure there is nothing comin Someone, I think, should watch."

Mr. Kingman looked troubled an he nodded. "You're right, Moto," h said. "We had better take a look. We go on to the house."

They began climbing slowly up th hill again and no one spoke for a whil Bob Bolles could feel the urgency their thoughts and he was thinking, to His whole life kept moving through h thoughts.

"Come on, Bob," he heard Mr. Kin man say behind him. "Step—step it!"

"All right, Mac," he answered.

His breath was coming fast from t climb, but his voice was perfec steady. It was his great desire to steady, although it could make no po sible difference. His main hope w that he would behave well. They mig not care, but he wanted Kingman a Moto to know that he could take it well as they could and he wanted M Kingman to know it.

"Ah!" he heard Mr. Kingman say l hind him. "Well, there it is."

THEY had rounded a curve in the a nue and the ruins of Westerly H lay in front of them. Bob never for his first view of the house. Someh its grim solidity conveyed the impr sion of what it must have been o and somehow its past was stronger t its present. It must have been a house once, a square three-story m sion, overlaid with stucco. Now its was down and the stucco was pee in a sickly way, revealing huge pat of the gray coral stone beneath it. kitchen quarters were a mass of we The tall, arched windows and the g front door were black and gaping, all the ground around the house clear, perhaps because the knoll w it stood was exposed to the preva breeze. Thus there was an impres even then, of lawns and terraces.

It was still possible to trace the c of the avenue which ended at mas steps that led to a broad stone ter on which the house stood—a ter with battered stone railings that c looked the sea. On a medallion a the door, you could still see the co arms of the family and, in spite o watchful bleakness, there was a s of vanished hospitality, of servants

"Well, really, dear, you don't have to scream at me!" GEORGE

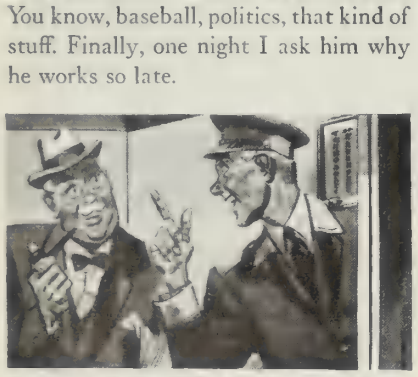
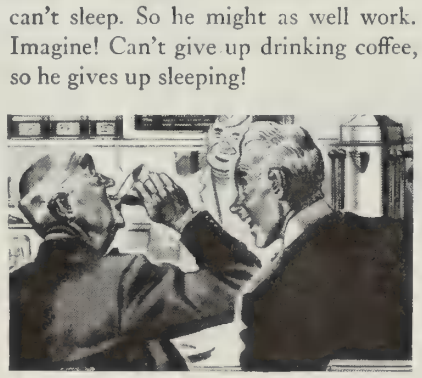
# "It took me two years to get out of an elevator!"



**1. Up and down**...up and down ...all night long I nurse that animated bird-cage from main floor to attic. Pushing little buttons on the wall! Saying: "Watch your step, Madam!" Opening the gate and closing it! You guessed it, it gets tiresome...after two years.



**2. Anyway, I got social life!** Me and the vice-president are just like that. He stays late all the time, so we get talking. You know, baseball, politics, that kind of stuff. Finally, one night I ask him why he works so late.

**3. He says coffee's to blame.** The caffein in it keeps him awake. But he loves the stuff, so drinks it, anyway. Then he can't sleep. So he might as well work. Imagine! Can't give up drinking coffee, so he gives up sleeping!

**4. So I tell him.** We ride up and down while I explain how you can drink Sanka Coffee and still sleep, because it's 97% caffein-free. He looks doubtful. "Meet me at Joe's Diner at quitting time," I says, "and I'll prove it!"

**5. Joe's my pal.** He brings a can of Sanka Coffee, and we find where it reads: "The Council on Foods of the American Medical Association says: 'Sanka Coffee is free from caffein effect and can be used when other coffee has been forbidden.' "

**6. This V.P. tries a cup**...*two* cups, in fact. Next night he comes around beaming. Says something about sleeping like a lamb. Then he offers me a job in his office. So—it's good-by bird-cage! Hereafter, I *walk* downstairs...and it's a treat!

SANKA COFFEE

**REAL COFFEE . . . 97% CAFFEIN-FREE**

mahogany. The house was there in an utterly forgotten world of its own. Bob would not have been surprised if he had seen the front door open, although no door was there. Instead, a flock of gray birds flew chattering from one of the lower windows and the breeze was on his face again, clear and fresh from the sea.

"Oh," he heard Mrs. Kingman say, "it must have been beautiful once."

"Yes," Mr. Kingman said, "but never mind it now."

He was opening the case that contained his field glasses. To the left, as they stood facing the great front door, down below them, was a wide, blue stretch of ocean. The waves near the horizon glinted in the sunlight and, nearer to the land, the breakers churned in a white ring around the coral reef.

"Well," Mr. Kingman said, "it all looks clear."

"Yes," Mr. Moto answered. "I am so glad to think so. Let us walk up the steps. Up there is a better view."

BOB climbed up quickly. He wanted to see the bay which was still concealed by the tops of trees, but up on the terrace the pier and the beach were all distinct beyond the treetops, not half a mile away. Mr. Kingman was looking through his glasses again.

"What," he said, "what the devil! The boat is moving!"

You did not need glasses to see it. Bob Bolles felt a strange sense of elation, and a grim and inexplicable desire to laugh. The Thistlewood in the distance, like a child's toy boat, was nosing her way through the reef to the open sea. He could see Tom, a small black dot, standing at the wheel. Bob Bolles set down the hamper and turned and faced them. Oscar had dropped his suitcase.

"Why," Mrs. Kingman said, "the anchor rope must have broken!"

Mr. Moto's face was impassive, but his voice was high and reedy. "No," he said, "it is under power. Someone is aboard, I think." And he glanced sideways at Bob Bolles.

"It looks that way, doesn't it?" Bob said.

Mr. Kingman snapped his glasses back into their case. In almost the same instant he had unslung his rifle from his shoulder and for just a second he looked at Bob Bolles thoughtfully.

"So that's it, is it?" he said.

"Yes," Bob Bolles said evenly, "I told him to take her off if he had a chance."

If it was the last speech that he had made on earth, he was glad that he had been able to make it. He had taken a good deal from them that day. He smiled at Mrs. Kingman. He had thought that they would be angry, but the strange thing was, no one was angry. Mr. Moto stood rubbing the back of his head and gazing at the harbor. Mr. Kingman was adjusting the sights on his rifle.

"Give me the telescope sight," he said, "and some extra clips, please, Oscar. It cannot be more than six hundred yards."

"It will do no good," said Mr. Moto. "You kill him and the boat goes on the rocks."

"We'll get her off," said Mr. Kingman briskly. "The telescope sight and the clips, please, Oscar. Damn it, hurry up! What's the matter?"

Oscar had not moved and his face was red. "I have left the sight," he said, "and I took only four clips of shells. I have thought we go back aboard."

"Hell," Mr. Kingman said, "hell's fire!" He knelt down and rested his rifle on the stone railing. Smack! the rifle went. Smack! Smack! Smack! And Mr. Kingman laughed pleasantly.

"Ah, he's running from the wheel!"

Smack! the rifle went. Mr. Kingman, smiling faintly, reached in his poc for another clip.

"Don't you think," Bob Bolles ask "that you're wasting your time?"

"Why?" Mr. Kingman asked, lool up at him from the rifle sights.

"Because he's lashed the wheel gone below," Bob said. "You can sh her full of holes, but you won't stop Mac."

Mr. Moto still rubbed the back his head. He was smiling, but his s was mechanical. "So little use to Mr. Kingman that," he said. "It m have been better for you later if he used more shots."

Mr. Kingman thrust home the clip and got up from his knees. lines of his face were deeper an did not speak for a moment.

"I've got plenty left," he said. "W that was quite a play, Bob." He off his sun helmet and rubbed the of his hand across his forel "There's no use being angry. I like to get angry, but this is a—a of a mess."

Mrs. Kingman spoke sharply. your own fault," she began. "Mac didn't you think?"

"Please be quiet," said Mr. King "I cannot think of everything." he drummed his fingers thoughtful the stock of his rifle.

They must have all been stari the harbor, lining the edge of th race, their backs to the house. Bolles never dreamed, and he di believe anyone else did either, tha were not entirely alone up there, ing at the sea—until he heard a behind him. There was no warn g—only a full, throaty voice.

"'Ere, 'ere," the voice said. "W all this how-do-you-do? The has gone, hasn't it?"

When Bob Bolles thought of terward, he supposed that the i which followed would have been ing, if anyone had possessed th pacity to appreciate it. It seemed to him so incongruous t some ways it was magnificent. in unison, they all stared ove shoulders, like children caught i guilty act.

"Well!" said Mr. Kingman there was no doubt that his nerve very good, for he was the first cover. "Where did you drop my man?"

It seemed to Bob Bolles the on sible question to ask. Standing terrace just behind them was In Jameson of the Kingston police

THE inspector's clothing was what dingy and soiled, but ev had the uncompromising militar ness that Bob Bolles rememb Kingston a few days back. The tor's military mustache was c trimmed. His puffy red cheek clean-shaven. Like Mr. Kingm was wearing a sun helmet and right hand he held a short stick, ger stick. It made him look li he undoubtedly had been o English noncommissioned offic

"It will hardly help to blust spector Jameson said, "and I sh everyone here the usual warnin thing said by him or her," his st eyes moved in the direction Kingman, "will be used against her."

From the way Inspector spoke, he seemed to consider sudden appearance there was routine matter.

"And I might add," Inspecto son said, "it will do no good t those weapons at me."

"Oh," said Mr. Kingman, "w

"You'll only be responsible death of an officer in line of d spector Jameson said, "besid

else is against you. It will 'ardly help you, sir."

Mr. Kingman had a dazed, blank look —and they must have all looked the same. From the corner of his eye Bob Bolles saw that Oscar was watching Mr. Kingman's face. Mr. Kingman moved his hand and Oscar moved a little to the left. Inspector Jameson must have seen the gesture.

"It's too late for monkey tricks for you or that Swede either," Inspector Jameson said.

But Mr. Kingman's voice only had surprise in it. "Never mind that now," he said. "Can't you tell us where the devil you came from?"

THE inspector's official manner relaxed slightly. "No harm in explaining," he answered more genially. "In the motor launch with this Japanese gentleman, of course," and he pointed a heavy finger at Mr. Moto.

"Excuse," Mr. Moto said. "There were two in the crew. I did not see you."

"No more you did," Inspector Jameson answered, "since I was stowed snug up forward. Why, you can thank me that you had the launch at all." The inspector was only human. He looked at Mr. Moto complacently.

"Oh," said Mr. Moto. "Please, why should you want—"

"It isn't always foreigners who know everything, if I may say so," Inspector Jameson answered. "How did you think it was so easy for a foreigner like you to hire a boat? Why, I'll tell you why: because the police have been searching for a Swede under the name of Oscar Lindquist and for a gentleman with an American passport by the name of Kingman."

Mr. Kingman's face was as motionless as marble, but he did not speak.

"But I am not Mr. Kingman, please," Mr. Moto said.

"No more you're not and very lucky for you," Inspector Jameson answered. "You shall explain later why you were looking for Mr. Kingman. When it was known you were asking where he was and looking for a boat, it was a welcome opportunity, if I do say so. I arranged for the boat and I 'opped aboard and when she passed the schooner I knew that I was right and when she got here I opped off and now—"

"I do not understand," Mr. Kingman said.

Inspector Jameson squared his shoulders and gave his stick an expert twirl. "Now that the schooner is gone, the jig is up, Mr. Kingman, for you and for the Swede here named Oscar Lindquist. You are 'ere on an island, one of his majesty's possessions, and no way of getting off, and I'm 'ere representing the law, sir, and that's all there is to it."

A blank, incredulous look crossed Mr. Kingman's face. "But I don't exactly see," he said. "Where is your boat now, man?"

Inspector Jameson spoke respectfully. He obviously considered that Mr. Kingman was a step above all the others.

"Once the schooner was sighted last night," he said. "I knew you were aboard and coming to Mercator. The motorboat has orders to go on and send for a government cutter. I wanted no accident about it, in case you should get to the schooner again, and there are odd doings here which need investigation. But now the schooner's gone you can't get off and I've showed myself. That's all, sir."

Mr. Kingman pursed his lips. He seemed to whistle noiselessly.

"And I take it," the inspector went on, "from what I overheard 'ere, the black boy employed by Mr. Bolles has run off with the schooner for what reason I cannot fancy. And what brings this lady and all the rest of you here is something for further investigation when the authorities appear on the cutter. In the meanwhile, since no one can leave here, I'm taking over. Is that plain to everyone?"

"Yes," said Mr. Moto. "Thank you. The cutter—when is it coming back, please?"

Inspector Jameson looked up at the sun and then glanced at his wrist watch. He was magnificent in his complete faith in himself. He seemed entirely oblivious of any possible danger.

"If she is at Nevis she should be here by noon tomorrow," he said. "It's as I say, the jig is up, Mr. Kingman. You can't get off and you won't be so foolish as to lay a hand on me. Your 'istory's been sent on the cable from Scotland Yard, a sort of international toff, I take it you are, and you won't make matters worse for you by laying an 'and on me.

"Don't wait up, dear, I'll probably be very late" HERB WILLIAMS

## How's your "Pep Appeal"? —by Bundy

**Radio Director:** No! No! You're going on the air for PEP! Where's that old "oomph"—you know—that zip-zip, that "pep appeal"?

**Radio Director:** Now! Now! Don't feel so bad about it. I know you can rock 'em when you're feeling right. And—say!—that reminds me. Why don't we take time out to *try* a little KELLOGG'S PEP?

**Radio Director:** Here in the script it says that none of us can have pep without getting all his vitamins. And right in this crisp toasted cereal, KELLOGG'S PEP, are extra-rich sources of two of the most important vitamins, $B_1$ and D.

**The Singer:** Hey! Hold on a minute! This is the best doggone cereal I've tasted in a month of Sundays. If getting all my vitamins can be as much fun as eating PEP, just watch me! Before long I'll become the pep girl of the air.

## Vitamins for pep! *Kellogg's Pep* for vitamins!

*Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin $B_1$, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep pack-*

if nothing can be gained by it. You nor anyone else."

His china-blue eyes moved serenely across the group and Mr. Kingman stood with his mouth half open.

"Do you mean to say that you're here by yourself, my good man?" Mr. Kingman asked. "You mean you haven't got anyone lurking in the bushes?"

"Here by myself is right, sir," the inspector answered. "One man is enough when he has the old empire behind him."

Mr. Kingman looked at Mr. Moto in a stupefied sort of way. "Did you ever hear of anything like this?" he asked.

"Yes," Mr. Moto said, "please, it is like the British."

"By—by jove," Mr. Kingman said, "I never can understand them," and then Bob Bolles spoke up. He could not endure standing there and doing nothing.

"Jameson," he began, "you damned fool—"

"'Ere," said Inspector Jameson. "That's no way to talk, Mr. Bolles. I do not believe you are in any ways implicated, but there must be an explanation."

"Wait, please," Mr. Moto said. "Why do you want Mr. Kingman and the other man, please?"

INSPECTOR JAMESON straightened his shoulders again. "Quite right for you to ask," he said, "I'm sure," and his voice became official and sonorous: "On a very serious charge. On the confession of a keeper of a public house—one Henry Pasquez."

"Oh," said Mr. Kingman, "that's it, is it?"

"There, you have it, sir," said Inspector Jameson, nodding. "On the night of November 12th Henry Pasquez was apprehended endeavoring to conceal a body."

There was a sharp cry from Mrs. Kingman, but the inspector's voice went on: "The body of a tourist, French, described as Charles Durant. The confession describes one Oscar Lindquist as strangling this Charles Durant with a rope in a very 'orrible way, if I may say so."

"Oh," Mrs. Kingman cried, "you—"

Mr. Kingman turned on her. His face was white, but his eyes were burning bright. "You be quiet if you know what's good for you," he said. "What other piece of nonsense is there, Mr. Policeman?"

"And you are accused as accessory," Inspector Jameson said. "I 'ereby place you under arrest and anything you say will be used—"

Mr. Kingman's voice rose in a sharp snarl: "Against me? What? All right, Oscar!"

And Mr. Kingman drove the butt of his rifle with all his force into the pit of Inspector Jameson's stomach. At the same moment Bob Bolles felt a hand on his arm.

"Not now, please," Mr. Moto said. "Careful, Mr. Bolles!"

It was over in a second. Inspector Jameson and Oscar were struggling on the stone terrace. Mr. Kingman was leaning over them, but almost instantly he looked up.

"Be careful, my dear," he said to Mrs. Kingman. "Keep back!" His voice was sharp and harsh above the other sounds. Oscar had raised his fist and had struck with all his force at the base of the inspector's skull, and now the inspector lay still.

"All right," said Mr. Kingman briskly. "No need to finish him, Oscar. Drag that fool into the shade and put a gag in his mouth and tie him up."

Oscar was very strong. He lifted the whole limp weight of the inspector on his shoulders and carried him around a corner of the house and out of sight. Mr. Kingman looked at Mr. Moto as though he expected his sympathy and understanding.

"He'll be all right for the time being I think," Mr. Kingman said. "By—by jove, I never saw a thing like that. He was going to arrest all of us. He really meant it."

But Mr. Moto did not appear to sympathize and he shook his head slowly. "So very bad, please," he said. "This brings more trouble, always more trouble. Why liquidate a man in Kingston, Mr. Kingman?"

Mr. Kingman moved his head impatiently. He seemed to be troubled too. He seemed to be using all his will to keep his nerves under proper control.

"Damn it," he said, and he spoke jerkily. "That man—that Henry—was recommended to me. I told the fool to make it look like suicide. I even fixed the farewell note. How did I know he'd lose his nerve? At any rate, it was necessary."

Mr. Moto moved his left hand softly over the creases of his white coat. "You should never do such a thing in Kingston," he said softly. "There are other ways."

"Damn it," Mr. Kingman said, again. "It's none of your business, and there was a difference of opinion and the man fought. And that's that. It was an accident, and you can't help accidents."

Then Mrs. Kingman spoke—so unexpectedly that even Mr. Moto looked startled.

"You coward!" she said. Her eyes were icy cold and contemptuous and her lips were curved with the same contempt. "You double-dealing coward. You meant to go back on us all the time, didn't you?" Mr. Kingman took a quick step backward. His eyes were on Mr. Moto, but Mr. Moto did not move. Suddenly Mr. Kingman's face looked as ugly as a snake's.

"Perhaps I'd better explain myself," Mr. Kingman said, "right now."

"Yes," said Mr. Moto, "it would be so nice."

"Then, listen," Mr. Kingman said. "It's better to have it in the open. I look out for myself entirely. To hell with the Vichy government and any snivelling Frenchmen! Helen, my dear, you people don't pay enough. It was an accident in Kingston and I'm sorry for it. Mr. Moto and I are working together now, and perhaps we'll continue if Mr. Moto pays enough. That part on the plane should be worth a million dollars if it's delivered to the right party. But as for you, Helen, you're out of it. You've always been out of it. You and your people can't stop me now." Mr. Kingman paused and moistened his lips. No one spoke until he went on again:

"All this happily married business! I'm just as sick of it as you are. If you know what's good for you—and I think you do—you'll play this game with me right to the end. And no further personal remarks from you, my dear. There's nothing you can do—absolutely nothing. You're in a damned tough spot and you know it. Do I make myself clear?"

THERE was something sickeningly certain about Mr. Kingman's speech. It was full of all sorts of unspoken implications, and Mrs. Kingman must have understood it. She was standing still, digging her nails into her palms. Her lower lip was trembling and for a moment Bob Bolles thought she was going to weep.

"Yes," she said, "it's clear."

"And you'll do what I tell you, won't you?" Mr. Kingman said.

"Yes," she answered, "yes, Mac," and she seemed utterly beaten, utterly resigned.

"You've got a great way with women, haven't you?" Bob Bolles asked. "I'd like to take that up with you

" He had to say something. He d not have stopped if he had tried, he suddenly felt himself seething white-hot anger. It was not what Kingman said, but what he had said. And then Oscar came around corner of the house, holding his ready.

: is all right, Oscar," Mr. Kingman and his eyes met Bob Bolles' rely. "Romantic, aren't you, Bob? : pretty. I'll admit it. And if I ed she'd get down on her face now and lick the dust off my shoes, ıse she'd have to, Bob, if she 's what's good for her. Don't in- pt. I'm taking up your case. That pretty smart of you, sending that away, wasn't it? There's just one about it—"

'hat?" Bob asked.

' makes you about as useless as ken-down horse, my friend, unless an think of some way of getting oat back."

'o hell with you," Bob Bolles said. e isn't any way. She's gone. ll pick you up in the morning, nan."

'at's just a little hasty," Mr. King- said, "don't you think? I'm going e you time to think that one over. the breath is being shut out of ou may change your mind—a 'or- death with a rope. You heard didn't you? Oscar can handle

C BOLLES still felt that white ne of anger, but his mind was work- st. "Maybe Mr. Moto wouldn't ," he said.

V Kingman's forehead wrinkled.

'o not see," Mr. Moto said, "why ould I not like it?"

B Bolles answered quickly. He ad a card to play.

'I just occurred to me," he said. wanted a plane mechanic. I know about airplane engines, Moto. I it them together and take them I was an aviator, in case it in- you."

—by jove," Mr. Kingman said, n't know that."

ıst thought Mr. Moto would like w," Bob Bolles answered.

y, yes," said Mr. Moto. "Thank you so much. That is very interesting."

Mr. Kingman's fingers drummed gently on his rifle stock. "You think damned fast, don't you?" he asked. "Well, Moto and I might be able to use you, Bob. And now, Mr. Moto—"

"Yes," Mr. Moto said, "yes, please?"

"You're pretty much in the way too, but we need each other, don't we, in case the American Navy or that British cutter comes? We're two against you, Moto, and we're agreed to do nothing until we find that plane. That's right, isn't it?"

"Yes," said Mr. Moto, "that is right."

"And maybe we can talk business afterward."

"Yes," said Mr. Moto, "yes, perhaps."

"Then take your hand out of your pocket," Mr. Kingman said. "It's all right, Moto."

Mr. Moto did not remove his hand from his coat pocket. "Excuse me, please," he said, "if under the circumstances I still do not trust you altogether."

Mr. Kingman shrugged his shoulders. That genial manner of his was back with him again. "Oh," he said, "all right, all right. Let's have a bite of lunch and then we'll start looking," and he glanced toward the house. "Bring in the basket, Oscar. There should be some place to sit inside."

"Why, yes," said Mrs. Kingman. "I'm very hungry now."

It was all surprising to Bob Bolles. That anger of hers and her fear seemed to have gone entirely, just as though that scene with Mr. Kingman had never happened. It was most amazing—that complete control of hers. She seemed completely happy again. Perhaps she was always meant to be happy.

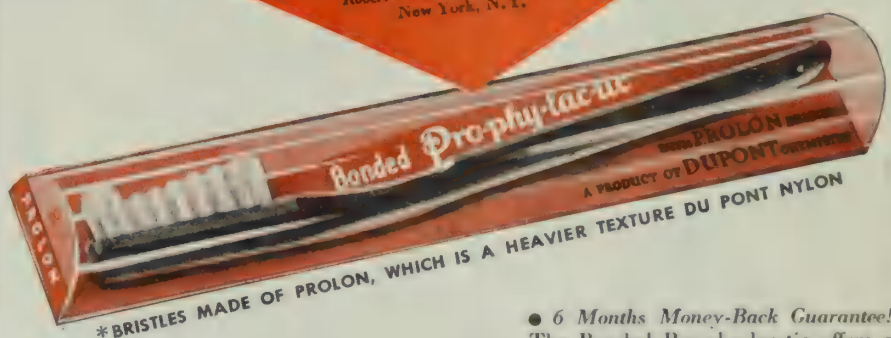
They had all turned by then toward the stone walls of the house with their peeling yellow stucco. The tall windows of the room in front of them opened like doors upon the terrace and showed a large, bare room inside with a flagstone floor. Fire and weather had destroyed the beams and ceilings long ago, so that the room itself was half choked with rubble and you could look up through the three stories of the house to the open sky; but a corner of the room near the windows was clear and, standing in the corner, you were

"Them's mighty fancy shootin' togs yer wearin'. You boys just down from the city?"

The only brush in the world with "ROUND-END" BRISTLES!

MAGNIFIED! ...SEE THE DIFFERENCE!

(Brushes bought on open market)



BONDED PRO-PHY-LAC-TIC. Look at these smoothed, gentle bristle tips! This *one* brush is the *only brush in the world with rounded bristle-ends!* Made with Prolon, a heavier texture du Pont Nylon; OR with *Natural* bristle.

BRAND "A"—50¢ BRUSH. Harsh, jagged points! Want them on *your* gums? And don't forget, neither Brand A nor ■ has Pro-phy-lac-tic's *famous end-tuft for cleaning hard-to-reach back teeth.*

BRAND "B"—50¢ BRUSH. Again, rough, pointed bristle-ends! Of all tooth brushes—in all price classes—only the 50¢ Bonded Pro-phy-lac-tic has gentle "Round-End" bristle.

SWORN TO AND NOTARIZED! I certify that Margaret Oschman of the Medical Photo Service, New York, has sworn to me that the illustrations shown here are un-retouched micro-photographs of the bristles in three leading brands of tooth brushes bought on the open market.

in the shell of the greater house with all its ground plan bare and bleak in spite of the wreckage.

The room where they stood might have been the dining room or the parlor and it had the only floor that was left. Beyond it was the entrance hall with the remains of a stone staircase which led upward into emptiness. The floor of the hallway and the floors of the other rooms had dropped into the cellars and the floor of the room where they were standing would have been gone long ago had there been a cellar beneath it. As it was, there were the remains of plaster on the wall and a fireplace between two windows that was half filled with rubbish.

"Why," Mrs. Kingman said, "there isn't anything here," and Mr. Kingman and Mr. Moto also seemed surprised, for, with its walls still standing, the building from the outside still gave the appearance of a house.

"The devil," Mr. Kingman said, "there's no place here to store a plane. By jove, there's law and order! There's the British empire."

He was referring to Inspector Jameson, who was standing, trussed and gagged, against a heap of stones. There was nothing to do about Inspector Jameson then.

Oscar said nothing. He pulled four blocks of stone together to make a table and moved some other stones around it for seats. Then he found some tin cups that were in the picnic hamper and pulled out a bottle of wine.

"Isn't Oscar wonderful?" Mrs. Kingman said. "He can make any place look like home." Bob Bolles sighed. He could not make her out at all.

"Yes," said Mr. Kingman. Nothing seemed to disturb him, not even Inspector Jameson. Those people had amazing resilience. There was no doubt of that. "Now, we all feel better for the moment, don't we? The walls protect us from the sun, and here is canned chicken and bread, and Oscar will boil some coffee, I think. Pass the cups around, Helen, my dear. It is Ruedesheimer, if no one objects to a German wine. Sit down, Moto. Sit down, Bob. Your troubles haven't started yet, my boy."

MR. KINGMAN sat down, resting his rifle across his knees. He raised his cup, but Bob noticed that his other hand still held the rifle.

"Very pleasant wine," Mr. Moto said. "I have always admired all things German."

"Germany used to be a very restful place," Mr. Kingman said. "Here's looking at you, Mr. Policeman. I'm sorry you can't have a drink of it too," and Mr. Kingman laughed. "Odd, isn't it, all of us sitting here at cross purposes—Mr. Moto with his hand in his pocket, me watching him, and Bob there, wishing he could break my neck? By—by jove, it's rather jolly, isn't it? Here comes the coffee. Have some, Moto?"

"Yes," said Mr. Moto, and he made a gentle belching sound. "Thank you very much."

"Yes," said Mr. Kingman, "all together and all at cross purposes, all ready to fly apart at a moment's notice. It will be quite a while before I can come back here again, I think. Yes, this is the—the life, isn't it? Helen, my dear, I'm glad you're taking it so well."

She looked at him across the stones.

"It's the only way there is to take it, Mac," she said.

"After all, that man Durant was just another of us. He was nothing serious to you, was he, my dear?"

"Just another of us," Mrs. Kingman said. "That's all."

"By jove," Mr. Kingman went on, "here's our little snack of luncheon over and I doing all the talking—the—the life of the party, what? There's just one thing we've got to think about—some way of getting off this island—and, Bob, you're going to do the thinking for us." Mr. Kingman got to his feet. "Helen, my dear, if I may talk to you outside for a minute, we must think of some way for Bob to get that schooner of his back here. Will you excuse us, please?"

Mr. and Mrs. Kingman walked out on the terrace, and Mr. Moto and Bob Bolles were alone except for Oscar who sat some distance away watching them. Mr. Moto glanced toward Inspector Jameson and then took a noisy sip of his coffee. His face was devoid of any expression. The events of the morning did not appear to have disturbed him in the least.

"If you have some signal to call back your boat I think it would be so much nicer if you told," Mr. Moto said, "so much nicer—because Mr. Kingman will make you tell. There are so many ways."

"To hell with all that," Bob Bolles said. "I can take anything that you boys dish out."

Mr. Moto laughed politely. "You are very nice, Mr. Bolles," he said, "very, very nice. I only suggested, please—soon it will be difficult for all of us."

Bob Bolles looked at him curiously.

"That thing on the plane," Bob Bolles asked him suddenly, "what's your game? Are you going to get it for yourself or are you going to play in with Kingman? Not that it's any of my business, I suppose."

Mr. Moto set down his cup. "So very pleased you asked," he said. "I think in the end I shall have it for myself, yes, when the time comes."

"Suppose Kingman's a Nazi?" Bob asked. "You're playing in with those boys, aren't you?"

Mr. Moto looked interested. "Oh," he said, "do you think he is a Nazi? Why, please?"

"Well, you take Oscar," Bob E said. "First he pretended he w Swede and now he's developed a man accent. And take Mr. Kingr accent."

Mr. Moto's gold teeth glittered friendly smile. "So clever of y think," he said. "Mr. Kingmar suggested the same himself. I a sorry I do not trust him—a very man, I do not like Mr. Kingman.

"I don't blame you," Bob Bolle fervently. "I hate his guts."

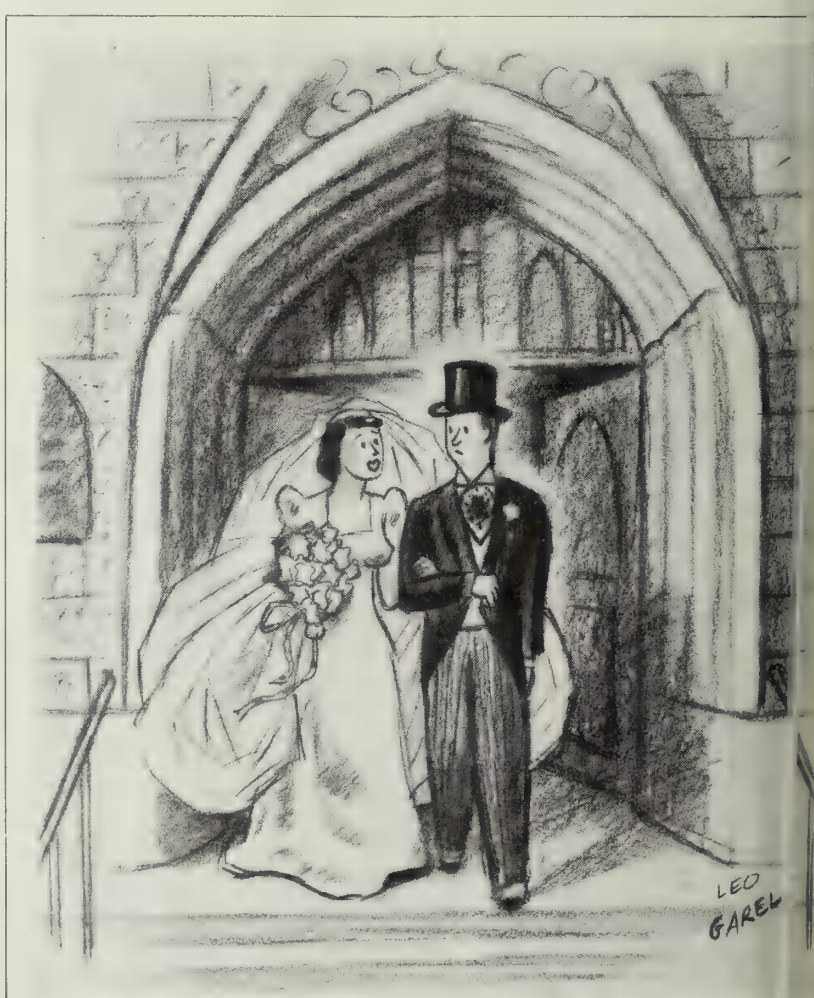
"So happy to hear your thou Mr. Moto said. "But I beg you, p Mr. Bolles, to take care of yours am so glad you understand airp Mr. Bolles. But take care of you Mr. Moto's narrow, dark eyes a glance in the direction of the te "So sorry there should be troub tween America and Japan—two very nice nations. It is all a cu misunderstanding."

BOB tried to make his voice careless. Mr. Moto was leadin something, he was very sure. Th der bonds of expediency whic holding them together were shifti wearing very thin.

"You and I," Bob said, "migh a temporary cultural understa

Mr. Moto sucked in his breat ily between his teeth. "Please," "no understanding now."

Bob had nearly forgotten Osc car had risen from the stone wh had been sitting close to In Jameson. Now he stepped acr space to the stone table, scowli



"By damn," Oscar said, "yo your mouth or I shut it for you

"Please," Mr. Moto beg think—"

He stopped. Mr. Kingma walked in from the terrace wi Kingman just behind him.

"Here," Mr. Kingman asked. the trouble here?"

Continued from page 12

Cameron, and sat down at the office table. As he went through the roster he now and then paused for comment: "Corporal Klein—he's new since my time. What happened to Bartley? O'Hare's serving third hitch, I notice. I see you've got him in the ranks. Must have gone back to whisky." Heat held on and the men around him waited and slowly sweated. Captain Cameron went through sick list, the clothing account and the mess fund. "You've saved too much money on the fund," he commented. "It indicates a miserly mess sergeant."

LATER he made a tour of F's barrack and inspected the stables and returned to stand in the doorway, cap tilted down over half-closed eyes. A fatigue detail passed in a straggling column of twos and a little later a troop came through the main gate of the fort, returned from scout. An orderly moved across the parade, saluted and handed him a note, and stood by while Cameron read it:

*"Captain Cameron: We would be pleased to have you for supper.*

*"Margaret Morton."*

The captain said, "My thanks to Mrs. Morton and I will come."

At six, the bugles blowing first call for retreat, he took his horse from a waiting orderly and rode over the parade to receive his troop from the first sergeant. Sixty-two men stood to horse before him. He said, "Prepare to mount! Mount!" He watched these men fling up their carbines, swing to saddle and turn stiff and still. He was a long and wiry officer, sitting on the saddle with legs almost straight down; and the chinstrap of his dress helmet squeezed his big jaws together. He said, "Fours right," and swung the troop out into regimental line. Dust moved up around horses and men like gray fire smoke and sun flashed brilliantly on bright gear. The fanfare of the bugles died and the band crashed into the national air and the brass cannon boomed, its echo rolling across the river and on out along the flat earth beyond. The flag moved slowly down the pole, the colonel's voice filled the air with one great bronze-voiced bark, "Pass in Review!" and the band broke into a march.

As he took his troop past the colonel, Cameron tossed up his sword and brought it down, and his back stiffened and feeling rushed through him—the feeling compounded from the smell of saddle leather and rank horse sweat, the growling sound of his sergeants behind him and the sight of the guidon pennants whipped back by the riding breeze. He was home again, bathed in those simplicities and realities that sweetened and made his life complete—to the golden clouds of dust and the bite of the sun and to the closeness of his men, to the round of old duties marked off from sunrise to dusk by the sweet-sharp tones of the trumpets.

This was his life. Yet, when he brought his troop back to the company street he sat momentarily before them and showed none of his feelings because he could not. He was a stranger to the troop and these men were strangers to him. He could make no easy gestures to buy their respect. He had to prove himself to them and they had to prove themselves to him; this was the way soldiering was. Cooney sat before him, third front file in the second squad—a heavy, Irish trooper in whose glance mockery brightened; but it was nothing the captain could reach, for Cooney stood behind that barrier separating o ficer from enlisted man. Cameron pu this away in his mind, gave the troo to the first sergeant and crossed bachelor's hall. Later, in a beautif streaming twilight, he presented hin self at Captain Morton's house.

Margaret Morton waited for him her doorway, smiling and with son pleasantly casual word ready to spoken. When he paused before her, grave and austere of expression, t smile left her. Her glance scanned hi most carefully, clouded by the mer ories of past years, and her voice w a soft murmur for him alone: "Nothi changes. You are not a pound heavi not a day older, nor the least trace ge tler."

"No," he answered, "I have changed."

He entered the room to face crowd of officers and ladies, some whom he knew, some of whom w new to him. Captain Seavers' wife sa "You are the same old martinet, Joh They sat down to supper and later into comfortable gossiping. Ma Bainbridge said: "How was the E Cameron? A relief from frontier se ice, no doubt."

"It was a drudgery I despised."

He said very little during the even He stood among them, not ill at e but indifferent and withdrawn, find small talk difficult, and at the earl possible moment he made his exc and left. Margaret Morton follo him to the porch and here he stop and gave her his long and grave st "Nor have you changed."

"I am a settled and married wo with a son who is three."

"Are you?" he said, and looke long at her that she hurriedly r mured, "Good night," and turned the house.

Shortly afterward tattoo broke a the parade and the officers and ladies moved homeward through hot, aromatic night. When they alone Captain Morton said to his "I told you stone doesn't change.'

Margaret Morton didn't immedi answer, being engaged in her own and active thinking; whereupon ton said speculatively, "Memories girl?"

"He reminds me," she murm "that I'm growing old.'

CAPTAIN MORTON let out a ringing laugh and his wife's c turned red. She was not one to easily confused and the captain the uncomfortable realization h touched feelings better left alone.

Walking homeward, Major bridge's wife said, "He still love I wonder what she felt when sh him again."

Bainbridge was mildly shocked. woman's married. That's all ov

"Nothing's ever over. Theirs very stormy affair. Had she bee to bend him ever so little, had sh able to dilute the iron streak i she would have married him inst Harry Morton."

"Marrying him," said Bain "would have been like marry monk. The man's a soldier. Tha only love he's got."

"The affair is not dead," sai Bainbridge. "It could develo quite a scandal. They all know i Margaret and Harry and John.'

Deep-seated in a rocker on th of bachelor's hall, a cigar smo fragrantly between his teeth, C watched a guard detail tramp by

fed the dark with round and beautiful
ces and lights died around the quad-
ngle and the sentry call traveled from
st to post. Dust clung to the air and
t heat stirred along the baked ground.
e desert wildness moved in and the
ck brilliant-flecked sky hung above
n; he sat idle and receptive while this
soaked into him and filled up the
ngry places.

E PUT the troop through drill until
sweat blackened men's shirts and
t turned their faces scarlet, and came
k to the orderly room. Shannon said,
will be all right to issue passes to-
nt, Captain? The boys go across on
ferry to the saloons on yonder side
a bit of drink and a little quarrelin'
the comfort of women."

No passes," said Cameron, "until I
e sweated the fatness and the soft-
s out of them. Shannon, can you
p Cooney?"

hannon stared at the captain. "I've
't tried."

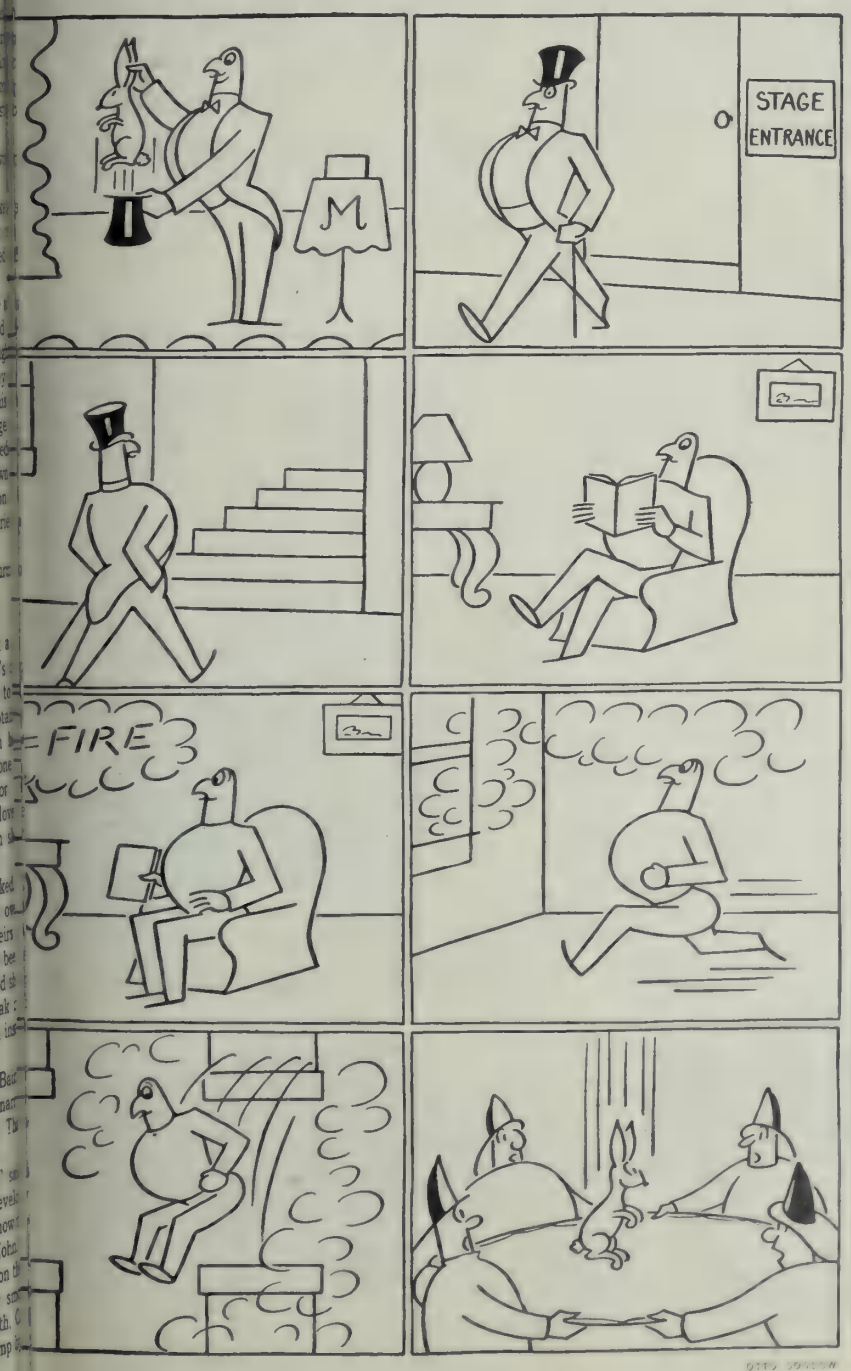
Try it the next time he lays his stub-
n eyes on you."

fter night closed in Captain Cam-
n sauntered through the main gate
made his casual circuit of the post
came at last to the ferry slip. He
d by the shadow of a cottonwood
watched men move out of the post,
nd on pass for the saloons across
river; and saw three other men who,
ing no passes, slipped furtively from
uarded angles of the post. Coming
ard to the ferry slip he intercepted
n. They were F Troop men and one
was Cooney, and thus caught, they stood woodenly silent before him. Cooney's eyes met Cameron with a flare of insolence and silent laughter.

"Two days on the water detail," said the captain. "Get back to the fort."

"Yes, sir," said Cooney in a voice whose perfect civility mocked the captain. Cameron watched them go back through the main gate, but he knew the quality of Cooney's desires and the strength of Cooney's will and so he traveled along the dark outer walls of the fort and paused at a gap in the wall close by the houses of laundress row. There was a rowboat tied to the bank at this spot and near tattoo he saw a single shape slide down laundress row and come forward at a low run, bound for the rowboat. Cameron said, "Cooney," and caught the Irishman in his tracks. He received the full furious flare of Cooney's temper—the bright anger and the rebellion. The Irishman stood in front of him, breath rising and falling through his mouth; his eyes were round and pale.

"Don't try it again, Cooney. You hear?"



"I hear, sir," said Cooney. "I am a stubborn man, sir."

"So am I, Cooney."

"That I know," the Irishman murmured, coolly and falsely respectful. "You will be turnin' me over to a court-martial, sir?"

"No," said the captain, "I will take care of you my own way. Go back to quarters."

He watched Cooney retreat and he

THAT'S right . . . *all* smokers sometimes inhale . . . knowingly or unknowingly. And inhaling *increases* the *chance of irritation* to sensitive nose and throat passages. But—see what eminent doctors found . . . on comparing the leading cigarettes! They report that:

**THE SMOKE OF THE FOUR OTHER LEADING BRANDS AVERAGED MORE THAN THREE TIMES AS IRRITANT AS THE AMAZINGLY DIFFERENT PHILIP MORRIS — AN IRRITANT EFFECT WHICH LASTED MORE THAN FIVE TIMES AS LONG!**

You can't avoid some inhaling—but you *can* avoid worry about your nose and throat . . . you *can* have true smoking pleasure without penalties—*if you smoke* Philip Morris!

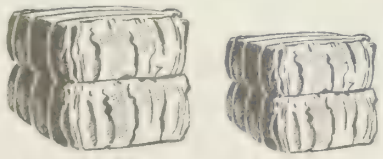
AMERICA'S *FINEST* CIGARETTE

# An Importan About Rubber i

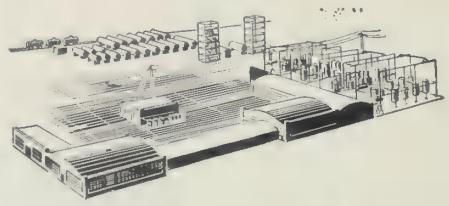
## AND WHAT YOU AS A CAR OWNER A

Among the strategic raw materials so vital to national defense, rubber is one of the most indispensable. Airplanes, scout cars, tanks and trucks as well as thousands of vehicles necessary for transportation in defense industries require tires, tubes, and hundreds of other products made from rubber. And while no other nation in the world has such vast natural resources as the United States, all of our rubber must be imported across thousands of miles of ocean. With world conditions as they are today, we must face the growing possibility that this country may be cut off from its principal sources of rubber supply.



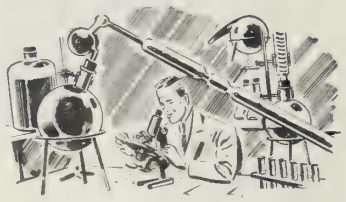
*Map showing routes that rubber travels to the U. S.*

Realizing the dangers of a single source of supply, Harvey S. Firestone began years ago the development of a huge million-acre tract of land in Liberia for growing rubber. Today, an ever-increasing amount of highest-quality rubber is being shipped to Firestone from these plantations.



*Tapping rubber trees on the Firestone Plantations in Liberia.*

Today, this country has on hand or in transit only enough crude rubber and finished products to last 13 months at present rate of consumption.

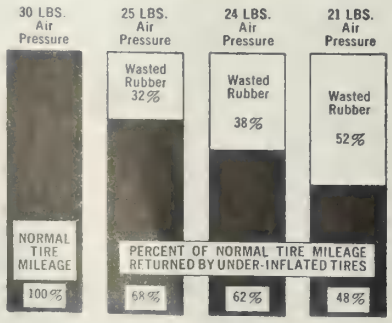


*Comparison of rubber supply on hand and amount needed for one year at present rate of consumption.*

Every month part of the rubber imported is used by the government to build up a reserve. The remainder is allotted to the rubber companies who must first manufacture products needed for defense. They then use the rest to make the thousands of rubber products needed by automobile and other manufacturers and by the public.

*New Firestone synthetic rubber factory.*

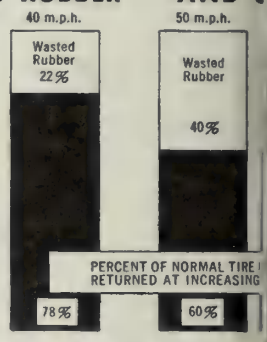
Fully aware of these serious conditions, Firestone has taken many steps to conserve and increase America's supply of rubber. In cooperation with the government, Firestone is now building another factory for the manufacture of synthetic rubber. This will greatly increase present capacity.



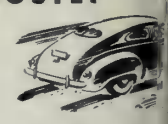
As a further step in conserving rubber, Firestone scientists and engineers recently developed the new wear-resisting Vitamic rubber compound, which enables car owners to get much greater mileage from their tires and thus save more rubber.

### HOW EVERY CAR OWNER CAN HELP CONSERVE RUBBER

Today's conditions stand as a challenge to the loyalty and patriotism of American motorists. Here are a few common-sense rules of tire care which will save millions of pounds of rubber annually for your country and save money for you.



### UNDERINFLATED TIRES WASTE RUBBER



Look at this chart — if a tire with 30 lbs. of recommended air pressure is run at 25 lbs., 32% of the normal tread mileage is sacrificed! Save money and save rubber by having your tires checked every week.

### SPEED WASTES RUBBER — AND

Chart shows excessive speed is the greatest thief of tire mileage. An increase in speed of 50% may mean a 50% increase in the cost of operating your car.

### QUICK STARTS AND SUDDE ARE COSTLY

In quick getaways, wheels spin against the pavement, wasting rubber. A similar action takes place when sudden stops cause yo slide. Save rubber by starting and stop

### WHEN YOU NEED NEW T IT'S ALWAYS GOOD JU TO BUY THE BES

One of the most effective ways to — and at the same time save mon precious human lives—is to equip tires with Firestone Life Protecto type tubes that out-wear three sets tubes. With Firestone Life Protect car you can drive your present thousands of extra miles without f outs, because these tubes make a harmless as a slow leak.

And after your present tires ar replace them with the safest, long tires that money can buy — the ne Firestone DeLuxe Champion Tire tires made that are safety-pro speedway for your protection on t

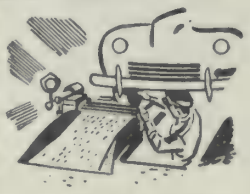
ONE-STOP SERVICE

### SAVES YOUR TIRES . . . SAVES YOUR CAR . . . SAVES YOUR MONEY!



In every community there is a Firestone Dealer or Firestone Home & Auto Supply Store with experienced service men who will gladly help you get more mileage out of your tires and keep your car running more economically without one cent of cost to you. Here are a few of the services they perform:

### INSPECT YOUR TIRES AND CHECK THEM FOR CORRECT INFLATION

Your tires will be inspected and properly inflated free at any time. Nails, glass or other objects that become imbedded in the tread are removed. Dangerous breaks in the tire body are located so that they may be repaired before serious damage occurs. This service increases tire mileage.

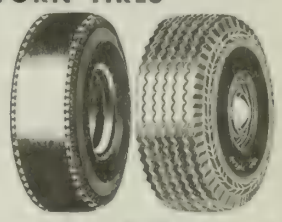
### TEST YOUR BRAKES WITH THE MOST ACCURATE MACHINES

Balanced brakes prolong tire life by preventing over-braking on one or two tires. Firestone electric brake machines scientifically balance each wheel. Your Firestone Dealer or Store will gladly test your brakes free.

### CHECK YOUR WHEEL ALIGNMENT WITH MOST MODERN EQUIPMENT

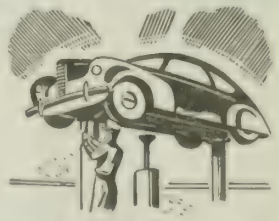
Pigeon-toed wheels that waste so much rubber and gasoline can be quickly aligned. Misalignment can occur through striking a chuck hole or from a severe bump. Your car should be checked regularly for alignment — another free Firestone service.

### INSPECT AND TEST YOUR BATTERY



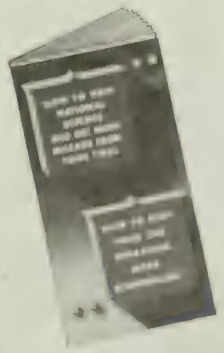
You can save a lot of trouble if you make your Firestone Dealer or Store responsible for your battery's efficiency. They will gladly test the battery free upon request. And their efficient equipment will tell the exact condition of each cell so that you may avoid any annoying road delays.

### TEST YOUR SPARK PLUGS



Spark Plugs are the nerves of your motor. Unless they have full firing power they waste gasoline. Your motor will fire unevenly and wear on bearings, shafts and other running parts is increased. Have your Firestone Dealer or Store test your plugs every 4,000 miles. There is no charge!

### SAVE RUBBER BY RETREADING YOUR SMOOTH, WORN TIRES



If your smooth tire has a body that is safe and sound, a rugged, tough, long-wearing, non-skid Firestone New-Tread can be applied at amazingly low cost, which will give up to 80% of the mileage built into the original tread. This is one of the best possible ways to do your part in conserving rubber.

### EXPERT LUBRICATION PROLONGS CAR LIFE

Firestone lubrication is performed according to the car manufacturer's specifications and only the highest quality lubricants are used. Regular and correct lubrication prolongs the life of your car.

### GET THIS NEW BOOK *FREE*

***It will help save rubber for defense and money for you***

We earnestly urge you to join in the nationwide campaign to conserve rubber for national defense. Get your copy of this new free booklet at your nearby Firestone Dealer or Store or send a letter or post card to The Firestone Tire & Rubber Company, Akron, Ohio.

*You are invited to listen to the Voice of Firestone with Richard Crooks, Margaret Speaks and the Firestone Symphony Orchestra, under the direction of Alfred Wallenstein, Monday evenings, over N. B. C. Red Network*

# "Look me over, Dad, I'm a woman with a past!"

"Hmm! It seems to have agreed with you. But I never did like your being away from home. Come on, darling, what's the confession?"

"Brace yourself, Dad. It's a dark story. For months after I hit the big city I was all on edge. Lost weight. Lost sleep. I even used to . . . "

"Used to *what*, Sue?"

"*Jump at people*, like this! And then I was told I had a Vitamin B Complex deficiency."

"What the dickens is that?"

"It's a shortage of those amazing vitamins you find in their natural form in fresh yeast. So I bought a week's supply of FLEISCHMANN'S. Took two cakes a day in nice cool tomato juice, and pretty soon..."

"Mm! I know FLEISCHMANN'S can do plenty for people, but what's this about tomato juice?"

"That's the new way to take it. Look! Mash a cold cake of FLEISCHMANN'S in a dry glass with a fork, add a little tomato juice, stir till blended, fill up the glass, and drink. Delicious! Has a flavor like oven-fresh bread!"

Read the label. FLEISCHMANN'S is the only yeast with all these vitamins. And the only sources of the important Vitamin B Complex are *natural* sources, such as yeast and raw liver. Remember, if you bake at home, that three of the vitamins in FLEISCHMANN'S, $B_1$, D, and G, are not appreciably lost in the oven; they go right into the bread.

## Fleischmann's Fresh Yeast
## For Natural Vitamin B Complex

turned to his own quarters, meanwhile observing Captain Rand's company move out through the main gate on scout detail and dissolve in the prairie's dark.

CAMERON crossed to the orderly tent in the early morning and saw that Shannon's face was raw and swollen. "I am getting old, Captain," said Shannon. "I could not lick him."

Cameron drilled them dismounted under the desert sun; he threw a daily inspection at them. By night he sent his patrol outside the fort and rounded back the F Troop men who tried to slip across the river. Sitting on his horse at retreat, his eyes clung to them. By day, wherever they were, his presence drove them. At the end of the week he broke all his noncoms back to ranks and promoted a new set. He saw the fat fall off these men, he watched them grow stiff on the saddle; he saw the rank, surly spirit begin to shine in the rounds of their eyes.

Captain Rand one day made complaint: "Ease off on your men. They're quarrelsome. One of my troopers had a hell of a fight with Cooney in the stable last night."

"Train your men to take care of themselves," said Cameron, and was secretly pleased.

Now and then, coming down the walk on officers' row he fell in with Margaret Morton and went along with her, a tall, dark man staring straight ahead into the sunshine. Once she said, "We are of course being observed, John. We should not be so silent and serious when we walk together."

"Don't try to change a man's heart, Margaret."

"Never speak of that," she said, and turned into her house.

Going on, he saw Cooney standing in the water-detail wagon. Cooney was adrip with sweat from the labor of lugging barrels in and out of officers' row, and the day's heat was a scorch on his skin. He stood still as Cameron passed and his eyes deliberately lifted toward Margaret Morton and dropped back to Cameron, mirroring earth-gray suspicion. The captain put it away in his head and that evening spoke to his top sergeant: "Make a check roll call in the barracks tonight. If anybody is missing let me know."

After dinner he strolled the fort's quadrangle, bathed in deepening twilight and in growing dark. A small wind came from the west, out of the land of the Sioux, out of that yonder mystery, and the breeze was like life to him and the savage savor of it was whisky in his veins and a slugging pulse of excitement throughout his body, and he knew that if he had driven his men without mercy he had likewise driven himself. He was filled with the same rank violence.

Captain Morton paced down officers' row and paused. "You look lonesome," he said. "Drop in and talk to Margaret," and he went briskly along toward headquarters. Cameron moved forward, seeing her shadow on the porch. That part of his life, he knew, had never grown less. Side by side in him had marched the two great emotions of his life—his love of her and his devotion to his profession. There was room for nothing else; and at last there was not room for both and so he had lost her to Morton. It left its havoc. Other men could compromise and take the sweetness of many things. For him the choice had been between two passions which could not live side by side. She had made the decision for him, wiser than he; and still her presence was a great undertow and as he stopped before the porch every old feeling he had about her was still alive and every old wound reopened.

"Come sit beside me," she murmured.

"No," he said.

"Everything that used to be betwee us still torments you."

"You have the same memories, don you?"

"A woman lives better with her mem ories than a man. They sweeten h thoughts. But a man lets them gro stronger and stronger until they co sume him. You have your professio That's what you wanted, wasn't i We'll be together in this regiment mar years. You must not look at me ar long for impossible things."

"Easy to say."

"No, not easy to say."

He saw the round dim glow of h face, darkened by the night and dar ened by what was in her body, and f a moment he felt her closeness as it h been, and during that moment he kn it was with her as it was with him— emotion keen and forlorn and despera "You made your choice," she said.

Taps moved in slow melody acr the parade and a guard detail tramp by. F Troop's top sergeant paced ov the quadrangle and paused before Ca tain Cameron. "All present in barrac sir, except Cooney."

"That's all, Sergeant," said Camer and watched the sergeant stride aw

"You made your choice," repeat Margaret Morton. "You must be e now, with yourself and with me."

"Nothing is easy with me, either soldiering or love."

"Never speak that word."

"You see," he said, "it is not dea

"Don't stir up old things. Only d aster could come of it for us."

"Good night."

"Do you understand?" she repea more urgently. "You must not."

He turned down officers' row and the fort, coming to the ferry. He cros on the ferry and took a side trail up bluff to the saloon; he let himself i the saloon's back room, and knoc against the bar door. When the b keep put his head through the doorw Cameron said, "Just tell Cooney a fri wants to see him."

He heard Cooney drag his b across the barroom floor and he st back against the wall, lighting a f cigar. Cooney pushed the door o cheerful and careless, but the sigh the captain stopped him dead; it li his head and it changed the conte shine of his eyes to a yellow-br glow. He closed the door.

"Now you'll court-martial me," Cooney, "and I'll be out of your c pany and no longer a care to you."

"I take care of my company," Cameron.

"So you do, Captain. You're the r ter, as far as the regulations go. O far as you can make your nonc fight."

"YOU'LL mind me, Cooney," Cameron, and unbuttoned his He removed it and laid it on the t Cooney's voice hit him, full of di proval: "There's a wall between rank and mine."

"What I am about to show you," Cameron, "is that there is no wall can hide behind. No wall for yo for any man."

"Ah," said Cooney, "this is shame

Cameron said, "I came up throug ranks, Cooney," and caught Coone the shirt collar and flung him ag the wall. The sound of that wa echo through the house. Co wheeled free, his lips drawn back big white teeth and he murmure you want it, then," and bowed his and plunged at Cameron.

Cameron hit Cooney's lowered and threw him against the wall; h the great yellow roundness of Coo eyes. Cooney got his arms aroun and hurled him sidewise half acros

om. A chair crashed down and a
n's voice called through the flimsy
rtition: "What's goin' on in thar?"
ooney rushed at Cameron, his broad
s breaking through the captain's
ard and smashing him on chest and
k. Swaying aside, Cameron saw
ooney's arms spread apart at one
eless moment and he drove home one
rt, rising punch. Cooney fell and lay
tly groaning.
The door came half open. Cameron
d, "Shut that door!"
Cooney pushed himself to his knees,
ring at the captain with his balked
red. "You've lost my respect! If we
re out on campaign and I was behind
i, I'd put a bullet—" But he clapped
and across his mouth, groaning. "No,
vouldn't! I'd lose my own respect.
ere's things a man won't do—"
Cameron smiled a wintry smile at
ney. "You're afraid, Cooney. You've
l luck with your fists and you figure
u're a brave lad that will take no non-
se. But you're afraid."
I am my own free man," cried
ney. "You will never reach into me
l lay your damned black will on
ie!"
Free?" said Cameron. "No man is
. That is why you're afraid. There's
etter man than you somewhere, and
you fight to prove there is not and
the while you know you're wrong.
re're a thousand men in the post
ter than you, Cooney."
ooney stared at him and Cooney
ed him—his presence and his smile
his smell and shadow. Captain
neron put on his coat and walked

T TATTO Captain Cameron took his
troop through the main gate, sixty-
men, two lieutenants and a civilian
le. Three miles from Lincoln, he
le camp and set out his guards; and
ed up in a blanket with a saddle for
w. At daybreak they marched
ight west to the shallow forks of a
k and were soon after lost in a land
hing like great sea swells. Once the
lian guide scouted forward and re-
ed to say, "Been Sioux this way."
sunset they were at the foot of low
s, with the crease of a pass visible
re them. The creek still ran with
n and in the low fork of a near-by tree the silhouette of an Indian grave showed through evening's dark. The cook fire died and blackness was a whirling pressure around them and an emptiness moved in greater than any emptiness in the world, threaded by the far, sharp barking of coyotes and little earthborn sounds that had no name. The wind softly brushed them with its scent of danger. The civilian guide said, "Never know about Sioux, Captain. They're always somewhere."

AT DAWN they continued with the creek and moved into the low pass, following the trace of an Indian trail. Sun flamed up and dust rose; and looking behind him, Cameron saw the glitter of sweat on the dark faces of his men, and the sharp edge of their tempers when they looked back across the gulf he had created. The troop was sixty-two men, but sixty-two men didn't make a troop. They marched as strangers behind him, and he was a stranger to them; the guidon stirring in the riding breeze was a symbol of a unity not yet proved.

The civilian said in the most conversational of voices: "I think they're on the brow of the ridge, yonder of the creek."

Looking to the ridge's crest, he saw the vivid flash of sun on metal. A rifle shot flatted in the thin air and the bullet's dust dimple broke at his feet. He made one gesture with his arm. "Prepare to fight on foot." He watched them swing and dismount. The horse holders ran back and Sergeant Gaffney began swearing. "Gaffney," said Cameron, "you're wasting wind." The guidon corporal and the trumpeter took stand by him. Indians showed on the ridge, on horse, not yet making a fight of it but sending stray shots down. The troop was on the exposed side of the creek and needed the shelter of the cut bank across the water. Before he gave his order he looked at his men carefully, and saw that they were watching him. "Cross the creek," he said, "and get under that bank."

They splashed across the creek and reached the cut bank. Looking back, he saw a horse drop and thresh in a hamstrung motion and die. The Sioux bullets thickened, making creases and spouts in the water, and the Sioux were

moving toward an angle of the creek to sweep up against F Troop's flank.

Cameron said, "Pick 'em off," and listened to the sudden crackling of carbine fire. Low in the saddle, the Sioux rushed diagonally down the slope in a long, thin column, poor targets against the sun, but for this little while Cameron stood back to observe his troop. Gaffney was an excitable man in trouble and didn't merit his chevrons. The guidon corporal stood fast in his tracks, a long, thin Irishman whose eyes looked upon the Sioux and showed no fear. Little Joe Rinert clung flat to the cut bank, hiding himself. Cooney used the cut bank as a parapet, the snout of his carbine kicking up slightly from each shot; Cooney's face was dye-red and tracks of sweat cut trails through the alkali dust. George Rasmussen took two steps away from the cut bank, made one half turn and fell dead.

The Sioux changed location so swiftly that the troop's fire was masked by its own men. Cameron made a long sweep with his arm and called, "Second platoon swing up to those rocks." The bullets were singing in hot and close and dust thickened all along the slope and his men were fumbling and not sure of themselves. He ran forward until he had reached the rocks and he stood high against the sun while his men lifted themselves from the ground and came on at a low run. Cooney went cursing past him and Cooney stared at him and dropped on his knee close by and, still cursing, took his aim. The Sioux straddled the creek and came galloping in.

CAMERON sighted his service revolver on the blurred shadows moving forward and heat and powder smell rolled back on his face. There was a long interval in which the fire of the Sioux struck hard at the troop and the carbines of the troop made a stubborn answer. This was the moment when the bowels of men turned cold or their spirits grew great upon them and Cameron, not yet sure, turned and looked upon his troop and saw that it was steady, and smiled. The Sioux had reached the cut bank and had started over the water and at that point a leading warrior went down and the rest of the Sioux were caught in the midstream jam. Captain Cameron pointed his long arm at it and the troop's fire centered upon it and under that terrible wither of fire the Sioux line melted and broke.

He watched warriors race through the water, leaning low to seize their wounded brethren; he saw the rest of the group wheel and flee into the dust and the sunlight's glare, and then he turned to look upon his troop again, and his head gave a sudden upward jerk and a black look came upon his face and he fell to the ground.

The fire was dying out and the Indians were in flight. As he rolled slowly on the hot earth and gritted his teeth against the round and hollow surge of pain moving up from somewhere below his belly, he formed his official report in his mind: "F Troop sighted a Sioux detachment, approximately ninety in number, on the south fork of Tull's Creek. The engagement lasted fifteen minutes, after which the Sioux broke, leaving considerable dead behind. Our own casualties were—"

Cooney was the first man to him and Cooney bent down, the sweat of his scarlet face dripping on Cameron. Lieutenant Chappel stumbled forward. Cameron said, "What were our casualties?"

"Rasmussen's dead," said the lieutenant. "And Sharp is shot through the arm. Where are you hit, Captain?"

"In the leg, I believe. Pull me up, Cooney."

Cooney pulled him up so that he could look along the creek. The Sioux were in the distance, now obscured by their own dust and he knew they would not strike again this day. He said to the lieutenant, "Camp the troop here, Chappel, and set out pickets."

"Cap'n," said Cooney, "you're bleedin' like a faucet. I will have to cut your pants away. It is an expensive pair of pants, but you do not mind?"

"You fought well, Cooney."

"Ah," said Cooney and paused from his chore to give the captain the narrowest of glances, "so I did. And not from fear. I am a stubborn man and I would not have budged an inch from those copper-hided devils for all the whisky in Dakota."

They patched up the captain and he sat propped against the rocks while the blazing afternoon exploded in the west. A detail buried Rasmussen and twilight fell and mess fires danced and Cameron heard the murmuring of his men and listened to that sound with content. Cooney came up with a mess pan and stopped by him. "A bit of fried fish, straight from the creek."

"Thank you," said the captain, and stared at Cooney's long and dirty and tired face.

Cooney said, "We stood, did we not? You have no complaint on that?"

"No," said the captain, "no complaint. I am making you a corporal, Cooney."

He watched the return of swift and suspicious flare of antagonism to Cooney's face. But it did not last long; it faded away and Cooney, sighing, looked down at the captain with a resigned expression. "I said you would never put the harness on me." His glance bored straight through the captain. "Do you abide your own harness?"

It was a soft, simple question but the captain knew Cooney was thinking of Captain Morton's wife; for Cooney was a smart man and had used his eyes. "Yes," said the captain, "I'll abide my harness, Cooney."

"If that is the way you live, so will I then," said Cooney, and turned off.

Cameron lay on his blanket in night's full darkness and felt the oneness of them all, himself a part of that oneness. They knew him and he knew them a out of salt, sweat and violent action had turned them into a troop. T pride of that would never leave th The earth was around him, its vi filling him and giving him life. T was what a man should be. Perh when the younger years were g and the pride of spirit had dulled, th might be regret and a wish for softr long ago offered; but until then was the meaning of a man, warmer t the lips of a woman. It occurred to that in a way it was strange how Coo had cleared his mind for him. He broken Cooney to the wheel and Cooney had the last word after all; Cooney had made him see he ha abide his own philosophy and his harness. He would have to tell M garet that.

HE TOLD her the following night. was in the post hospital when came in with her husband; but prese Morton—who was an understan man—went away.

Margaret said, "Your life will al be violent. But you wish it so."

"I have no complaints," he said, I will not wish for things that are yond me. I wanted more than one can have. I will be content."

He noticed the relief that came her face and he understood then she had been under great strain. had feared his power over her an had feared her own heart. He wa her face and saw the beauty it ha ways held for him, and always v hold for him, and he saw the soft expression which followed her r She was near to tears—she was rer bering all that he remembered. B thought of Cooney and he knew he could do no less than Cooney done.

He rarely smiled, but he did so "I have some of you, Margaret."

She looked down and she rea heart, and at that moment she mitted him to read her heart; and said, "We must all be faithful, Jo else we are little people."

**"We'll be all right once we get out of here—they say the rest of the course is covered with smooth, green grass"** BI OTH

# Mr. Me goes to town

HVE A WHOLESALE GROCERY business out in the Middle West.

eat shakes of a business. But enough to keep mily going and pay my insurance premiums.

Aput twice a year I have occasion to go to Chicago, l k things over with some of the people I deal with.

Now, I *might* go to Chicago the cheapest way I can.

B I don't do it. I always go Pullman. I pay a le igher railroad fare, and it costs me $2.90 for a Ve berth. And I figure it's money well spent.

In he first place it bucks me up. I just plain feel r important when I ride on a Pullman. In the n car and in the smoking room I meet men o e gone a long ways in the world—who have r ting things to say.

Another thing While I'm no scared-cat, I *do* like li safe, and knowing I'll get to where I'm going ot somewheres else.

And traveling in a Pullman is like staying in a fine hotel. Take the washroom. Everything in it is spotless and well-arranged. They dish out spanking clean towels by the dozens. The hot water is hot, not tepid. The soap lathers up the way soap should. There's even a special tooth-scrubbing bowl and an outlet for my electric razor.

Your berth, if you've never ridden a Pullman before, will bowl you over The bed is a big bed, more than 6 feet long and plenty wide. The sheets on it are as white as December snow. There are reading lights, and a shelf for your books or magazines. There are hangers for your clothes, and a net hammock for socks, handkerchiefs, underwear and so on. When I get in the berth, I feel plenty cozy. And do I sleep! Mmm, like a log.

As if all this wasn't enough, there's the porter. He takes care of me as though I was the only fellow on the car. Gets me up exactly when I ask him to in the morning. Brings me a drink of water if I'm thirsty at night. Beats me to the draw with an extra blanket if it's cold. And in the morning, when the train is pulling in to Chicago, he has my shoes shined and my clothes brushed, so that I feel pretty good about the way I look.

Also, when somebody asks me how I came down, and I say "Pullman", I get a quiet kick out of it. May be a little small of me, but I think most folks feel that way.

## ☆ For comfort—Go Pullman ☆

# Holy Harold

Continued from page 13

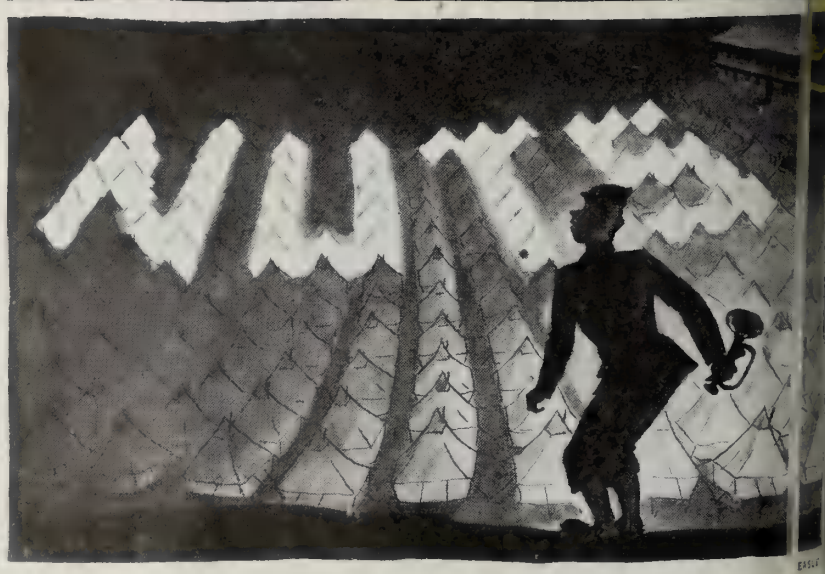
He has fought with Harry Hopkins, Jim Farley, Henry Wallace, Admirals Leahy and Moffett, Alf Landon, Wendell Willkie, Jack Garner, Henry Ford and Gifford Pinchot who, he insisted, "hasn't had a new idea in twenty-five years and, moreover, doesn't know one bird from another." This last left Mr. Pinchot all but permanently crippled, in as much as Mr. Pinchot and American bird life had been virtually identical for many years. He said that Mr. Herbert Hoover was not to be blamed for failing to be a better President than he was because Mr. Hoover was a long-time sufferer from the creeping jitters. Without warning he has torpedoed senators, representatives, governors and smaller fry, just as a warm-up frequently taking them on in convoy lots. From individuals he has turned to the press and to whole political systems and philosophies. Frightened industries and industrialists were push-overs. With a few exceptions, notably the Aluminum Company of America, he has eased up on Big Biz since it has become more or less apparent that the defense program has need of it. Big Biz, a tag applied to almost anything larger than a general store in Mr. Ickes' formative years and still prominent in his vocabulary, likes to speak of him as a radical, even a red radical. But that too is less than accurate. Mr. Ickes is an old-time reformer of the Bull Moose school. Theodore Roosevelt is still his spiritual leader although T. R.'s more nimble cousin commands his complete loyalty. Teddy's big stick is still the Ickes totem. His chidings are still of that more ponderous era—intellectual Dillingers, money mobsters, dervishes of Wall Street, worshipers of Moloch, economic sciatica, big-business barons, plutocrats of privilege being samples. Corn, but good corn. There is seldom anything puckish about Mr. Ickes' scolding. None of his snipings has had the ring or echo of his current master's economic royalists.

### A Direct Hit on Harold

Ickes is a barrel-chested, cat-eyed badger of a man and has almost no faith in his fellow beings. Neither this nor any preceding administration has produced a man capable of getting more solid comfort out of a nice new enemy. Of course he has not gone unanswered in his tongue-lashings. Goaded to reprisals, less deft tongues have taken their clumsy licks at Mr. Ickes. And while victory was usually his, no tag he has tied to a startled foe has had the exactitude and popular acceptance of what a still unidentified counterpuncher called him—Donald Duck. Almost every Ickes scorner in Washington lays claim to that happy comparison and we're playing no favorites. It was a direct hit, silencing Mr. Ickes for a split second in the middle of a quack.

Senator Bridges of New Hampshire has called him a Hitler in short pants—not so good. Senator Pittman of Nevada was all in favor of a congressional committee to run down a rumor that there was something on earth that Mr. Ickes didn't want to manage. Governor Alf Landon of Kansas called Mr. Ickes a corn borer. Dorothy Thompson accused him of being an utterer of awful frivolities. Jack Garner insisted upon calling him—privately anyway—Itchies. And an unidentified cattleman emerging in terrible bewilderment from Mr. Ickes' office, still wondering what was wrong with grazing a cow or two on government land, spoke of him as "a right brawlin' little feller who must have et something." It happens that he had done one of the best descriptive jobs that any Ickes commentator has achieved. Mr. Ickes suffers cruelly from dyspepsia, an ill reward for his early zeal. A tremendous worker, he snatched his meals when and if time allowed. It is not impossible that his disordered digestion is responsible for many of his frequent irascibilities.

Yet he has not permitted his unceasing and successful pursuit of unpopularity to interfere with the discharge of his duties as Secretary of the Interior. In this post, to which he was appointed in 1933 after it had been declined by Senators Johnson of California and Cutting of New Mexico, he has been honest, courageous and, to the politicians who had long regarded the Interior Department as their very own grab bag, a great disappointment. Mr. Roosevelt had him ticketed for Commissioner of Indian Affairs, which would have been very much like Joe DiMaggio playing the outfield for Mickey's Meat Market in a Wyoming softball league.

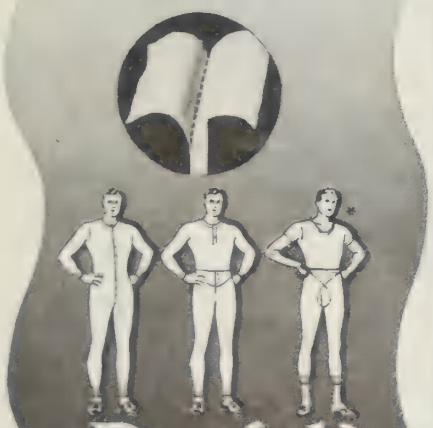


As a public servant he has been aggressively good and bitterly faithful, frequently firing less virtuous and ardent subordinates who were merely suspected of fingering a wildcat. What with his passion for displeasing his fellow man and his savage incorruptibility, his admitted rectitude never got a chance to shine in public office until Franklin Roosevelt drafted him.

Born near Hollidaysburg, Pennsylvania, of Scottish and German stock, he was consigned to a Chicago aunt when sixteen and presently was graduated from the University of Chicago, a lawyer. Among the few people whom Ickes then thought worth while Professor Charles E. Merriam, who taught him political science. Professor Merriam, a Republican, accepted the sacrificial task of running for mayor on a reform ticket against the Honorable Carter H. Harrison, Jr. Mr. Harrison had already been mayor terms to the complete satisfaction of unholy and was loath to run again til he realized what suffering would be in City Hall were Chicago to undergo a reform administration. he patriotically and thumpingly feated Professor Merriam at the crushing every Merriamite save Ickes. After the voting, the professional campaign managers foregathered the customary post mortem. A number of interesting aspects of the contest broached, but as far as we are able learn, nine tenths of the time was voted to: Who is this guy Ickes? Ickes, working for Professor Merriam in what started out to be a humble capacity, had managed to irritate every body he had had time to meet.

### Came the Crusader

He never ran for political office saving a lot of time. And almost invariably the candidates he favored The exceptions were Franklin Roosevelt and Judge William E. Dever latter a Democrat who was elected mayor of Chicago in 1923. Mr. worked vigorously for Judge Dever perhaps too vigorously. Even after judge was inaugurated he cooled to Mr. Ickes, taking to an inner office and leaving word that he



**Get Wool-Protection without Wool-Itch!**

Wouldn't you prefer to *avoid* colds than to cure them? Then get underwear that gives you the *best* protection against wintry weather. Duofold's fabric is made in *two thin layers*. Wool and other fibers are in the *outer layer*. The inner layer is all cotton. No wool can touch you . . . No itch. The 2 layers maintain bodily warmth better than a single layer of equal weight. They also reduce the chilling effects of evaporation. Bodily moisture evaporates from the *outer* layer, *away* from the skin. Made in union suits and two-piece garments to suit all requirements. *New "Action-Support" longs for *active* work or play.

**Duofold**

*See that G! Something* new *has been added to that manly chest by a grateful Alma Mater. Something* **new***'s been added to Old Golds, too—to create a* **new,** *finer flavor!*

# Something NEW* has been added!

Old Gold has a plentiful supply of Latakia in America!

### *IT'S LATAKIA!

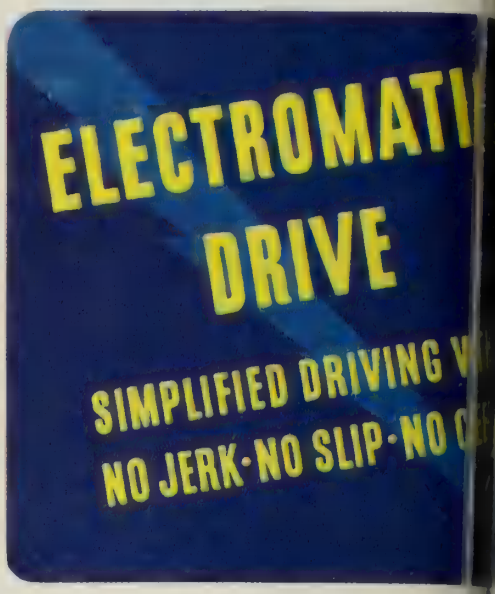
(Pronounced La-ta-keé-a), a wonderfully flavorful Eastern Mediterranean tobacco. Added like a "seasoning" to Old Golds, Latakia now creates an entirely *new*, delightful cigarette flavor.

Same golden pack—but NEW Old Golds—blended with Latakia! P. Lorillard Company—master blenders of fine tobaccos since George Washington's day.

### ENJOYS SMOKING MORE

Carl Moebus, accountant, Lynbrook, L. I., notes: "You can tell, right away, that something *new* has been added to Old Gold. That Latakia tobacco gives an entirely *different* flavor that makes me actually enjoy smoking more than formerly."

### "NEVER TIRE



of their flavor . . ." Says Miss Charlotte Mantell, Fashion Artist, New York: "I thought the New Old Golds, with Latakia, might be different. Well, I can't imagine anything more satisfactory."

**Low, wide and swagger**—with smart *functional* beauty—the first Packard Clipper was a sensation overnight! Prominent style-mark: Speed-lined "Fade-away" fenders, first featured by Packard. For 1942, Clipper styling is yours in even the lowest-priced Packards!

**Choose your horsepower**—for 1942—on the same wheelbase—you can have either a Clipper Six (105 H. P.) or an Eight (125 H. P.). Difference in price: only $55. Both motors are thrifty, fiery, precision-built marvels.

**Save gas, oil, and engine wear** with sensational Electromatic Drive. Elimina pedal operation... banishes wasteful "slip" engine speed by 27.8%. An "extra"—bu owners say, "It pays for itself!"

# For 1942, *new Clipper styling*.

**STUNNING NEW CLIPPERS JOIN FLEET**—Above is shown the smart, new-styled 1942 Packard Six Club Sedan. Both Clipper Six and Eight are available as either Special or Custom models *and in three distinguished body styles.*

**ay that pays off in dollars**—The Clipper's streamlined design results in important gas ny! Precision meters prove the 1942 Clipper tops st year's gas-thrifty Packard by as much as *18% iles per gallon!*

**Pedometers tell the story** of the low-slung Clipper's "cradled" ride. Sensitive shock-recording meters show that on rough testing-roads the Clipper is at least 29% smoother-riding than its predecessor, a car famous for its Air-Glide ride.

**You may have to keep** your new car a long time. Will it see you through? Yes—if it's a Packard. Typical reason for long life: Clipper uses 44 ball and roller bearings (instead of far less costly bushings)—more than *any* competitive car.

# ven the lowest-priced Packards!

**A FEW SHORT MONTHS AGO,** Packard raised the curtain on a daring, brand-new kind of car . . . the Clipper . . . and the whole country joined in a roar of applause.

Today Packard brings *two new versions* of this sensationally-successful Clipper styling to *every* price class in the 1942 Packard line. Now, not only the more expensive Packards, but even the *lowest*-priced Packards, are stunning, super-streamlined Clippers!

### *Beauty that works for you!*

These magnificent new Clippers, even more than before, recognize that beauty, to be keyed to the times, must be *functional*—must contribute to *economy, long life,* and *comfort.*

For example, the Clipper's flight-lined styling not only achieves dazzling new beauty, but cuts down air resistance to an almost unbelievable extent. Result: Tests conducted with scientific accuracy prove that these brilliant new 1942 Clippers knife through the air with an actual improvement in gasoline savings of 12% to 18% over even last year's thrift-champion Packards!

### *Dozens of dividends!*

In addition to fuel savings, Clipper functional design pays welcome dividends in many more ways.

These dividends are yours in the form of 26% better visibility through the Clipper's wider, deeper, sharply-raked windshield . . . easier, safer handling—evidenced by 24% steadier "wind-steering" . . . 20% more quiet inside the car—for Clipper streamlining hushes the wind . . . a 14% step-up in acceleration—to give you the security of always having a lightning burst of passing speed on tap.

### *More power reserve!*

And by cutting wind drag as it does, Clipper design combines with improved engine efficiency to provide sparkling performance with a gain in power reserve of 32%! This means less engine strain on hills—smoother operation at *all* times.

And for the man who buys a car today, the Clipper offers something else—even more important . . .

### *Built for the "long haul"*

When you buy a Packard Clipper you *know* you have a car that's precision-built for lasting durability . . . with nothing skimped, no "substitutions" that impair quality . . . a car that will give you *extra* miles and *extra* years of service, long after ordinary cars have worn out—in looks and fact!

So drop around today or tomorrow to your nearest Packard dealer's. Skipper a Clipper just once—and you'll want to skipper one for keeps!

**LOOKING AHEAD?**

**SKIPPER THE CLIPPER**

**CLIPPER DIGEST FOR '42**

Here's a quick review of still other high-spots you'll find in the new 1942 Clippers . . .

- Nearly a foot wider than high
- Full headroom front *and rear*
- *Integral* "Fade-away" fenders
- Even wider doors
- Phenomenal handling ease
- Wide-angle vision

ASK THE MAN WHO OWNS ONE

## "I still say the club should have merely expelled him!"

Captain Titherton is right. Even in the protection of priceless eyesight, we think the Little Neck Explorer's Club went too far in its punishment of the member who persisted in taking lamp bulbs from one socket to fill another. But, treat it lightly as we may, *there is a serious side to this bulbsnatching.*

**1. You probably find** that bulbsnatching leads to arguments in your home, even if your family never gets down to the last bulb in the house! (A sure cure is a handy supply of G-E MAZDA lamps.)

**2. It may interfere** with Junior's homework, through eyestrain, since bulbsnatching usually leaves the wrong size bulbs everywhere. (He needs an I.E.S. lamp with at least a 100-watt bulb in it.)

**3. In extreme cases,** bulbsnatching can e the cause of serious accidents to you or to em bers of your family. (Don't wait to be jarr into action. Get spare G-E MAZDA lamps now.)

**4. Just try this:** Go to your G-E MAZDA lamp dealer. He has a handy chart that will help you pick the right sizes. Get enough to fill every socket, with a few spares for the cupboard shelf.

**See how little it costs to protect your home and your eyes!**

7½, 15, 25-watt **10¢** — 75 and 100-watt **15¢**

40, 50, 60-watt **13¢** — 150-watt **20¢**

*MAZDA—*not the name of a thing but the mark of a research service*

g to be rather too busy to receive petulant supporter. Just why this pened is not clear, but the rumor still sists that the judge desired to try a couple of his own ideas.

Ir. Ickes was still standing at Theo- Roosevelt's Armageddon, thump- a busted drum, when Franklin sevelt, looking for a liberal West- r to take the office rejected by ators Johnson and Cutting, beck- l. Cleaner men than the unhappy rt Fall had ruled the Interior De- ment since the light-fingered day of ren Harding, but none had the ading passion of Mr. Ickes. It has said of Mr. Ickes that when he to Heaven, a considerable number ngels are going to leave—some of gladly. When Mr. Ickes took over nterior Department, he all but tore the building that housed its of- crying that he smelled something. hired an old hand at crook-hunt- Mr. Louis B. Glavis, equipped him 400 sleuths and turned them loose. dition to his routine duties as sec- y, Mr. Roosevelt made him director e Public Works Administration an ultimate allowance of eight n dollars to spend. If you care member, the PWA collaborated states and municipalities in the ion of bridges, public utilities, pub- uildings and the like—the local e putting up so much and PWA est. The work was done by local actors.

I was inevitable that a great deal of u uggery was possible, that local l cal mobs should do their best to the money to good political ac- . They didn't know Mr. Ickes r well. Mr. Glavis watched them d Ir. Ickes watched Mr. Glavis. Per- a few cents of PWA money did go str , but only a few. It was Mr. k way to sit in a large office, away the far end, like Benito Mussolini he the latter had an office to call his wn In chairs facing him sat the poli- cia s and the project promoters pre- are to grasp Mr. Ickes' hand, tell him ha a superior guy he was and ask for ty nillions or so. They would have uc preferred to have had a few words th he director of PWA alone, but Mr. ke would have none of that.

### Maybe It's Frustration

O by one, group by group, they re summoned up the room by an de y and led to Mr. Ickes' desk. They t cold handshake—or rather they oc a cold, limp hand. Mr. Ickes wa knew what his callers wanted fo they opened their mouths. Mr. av had seen to that. He always ev twice as much as they were pre- re to tell him about contractors, sub- nt ctors, materials purveyors and ou such political intimacies as who is nose brother-in-law and who was all behind the Hardpan Dredging, in ling and Construction Company. Mr Glavis had reported that the fa- re contractor had danced twice with a r yor's wife or daughter, Mr. Ickes' an roze. Some money might even- all be allotted to such obviously tru worthy applicants but an investi- tor ent with every dollar. Although Mr avis has long since left his serv- , l ving created more enemies than Mr kes had names for, investigators l owl Ickesland. He is now boss of o departmental detective agency. et r that an otherwise inconsequen- l e has been felled on the public ne will fetch his sleuths on the run. t meone complain that too much p has been used in departmental sh oms and the soft-shoe lads go on lu . A hint that a sheepherder, cat- ne or a goat guy has treated his ani- ls a munch of government grass is enough to fetch Mr. Ickes out of his chair roaring for the bloodhounds. Personally he has scouted desks for heel scratches, firing the relaxers when caught. He cut down the apparently unnecessary number of daily feminine face-do's by putting lady traffic cops in the women's rest rooms, not that he prefers plain faces to glamor but because it is less irritating to have the department's lassies moping at desks than bumming in their hideaways.

He wants no truck with folks who aren't fagged out at quitting time—or who don't at least look it. Mr. Ickes has been scanned from afar by psychiatrists who lay his gift for hostility to nearly sixty years of frustration. Professor Merriam, whom he tried to elect mayor of Chicago and who has since chored for Mr. Roosevelt, said of Mr. Ickes: "You might call it a series of frustrations with success at the end."

**"I wish some of the partners would resign—just to break up the rhythm"**

ELMER ATKINS

Apparently Mr. Ickes' earliest and most durable distrust has been of wealth —personal and corporate. However, all men of means do not share his scorn; he is quite well-to-do himself. The bulk of his money—about $800,000—came from his first wife, Mrs. Anna Wilmarth Thompson Ickes, a widow somewhat older than himself. She was killed in a motor accident in 1935. He had to fight for the money, the will being contested in courts by his foster son, Robert. But the courts gave it to Mr. Ickes. To this nest egg Mr. Ickes has added savings, being a careful spender. Also he has invested profitably. He has two homes, one a relatively modest affair in Winnetka, Illinois, and the other an estate near Olney, Maryland—Headquarters Farm. The latter, considerably more to his own stature, is something of a show place—well-stocked, carefully manned, fruitful acres replete with all the luxuries necessary to the declining years of a great man. Not, mind you, that Mr. Ickes proposes to tolerate any such nonsense as declining years. For exercise he putters, reads the reports of his investigators and gets mad.

Headquarters Farm's mistress is Mr. Ickes' second wife, Jane Dahlman Ickes of Milwaukee. She was a government employee, working in various departments, including the Interior. She is nearly forty years younger than Mr. Ickes. They were married in 1938. Two children have been born to them. As we have implied, the country knows no lack of people who consider Mr. Ickes less than lovable; but he is a hero at home, Mrs. Ickes' devotion to him being one of the few surviving prewar topics of Washington gossip.

Mr. Ickes' services to his country in the first World War were somewhat less spectacular. From April, 1918, to January, 1919, he was Y. M. C. A. secretary with the Thirty-fifth Division. Veterans of that organization admit that as the boss of their Y. M. C. A. hut he manifested no signs of future greatness although they admit that under his direction the 35th's Y was almost completely innocent of frivolity. Nor does research into his Chicago activities in the pre-New Deal days produce anything which might now be regarded as prophetic of administrative genius. In those days he was merely a small, discontented voice in a neighborhood wilderness; and a dollar would get you ten that Harold Ickes would wind up amid the cobwebs of a roll-top desk, grumbling over yellowed newspaper clippings, and writing mugwump letters to the Kept Press.

When his long-last chance came in 1933 he made up for the lean years. As Secretary of the Interior he has sued and has been sued, although suits brought against him charging libel and kindred injuries have never got much farther than the preliminary yelp of the injured. Apparently no would-be litigant has overcome the fear of Mr. Ickes' private files. Mr. Ickes' private files have become almost legendary in eight years. Nobody but Mr. Ickes is at all sure what those steel cases contain, but neither has anybody dared him to open them. Maybe those files wouldn't send you to jail, but there's no statute of limitations on public ridicule.

He has knocked the promise out of a number of burgeoning political careers. For example it was Mr. Ickes who gave Mr. L. W. (Chip) Robert the first push toward resignation from the post of secretary of the Democratic National Committee. Mr. Robert, engineer and architect, did not allow his political duties to interfere ruinously with his private affairs. For example, he managed to get a pledge of $21,600 from PWA for the erection of a public dormitory for his Alma Mater, the University of Georgia. Mr. Ickes' sleuths reported in time that the money was not erecting public dormitories but fraternity houses. Among the numerous things, as well as persons, unloved by Mr. Ickes are fraternity houses. Mr. Ickes not only halted the work at the University of Georgia but he demanded back the $7,200 already granted to Mr. Robert. But that indignation was but a maidenly frown compared to the Ickes rage when presented with a bill to pay Mr. Robert's firm a commission fee of $36,000 on a grant of $4,881,000 for a state hospital at Milledgeville, Georgia. We are almost tempted to tell you that the fee was not paid, but we know you'd guess that.

### The Lure of Printer's Ink

Some day, when the world is discharged from the psychopathic ward, Mr. Ickes' files may be opened. They may contain nothing but a few pressed rose leaves and an old dance program. But we want to be around. If legend is heeled with truth we shall know the whole story of hirings and firings in Alaska, Puerto Rico and the Virgin Islands, among other territorial and insular wards of Mr. Ickes. Or maybe we shall have to wait until Mr. Ickes dumps the whole file into a book. He has an itch for personally turned-out literature. He'll write a newspaper or magazine article without warning, or the minute an editor's back is turned. Not long ago he wrote a steamer in defense of the Alaska policies of a Secretary of the Interior of thirty years ago. Nobody but Mr. Ickes and a few private enemies had even a remote idea of what it was all about. And that included the publishers of the piece. However, Mr. Ickes has the urge to write. In his tenderer moments he loves to talk about the two years he was a reporter on the late Chicago Record. He still refers to the "newspaper game" and seldom refrains from telling visiting journalists that he "was a reporter once myself." As a reporter in those untroubled days, Mr. Ickes almost ruined his newspaper career by finding a "lost girl" right in the middle of a summer lull sensation which his editors hoped to stretch out until something worth while happened. Worse, Mr. Ickes wrote that actually the girl never had been lost. And somehow a drowsy night editor let it get printed.

But that was long ago, long before Mr. Ickes became a big-game hunter. At the moment, he is stalking Big Biz with all his might and main, specializing in making life as unsunny as possible for the Aluminum Company of America.

"When the story of the war comes to be written," said Mr. Ickes to a Senate committee investigating our defense

# AN IMPORTANT MESSAGE FROM DU PONT

★ *In the interest of national defense, conserve anti-freeze so there will be enough to go around.*

★ *Don't buy or use more than you need.*

★ *Before you put in anti-freeze, have your car radiator cleaned to remove the rust, scale and dirt that cause poor circulation and overheating.*

★ *Have your dealer tighten up all hose connections, cylinder bolts, and water pump packing. This will prevent leakage of anti-freeze.*

★ *Also see that the fan and belt are working properly to provide full cooling efficiency.*

★ *Then put in a dependable anti-freeze, following the directions on the can.*

**Du Pont tells how to choose the right anti-freeze for your car:**

▶ Du Pont "Zerex" is an outstanding premium anti-freeze. $2.65 a gallon. It won't boil out . . . it's non-evaporating. One filling lasts all winter long. It's for the man who will pay a little more to get complete freedom from winter worries.

▶ Du Pont "Zerone" is America's largest-selling anti-freeze. $1.00 a gallon. It's economical . . . requires only an occasional check-up. It's the type preferred by the American motorist who wants maximum anti-freeze economy with great efficiency.

Du Pont makes "Better Things for Better Living . . . through Chemistry" . . . and "Zerone" and "Zerex" anti-freeze are chemical compounds.

program, "it may have to be written that it was lost because of the recalcitrance of the Aluminum Company of America. It is just as serious as that; and they are just as helpful and cooperative as that too."

Again, before the Senate Military Affairs Committee, Mr. Ickes said, "I have a profound conviction that the Aluminum Company of America would prevent the necessary expansion of our aluminum-manufacturing facilities regardless of the consequences to the country or the world, in order to get them all within its own domination and control."

### Much Fuss and No Aluminum

Mr. Ickes believes that the Aluminum Company of America is a monopoly. And this belief creates an unbridgeable gulf between the company and Mr. Ickes. Whether the company is a monopoly within the definition of the federal law is a question the courts have long since begun to struggle with. In the meantime, the Office of Production Management wants aluminum for planes and other war-making devices. The government proposes to build a dozen aluminum factories. But that will take time. The Aluminum Company of America declares itself ready to increase its output immediately—provided Secretary Ickes will allot to it the government-generated electric power it needs. And Mr. Ickes, under whose supervision are the Tennessee Valley Authority, Bonneville Dam and other federal power producers, refuses to play ball with the Aluminum Company. It's a fearsomely complicated situation out of which no aluminum is derived. Perhaps by the time you've read this, the White House will have taken a hand. After the Military Affairs Committee had listened to Mr. Ickes and the Aluminum Company of America, it sighed deeply and wrote down a few conclusions. We give you an excerpt:

"The aluminum industry relies on power—electric power. The unwillingness of some government officials to provide hydroelectric energy from government dams in such an emergency as exists today is at least shortsighted. Whatever may be the merits of the troversy between these so-called nopolies and the Administration, the sense of this committee tha squabble at this time on the subje monopoly is a tragic and sorry s tacle indeed."

Among other official places wh Mr. Ickes is not a popular hero are War Department, the Navy De ment, the offices of the Attorney eral, the Treasury Department, State Department, the Interior De ment, Congress, the Federal P Commission, the OPM, the RFC FCC and—ah well, what's the use. Ickes doesn't give a damn. If he the additional burden of administ all of the country's electric po privately generated as well as fe and municipal—you'll probably s more night baseball games. Broad and Main Streets will lose their ni glitter. Perhaps you'll have to few of your power-consuming h hold gadgets into storage for the tion. Indeed it may become so ba housewives will have to learn to the old-fashioned broom, vacuum ers being forbidden. Mr. Ickes, empowered, may issue such regul because power must be allott munitions makers.

But not to the Aluminum Cor of America, if Mr. Ickes can h Quite a number of Mr. Ickes' ill-w say that in spite of his somewh vanced years he does not wave utter nonsense suggestions th might be a candidate for the dential nomination sometime. B jority opinion has it that it is contest between Mr. Ickes and t emergency—which will last the The large number of people wouldn't be surprised at anythi Ickes does are prepared to see hi in on the OPM and any or all other new emergency bureaus by Mr. Roosevelt—sort of ta whole emergency over and make of it. Our own guess, while not portant, is that Mr. Ickes will the emergency and the war and investigate the whole mess, pin entire responsibility with loud Mr. Hitler who, in Mr. Ickes' is strictly Big Biz.

**"Somebody gave him a box of them, and after the first couple he got used to them!"** HENRY

# The Fight Goes On

Continued from page 18

ters of the Western Hemisphere, the oximity of Greenland and Iceland as ssible bases of occupation by the zis, the closeness of West Africa and adjacent islands to the coast of azil, the development of bombers with htning speed and tremendous cruis- radius—all of these seemed to shrink distance which the American peo- had grown to believe existed be- en the battlefields of Europe and ir own shores.

n June of 1940, as France was falling ler the quick attack of the Nazi jug- naut, two things appeared to be per- ly clear. First, that America must once and with the greatest possible ed arm itself with all the new ma- hery of war. Second, that the chief e upon which America could rely the necessary time required to carry this rearmament program was the inuance of the British resistance to Nazis. American industrial capacity not been geared to wartime pro- tion. It had been engaged only in ufacture of peacetime products. To ge it from a peace status to a war us would take time. To gain that it was necessary for Great Britain aintain its defense, for if Britain to fall it was clear that we would to face the Nazis alone—and we not physically prepared to do so.

### The Navy Comes Back

herefore the two great objectives— own rearmament and our aid to ain and the other democracies re- ng the Nazis—were tied together in hand.

ven before the war began in 1939, nal defense had begun to engage erious attention and concern of our rnment.

a matter of fact, back in 1933 this inistration started to build up the rican Navy, which by that time had allowed to deteriorate into an un- vably inferior condition. As early he NRA days of 1933, the sum of ,000,000 was set aside out of NRA opriations for public works, for the ose of beginning to build up the y. This was the commencement of ogram to bring the United States up to the treaty limitations which been set by the London Naval Limi- n Treaty of 1930 and the earlier ington Naval Limitation Treaty of

m then on, increased appropria- for our Navy had, by 1940, brought ck to a high state of efficiency, ment and striking power—to y the position among the navies e world which it should. Expendi- for both the Army and the Navy apidly.

ring these years, as I have pointed n the Introduction to the 1939 ne, the United States was doing its t to promote peace throughout the , to prevent aggression against nations and to preserve the in- y of treaty agreements. It was ning obvious, however, that the or nations were determined to con- to pile up their armaments so that would be in a position to dictate objectives by force rather than them by conference; that they set upon a systematic course of violations, and upon a program gression against any nation which in their way.

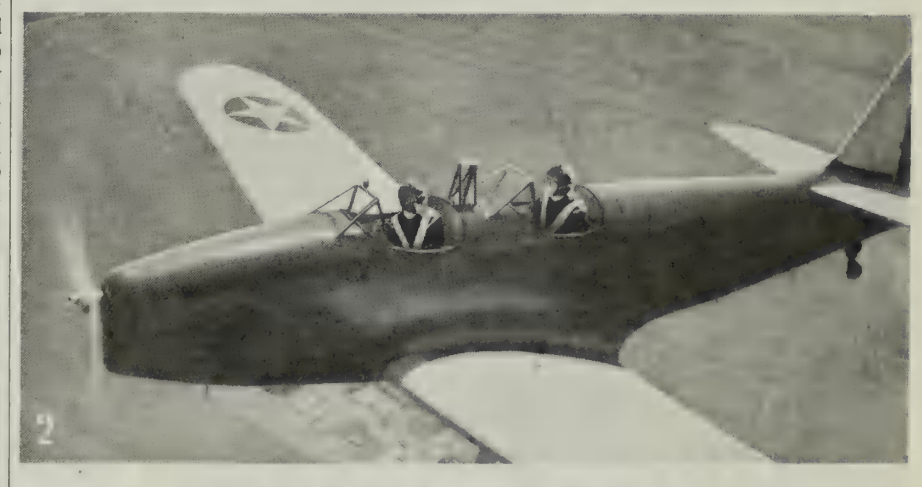
the beginning of 1938 this had be- so clear to us that the matter of nal defense became one of pre- ant concern. Thereafter, although not relenting in its efforts to promote world peace, the United States began to pay prime consideration to building up its national defense. On December 28, 1937, in a letter to the Appropriations Committee of the House of Representatives, I expressed the growing concern of the government over the fact that "in the world as a whole many nations are not only continuing but are enlarging their armament programs." In that letter I announced that I would probably send supplementary estimates for increased appropriations for the Navy.

On January 28, 1938, in a special message to the Congress, I requested increased armaments for defense. In that message I called attention again to the efforts which the United States had made to find a way to limit and reduce armaments, and to the failure of those efforts. I called attention to the "unprecedented and alarming rate" of rearmament throughout the world, and to the necessity of our meeting that condition by arming ourselves for defense.

In the following year, 1939, even before the outbreak of the war, in the annual budget message, and in special messages dated January 12, 1939, January 26, 1939, March 4, 1939, and April 29, 1939, I asked the Congress again and again for additional appropriations for national defense for the Army, the Navy, and the Air Force.

These additional appropriations were, in each instance, passed by the Congress. It is interesting to note, however, that some of the present leading isolationists in the Congress not only voted against these appropriations to build up our national defense, but actually argued and propagandized against them.

In 1940, when the full striking force of the Nazi war machine had been demonstrated to the world, the tempo of our defense efforts began to take on a pace commensurate with the obvious danger. On May 16, 1940, during the invasion of France, I sent another message to the Congress calling attention to the new lightning speed of warfare, and asking for appropriations to enable production to be geared up to a possible capacity of 50,000 planes a year, stating my belief that we should immediately plan a program which would provide us with 50,000 military and naval planes as soon as possible. I asked for an appropriation of about a billion dollars immediately. Two weeks later, on May 31, I made an additional request for appropriations of over a billion dollars. A month and a half later, on July 10, 1940, I again asked the Congress for additional authorizations of almost five billion dollars for national defense, of which more than two billion was to be spent during the coming year. Since then has come the appropriation of seven billion dollars for carrying out the provisions of the Lend-Lease Act.



### Arm Ourselves—Help Britain

By the fall of 1940, the twofold purpose of arming ourselves to the teeth, and at the same time helping Great Britain and the other democracies had become the aim of the vast majority of the American people. By that time, it had been made clear that Great Britain had the courage and stamina to resist the Nazi attack, with the assistance of the limited war supplies which we had been able to send to her up to then.

There was, however, a minority of the American people who were opposed to these twin objectives. Although they were a minority, they formed a very powerful group. They were powerful

# Astonished

## actually means thunderstruck

WHEN we trace our modern English word *astonish* back through the Middle English *astonien* and Old French *estoner*, we find its original source in Latin *ex*, "out," combined with *tonare*, "to thunder." The first meaning of *astonish* was "to stun," "to render senseless," as by a thunderbolt or a blow. But the word has lost its physical significance and now suggests great surprise, sudden fear, or wonder.

This is one of the thousands of interesting word origins given in the unabridged Merriam-Webster, WEBSTER'S NEW INTERNATIONAL DICTIONARY, Second Edition. This great reference book provides a wealth of general information. It contains 600,000 entries—122,000 *more entries* than any other dictionary. 12,000 terms illustrated; 3,350 pages. *WARNING:* The only genuine Webster is the MERRIAM-Webster. Look for the Merriam-Webster name and circular trade-mark on the cover. Ask your bookdealer to show it to you. Write for free illustrated booklet of interesting word origins to G. & C. Merriam Company, 729 Federal Street, Springfield, Massachusetts.

# Can't Scuff Off! FLOOR IS DYED!

# TRUSCON FLOR-DYE

**PERMANENTLY DYES CEMENT FLOORS**

FLOR-DYE is a dye that really penetrates—that goes right down into the concrete. It is colorfast, waterproof and lime-proof. For the first time it is possible to decorate basement floors and do a lasting and economical job. Won't stain. Easy to clean. Not affected by moisture or condensation. A floor preservative and a cement dust-proofer. Write for literature and color card.

**Territories open for distributors and dealers.**

**TRUSCON LABORATORIES, Dept. C-12, Detroit, Mich.**
Send me literature and color card on FLOR-DYE.

because they had large funds at their disposal for propaganda purposes. They were powerful because they had the support of some of the largest newspapers and newspaper chains in the country. They were powerful because they could command the services of a handful of United States senators who knew that they had the power to filibuster, and who were willing to use that power, if necessary, to gain their ends.

This group included the defeatists who preached that Hitler was invincible and could not be beaten. It included the appeasers who thought that the best way to get along in the world was to appease Hitler. It included some businessmen and financiers who urged that Americans could do business with Hitler, and could make fat profits in the process, especially after the rest of the world had been vanquished by Hitler's arms. It included a small number of conscientious but misguided American citizens who thought that the way to peace was to put their heads in the sand and refuse to look at the storms abroad. It included all of the bundists, fascists and, before the war between Russia and Germany, all the subversive Communists. It also included all of the groups in the United States committed to racial and religious intolerance and bigotry.

This minority urged that the thing for the United States to do was to insist upon a negotiated peace, and thereafter to try to get along, in a business and in a diplomatic way, as well as possible, albeit humbly, with Hitler. For, according to them, Great Britain and the rest of the world were as good as conquered.

### The People Know the Situation

The majority of the American people, however, has become thoroughly convinced of the fallacy—to say nothing of the immorality and degradation—of these arguments. They have clearly thought things through and have outlined for themselves their true situation.

It has now become apparent that the very physical security of the United States is at stake. The United States has, in its history, been actively engaged in several wars with foreign nations; but now for the first time, even though not actually at war, its physical safety and independence are being threatened. It has also become clear that democracy itself, as an institution and as a way of life, is in the same danger. For the plan of the Nazis now appears in its true light—to dominate the entire world not only physically but ideologically. What the Nazis hope to accomplish—and they are trying to make good that hope—is the political and physical control of the entire world, and with it the imposition of their own so-called "new order."

This "new order," it is obvious, is merely the old order of tyranny and enslavement of other peoples. It is an order in which there is no liberty, no religion, and no hope.

The majority of the American people now realize that if Great Britain succumbs to the Nazis, the Nazis will be in full control of the four continents of Europe, Asia, Africa, and Australia—and, what is more, will be in full control of the high seas. We know what Nazi control of the seas would mean to our commerce and our safety. So long as the friendly British navy is in existence, we need not fear that the freedom of the seas will be endangered. But if Great Britain were to fall, particularly if its navy were to be surrendered or immobilized, the seas of the world might fall under Nazi domination.

And even without actual Nazi control of the seas, we have learned how narrow the oceans which separate us from the wars abroad have become. The speed of modern bombers and their ability to fly untold distances without refueling, have brought home to us how near the coast of Africa and the Cape Verde Islands and the Azores are to our own shores. The Tripartite agreement among Japan, Italy and the Nazis in September of 1940 has served to emphasize not only to the United States but to the entire Western Hemisphere how direct and how menacing is this threat of the dictator powers toward all of the Western World.

Yes, the American people are realistic enough to understand what a Hitler victory would mean for the United States and for the Western Hemisphere—what it would mean to the American farmer, the laborer, the housewife, to every citizen in our land. Above all, they know what it would mean to live at the point of a Nazi gun, as do the occupied countries of Europe today.

They know how hopeless it is to attempt to preserve American freedom, if the freedom of every other nation and of every other people has been taken away. They reject the idea of a pact with Germany or of a negotiated peace, for they have before them the tragic experiences of so many other nations which had placed their hope and reliance on agreements with Hitler. From the time of the Nazi invasion of Norway down to the Nazi invasion of Russia, the Nazis have proven over and over again that a treaty or a pact means nothing to them, and that the most solemn obligations impose no barriers to their ruthlessness.

KIRK STILES

### For Our Own Self-Interest

Do business with Hitler? Live at peace with Hitler? The only peace possible with Hitler is the peace that comes from complete surrender. How can one speak of a negotiated peace in this war when a peace treaty would be as binding upon the Nazis as the bond of gangsters and outlaws?

The course that the American people have now taken for themselves, in their "all-out" aid to Great Britain and other nations resisting the aggression of dictators, is a course prompted fundamentally by hardheaded self-interest and self-concern. The "lend-lease" program under which America is now vigorously acting as the arsenal for all victims of aggression is founded on the princi that the best interest of the Uni States is served by helping every nat able and willing to fight Hitler to ca on its fight. It is based on the kno edge that every day that the fight c tinues brings the cause of democr closer to victory, and keeps the farther away from our shores. Our icy is not based primarily on a desir preserve democracy for the rest of world. It is based primarily on a de to protect the United States and Western Hemisphere from the eff of a Nazi victory upon ourselves upon our children.

That is why the aid we are now ing to Britain and to all who resist Nazis is so closely tied up with our defense. Under the "lend-lease" gram, our own rearming proces completely geared in with the pro of helping the other nations carry their own fight at the same time. arms and munitions are now b manufactured at the order of the U States Government; and the U States Government determines fo self how it can best serve its own i est with these arms and muni —what it should keep for itself what it should send abroad to carr the fight against Hitler. That dete nation is based solely upon what is for the United States, having alwa mind the clear fact that the best i ests of the United States require tinued resistance to Hitler whe possible, by any nation that is w and able to fight him. Our best i ests are served by helping all c who resist, instead of waiting for to fall and finding ourselves the in line for Nazi attack.

### A United America Stands Rea

Modern warfare has given us definition for that word "attack." was a time when we could afford that we would not fight unless att and then wait until the physical came upon us before starting to Modern techniques of warfare changed all that. An attack toda very different thing. An attack begins as soon as any base has occupied from which our secu threatened. That base may be sands of miles away from ou shores. The American Gover must, of necessity, decide at whic any threat of attack against this sphere has begun; and to mak stand when that point has been r

Never in our history have v barked upon so great an effort duce the implements of war as which we are now engaged. Tha is the effort of a united Americ ple who have successfully wi the attempts of Nazi agents, an small minority group I have me to disunite them, to becloud thei and to hinder their purpose. A being written, in July of 1941, appears on the horizon to det from carrying their purpose thr its final conclusion. It is a purpo cated to the future security of to the continuance of freed democracy among all men of g everywhere, and to the preserv religion and humanity among lized peoples of the earth.

# WHAT YOU SHOULD KNOW ABOUT RADIO SERVICE

## During the National Emergency

this National Emergency, our radios become asingly important to us all. They keep us in with our Government's Defense Program other events of the utmost significance. They as safeguards to national unity and as aids tional defense. Thus, the desirability of keep- old radios operating efficiently becomes evi- —and especially so in view of present limita- on the production of new receivers, caused ortages of certain essential materials.

tually, the average radio receiver requires attention. What it does require, however, d not be neglected.

### N DOES A RADIO NEED SERVICE ?

is seldom wise to wait for service until a stops operating entirely. As a rule, any er that has been in use for 18 months or will benefit from a routine service check-up robable cost of not more than $1.50 or $2, ding on local rates. Most old receivers could atly improved, simply by the replacement of tubes. In other cases, the realignment of circuits, the replacement of worn volume con- r other parts may make an amazing difference.

### YOU A "RADIO EAR" ?

erioration in essential radio parts may result se, distortion, tuning difficulties, weak volume, one and other annoying factors. Often, this occurs so gradually you are not fully aware of it. Your ear comes to accept inferior reception as good reception, or you take poor operation for granted. With occasional attention from a competent technician, however, your radio should continue to perform satisfactorily for many years.

### WHAT OF SERVICE CHARGES ?

The reliable technician—and you'll have no trouble locating such a man—is equipped for fast, economical service on any radio. He will charge on the basis of time required, plus standard prices for any tubes or parts used. For minor jobs, he will probably charge his advertised minimum service fee. This is sound business practice—for your protection as well as for his.

It is also sound practice for the service shop to have modern test instruments. RCA service equipment, for instance, permits testing along the lines followed in the RCA Laboratories, and in RCA radio manufacturing. Such equipment is conducive to better, faster and hence more economical work.

It is sound practice for a radio serviceman to explain just what is required to repair your radio. No reliable technician will hesitate to do this. Moreover, he will search beyond the immediate point of trouble and, if necessary, recommend replacement of other parts which show signs of deterioration.

### MODERNIZING OLD RADIOS

He may also suggest ways to modernize your radio, such as by adding a record player, by installing a noise-reducing antenna, or by some other means.

Throughout his business, he follows the same principles which guide any good professional man. He knows you will judge him, not by "quacks" which exist in his, as well as in other professions, but solely by his ability for reliable, economical service in making your radio perform better and last longer.

### CHOOSING A RADIO SERVICEMAN

Like any other good business man, the reliable radio technician is best known by his reputation, by his skill, by his associations, by his equipment, by the manufacturers he represents, and by his standing in the community.

Although Radio itself may be a mystery to you, these common-sense business principles are not. Judge by them, and you will have no difficulty choosing the right man—whether he be the dealer from whom your radio was purchased, a well-established independent serviceman, a department store, or any other concern offering modern radio service facilities.

The ultimate in pipe perfection LHS Certified Purex $3.50

# M—A—N Spells Wonderful

Continued from page 21

He had drinks and she, being a teacher and awake to tomorrow's duties, had lemonade. Once she said, "If you're going to get that job tomorrow oughtn't you to get some sleep?"

"I'm celebrating," he said. "Come on, let's go for another taxi ride."

She knew the kiss was on its way a long time before it arrived. His arm came around her shoulders; she wanted to stiffen them and couldn't. The wheels of the taxi went s-lick s-lick and Lon said dreamily, "That must be Rock Creek Park."

She looked out of the window and somehow that made his face come closer. They froze like that for a few blocks, until a rut in the road jarred them almost nose to nose. Her skin was hot, as though his face warmed it and her lips softened. But she spoke valiantly because it wouldn't be fair not to.

"I think I've got a cold," she said, careful not to breathe in his face.

"I never catch cold," he said, and his lips came fully over hers. The kiss lasted a long time. She spent, in it, every yearning she had ever had.

When they broke he said harshly, "I didn't expect a kiss like that."

Her cheek still lay against his, the fierceness of his voice startled her and she sat up.

"I mean, that was the real stuff," he said. "You've got to like a guy a lot to kiss him like that."

She crept into the corner, ashamed. "I . . . guess that's right," she said.

In a businesslike manner he opened the cab window, offered her a cigarette. "Well then, let's skip it," he said.

"You're too nice a gal, Minnie. I couldn't lead you on, after that."

She refused the cigarette as she had refused them all since they had left Otwanda. She was very shaky but she had to find out what he meant. "Lead me on?" she asked.

"Well, honey," and the "honey" was like a comradely slap on the back, "that was what I'd call a 'marrying' kiss. And did you ever know a foreign correspondent to have a wife?"

She thought about it because it really seemed to be a question. "No . . ." she said, though she wasn't sure.

"It's tough," he said, the light of his cigarette sinking and swelling in the dark, "but that's the way it is. He travels fastest who travels alone." He rapped on the glass partition and the driver turned toward home.

Oh, dreariness. Oh, humiliation. She couldn't say anything. After a little, he reached across and took her gloved hand. "Don't be sore, that's a good girl. I was just trying to shoot square."

SHE tried to make herself think how fine it was of him not to take advantage of her. But just then she discovered there are limits to what you can do with the mind.

Later, in the dim warmth of the hotel corridor, before her door, he took her hand. He whispered, intimately as though they were locked away from everyone, though of course he just did it to keep from waking Marshall. "You're fine, Minnie," he told her. "You're very sweet. You'll make somebody a wonderful wife. Somebody who isn't going to go high-tailing it over the world." He came down over her, and she learned for the first time that his eyes weren't blue at all, but green with brown edges. He was going to kiss her again. . . . But, "Ah-uh, mustn't touch," he said. "Good night. Meet you at the bee." And, cheerfully, was gone.

By morning she had the biggest and newest thing in colds—one mixed with unrequited affection. At breakfast, Marshall ate magnificently while she neglected her coffee, looking about the dining room for Lon Waterford. She couldn't help herself. I can look, can't I? But he wasn't there. Nor in the lobby where she met the rest of the contestants and their guardians. Nor was he in the auditorium of the public building in which the bee was to be held. By ten o'clock they were all assembled, tense and buzzing, to watch the thirty children mount the platform and take their chairs. But Mr. Lon Waterford of the Otwanda Express was absent . . . to Minuette Mintern, conspicuously absent.

The audience gave itself a good big settle, the bottom of each human to the seat of each chair, and the national spelling bee began.

There was a good deal of ceremony about the contest. A Mrs. McHaig, a good, strong woman, "called" the words. She hollowed all vowels and slapped all consonants, no mistaking what she said. Three judges, men like grim listening fates, stood behind each contestant as he or she spelled. Six ears awaiting error. The children sat in two rows, the small ones in front, the large behind.

There were more girls than boys, and all the girls had handkerchiefs.

Minuette Mintern had great respect for spelling, and since Marshall had started his career as champion speller she had seen many bees. But nothing as important as this, ever. She was glad she needn't be up there on the platform.

The caller called, the judges passed from one to the next and, in turn, each contestant rose, pronounced the word carefully, spelled it with a rigid face and sat down again. There would no arguments with this crew, Minue could tell.

Ill as she was, she had to think v sad thoughts so she would not la during that first round of the bee. children all came from different secti of the country, they had been pla without any geographical division the accents which came out of th careful young mouths were astonish She had had no idea that there were many ways of speaking American.

THERE was the golden child from diana who drawled. . . .

The poised boy from New Engl who pronounced "heart," "hat". . .

The Southern girl who pronou every "n" as though it were "in," who always seemed to be getting w like "innocent" to spell! She mac ah-in-in-o-see-ee-in-tee.

There was Ruth Eleanor, the girl had sat across last night's banque ble. She was a different kind of Sc erner: her voice spilled cream.

And Marshall, whose flat M Western speech suddenly surp Minuette. Why, to some people, thought, I'll bet that sounds like a cent too!

The first round was an easy one even so a very small girl went dow "receive" and came weeping int audience. The lady who called words asked the audience to cla each child who missed and they ob politely.

"I-before-E," Minuette said to self, "*except* after C, or *when* nounced A as in neighbor and w

The little girl who had missed sa close to Minuette; she wore sock a pink gingham dress and she flun

# Plowing a 1600-mile furrow *for defense*

THE nation's transcontinental telephone facilities are being more than doubled – in a hurry!

Telephone crews now are working west from Omaha. Others soon will start east from Sacramento. When they meet, their tractor-hauled "plow trains" will have buried two Long Distance telephone cables three feet underground, in a furrow 1600 miles long!

Together, these twin cables provide for more than 500 *new* telephone talking channels – plus facilities for radio, teletype and telephoto. Protected against weather and other hazards, they make it unlikely that America's coast-to-coast communications will ever be broken.

Big as it is, this job is only a small part of the Bell System's share in national defense.

**LONG DISTANCE helps unite the nation**

"THE TELEPHONE HOUR" *is broadcast every Monday evening over the N. B. C. Red Network*

Here's the new cable route—from Omaha to Cheyenne, to Denver, to Salt Lake City, to Sacramento. The special plow in the picture cuts a deep, narrow trench, lays two cables, and refills, in one continuous operation. Each plow can cover several miles a day under favorable conditions.

*"Go ahead, boys . . I don't let ANYTHING interrupt the enjoyment of my MENNEN BRUSHLESS SHAVE!"*

*Shave and smile* with Mennen Brushless! Man, it seems to *melt* wiry whiskers away. Good-bye to yank and pull. Yessir, it's a *different* brushless! It's a cream, not a grease. No mess, no stickiness. And no hard-water troubles. C'mon, get shave-happy—get MENNEN BRUSHLESS!

*On your Radio—Capt. Flagg & Sgt. Quirt starring Victor McLaglen & Edmund Lowe Sunday Nights NBC—7:30 E.S.T.*

self into her mother's arms saying, "But I knew it, Mom . . . honest I *knew* it!"

"Shh . . ." her mother said comfortingly, and the contest went on.

On the next round a boy with clenched fists missed *diphtheria,* having almost swallowed his tongue pronouncing it. The audience clapped harder, *diphtheria* had its respect.

The words began to grow longer: *incinerator, dietitian, manufacturers* . . . that was a trick one, the speller might forget to add the "s" . . . *plebeian, effigy, reincarnation, magnanimous.* The children rose and sat, the accents and the voices changed . . . and Ruth Eleanor seemed to have been right: they didn't go down on the long words. For a time there were just those two empty seats on the platform.

Minuette looked at Ruth Eleanor with respect; she was pale but smiling and she never failed to smooth her skirt when she sat down. A young woman to watch! Marshall, on the other hand, was much less precise: he lounged out of his chair and back into it, he rubbed his nose with the back of his hand and scratched his pants leg with the sole of his foot. But he didn't miss . . . he spelled his words efficiently and without hesitation. He's bound to win, Minuette thought.

THE strain began to tell on the audience. Lips moved silently, spelling the words with the contestants; when, at last, a third child was defeated, on *promissory,* a man in the rear of the auditorium broke into something which sounded like swearing, quickly swallowed.

Then, popcorn in a hot pan, they began to explode. Four in a row missed four different words, *colonnade, restaurant* (which a dark girl had thought was spelled resteraunt), *vilify,* and *tantamount,* which the unhappy speller considered an earth formation, ending with "d."

It began to look disastrous; the line was cracking!

Then, psychologically timed, there was a rest period for drinking water and relaxation. The audience went backstage and mingled with the spellers. Some had brought spelling books for additional firing-line coaching. Minuette went up to Marshall and, smiling, said, "You're doing fine. How do you feel?"

Marshall said of the national spelling bee: "It's a cinch." He took a drink of water and a jelly bean from a hip pocket. "Where's that guy Mr. Waterford?"

A teacher is supposed to know everything and since Minuette did not know the location of Mr. Waterford she changed the subject.

"Marshall," she said, "I think perhaps we ought to work a little. All the other children seem to be coaching."

Marshall put his hand into his pocket, brought it out empty. "You didn't happen to bring that sack of candy I had, did you, Miss Mintern? It was right on my dresser."

After rest period the words went on and on. Minuette's head ached, she had brought no extra aspirin with her, and sometimes her vision seemed to waver. If only Lon would come, just in case she fainted or something, so there'd be one of them to keep an eye on Marshall. The hours dragged on and on—it took some time to trip thirty champion spellers—and no Lon. Maybe they made him start right out being a Washington correspondent, she thought, maybe. . . .

The scene glazed, and when it focused again she forced herself to be attentive to the contest. There were only four children left on the platform. Four lonely little children, the three prowling judges and the iron-voiced word pronouncer. One of the children was Ruth Eleanor, two others were la girls, one blond, the other red-hai and freckled. The fourth was Marsh

Lord love him, she thought with s den tenderness. There he sits, winn his contest. She could actually see n the man Marshall would be, the gr oak spreading from the little acorn.

It was the big blond girl's turn. looked older than the others: she taken to lipstick, and a charm brac rattled on her arm as she stood.

"*Philately,*" said the caller.

The girl looked dazed. Minu thought anxiously, Doesn't *anyon* her family collect stamps? She wa them all to win, suddenly. But charm-bracelet girl said "ph-i-l-a-l-e-y"; the judges solemnly consu their dictionary, and then, to that companiment of clapping hands, drums beating the traitor out of army . . . there were only three.

"*Incipient*" said the caller to I Eleanor, and she spelled it sweetly, rectly, smoothing her skirt as she s

The red-haired girl got "*plen tentiary,*" swallowed, spelled hal through it, stopped for a short aeon finished it triumphantly.

It was Marshall's turn. Minu breath lagged. "*Envelop,*" said the and Minuette relaxed.

Marshall evacuated his chair, c spelled *envelope,* without hesitat second, and sat down again confid not realizing he had missed. It t few seconds for them to make it to him. Then he came down the to a fluff of applause and sat Minuette. Looking at him, sh longer saw the mighty oak. I crawled back inside a rather pale acorn.

"That was wonderful, Marshall whispered. "You're third out of t

"Can we go now?" He did no at her. "I want to go."

"No," she whispered, shocked. of the other children are leavin can't go till it's over."

"I want to go."

"No," she said, the commander sixth grade at Otwanda Grade "Watch the spelling bee."

He sat still after that but he raise his head; he would not reg last two contestants.

BACK and forth, the caller se now from the red-haired girl Eleanor, from Ruth Eleanor to haired girl. Desperately Minuet to keep track of it, but what went her eyes did not connect with he she had no idea of what had h until the red-haired girl steppe and suddenly there were photo below the platform, flash bulbs ing, and Ruth Eleanor in her wrinkled dress was having her taken.

Now there seemed to be sw ex-spellers, all with autograp armed with pens and pencils one another for signatures. T asked Marshall were turned a obliged by him.

"Marshall," she said, touc arm, "you've simply got to b loser!" He would not look a speak.

"Marshall!" Minuette said, "Lon! thank goodness you're h shall is upset about losing th bee and I want you to tell him matter . . . that he did a good

"Listen, Minnie," Lon sai stopped in here for a minut wouldn't worry about me. I slight headache and I'm goin to the hotel right away."

"A headache . . . ?"

ly, Lon Waterford laughed.
sure different, kid," he said; "I
don't ever want to go home to Otwanda. Matter of fact I—um—told a few of the boys I wouldn't be coming back. Wow!"

"We're going to stay," she said, "and go on all the trips and enjoy ourselves and get over this. And then," she turned triumphantly on Lon Waterford, "we're going home. *All* of us."

It was fever, no doubt, but she made a speech and they listened. She waved an arm at the big buildings all around them, she said that they had been built by people who did their jobs, by people who would take time to learn the easy words as well as the hard ones, by people who smiled when they were licked and tried again. . . . It didn't bother Miss Mintern at all that she was talking to men, a big one and a little one; she was very proud of herself and beautifully angry.

"You ought to have a pulpit," Lon Waterford said, grinning. "Okay, teacher, we catch on. Hey—what's the matter?" She had put her hand to her head and closed the brown eyes with lights in them.

"I'm miserable," she said.

"M-I-S-E-R-A-B-L-E," Marshall said, unconsciously.

But when they put her into a taxi she was still talking, the last gasp before the flu got her: "You're both so spoiled you aren't even grateful. You won third prize, Marshall . . . a hundred dollars! A hundred dollars and think how you acted."

Lon's arm was around her, naturally, she was so sick. "And what do I get?" Lon asked her.

She looked at him and leaned against him. His fingers, touching her, became warm. He didn't think he had ever been quite as close to anything quite so nice. If he went back to Otwanda—and where else could he go?—within reach of kisses like those this schoolmarm could propound—well, the flesh was weak and some men owe their success to their wives.

"I see what you mean," he said.

**Things that even coaches on the other team see appear in Bert Stanley's high-power glasses as he scouts and jots down notes the key plays of the game he is scouting. Result: Usually an eyewitness report**

# Pigskin Spy

**By Bert Stanley as told to Frank J. Taylor**

**Bert Stanley sees as many as five big games a week-end on free tickets plus a fee of possibly $750. Not for fun—his 30-page report on each game has saved many a coach's neck**

BY CATCHING planes from city to city on week ends during the gridiron season last year, I managed to see thirty-two football games involving forty-five different teams. Before you put me down for a football nut, let me explain that I picked up from $25 to $100 for each game I watched.

I'm a pigskin spy, technically known as a football scout. My work is spying on teams my customers are scheduled to play later in the season.

I don't peek through knotholes in fences, or sit in trees by the practice fields to see what plays the coaches are cooking up. I do all my spying from the press box, as guest of the athletic manager upon whose team I'm spying. The colleges have a gentlemen's agreement to supply each other's official spies with complimentary ducats to games. I look at the same plays that reporters and tens of thousands of spectators are watching, but I see five times as much, I guess, as they do. Anyway, I see enough to make thirty typewritten pages of detailed report on each game I scout.

Using high-powered binoculars, I study the players' strong points and their weaknesses, or what insignificant habits they have developed that may tip off the next play.

One of my assignments last year was spying for Coach Clark Shaughnessy of Stanford, which hadn't beaten the University of Southern California in four years. Shaughnessy's team had come up from the cellar of the Pacific Coast conference so unexpectedly and spectacularly that the players were known as the "Wow Boys." Shaughnessy knew that if he could win over the Trojans he would have pretty clear sailing to the Rose Bowl. My job was to spot the weaknesses in the Trojan line and backfield as revealed by earlier games with other teams.

Sitting up there in the coliseum, surrounded by shouting, jumping, back-slapping fans, through my binoculars I could see about thirty square yards of the gridiron. It was easy to see the beads of perspiration on the players' faces.

When each play started, I anticipated it, if I could. If a pass was coming, I checked the men who were out there to receive the ball. When a team kicked I looked to see which player broke through to block the kicker, knowing that it's usually the same fellow who does that in every game. I watched to see if they played man-to-man or zone defense, and what pass defense they had. I looked for something specific on every play. Before the gun went off I had the names and numbers of players memorized. I knew the numbers of about 1,100 players on the Pacific Coast by heart last season. In front of me I had a dozen sharpened pencils, a note pad and forms on which I jotted down notes, something I have trained myself to do without even taking my eyes out of the binoculars or dropping my cigar.

In the U.S.C.–U.C.L.A. game I noted that U.S.C., as usual, had a perfect and airtight line against their opponents, which meant that Stanford's power plays probably would not work too well when they met the Trojans. So I looked around for some weaknesses and discovered that U.S.C. had not developed an accurate passer, nor did they have an ironclad defense against passes. I noted that certain U.S.C. backs shifted from their assigned positions on defense, leaving openings for passes. This information influenced the strategy Shaughnessy used against the Trojans.

Shaughnessy relied upon deception strategy in most of his plays, using a quarterback not as an orthodox blocker, but to handle the ball in such a way and play so deceptively that, by faking and sometimes deliberately wasting plays, he set up the situation for the touchdown pass. Stanford was fortunate

# This year— why not enjoy the kind of quality foods you have always wanted?

## *Grocers are ready to help you—*

AMERICA is going back to work!

Now — for the first time in years — millions of homes can afford the quality they have always wanted. And the variety every family needs.

Why not let Del Monte help you enjoy this better living to the full?

**Just take your pick**

No need to tell you how good Del Monte Products are!

American women have known Del Monte Canned Fruits and Vegetables — and preferred them — for more than a quarter of a century.

But do you realize the full extent of their practical service to you — every day?

Every time you plan a meal—think of the very real satisfaction and convenience of having more than 100 different, delicious varieties of fine foods to choose from

—all under one reliable brand—all uniformly and dependably right.

And remember—the wide variety of Del Monte Foods makes it especially easy to add, as a regular part of your everyday meals, a better balance of the vitamins and minerals so essential in adequate diets.

It is easy to buy Del Monte, too — no matter where you live.

**Your grocer wants to please you**

Take your own experience! Aren't Del Monte Products usually carried by grocers you like to trade with — progressive, efficient, up-to-date stores?

The very fact that any grocer specializes on Del Monte is good evidence of what a modern merchant he really is—that, first of all, he is looking out for your own quality interests.

**No guesswork—no experiments**

By handling a complete Del Monte assortment, he saves your time. You don't have to guess—or experiment with a lot of different brands.

At the same time, it helps *his* business, too!

He can get along with a smaller investment in goods — cut down his cost of doing business — serve more customers, more easily and quickly.

There's some good Del Monte grocer near you! Why not discover the service *he* has to offer. Get acquainted with him now — and with the almost endless menu variety Del Monte brings you.

It will make your meal-planning easier — save you time and uncertainty — give you the kind of quality foods you want for your family.

# Murder in Retrospect

Continued from page 16

"A lot of additional pain and grief is caused by honesty," remarked Hercule Poirot.

Meredith Blake looked at him doubtfully. He did not quite like the sentiment. He sighed: "It was a—a most unhappy time for us all."

"The only person who does not seem to have been affected by it was Amyas Crale," said Poirot.

"And why? Because he was a rank egoist. I remember him now. Grinning at me as he went off saying, 'Don't worry, Merry. Everything's going to pan out all right!' "

"The incurable optimist," murmured Poirot.

"He was the kind of man who didn't take women seriously," Meredith Blake said. "*I* could have told him that Caroline was desperate."

"Did she tell you so?"

"Not in so many words. But I shall always see her face as it was that afternoon—white and strained with a kind of desperate gaiety. She talked and laughed a lot. But her eyes—there was a kind of anguished grief in them that was the most moving thing I have ever known. Such a gentle creature, too."

HERCULE POIROT looked at him for a minute or two without speaking. Clearly the man in front of him felt no incongruity in speaking thus of a woman who, on the day after, had deliberately killed her husband.

Meredith Blake went on. He had by now quite overcome his first suspicious hostility. Hercule Poirot had the gift of listening. To men such as Meredith Blake the reliving of the past has a definite attraction. He spoke now almost more to himself than to his famous guest:

"I ought to have suspected something, I suppose. It was Caroline who turned the conversation to—to my little hobby. It was, I must confess, an enthusiasm of mine. The old English herbalists, you know, are a very interesting study. There are so many plants that were formerly used in medicine and which have now disappeared from the official pharmacopoeia. And it's astonishing, really, how a simple decoction of something or other will really work wonders. No need for doctors, half the time. The French understand these things—some of their tisanes are first-rate."

He was well away now on his hobby: "Dandelion tea, for instance, marvelous stuff. And a decoction of hips—I saw the other day somewhere that that's coming into fashion with the medical profession again. Oh, yes, I must confess, I got a lot of pleasure out of my brews. Gathering the plants at the right time, drying them, macerating them—all the rest of it. I've even dropped to superstition sometimes and gathered my roots at the full of the moon or whatever it was the ancients advised. On that day I gave my guests, I remember, a special disquisition on the spotted hemlock. It flowers biennially. You gather the fruits when they're ripening, just before they turn yellow. Coniine, you know, is a drug that's dropped right out—I don't believe there's any official preparation of it in the last pharmacopoeia—but I've proved the usefulness of it in whooping cough, and in asthma too, for that matter—"

"You talked of all this in your laboratory?"

"Yes, I showed them around, explained the various drugs to them—valerian and the way it attracts cats—one sniff at that was enough for them! Then they asked about deadly nightshade, and I told them about belladonna and atropine. They were very much interested."

"They? What is comprised in that word?"

Meredith Blake looked faintly surprised as though he had forgotten that his listener had no firsthand knowledge of the scene.

"Oh, the whole party. Let me see—Philip was there, and Amyas, and Caroline, of course. Angela. And Elsa Greer."

"That was all?"

"Yes! I think so. Yes, I am sure of it." Blake looked at him curiously. "Who else should there be?"

"I thought perhaps the governess—"

"Oh, I see. No, she wasn't there that afternoon. I believe I've forgotten her name now. Nice woman. Took her duties very seriously. Angela worried her a good deal, I think."

"Why was that?"

"Well, she was a nice kid, but she was inclined to run wild. Always up to something or other. Put a slug or something down Amyas' back one day when he was hard at work painting. He went up in smoke. Cursed her up and down dale. It was after that that he insisted on this school idea."

"Sending her to school?"

"Yes. I don't mean he wasn't fond of her, but he found her a bit of a nuisance sometimes. And I think—I've always thought—"

"Yes?"

"That he was a bit jealous. Caroline, you see, was a slave to Angela. In a way, perhaps, Angela came first with her—and Amyas didn't like that. There was a reason for it, of course. I won't go into that, but—"

Poirot interrupted: "The reason being that Caroline Crale reproached herself for an action that had disfigured the girl."

Blake exclaimed, "Oh, you know that? I wasn't going to mention it. All over and done with. But, yes, that was the cause of her attitude, I think. She always seemed to feel that there was nothing too much she could do—to make up, as it were."

POIROT nodded thoughtfully. "And Angela?" he asked. "Did she bear a grudge against her half sister?"

"Oh, no; don't run away with that idea. Angela was devoted to Caroline. She never gave that old business a thought, I'm sure. It was just Caroline who couldn't forgive herself."

"Did Angela take kindly to the idea of boarding school?"

"No, she didn't. She was furious with Amyas. Caroline took her side, but Amyas had absolutely made his mind up about it. In spite of a hot temper, Amyas was an easy man in most respects, but when he really got his back up everyone had to give in. Both Caroline and Angela knuckled under."

"She was to go to school—when?"

"The autumn term—they were getting her kit together, I remember. I suppose, if it hadn't been for the tragedy she would have gone off a few days later. There was some talk of her packing on the morning of that day."

"And the governess?" Poirot asked.

"What do you mean—the governess?"

"How did she like the idea? It deprived her of a job, did it not?"

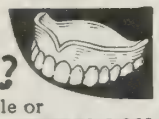
"Yes—well, I suppose it did in a way. Little Carla used to do a few lessons, but of course she was only—what? Six or thereabouts. She had a nurse. They wouldn't have kept Miss Williams on

800 FEET OF PIERCING SPOTLIGHT

THE DELTA POWERlite
AMERICA'S FINEST ELECTRIC LANTERN

● From its big 4½" front reflector shoots a sharp, piercing, 800 foot spot beam; from its top reflector is thrown wide diffused floodlight. Either light as you need or want it at the flip of a switch. Powerlite's sturdy, compact steel case is finished in two-toned baked gray enamel. Lens are unbreakable. Handle reverses. Operates from single 6-volt lantern battery good for 80 to 100 hours. **Price $3.35** less battery, at sport, hardware, electrical stores.

ROADLITER
*Bike Headlight*



Styled like latest auto headlights. White enamel finish, chrome trim. Fluted lens. Throws sharp beam. Mounts on handlebar or front fender. Operates on 2 flashlight batteries contained within case. At bicycle dealers, **$1.39** less batteries.

vent on, speaking more to him- to Poirot: "That's partly, I think, why I tackled Crale. He was nearly twenty years older than the girl. It didn't seem fair."

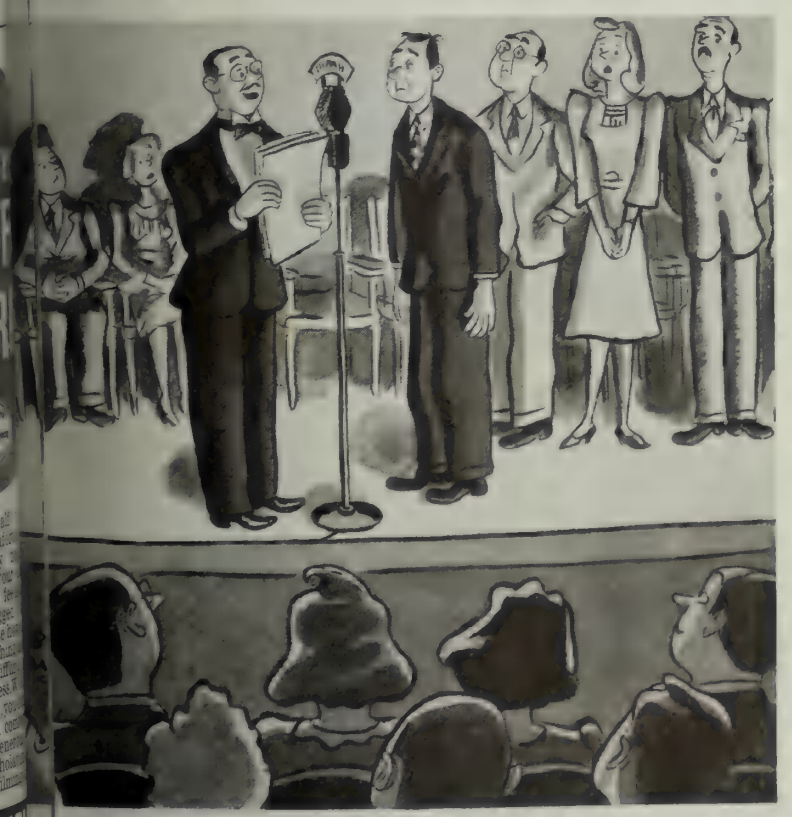
"Alas, how seldom one makes any effect," Poirot murmured. "When a person has determined on a certain course —especially when there is a woman concerned—it is not easy to turn them from it."

Meredith Blake said, "That is true enough." His tone was a shade bitter: "I certainly did no good by my interference. But, then, I am not a very convincing person. I never have been."

Poirot threw him a quick glance. He read into that slight acerbity of tone the dissatisfaction of a sensitive man with his own lack of personality. And he acknowledged to himself the truth of what Blake had just said. Meredith Blake was not the man to persuade anyone into or out of any course. His well-meaning attempts would always be set aside—indulgently usually, without anger, but definitely set aside. They would not carry weight. He was essentially an ineffective man.

Poirot said, with an appearance of changing a painful subject, "You still have your laboratory of medicines and cordials, yes?"

"No."



The word came sharply—with an almost anguished rapidity Meredith Blake said, his face flushing: "I abandoned the whole thing—dismantled it. I couldn't go on with it—how could I after what had happened? The whole thing, you see, might have been said to be *my* fault."

"No, no, Mr. Blake, you are too sensitive."

"But don't you see? If I hadn't collected those damned drugs; if I hadn't laid stress on them—boasted about them—forced them on those people's notice that afternoon . . . . But I never thought—I never dreamed—how could I—"

"How indeed?"

"But I went bumbling on about them. Pleased with my little bit of knowledge. Blind, conceited fool. I pointed out that damned coniine. I even—fool that I was —took them back into the library and read them out that passage from the Phaedo describing Socrates' death. A beautiful piece of writing—I've always

admired it—but it's haunted me ever since."

Poirot said, "Did they find any fingerprints on the coniine bottle?"

Blake answered with one poignant word: "Hers."

"Caroline Crale's?"

"Yes."

"Not yours?"

"No. I didn't handle the bottle, you see. Only pointed to it."

"But at some time, surely, you had handled it?"

"Oh, of course, but I gave the bottles a periodic dusting from time to time—I never allowed the servants in there, of course—and I had done that about four or five days previously."

"You kept the room locked up?"

"Invariably."

"WHEN did Caroline Crale take the coniine from the bottle?"

"She was the last to leave," Meredith Blake replied reluctantly. "I called her, I remember, and she came hurrying out. Her cheeks were just a little pink, and her eyes wide and excited. I can see her now—"

Poirot said: "Did you have any conversation with her at all that afternoon? I mean by that, did you discuss the situation as between her and her husband at all?"

"Not directly," Blake said slowly in a low voice. "She was looking, as I've told you, very upset. I said to her at a moment when we were more or less by ourselves, 'Is anything the matter, my dear?' She said, 'Everything's the matter. . . .' I wish you could have heard the desperation in her voice. Those words were the absolute literal truth. There's no getting away from it—Amyas Crale was Caroline's whole world. She said: 'Everything's gone—finished. I'm finished, Meredith.' And then she laughed and turned to the others and was suddenly wildly and very unnaturally gay."

Hercule Poirot nodded his head slowly. He looked very like a china mandarin. He said, "Yes—I see—it was like that . . ."

Meredith Blake pounded suddenly with his fist. His voice rose. It was almost a shout: "And I'll tell you this, M. Poirot—when Caroline Crale said at the trial that she took the stuff for herself, I'll swear she was speaking the truth! There was no thought in her mind of murder at that time. I swear there wasn't. That came later."

"Are you sure that it *did* come Poirot asked.

Blake stared. "I beg your pa he said. "I don't quite underst

Poirot said: "I ask you wheth are sure that the thought of murd did come? Are you perfectly co in your own mind that Carolin did deliberately commit murder

Meredith Blake's breath ca evenly. He said, "But if not—i are you suggesting an—well, acc some kind?"

"Not necessarily."

"That's a very extraordinary say."

"Is it? You have called Crale a gentle creature. Do creatures commit murder?"

"She was a gentle creature, bu same—well, there were very quarrels, you know."

"Not such a gentle creature

"But she was— Oh, how diffic things are to explain."

"I am trying to understand."

"Caroline had a quick tongu hement way of speaking. She m 'I hate you. I wish you were d it wouldn't mean—it wouldn't *action*."

"So, in your opinion, it wa uncharacteristic of Mrs. Crale mit murder?"

"You have the most extra ways of putting things, M. Poir only say that—yes, it does see uncharacteristic of her. I can plain it by realizing that the tion was extreme. She ad husband. Under those circum woman might—well, kill."

Poirot nodded. "Yes, I agr

question seemed to irritate
. He said, "Why? How should I
*why?* These things are so. Philip
s crabbed her whenever he could.
s annoyed, I think, when Amyas
d her. He never went near them
er a year. And yet Amyas was
t his best friend. That was the
really, I suppose. He didn't feel
ny woman was good enough. And
obably felt that Caroline's influ-
would spoil their friendship."
d did it?"
, of course it didn't. Amyas was
just as fond of Philip—right up
end. Used to twit him with being
eygrubber and with growing
eation and being a Philistine gen-
Philip didn't care. He just used
go and say it was a good thing
had one respectable friend."
w did your brother react to the
reer affair?"
you know, I find it rather dif-
o say. His attitude wasn't really
define. He was annoyed, I think,
myas for making a fool of him-
er the girl. He said more than
hat it wouldn't work and that
would live to regret it. At the
ime I have a feeling—yes, very
ely I have a feeling that he was
just faintly pleased at seeing Caroline let down."

There was a silence. Then Blake said with the irritable plaintiveness of a weak man, "It was all over—forgotten—and now *you* come, raking it all up. . . ."

"Not I. Caroline Crale."

Meredith stared at him: "Caroline? What do you mean?"

Poirot said, watching him, "Caroline Crale the second."

Meredith's face relaxed. "Ah, yes, the child. Little Carla. I—I misunderstood you for a moment."

"You thought I meant the original Caroline Crale? You thought that it was she who would not—how shall I say it?—rest easy in her grave."

Blake shivered. "Don't, man."

"You know that she wrote to her daughter—the last words she ever wrote—that she was innocent?"

Meredith stared at him. He said—and his voice sounded utterly incredulous, "Caroline wrote *that?*"

"Yes." Poirot paused and said, "It surprises you?"

"It would surprise you if you'd seen her in court. Poor, hunted, defenseless creature. Not even struggling."

"A defeatist?"

"No, no. She wasn't that. It was, I think, the knowledge that she'd killed the man she loved—or I thought it was that."

"You are not so sure now?"

"To write a thing like that—solemnly—when she was dying."

Poirot said, "A pious lie, perhaps."

"Perhaps." But Meredith was dubious. "That's not—that's not like Caroline. . . ."

Hercule Poirot nodded. Carla Lemarchant had said that. Carla had only a child's obstinate memory. But Meredith Blake had known Caroline well. It was the first confirmation Poirot had got that Carla's belief was to be depended upon.

Meredith Blake looked up at him. He said slowly, "If—*if* Caroline was innocent—why, the whole thing's madness! I don't see—any other possible solution. . . ." He turned sharply on Poirot: "And you? What do you think?"

THERE was a silence.

"As yet," said Poirot at last, "I think nothing. I collect only the impressions: What Caroline Crale was like. What Amyas Crale was like. What the other people who were there at the time were like. What happened exactly on those two days. *That* is what I need. To go over the facts laboriously one by one. Your brother is going to help me there. He is sending me an account of the events as he remembers them."

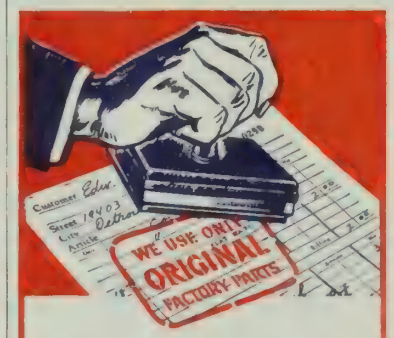
"You won't get much from that," Meredith Blake said sharply. "Philip's a busy man. Things slip his memory once they're past and done with. Probably he'll remember things all wrong."

"There will be gaps, of course. I realize that."

"I tell you what"—Meredith paused abruptly, then went on, reddening a little as he spoke: "If you like, I—I could do the same. I mean, it would be a kind of check, wouldn't it?"

Hercule Poirot said warmly: "It would be most valuable. An idea of the first excellence!"

"Right. I will. I've got some old diaries somewhere. Mind you," he laughed awkwardly. "I'm not much of a hand at literary language. Even my spelling's not too good. You—you won't expect too much?"



"Ah, it is not the style I demand. Just a plain recital of everything you can remember: What everyone said, how they looked—just what happened. Never mind if it doesn't seem relevant. It all helps with the atmosphere, so to speak."

"Yes, I can see that. It must be diffi-

# I COULD HAVE SAVED YOU $$$

## A prompt visit to your Auto-Lite Service Man may save you costly repairs!

**HERE'S YOUR GUARANTEE OF YOUR MONEY'S WORTH ON CAR REPAIRS.** The Auto-Lite service man uses only original factory parts. What is more, he is a skilled technician specially trained in testing Auto-Lite electrical equipment to give you "like-new" performance.

HERE'S how you can save yourself real money. Avoid big repair bills by checking small motor troubles at the start. Watch for the danger signals—lack of pep and power, slow starting, back firing, missing, overheating, gas waste, dim lights. At the first sign of trouble, have your car checked by a qualified service man. Insist on service parts built by the original equipment manufacturer. This is particularly important with the electrical units—the "nervous system" of your car. The Auto-Lite sign is your assurance that only original factory parts will be used in your car. It also guarantees expert workmanship and a fair price.

Auto-Lite service men are trained specialists in starting, lighting, and ignition. They carry a stock of original Auto-Lite service parts that are used as standard equipment by more than half of America's car manufacturers. They will help you get top performance from your car.

cult visualizing people and places you have never seen."

Poirot nodded. "That is another thing I wanted to ask you. Alderbury is the adjoining property to this, is it not? Would it be possible to go there—to see with my own eyes where the tragedy occurred?"

Meredith Blake said slowly: "I can take you over there right away. But, of course, it is a good deal changed."

"It has not been built over?"

"No, thank goodness—not quite so bad as that. But it's a kind of hostel now—it was bought by some society. Hordes of young people come down to it in the summer, and, of course, all the rooms have been cut up and partitioned into cubicles, and the grounds have been altered a good deal."

"You must reconstruct it for me by your explanations."

"I'll do my best. I wish you could have seen it in the old days. It was one of the loveliest properties I know."

He led the way out and began walking down a slope of lawn.

"Who was responsible for selling it?"

"The executors on behalf of the child. Everything Crale had came to her. He hadn't made a will, so I imagine that it would be divided automatically between his wife and the child. Caroline's will left what she had to the child also."

"Nothing to her half sister?"

"Angela had a certain amount of money of her own left her by her father."

Poirot nodded. "I see." Then he uttered an exclamation: "But where is it that you take me? This is the seashore ahead of us!"

"Ah, I must explain our geography to you. You'll see for yourself in a minute. There's a creek, you see, Camel Creek, they call it, runs right inland—looks almost like a river mouth, but it isn't—it's just sea. To get to Alderbury by land, you have to go right inland and around the creek, but the shortest way from one house to the other is to row across this narrow bit of the creek. Alderbury is just opposite—there, you can see the house through the trees."

They had come out on a little beach. Opposite them was a wooded headland, and a white house could just be distinguished high up among the trees.

TWO boats were drawn up on the beach. Meredith Blake, with Poirot's somewhat awkward assistance, dragged one of them down to the water and presently they were rowing across to the other side.

"We always went this way in the old days," Meredith explained. "Unless there was a storm or it was raining, and then we'd take the car. But it's nearly three miles if you go around that way."

He ran the boat neatly alongside a stone quay on the other side. He cast a disparaging eye on a collection of wooden huts and some concrete terraces.

"All new, this. Used to be a boathouse—tumble-down old place, and nothing else. And one walked along the shore and bathed off those rocks over there."

He assisted his guest to alight, made fast the boat, and led the way up a steep path.

"Don't suppose we'll meet anyone," he said over his shoulder. "Nobody here in April—except for Easter. Doesn't matter if we do. I'm on good terms with my neighbors. Sun's glorious today. Might be summer. It was a wonderful day then. More like July than September. Brilliant sun, but a chilly little wind."

The path came out of the trees and skirted an outcrop of rock. Meredith pointed up with his hand: "That's what they called the Battery. We're underneath it now—skirting round it."

They plunged into trees again and then the path took another sharp turn and they emerged by a door set in a high wall. The path itself continued to zigzag upward, but Meredith opened the door and the two men passed through it.

For a moment Poirot was dazzled, coming in from the shade outside. The Battery was an artificially cleared plateau with battlements set with cannon. It gave one the impression of overhanging the sea. There were trees above it and behind it, but on the sea side there was nothing but the dazzling blue water below.

"Attractive spot," said Meredith. He nodded contemptuously toward a kind of pavilion set back against the back wall. "That wasn't there, of course—only an old tumble-down shed where Amyas kept his painting muck and some bottled beer and a few deck chairs. It wasn't concreted then, either. There used to be a bench and a table—painted iron ones. That was all. Still—it hasn't changed much."

His voice held an unsteady note.

Poirot said, "And it was here that it happened?"

Meredith nodded. "The bench was there—up against the shed. He was sprawled on that. He used to sprawl there sometimes when he was painting—just fling himself down and stare and stare, and then suddenly up he'd jump and start laying the paint on the canvas like mad."

He paused.

"That's why, you know, he looked—almost natural. As though he might be asleep—just have dropped off. But his eyes were open—and he'd—just stiffened up. Stuff sort of paralyzes you, you know. There isn't any pain. . . . I've—I've always been glad of that. . . ."

Poirot asked a thing that he already knew: "Who found him here?"

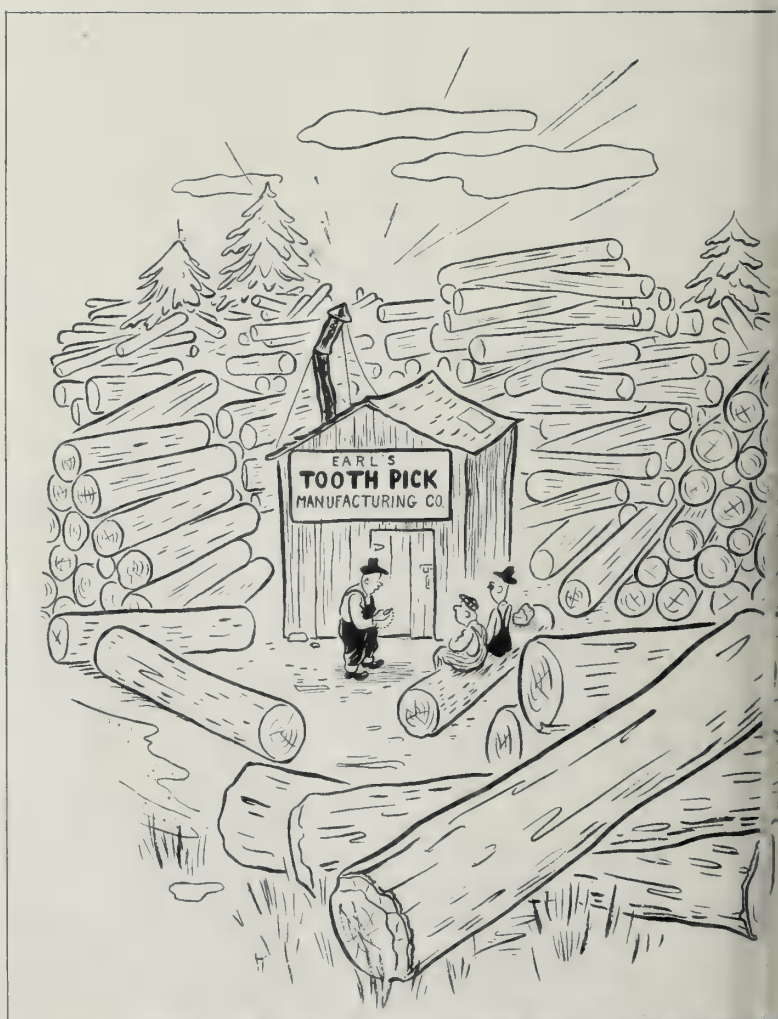
"She did. Caroline. After lunch. Elsa and I, I suppose, were the last ones to see him alive. It must have been coming on then. He—looked queer. I'd rather not talk about it. I'll w e it you. Easier that way."

He turned abruptly and wei ou the Battery. Poirot followed h wi out speaking.

The two men went on up t zi path. At a higher level than the at there was another small platea It overshadowed with trees and t re a bench there and a table. re said: "They haven't changed th m But the bench used not to be e C Rustic. It was just a painted i ness. A bit hard for sitting, bu lo view."

Poirot agreed. Through a fr ew of trees one looked down over e b tery to the creek mouth.

"I sat up here part of the a rn Meredith explained. "Trees wer quite so overgrown then. One uld the battlements of the Batt plainly. That's where Elsa w po you know. Sitting on one, with r h twisted around."



He gave a slight twitch of h sh ders. "Trees grow faster in thinks," he mutered. "Oh, w l, pose I'm getting old. Come on to house."

THEY continued to follow th atr it emerged near the hous It been a fine old house, Georgia n st It had been added to, and o g lawn near it were set some y wooden bathing hutches.

"Young men sleep there, g in house," Meredith explained. I co suppose there's anything yo wan see here. All the rooms have eec about. Used to be a little co rva tacked on here. These people ve a loggia. Oh, well—I suppos ney joy their holidays. Can't ke ev thing as it used to be—more's e p

He turned away abruptly. We down another way. It—it all c es to me, you know. Ghosts. ( sts *erywhere!*"

# This Twain Shall Meet

**By Holmes Alexander**

ILLUSTRATED BY WARREN BAUMGARTNER

**Claggett took his glove and started for the bull pen. He couldn't have missed seeing Amy Huntington standing up with one hand on the railing, and the trouble was in her eyes again**

**Bert Lindsay may never become the pitcher Lou Claggett was. But he'll never be as lonely as Claggett was, either. For Claggett took care of that**

LOU CLAGGETT woke up and looked at his watch. Climbing off the bed, careful not to disturb his roommate, he put on bathrobe and slippers. He left the room and went down the hotel corridor to the elevators. The morning papers were piled here, later to be slipped under the doors.

Claggett took the top paper and shook it open to an inside sheet. Among the regimented columns of print his own name jumped out at him. Breathing hard with his mouth open, he read the squib—a mere sports item in this great metropolitan daily, but to him a vivid catastrophe:

"Bishops send Claggett to Houston. Veteran hurler released as player limit becomes effective tonight."

Claggett shivered. His mouth felt dry and his bones ached. That the news was not unexpected failed to soften the blow. It landed where it hurt him most—flush on the jaw of his pride.

"Fading out," he said aloud.

Carrying the paper, he returned along the corridor. He was a big man, heavy through the shoulders and with a touch of frost in his black hair. The brown face wore a hard, protective smile. It was part of Claggett's pride never to show his feelings. Players who had nicknamed him Stony were referring to this.

HE RE-ENTERED the bedroom and saw that its other occupant was awake now. Claggett tossed him the paper and said, "Good news for you, kid."

This was true. The same report had opposite meanings for the two men. Claggett went to the table and lighted a cigarette. He didn't want one before breakfast and he liked Bert Lindsay, but the gesture was intended to disguise his agitation. Swallowing bitter smoke, Claggett watched the rookie's expression. Bert Lindsay made a long, flat shape under the single sheet. His ruddy face seemed puzzled.

"Well, kid," Claggett smiled. "It means you got the job."

Lindsay nodded without enthusiasm. "Yes," he said. "But I wish it hadn't worked out this way. You've been a swell guy to me, Stony; and I'm sorry."

Claggett crushed the cigarette and got back into bed. It was too early for breakfast, and he needed something to lean on. Young Lindsay's words annoyed the older man. Sentimental speeches always did. Himself, he didn't go in for any soft stuff. *Be tough and you don't get hurt.* Once he'd been hurt by having a soft spot, but that was a long time ago. He had learned better since.

"Don't spill any grief over me, kid. I can take it."

"I know that," Lindsay said.

After a while the men got up and dressed. A ball team on the road saves laundry by wearing dark shirt open collars. Claggett was putt one of these when he noticed Ber say struggling with a white starch lar and necktie.

"Celebrating, are you?" The laughed. "Maybe I should go buy myself some crape."

Lindsay looked embarrassed. that," he said. "I've got a girl today."

"You should have one in every Claggett said.

He checked himself from sayin The deepening flush on the Lindsay's neck was more than rassment.

"Sorry," offered Claggett. know it was like that."

"Yes," said Lindsay. "It is, You see, this girl and I—well, sh ing up from Jersey to see me pitc boy grinned broadly. "Gosh, she's pretty wonderful, I think."

CLAGGETT turned away. was again . . . the soft stu he'd felt that way himself about long time back. He saw that was putting a small leather fo his coat pocket. Claggett had c ticed the kid nursing this object, wondered what it was. Now he a picture of the girl.

They had breakfast togeth which Lindsay left the hotel. sat in one of the big lobby ch pretended to be reading a mag often employed this ruse to di conversational teammates; a he had special causes for desir left alone. # West Coast Japanese

Continued from page 15

more bitter against the Chinese it was, later, against the Japa- and caused considerable blood- But the Chinese today are well and respected, partly because they aturally good people—and partly se they have managed their pub- ations wisely. They have, for ex-, been able to get Americans to bute a lot of money to help suf- peasants in China and uphold hinese government, which is just spotic as the Japanese. The Coast ese, on the other hand, have never to collect anything for suffering ese peasants, but have bought e bonds heavily in an effort to their loyalty to the United States. a curious fact that there has been bitterness between whites and ese than between Chinese and ese, who get along pretty well on rface, despite an aggressive boy- ampaign.

e time ago leaders of the *Nisei* iser heads among the *Issei* real- ie necessity for selling the whites ea that the "Jap menace" was flated. This resulted in the Japa- merican Citizens' League, a na- ide organization with ten thousand ers in fifty-one chapters. The was born in Seattle, largely h the efforts of Jimmy Sakamoto, editor of the Japanese-American r. Sakamoto abolished the Japa- anguage section of his paper as step.

### Steadfast Americans

e Jimmy is a typical *Nisei* leader, lk with him: His office in Seattle s two copies of the Declaration pendence, and a certificate say- s a life member of the United Flag Association. In its conven- San Francisco this summer, tells you, the league passed resolutions: To buy defense to urge home defense; to sup- e USO. The Japanese division USO, by the way, went over its head of most divisions.

ask the blind editor: "If war what will the *Nisei* do?"

orse comes to worst," he replies, emain steadfastly American. We we'll be more or less suspect, but we'll still be loyal. If this country is good enough to live in it's good enough to fight and die for. . . . Did you know that about a fifth of the fifteen hundred *Nisei* in our Army were volunteers—the highest percentage of any racial group?"

"What," you ask, "will the *Issei*—the alien Japanese do?"

"Our parents, of course, are on the spot even more than we are. But they will be loyal, too. The average age of the male *Isseis* is now about sixty; of the women, around fifty-two. Their homes are here, where they have spent more than half their lives; their children are Americans."

We now get around to discovering whether our Intelligence services—Army, Navy and F.B.I.—agree with *Nisei* spokesmen or not. It is impossible to ask them, because they won't be quoted, and many of them won't even talk. Their reports are secret.

For five years or more there has been a constant check on both *Issei* and *Nisei*—Japanese and Japanese-Americans. The consensus among intelligent people is that an overwhelming majority is loyal. The few who are suspect are carefully watched. In event of war they'd be behind bars at once.

Of course, there have been and are Japanese spies on the Coast. There are probably American spies in Japan. We know a lot about each other's defenses. But what public opinion often forgets in spy scares is the fantastic improbability of a Japanese invasion of the West Coast. Japanese navy and air force are, at best, second rate; in a straight fight they would have little chance against ours. To attack and land on our Coast in force, Japan first would have to subdue Hawaii, which top men in both navies agree is almost impossible.

So, in case of war, what any disloyal Japanese or *Nisei* would try is sabotage. This probability, as we have seen, has been taken into account and prepared against.

It is only fair to look at some of the things the *Nisei* and *Sansei* are up against, admitting the charges against them. It has been hard for their newspapers, for instance, to preach loyalty to us too strongly, because these papers rely for existence largely on advertising by Japanese-controlled concerns. These concerns, ruled from Tokyo, naturally try to get what may be called the Tokyo party line into print. So *Nisei* editors are on the spot. Urging loyalty to America costs them dough. Still most of them go ahead and do it and take it on the chin financially. A case in point is the influential South Coast Herald, which is Terminal Island's Japanese-language newspaper. Terminal Island is headquarters for the Japanese-American fishing fleet and its population is exclusively Japanese. The strongly pro-American South Coast Herald has a daily circulation of 3,000 and is edited by Jiusho Hiraga, who is probably the most influential person in our biggest Japanese-American fishing colony.

### Reason for Resentment

Nearly all Western cities enforce segregation rules against Orientals, and so social contacts with whites are casual and neither race knows much about the other. Whites and yellows mingle freely in public schools and inter-racial friendships are common. But as they go out into the world, the races drift apart and the yellows find themselves barred from white society and sometimes grow bitter, understandably.

The youngsters, who usually top their school and university classes, resent this discrimination and it drives them into colonies and forces on them the idea that they are Japanese and cannot escape being Japanese, no matter how strongly they wish to be Americans. It also has tended to weld them into a voting bloc—totaling between 25,000 and 30,000 in California, a bloc that increases slightly each year.

*Nisei* are accepted into our Army, but barred from the Navy. This rankles, because, they say, many of them are small-boat experts and would be useful on patrol ships, mine layers and sweepers and auxiliary craft. Army officers at Fort Lewis, Washington, where there are many *Nisei* soldiers, say they make good, intelligent fighters; the National Guard also thinks well of them.

As one *Nisei* girl summed it up in San Francisco: "We try to be good Americans—if only the white Americans would treat us as equals and allow us to do our part. But it's discouraging, after working hard to get a college education, to be denied jobs in white concerns and forced to do menial work in order to live. Sometimes we feel we're not wanted."

Even the anti-Oriental Joint Committee says publicly that the Japanese in the West "are splendid people in many ways; good students and workers." But—it adds—as a group they can't be assimilated into American life and something should be done about it. Just what, no one seems to know.

In case of war, there would be some demand in California for concentration camps into which Japanese and Japanese-Americans would be herded for the duration. Both classes fear this, but it would be unfair to say it is the prime motive behind their demonstrations of Americanism. It is a factor, though.

Army, Navy or F.B.I. never have suggested officially that such a step would be necessary, or even has been thought about. As we have seen, their opinion, based on intensive and continuous investigation, is that the situation is not dangerous and that, whatever happens, there is not likely to be any trouble. With this opinion West Coast newspapermen, in touch with the problem for years, agree almost unanimously.

". . . and the phone number of this woman who took your husband from you?" GEORGE SHELLHASE

"We'll Probably Be Keeping Our Car for a Long Time!"

Simoniz... Needed for Defense of Every Car's Beauty!

Simoniz your car . . . it's especially important right now! New cars will be hard to get. So, save the beauty of the one you have with Simoniz. It protects the finish as nothing else will and makes it last longer. If already dull, clean your car with either Paste or Liquid Simoniz Kleener. It brings back all the sparkle the lacquer or enamel had when new. Then, to keep the finish forever beautiful, always apply Simoniz. But, be sure to get Simoniz and Simoniz Kleener for your car—insist!

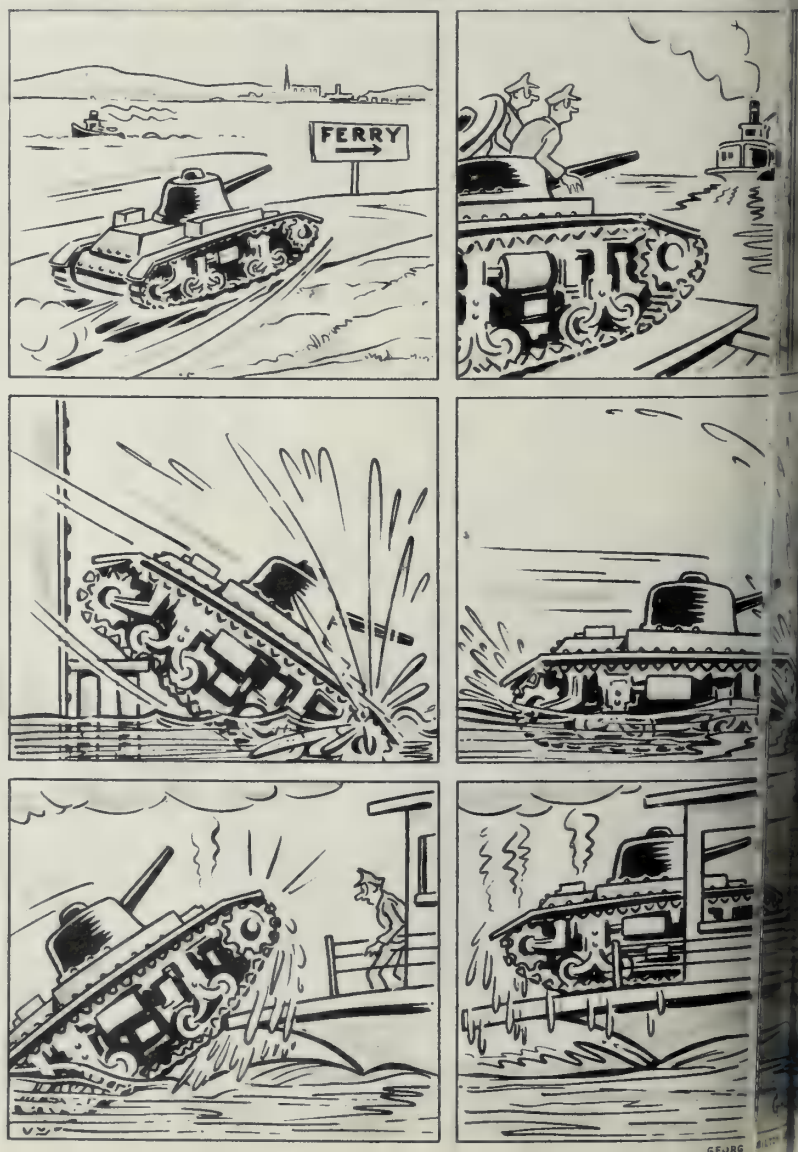
the billowing whiteness of ■ German parachute. Their guns are always within arm's reach.

Scotland never saw lumbering like this. To begin with, they cut the trees close and when the operation is done the stump is only ankle high. Their speed is incredible. Each mill produces an average of 17,000 feet of lumber a day and there are fifteen of them, which means about 250,000 feet, a good shipload of lumber a day. This one group of 4,500 men saves a ship ■ day, seven ships a week, thirty ships a month. And none of their lumber ends up in the North Atlantic. Come along and watch them work. . . .

### Men Who Know How

Major Edward Dawson is in charge of this company. The men and even his fellow officers call him "Blitz." He gets things done quickly. He's dynamite, just as he was in the last war when he served as a private. We were on the side of a hill which had stood undisturbed for two hundred years. There was a stone gallows on top of the hill. Years ago the dukes who owned the estate had the privilege of administering the law. One duke of antiquity built the gallows and before he died had hung one hundred men from its granite top. Then he buried them upright on the hill. Strange but authentic souvenirs of that grisly practice came to light when the woodpeckers started to blast a few stumps and rocks from the hill.



"What is the operation, Major," I asked Blitz, "from the time a man bites into a tree with his ax until the tree comes out of the mill in the form of lumber?"

"Instead of telling you I'll sho the major said. "The men work i of three. Here's a group starting follow this tree from here right i mill."

The Sawdust Fusiliers wear th clothes they wear in the C forests. It was too warm for t and-black checked shirts the fi us lumberjacks wear. Some of t wore no shirts. Others wore und Two of them looked at the bas tree appraisingly, as a dentist mi at a tooth he is about to dismant pointed wordlessly; the other Then both began to swing th rhythmically. The tree was seventy feet high and perhaps th thick. They cut a six-inch ga

### BEGINS OCTOBER 4th!

**6 Big Carnival Contests**

1. Oct. 4 to Oct. 12, inclusive.
2. Nov. 1 to Nov. 9. inclusive.
3. Dec. 6 to Dec. 14, inclusive.

(1942)

4. Jan. 3 to Jan. 11, inclusive.
5. Feb. 7 to Feb. 15, inclusive.
6. Mar. 7 to Mar. 15, inclusive.

Enter *Every* Carnival Contest — You May Win in Each.

### SIMPLY DO THIS

1 Go to your nearest bowling establishment featuring The Brunswick Bowling Carnival (or call Western Union).

2 Ask the proprietor or attendant for a free Entry Blank at the time you arrange for your alley.

3 Bowl three or more consecutive games to complete a 3-game total score which falls within one of the six classes of competition.

4 Write your score on your free entry blank.

5 Turn your entry in at the counter when you pay for your games.

. . . *that's all there is to it.*

*No Waiting for Prizes —*
WINNERS ARE ANNOUNCED AFTER EACH CONTEST

## *Bowl for Fun! Bowl for Health! Bowl for BIG PRIZES!*

Here is a simple opportunity for you to have more fun at America's favorite sport — and to win prizes while you play!

*Without spending one penny extra, you can win as much as $250.00 cash* Grand Prize money in addition to *class prizes* and *double* weekly cash awards for "target bowling." Think of it! 3390 class prizes each Carnival Contest and a top prize of $250.00 cash that even a beginner can win.

It makes no difference whether you are an expert, an occasional bowler, or if you've never bowled before. Because there are *six* classes of competition, ranging from "Beginners" to "Stars" —and a complete prize list for each class—each 9-day Carnival Contest.

Men, women, boys and girls of all ranges of skill, or no skill at all, will be in this big contest. All have an equal opportunity to win! Enter even though you have never bowled before. *Mornings or afternoons are especially good times to play in Carnival* — enjoy wholesome fun and win big prizes.

Enter each and every 9-day Carnival Contest. The more entries you submit, the greater your opportunity to win one or more of the 20,346 prizes.

ing when a weird-looking contraption lumbered up.

"This is a caterpillar drawing a sulky," the major explained. "The man who drives it is a sergeant major. To us he is the cat skinner."

Chains were looped over the now naked tree. Two men hauled on other chains hanging from the sulky. The end of the tree rose up eight feet to be held at the top of the "sulky," a high-wheeled trailer. Then the caterpillar started. It dragged the big tree. It dragged it some 200 yards and then dropped it. One man held a stick and marked off sections. Two others sawed the tree into five logs. They sang as they sawed; sang the song they wrote on the trip across from Canada to the time of "Oh, Suzanna":

"And when we arrive in Scotland
There'll be singing and three cheers
For the boys who'll bury Hitler
Dawson's Sawdust Fusiliers. . . ."

As the saw cut the logs away men grabbed them with grappling hooks and "decked" them onto a truck. Six logs came from the tree. The truck moved toward the mill, a quarter of a mile away. We followed. Cant-hook men were waiting. They reached up with their strange-looking hooks, grabbed the logs, and rolled them into a pond which was part of the mill. The pond is a miniature swimming pool, four feet deep and thirty feet long. They washed the logs of the mud and dirt which would have dulled the saws. They guided the logs to the end of the pond and started them up the jack ladder, a traveling chain that carried them into the mill. Now the logs were actually on the way to becoming lumber. Other canters (cant-hook men) rolled a log onto the saw carriage. The carriage rides parallel to the huge circular saw. A "dogger" rides the carriage, steadying the log, but above it you can hear the throaty voices singing:

"The trees we'll use for coffins
For Herr Hitler and his crew,
And we'll bury all the Nazis
So they will not bother you. . . ."

The log has made four quick trips on the carriage. It is square now. There isn't a bit of bark left on it. It slides down twenty feet to the "edger." The edges are trimmed by another saw. It slides to the butt man. He and sistant look at it briefly and kn length and thickness will best particular square log. The sav scream . . . The planks fall d slipway into waiting trucks. T logs from our tree follow.

"Half an hour," Blitz Daws "Not bad."

The tree had stood for 20 Half an hour ago it was swaying on a Scottish hill hard by an granite gallows. Now its dest complete. It was nothing but dred clean, white, even planks to win the war for England.

That, in short, is the work of interesting and perhaps most unit in England. Nine hour they work; they always ha tough work; they're accustomec work. It's fun to sit around at n them. About 300 of them c English—only French-Canadi other 400 are Scottish-born. T as youngsters to Canada and have come back. Most of th to be very American. Each has a baseball diamond and t play double-headers after din

"You don't know how the are doing?" one of them aske

"It's going to be tough this said. "They don't broadcast series on short wave, so we w who wins until a month after Could you do anything about

I said I'd try.

### A Colorful, Hard-workin

The camps in which the me exactly like those they know nadian woods. They are s cabins far better than anythin lish army has. But the Eng isn't accustomed to living in They're a colorful, hard-worki lot, these members of the Saw liers, and Canada ought to proud of them. And if tha comes they'll drop their axes saws and with dark gleams in they'll pick up their rifles and they'll pick off the shrouds chute at five hundred feet. else fails they'll drop the they'll pick up their axes show the Jerries how Canadi men can fight.

**"Don't you see? He's only going to the city to make enough money to come back here!"**

# Can You Pick the One from Dubuque?

**NEWEST DRESS FASHIONS-SHIPPED BY TRUCK-MAKE IT TOUGH TO GUESS-**

**Because women everywhere get the latest styles as fast as the style centers do. (Men, too!)**

WE show you this picture because we know that every woman — and every man — wants to be well dressed.

Today, you *are* . . . *wherever* you live . . . because motor transportation distributes the last styles to every corner of the land — quickly — economically.

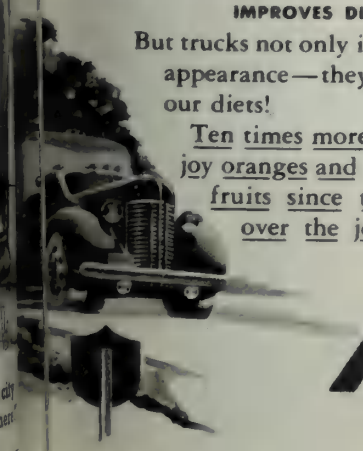
**IMPROVES DIET**

But trucks not only improve our appearance — they even help our diets!

Ten times more people enjoy oranges and other citrus fruits since trucks took over the job. We eat more meat — more fresh vegetables — drink more milk — than any other nation on earth.

**AND NOTE THIS!**

Trucks carry 62% of the beef served on American tables . . . 39% of the eggs . . . 40% of the vegetables. Detroit, St. Louis, Los Angeles, Spokane and twenty other metropolitan areas get their entire supply of milk by truck.



And almost 50,000 communities depend entirely upon motor freight for ALL necessities. No other major transportation system reaches them.

Yes — we in America — with half of the world's trucks — can thank our highway carriers for vastly improving our standard of living . . . and for helping to counteract the present world trend of rising prices.

**SPEEDS NATIONAL DEFENSE**

In these times of national emergency we can be doubly thankful. Here is one transportation system that can never bog down! Here are freight carriers that are never sidetracked! Here is speed — faster than the U. S. Mail — and flexibility that keeps defense plants operating at peak efficiency.

Just remember these things the next time you see a truck on the road. Remember it is part of a transportation system vital to the well being of your family — your community — and your country.

**AMERICAN TRUCKING ASSOCIATIONS**

## By Ruth Car

**Mrs. Leo Duroch is cessful in her o signing beguilin young misses— ball-playing hu managing the B**

PHOTOGRAPHED FOR COLLI

YOU can talk about fashion all you like," says Mrs. Leo Durocher, and she can talk about fashion with authority because it's her business. She is head designer for a manufacturer who turns out her creations by the hundred thousand. "But what the young girl wants is her man. You can wear your own pencil lines. She wants a dress that fits smoothly around the hips, and then flares out with a swish to call the boys' attention to her shapely young legs. And even if they're not the most shapely legs in the world, she knows that a swing skirt will make the most of them.

"She wants a dress that fits in the bodice, too. In my day we bound our breasts flat and tried to look as boyish as possible. Today the young girl has enough sense to know that this is a beautiful part of her body and she wants to make the most of it. What do you suppose she wears sweaters for? Most of them don't have all the bosom they'd like. So we tuck the dresses smooth through the midriff and let the fullness out above. If a girl has enough figure the dress fits smooth; if she hasn't, the dress suggests that she has."

Working on this commendable basis of helping the girls to get their men, Mrs. Durocher has built up a line of dresses that sell in their own special department in more than 2,000 stores throughout the country, so that you stand a good chance of meeting them on your own Main Street. She describes them as casual dresses, though they sound pretty calculating to us, and they retail for from $3.95 to $12.95. They are what the trade calls dresses for the junior miss. They are manufactured in St. Louis which, says Mrs. Durocher, is the center of the junior dress market.

To make certain that these young misses shall be pleased with their dresses in every detail, the buyers for the special departments question the girls in near-by high schools and colleges about their likes and dislikes. They pass the word along to Mrs. Durocher, and she is saved many a bon which general fashion p like the plunging neckli soft-pedal, like sloping

school, and after gradu-
be taken in, given tables
(meaning dress forms)
and set to work. Mrs. Durocher has eight girls in her designing department now. Her best designers, she repeats, came out of the factory. What you need most in the way of equipment is ambition, creative ability, an alert mind and a capacity for hard work.

A little pride and interest in your own appearance are a help, too. These the Durochers have in abundance, on both sides of the family, and they egg each other on. Leo never misses a pretty girl when there is one anywhere on the horizon, and he never lets Mrs. Leo miss her either. She feels responsible for some of Leo's fastidious concern over his own clothes. The pressing of a suit is a ritual that he directs in person. The lapels must be rolled on one suit because it is to be worn with a certain shirt; they must be creased exactly ten inches on another. He fusses about his colors. He scrubs his person till it shines with cleanliness.

"People will talk about you anyway," Mrs. Durocher says, "so you might as well give them something pleasant to talk about." The Durochers do.

Applied psychology is another Durocher key to success. Leo can pat a boy on the shoulder after he has lost a game for the Dodgers. He can also rush screaming out onto the field to do battle with an umpire over a decision. "There are some people you have to kiss and others you have to kick," is Mrs. Leo's way of applying the same idea to temperamental designers. Personally, she prefers dishing up honey to vinegar. Better drawing power. Like her dresses. ★★★

-and a HALF DONE overhaul won't stop Oil Pumping . .
ALWAYS CHECK ENGINE BEARINGS!

WHEN you decide on an engine overhaul to correct motor-fouling, power-stealing oil waste—be sure you have the oil pumping corrected *where it starts!*

Any good service man will tell you that worn connecting rod bearings are a principal cause of oil pumping, and that installing new rings is doing just HALF the overhaul job. When oil pumping starts at the bearings, correction must start there, too.

It costs so little more to replace worn connecting rod bearings when the engine is already opened up, that it is wise economy to have the bearings checked, and, if worn, replaced with a set of Federal-Mogul Oil-Control Bearings to restore power, pep and economy—and to assure lasting performance satisfaction!

# This Twain Shall Meet

Continued from page 68

mirror on the wall. He'd been six years getting another big-league tryout. By that time nothing fazed him. He was tough.

Then he didn't see his face for an instant. The girl who had stepped in front of the mirror was slim and young and pretty. She wore a bright dress and a canary-colored hat, under which were blond hair and large blue eyes with trouble in them. Claggett watched her vacantly. She turned slowly on her slender ankles, searching the room with her glance.

Claggett got up. Without knowing why, he felt certain that this girl's picture was in the leather folder that Bert Lindsay always nursed. Claggett approached her and said, "If you're looking for Lindsay, he went out about an hour ago. I'm his roommate."

Her hand in his felt warm and firm, but it was the smile that made him like her. It seemed to brighten not only her own face, but the whole room.

"Oh, then we missed each other at the station. You're Mr. Claggett—Stony Claggett. Bert writes me about you and how grand you've been to him. I'm Amy Huntington."

SHE was also, thought Claggett, a very sweet kid. Right away he saw that. But he wondered, unreasonably, how her eyes would look if the morning paper had carried Lindsay's release instead of his own. Lots of girls were sweet and easy to look at. He couldn't help wondering how Amy Huntington would take bad news.

"Well, here comes your man," he said.

Lindsay had just loped through the front door in a great frenzy. The boy and girl spied each other. They moved together in awkward motions, their faces hot and their arms stiffly down at their sides. It amused Claggett, as he slipped away, to see how bashful they were. They didn't know how to greet each other here, whether to kiss or shake hands.

"Gosh," thought Claggett, "it's been a long time ago. I was a durn' fool once myself, and now I'm thirty-five years old."

He got his hat off the rack outside the dining room. He went out into the street. Yes, he'd been young and foolish then, but now he was a real smart guy with a system. *Be tough and you don't get hurt.* Only he didn't seem very happy about it. He felt a sudden envy for Bert Lindsay. Not just for sticking with the club either.

Claggett glanced at his wrist watch. It was eleven-thirty, two hours before he'd be due at the Polo Grounds. The afternoon papers were on the street. He bought one and climbed to the top deck of a downtown bus. The sports columnist had something to say about the release:

"In choosing to keep Lindsay instead of Claggett, the Bishops are betting on youth and promise against age and experience. This may be sound judgment, but young Lindsay has yet to prove himself an all-season pitcher. After a brilliant start he has shown a tendency to be erratic in the pinches. This afternoon Manager Bosworth will send him against our Giants."

Claggett laid the paper aside and lighted a cigarette. What he'd read was cold fact. Lindsay had won five games back West, but he hadn't been very convincing on this Eastern road trip. The Bees had hit him hard, and Brooklyn had beaten him. He'd had to take relief in Philadelphia.

"Game for game, I'm as good as he is," Claggett thought. "It's just that Fred Bosworth thinks the kid has a future, and he can't carry us both. Damn, we've got a pennant chance this year. I'd like to stay."

He brooded as he rode along. Somehow he always missed these pennant seasons. He'd done two years with Cincinnati before McKechnie came along, and he'd been traded to the Bishops just when a championship team was breaking up. Now ready for another shot at the flag, they were letting him go. It hurt his pride.

The bus reached its terminal at Washington Square. Claggett stayed on to make the return trip. There didn't seem anything better to do. His last day in the majors . . . maybe he wouldn't bother to report for the game. He didn't want anyone feeling sorry for him.

But shortly after three o'clock he was in the dugout watching Bert Lindsay work on the Giants' lead-off man. Johnny Rucker popped out. Moore and Demaree did no better. Lindsay's fast ball was going through, so he used the curve sparingly. For three innings the Giants didn't get a man past first, while the Bishops made four runs off Melton.

"Stony," said Manager Bosworth. "When the seventh inning comes up, go out to the bull pen. I might have to use a pinch hitter if the kid gets careless."

"Okay, Fred."

The manager hadn't said a word about the release which became effective at midnight. Claggett was just as glad. In the locker room some of the boys had made clumsy attempts at commiseration, the sort of thing he didn't care for. Most of them liked him well enough, despite his aloofness; and he didn't doubt their sincerity. But just the same he wouldn't unbend. He didn't know how to any more.

"But I'd like to stay," Claggett was thinking. "No one'll ever know how much. To play on a pennant club just once before I go. It—"

Thunder rocked him from his meditations. With one out Babe Young had brought the crowd to life by blasting a double into left field. The fans began to stomp and bellow as Lindsay gave the 3-and-1 count to Danning. Claggett moved forward to watch. He had taught this kid a few tricks of the game.

"He'll use his best ball now, the way I told him. He'll throw his curve."

But Lindsay had momentarily lost control. He wild-pitched Young to third, and Danning walked.

"Get out there quick," said Bosworth. "We may need you this inning."

CLAGGETT took his glove and started for the bull pen. He couldn't have missed seeing Amy Huntington who was in a field box next to the dugout. She was standing up with one hand on the railing, and the trouble was in her eyes again. Lindsay had started pitching to Ott. The third-base coacher was yowling:

"Heads up, Mel. Hit the big one . . . hi-hi!"

It was the curve ball again. In the pinch you fell back on your Sunday shot, though not always for a first pitch. Lindsay had tried to cross them up by using it. Ott belted the twister up against the outfield wall, a three-bagger that meant two runs.

Claggett hurried now. He reached the bull pen and commenced to throw. There was a southpaw also warming up, and no telling which of them Bosworth would call. From where he was, Claggett watched Bert Lindsay duel with Jurges.

nt.

"I'm glad I don't know what it is," thought Claggett. He dug in and pitched to Rucker, and struck him out.

"Stony," said Bosworth. "I could've made a mistake about you. There's still time to prove I was wrong. We can use this game."

"All right," said Claggett.

HE WENT well in the fifth and better in the sixth. Never a great pitcher, he'd always been a good one, and there was another year left in his arm. The Bishops got him a run in their half of the ninth. He went out to finish it off. Young fanned, but Demaree tripled the tying run to third. Bosworth came out.

"How about it, Stony?"

"It's okay, Fred."

"You want to walk Danning and set up a double play?"

"That'll put the winning run on. I'd rather pitch to him."

"You'd better prove I was wrong," said Bosworth.

Claggett got set to pitch. In this same park, fifteen years ago, he'd botched the works. One bad throw had sent him back to the sticks, and one bad throw could do it again—for good. He didn't have the fireball any more, but the slider was still good against right-handers. He used it on Danning and struck him out.

"We're a pennant club," breathed Claggett, "and I'm going to be here at the finish."

He still had Ott to face, a left-handed hitter. You couldn't afford to make any mistakes with this man either. Claggett stepped off the mound to let his nerves settle. His eye wandered to the field box where Amy Huntington sat. She wasn't alone there. Bert Lindsay, having changed his clothes, had joined her. The sight of them there together made Claggett catch his breath. An unwelcome inspiration rooted him to his tracks.

"Quit stallin'," warned the umpire.

Claggett served one high and wide at Ott. He didn't dare put it through there to a slugger. Ott got a piece of the next one, a lusty foul into the right-field stands. *You're a tough guy, Stony,* Claggett thought. *The soft stuff gets you nowhere.* He pitched twice more to Ott, and both throws were high and flighty, the way his mind was. Bosworth called time and came to the box again.

"Stony, this fellow loves to swing at the 3-and-1 pitch. You better pass him."

"Maybe you're right, Fred."

But he wasn't going to do it. Being tough was how he got into the big

leagues, and being tough was going to keep him here a while longer. He glanced at the field box where the boy and girl sat close together; and then down at Ott. Maybe it wasn't safe to throw high sliders at a left-hand hitter. *Maybe that and some other things weren't exactly sporty.* Claggett got his arm up and came down hard. Ott strode into the pitch, expecting a fast ball. He had to dodge and save himself with the bat as the slider cut in at his face. Claggett smothered the easy pop-up. The game was over.

"Well, you did it," Bosworth told him as they jogged to the clubhouse. "And that's good enough for me. I'll keep you and option the kid. Say, Stony, I wonder if he's tippin' off that curve of his."

"I wouldn't know," said Claggett.

IN THE bedroom, when Claggett got there, Lindsay was standing at the open window in his shirt sleeves.

"Well, kid," said Claggett. "I guess Bosworth told you. It's tough luck."

Lindsay moved from the window, saying, "Listen, Stony. I'll let you in on something. Amy and I were going to be married tonight. We were going over to Jersey. We have a license."

"It's still good," said Claggett. "You'll have time. The train for Houston leaves at midnight."

"No," said Lindsay. "Everything's off now." He gave a strange, shrill laugh. "Don't you see—I'm no good. They always hit my best stuff when it really matters. Oh, well. I don't deserve her anyhow."

Claggett lighted two cigarettes and gave the boy one. They sat on the bed together, and Claggett knew how the kid felt all right. The wonder was: *you never hated the girl for letting you down; you only hated yourself.*

"Bosworth thinks I might be tipping off my curve," said Lindsay with a faint note of hope. "What do you think, Stony?"

"I wouldn't know, kid."

Again, thought Claggett, this wasn't really telling a lie. He had a hunch, that was all. Lindsay went into the bathroom where he sloshed water over his face. Deftly, Claggett reached for the boy's coat which hung on a chair. He felt in the pocket and touched the leather folder. It was still damp with sweat.

"I hope he doesn't ask me that again," thought Claggett.

But Lindsay said no more about the tip-off. He had pulled himself together by this time. He said, "Well, I've got to pack. Don't worry about me, Stony. I can take it."

"So long, kid. Good luck."

They shook hands and Claggett left the room. He thought he'd go somewhere and have dinner alone. Somehow he felt pretty rotten about it all, and he couldn't see why.

He got out of the elevator and started across the lobby, but this time Amy Huntington saw him. She looked up and smiled, but there was no luster in her eyes. Claggett stopped and took off his hat. "I'm sorry," he said, "about Lindsay."

"Oh, he told you? He's terribly upset. Mr. Claggett, you know about these things. Is he a big-league pitcher? Will he ever come back to the majors?"

"Most of them don't," said Claggett.

Amy nodded. "That's the trouble," she went on thoughtfully. "We were getting married tonight. Then this all happened. It makes a big difference."

"I suppose it does," said Claggett.

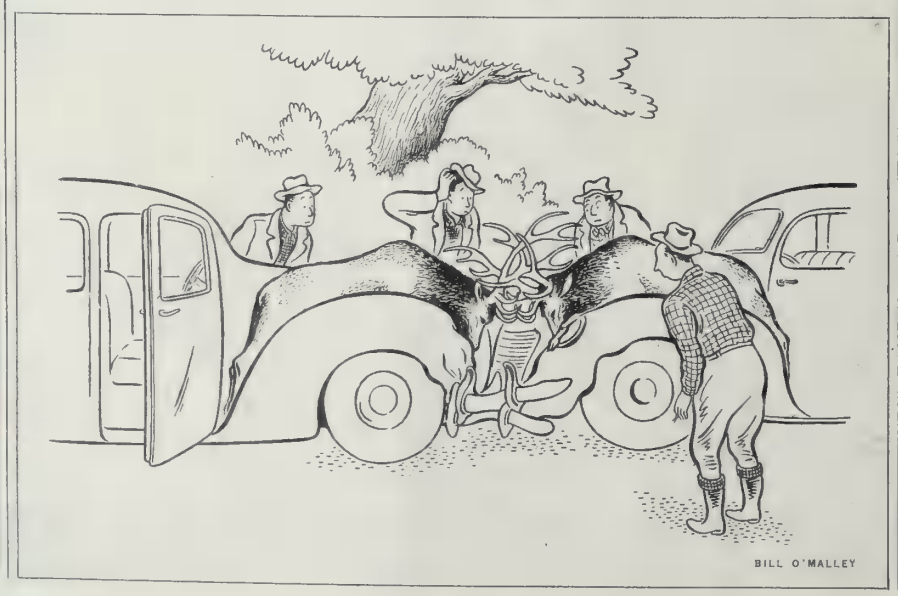
"Yes," said Amy. "I wouldn't mind waiting for Bert if I were sure he'd come back to the majors. But maybe he won't—probably he won't. That's why I'm not going to wait. That's why I'm going to Houston with him tonight."

Claggett stared down at her. He had to swallow before he could speak: "You mean—?"

She smiled again, and there was plenty of luster there now. "We'll be married anyhow. Bert says that everything's off, but I can change his mind if I try. You see, Mr. Claggett, wherever Bert goes is the big league for me."

Again Claggett became speechless. Something like this he'd been wanting to hear—and to believe—for fifteen years. He wished it could have happened to him, but just knowing it could happen to someone was the next best thing.

"But I do hope he'll make good," said Amy. "For his own sake."



"Maybe he will," Claggett managed to say. "Bosworth thinks his trouble is a tip-off. Once I knew a fellow who carried a girl's picture inside the blouse of his uniform. Whenever this fellow started to throw a curve, he'd squeeze his elbows in—a little longer than usual. He was unconsciously hugging his girl's picture for good luck."

AMY looked up sharply, but said nothing. Claggett abruptly moved on toward the street. He bought a paper at the corner and climbed aboard another bus. The soft stuff got you nowhere, he was thinking. In a few weeks Lindsay would iron out the tip-off sign and come back to the Bishops. Someone on the pitching staff would get the ax.

"Maybe it won't be me," mused Claggett. "But if it is—so what? I'm a tough guy. I can take it."

He looked down at the paper in his lap. Lindsay had put all the runs on base this afternoon, and the box score read: "Winning pitcher—Claggett."

The big man gazed long and fondly at the words. He had changed some since morning, but he still had his pride. . . .

was thoughtful. If things were aybe this wouldn't be a good time to leave to look for an opening in the theater. Maybe he ought to stay and fix things up before he started his career. The old man needed him. That's what this place needs. Showmanship!

"Mr. Hirsch, I think I can solve our business problems." Mr. Hirsch's head spun on his slender neck. His faded eyes opened wide for a moment, then he relaxed.

"If you'll give me a couple of days to work things out, I'll give you a real idea. I'll build up volume. Just leave it to Barnaby Toddhammer!"

"Willie, what did I tell you?"

"Okay, Willie Klein, but you wait!" He started to the door, pulling over a letter file and a stack of pencils. "Sorry, Mr. Hirsch," Willie said as he closed the door.

"You be a good stock clerk a while, yet!"

Barnaby Toddhammer stood for a moment outside the door, composing himself. "I'll prove to the old man that I'm a good showman," he said.

As if by intuition, the communications box on the office landing called to him as he passed, "Don't forget, the name on the pay roll ain't Barnaby Toddhammer!"

MARILYN looked intently at her long, curving nails as they wound around the soda glass. "Barnaby, dear," she said softly, "did you tell Mr. Hirsch that you wanted to leave the store?"

Willie gulped. He nodded.

Marilyn smiled felinely.

"And what did he say?"

Willie jumped in with both feet. "He said no."

Marilyn's face changed from docile felinity to enraged tiger. Dramatics 3A at George Washington High had enabled her to run a smooth gamut of emotions. She ran it.

"Honestly, Willie! I don't know why I put up with your childish ways. I don't know why I waste my time on an infant who is incapable of making up his own mind, utterly!"

"Barnaby," Willie reminded.

"That is a name for a man of character. Not for you. Last summer it was a baseball team, and not even a good one. Now you insist on burying yourself in a clothing store!" Her tone was icy, she was talking from a cool peak of hauteur: "I suppose I should find someone my own age."

Willie mentally counted the change in his pocket. "Care for another soda?"

"Yes," she said, on the ground for a moment. "Tell him not to put so much chocolate in this one." Then she soared.

"How do you expect me to have respect for you, if you're going to be a nobody in a store all your life?"

Willie's eyes were thoughtful, his manner distracted. "You know, Marilyn, I think I can learn about producing right in the store; besides, the clothing business is a good field."

"Willie Klein, I've lived next door to you most of my life. I've tried to guide you, to make something out of you. And what thanks do I get? What about my ambitions?"

Willie wagged all over, like a dog being scolded by a tolerant master. "Gosh, Marilyn, you don't have to have me for a producer! You've got talent."

Marilyn took out a stick of flaming lip rouge, flipped it open and repaired the damage done by the soda, "Don't be an utter child, Barnaby," she said.

Willie peeked out of the stock-room door. The floor was almost empty. The clerks walked idly up and down

the aisles, brushing a bit of lint from the suits, tapping a little with their feet, trying to stifle their yawns.

Once in a while they would glance enviously at Mr. Simon, who had a customer in the fitting room, three suits. Mr. Simon would call over the partition to the tailor in a loud voice. The customer had asked for him by name.

Al was back in the stock room mouthing a magazine with a lurid red and black cover.

"I'm going to beat it for lunch," Willie said. Al just waved his hand above the magazine and went on mumbling to himself.

Broadway was good and hot. It had that stifling smell of dusty air mixed with dampened wool that comes with the heat. You could feel it lapping at you unpleasantly, but the street was crowded.

Some of the stores seemed to be doing a good business, in spite of the weather. Murphy's was almost crowded as he went by. They were featuring Electric Blue, the shade for you! in all styles. Their windows were full of it.

He crossed the street and pushed his way up to a little stand.

"Glass of orange and a cream cheese and nut," he ordered.

As he munched, he studied Murphy's windows. Nothing much in them but those blue suits. Here and there, a brown gabardine stood out like a good deed in the Third Reich.

Why, then, did men pass Hirsch's and go to Murphy's? The price was the same! $22.85. It was true that Murphy's windows were a little more summery, while Hirsch's had some winter and fall styles in with their seasonal stock.

Hirsch's windows were green with suits. That couldn't be it. You could see just as many green suits on the street as there were Electric Blues. Willie scratched his head. It couldn't all be a matter of location even if Murphy's was right next to The Paris Theater, with fifty hot numbers to keep you cool.

After he had been on the street a while, the heat became unbearable. The thought of an afternoon spent in the stock room with Al was stifling.

"OKAY, Willie," said Mr. Hirsch, mopping his brow, "I don't feel good, either. You run along home and get into bed."

"Thanks," Willie said. He continued to look pained, rolling his eyes and tearing at his collar. As he reached the door, Mr. Hirsch cleared his throat.

"Willie! Don't forget to punch your card out, on your way home."

Willie nodded.

THE ball park was fairly cool. A breeze came up from left field and blew through the three-dollar seats. It had to pass the bleachers on the way, and Willie opened up his collar and tried to trap a little of it.

"Why don't the Reds pay all of your salary, you big fourflushing crook?" he screamed. Somehow, he couldn't get interested in the game.

The thought of Mr. Hirsch sitting in his stuffy office, worrying about business, bothered him. Mr. Hirsch was all mixed up in his mind with Marilyn, thousands of men wearing Electric Blue suits, nobody wearing green suits, and the Jerome Avenue Dodgers losing four straight. He bought a bag of peanuts and tried to concentrate.

"Now call for a bunt," he said. "Lay one down the third-base line."

The next pitch whistled down the first-base line for a beautiful double that brought in the runner and tied the score.

"What did I tell you?" Willie demanded. A very large man in his undershirt, sitting next to Willie, eyed him over his bottle of beer.

"You're a mastermind, kid," he said.

Willie nodded. The next man up was out and the inning died quickly.

Seventh inning. Willie got up to stretch and spilled his peanuts over the gamblers in the row in front of him.

"Sorry, Mr. Hirsch," he said, automatically. "I mean sorry, fellows."

He bent over and picked the peanuts up, one by one, making sure that they were all peanuts and not just discarded shells.

"Okay, let's go get 'em!" he yelled. He sat down and cracked one of the salvaged nuts. When he looked up, the field was empty of players. A small group of men in business suits stood in a little huddle around the plate. In the center was a very beautiful girl, a very beautiful girl.

"What's that dame doing down there?" Willie asked the fat man.

"Maxine Everheart, the movie dame. She's presentin' the valuable-player reward."

"Award," Willie corrected, softly. Some nerve breaking up a tight ball game just so some dame could come out and parade around.

This movie dame had on a bright red dress. "Gee, that would stop a truck dead in the middle of the Queensboro Bridge," he thought.

Willie's whole face changed. He mumbled to himself as he ate the last nut. He stood up, brushed by the fat man and walked down the aisle. It wasn't until he was on the Bronx Express that he realized that he had left a ball park in the middle of a tie game. "Holy smoke, this is big!" he said.

MARILYN moved over, ever so slightly, on the stoop. "Hello, Willie," she breathed, in her best voice. Her eyelids fluttered. "Say, it's only four-thirty—what are you doing home now?" She pulled her eyes out of their mascara moorings. "Did you quit? Are we going to go after Broadway?"

Willie tripped over the top step and sat down heavily.

"I'm not going to quit until I've got Mr. Hirsch straightened out." He paused for breath. "But I think I can do it quickly, if you'll help me."

"Help you in the store?" She was aghast. Naturally. "I'm not going to work in any store—I'm an actress. I want to be on Broadway."

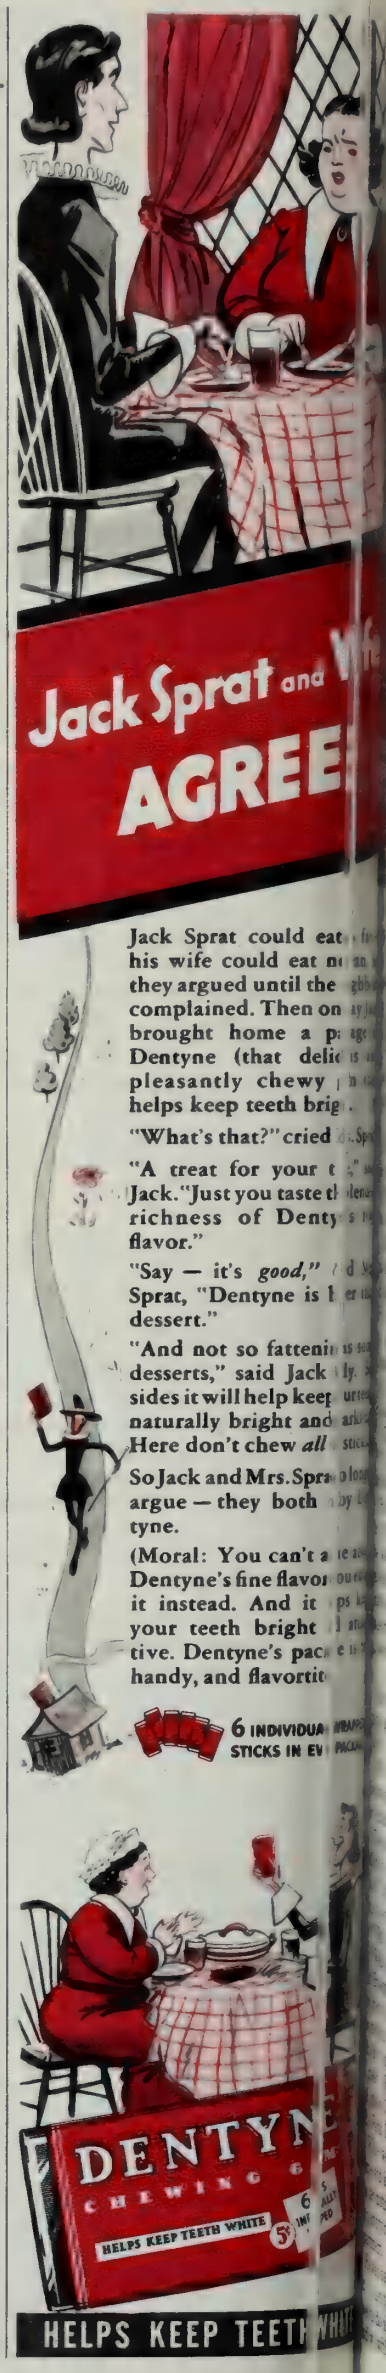
"Hirsch's is on Broadway."

Willie's eyes were dreamily fixed on the billboard that ran along the roof of the house across the street. Bits of his night-school course in advertising came back to him. Ziegfeld draped his brain with yards and yards of magenta cloth from inexhaustible bolts. Mr. Hirsch would lose no time in changing the name on the pay roll to Barnaby Toddhammer. That was, if he decided to stay with the store.

"You're going to be an actress in my first big production," he said, cryptically.

"Yeah?" Marilyn's eyes were distrusting.

"Yeah. I'll tell you all about it tomorrow night."



She pouted and her curiosity made her move closer to him. "Why not tonight, Barnaby?" she cooed.

"Baseball game tonight," he said. "Say, have you got a red dress, a bright one?"

"I should wear it to watch that team of yours get beaten!" she snapped.

MR. HIRSCH mopped his forehead, rolled the handkerchief in a tight, little ball and threw it across the room. He ripped open his desk drawer, mumbling all the while to himself. The aspirin box was empty.

"Willie! I think the heat is getting

r head. The whole idea is crazy!"
ie gathered himself together.

with a tennis racket, wearing
a red dress. It's to make the green suits stand out. When I told her I was going to pay you twenty-five a week she softened up."

Marilyn gazed up at him with love in her admiring eyes. "You're becoming quite masterful," she murmured. "Let's take a walk over by The Cloisters, tonight."

Willie shook his head. "Baseball game, tonight," he said.

They had collected quite a large crowd by the time they had removed half of the suits. It was one of those days when people like to stop and watch other people work. Besides Al would stop occasionally and clown for them.

His fun was stopped when they put up the curtain. Willie had demanded absolute privacy for the main part of the setting.

Mr. Hirsch came down from his office every fifteen minutes, looked at the window, torn up and littered with paper, wrung his hands and went sadly back upstairs. He had been talked into it. It was too late.

It took two full days and Marilyn spent most of the second day rehearsing with the male model that Willie had hired. Never having played tennis, she felt that she needed to get in the mood. They practiced walking with gay abandon in the narrow space between the displays.

The third day they were ready. At nine o'clock, Willie pulled the curtain. By ten-thirty, they had a sizable audience blocking their sidewalk and by four o'clock they had exceeded any single day's business by a large figure, and refused to give out Marilyn's telephone number an average of twenty times an hour.

The clerks bustled busily about the store, their pockets bulging with sales slips. Practically no one came in and asked for Mr. Simon by name. He was so busy he overlooked the oversight. Al had no time for his magazine and no time for lunch. Business was business, and booming.

"You see there, Willie," Mr. Hirsch said. "What did I tell you? The clothing business is the place for a man with brains. Even my competitors have been congratulating me. And that Marilyn, such a sweet little girl, so willing. She's worth her fifteen a week."

"Twenty-five," said Willie, quickly.

Mr. Hirsch beamed. "And you wanted to be a theatrical producer!"

WILLIE sauntered casually down the street toward the subway. No use hurrying, the express would get him to work by nine-thirty, easily. You could get a seat on the later trains, anyway. He bought a paper at the corner and paused to read the headlines. Two small boys from the neighborhood were standing by the curb. As he walked down the subway steps, he heard one of them talking to the other:

"That's Willie Klein, the baseball player. His team's won five in a row!"

"Gosh!" the second one said.

Willie rolled up his paper and looked at the ordinary people about him. A shirt button gave way under the strain.

As he approached Hirsch's, he saw the manager of Murphy's standing in front of Hirsch's, watching Marilyn walk up and down with her tennis racket. Murphy's man leaned over and read the sign that was conspicuous in one corner of the display.

"This window executed by Barnaby Toddhammer," he read.

He looked up. "Hi, Willie," he said. "Who is this Toddhammer guy, do you know?"

"He's a big man in men's clothing," Willie said. He winked at Marilyn, on the inside. She remembered that she was an actress and barely a smile broke her full lips.

The place will double its capacity by the first of the year. Thirty miles southeast of Phoenix ■ twin-motored air base (also ■ training school) is to be opened next month; and ■ bomber base has been established in the Tucson district. The latter project is in keeping with the Army's new policy of moving heavy-equipment bases inland. Even so, Arizona is within easy striking distance of both the Pacific Coast and Mexican border. Reproduced here is the Thunderbird Field emblem used by American and British students at Southwest Airways, Inc., first insignia to be adopted by an Army base.

### UTAH

40TH DIV.

FORT DOUGLAS, Salt Lake City. Instead of getting a ticket back to this post following his completion of the armament course at Lowry Field, Colorado, Pfc. John T. James, of the 6th Air Base Squadron, 5th Air Base Group, was bundled into ■ train bound for Savannah, Georgia. Pfc. James yelled about it but nobody listened. In Savannah he rubbernecked around for ■ while, got bored and finally renewed his howls about how far away he was from where he was supposed to be. Officials decided maybe there had been a mistake and Pfc. James was shipped back to Utah—at government expense, which is to say taxpayers' expense. That's the way it goes.

IN THE same squadron is Pvt. Ismael Borrero, who knows something of the hazards of soldiering close to civilization. Detailed as an M.P. to guard the Fort Douglas entrance nearest the golf course bordering the post, Pvt. Borrero was stiffly saluting three cars full of officers when ■ divot-digger sliced a drive boppo into the soldier's midsection. He grunted and his salute crumpled momentarily; then with a supreme effort he carried on until the cars had passed on. The golfer never did find his ball. He didn't even bother to come look for it.

### IDAHO

GOWEN FIELD, Boise. Air Base Moral Officer Lt. Jack D. Green has a football schedule pretty well lined up. Games will be played with two Idaho colleges, the Portland Air Base, Fort George Wright (Spokane) and maybe

**From a pier representing the side of an Army transport, landing party slips down nets into assault boats formerly used and condemned by Army Transport Service**

**Widely separated to provide scattered target for "enemy" holding the shore, the attackers, armed with rifles, antitank and machine guns, row quickly to the beach**

**BEACH PARTY. Emulating the Marines, men of Co. A, 53d Inf., at Fort Ord, Cal., learn to land on the Monterey Beach, supposedly held by an enemy force. Under the direction of Lt. Col. Henning Londen, commanding the 1st Btn., the men climb down nets into assault boats, taking with them, for the first time in the history of landing operations, a bantam jeep, 37-mm. antitank and a .30-cal. machine gun. Object of exercises is to teach infantrymen how to set up beach heads for landing of advancing forces**

**Under actual fire, the number of attacking troops shown at right (below) would blanket a larger area of beach. These operations are being practiced by the infantry on both coasts**

POLIDENT BEAUTY BATH

Keeps Plates Like New—No Brushing

Are you letting dingy false teeth destroy your smile . . . perhaps your whole charm? Does the very thought of unattractive plates make you self-conscious when you should be well-poised? The thing to do is—get Polident—a powder that magically dissolves away tarnish, stain, food-deposits from plates, removable bridges—*without brushing*, acid or danger! What a difference in the way your plate looks and feels! Polident purifies your plate—leaves it *clean*—attractive! Gums look more "alive" too! Leading dentists recommend POLIDENT. Only 30c, any drug store; *money back if not delighted.*

Hudson Products, Inc., 220 W. 19th St., New York, N.Y.

**False Teeth Wearers Often Worst Breath Offenders**

A dark film collects on plates and bridges, that soaks up odors and impurities! It gets in crevices where brushing can't even reach! Almost always it results in "denture breath"—probably the most offensive breath odor. You won't know if you have it *but others will!* Yet Polident quickly dissolves all film—leaves plates absolutely odor-free and sweet. Millions call Polident a blessing!

POLIDENT

*Cleans and Purifies* **No Brushing.** Do this daily: Add a little Polident powder to half a glass of water. Stir. Then put in plate or bridge for 10 to 15 minutes. Rinse—and it's ready to use.

a couple of other elevens. Now all the lieutenant has to do is whip up a team, of which he has none. It's putting the tail before the prop, but Lt. Green has high hopes of showing up with a complete set of gridders before the first kickoff.

### MASSACHUSETTS

1ST DIV.

FORT DEVENS, Ayer. Maneuvering around in his jeep, Major General Karl Truesdale stopped to ask some questions of an unidentified colored soldier of the 366th Infantry. The boy was cagey with his answers (didn't want to give no information to the enemy, no, sir) and in being cagey he all but had the general in a padded cell. As a final question, Gen. Truesdale asked the soldier if he knew who was talking to him. For his answer the Negro stepped back, walked around the car, finally recognized the general's two stars on the front. "Boy!" he exclaimed. "You doin' all right!"

### NEW JERSEY

44TH DIV.

FORT DIX. This home post of the 44th expects that the New Yorkers, New Jerseyites and Delawareans, now in the midst of two months of maneuvers in the Carolinas, will remain at peace with the South. First Call, the Division's official paper (Collier's, Sept. 13th) warned loud and long that when the Yanks went South they were to remember that there never was a Civil War. It's still the War Between the States. Incidentally, men of the 44th figure that geography has at last given them a break. Sweltering through the heat and chiggers of Virginia and Pennsylvania this summer made them long for Iceland; but the Carolinas in fall won't be such a bad dish.

SPARE NOTES: Boxing coach of the 44th is Lieut. John L. Sullivan. No relation to you-know-who. . . . When Pvt. Gim H. Leong joined the 119th Medical regiment he expected to be called Sing Song or Charlie Chan or something. No such thing. The guys call him Murphy. . . . There are at least two gents in the Division whose special civilian skills the Army has not yet been able to use. One, Pvt. Bernard Axelrod, 71st Infantry, was a hypnotist; the other, Corp. Irving Fullard, 114th Infantry, was a bear trainer. Bear training, says the corporal, might well be considered a good background for a noncom "except that a bear is a somewhat reasonable animal."

### SOUTH CAROLINA

30TH DIV.

FORT JACKSON, Columbia. Seems there was a lad in B Troop, 106th Cavalry, who, even before that, worked in the Staten Island Zoo. This National Guardsman is a great hand with animals; even knows how to catch and train hawks for falconry. Richard Drabble is his name. Early this year the Army decided to train hawks to intercept enemy carrier pigeons, and at Fort Monmouth, N. J., where hawks are trained, they decided Drabble was their man. When Fort Jackson was asked to transfer him they said no; couldn't spare Drabble; too handy around the horses; besides, we're going to make him a private first class. Nuts, said Monmouth, we'll make him a sergeant and give him a government car so he can chase hawks. Jackson still said no. Monmouth got mad. An argument raged. Jackson finally delivered. But all this had taken time, and when Drabble got to Monmouth the season for catching young hawks was over. Seems you can't train adult hawks to be dive bombers. Seems as though Drabble will have to try his hand at something else for a spell.

Continued from page 11

g, as quarterback, Frankie Alberts, nartest, coolest field general I have in twenty-five years of football. ts is shifty, deceptive, and a born ler at the right time. Since U.S.C. ted power plays, Alberts gave several at the opening of the . Then when he had the Trojans uard he fired passes over their to the unprotected spots I had d in the earlier games. Alberts eted eleven out of sixteen long s, two of them for touchdowns, y because a single U.S.C. defenman wasn't there to pick up the ord receiver in his territory. That e ball game.

en Nebraska was matched against ord for the Rose Bowl game Coach ones of the Cornhuskers asked me a scout's report on the Stanford By this time I had completed assignments for Shaughnessy, so free to work for Nebraska. Texas ., which had a chance at the Rose had hired me to scout Stanford culation. When Nebraska got the was free to sell a set of notes on couting job to Coach Jones.

re are perhaps one hundred proal football scouts throughout the y. It's a hectic life.

### ying While the Sun Shines

ing a single week end late in ber last year, for example, I a plane to Los Angeles to scout A. in a Friday night game against rn Methodist; flew back early horning to San Francisco to spy ah–Santa Clara game at Kezar m; left at the end of the first half h across the bay to Berkeley to the Michigan–California game; rty minutes to make a plane for , where I scouted the Fresno Santa Barbara State game Saturght; next day, Sunday, I scouted nzaga–St. Mary's game back in ancisco. I wrote my preliminary in planes, air-mailed them, and d each with a complete thirtynalysis which takes six to eight write and draw—part of a scout's being diagrams of all key plays.

I made $750 that week end, and that's what I call pigskin spying while the sun shines.

Anyway, getting back to the Rose Bowl job, I lined up my dope on Stanford in 135 pages of detailed report and shipped two pounds of stuff to Biff Jones at Lincoln, Nebraska. By that time in the season, Stanford was using decoys all the time and was relying but little upon power plays. Stanford had developed into the trickiest team in the country, with men in motion before every play. Alberts always waited for a good setup for passes, then shot to the uncovered spots perfectly. One of Alberts' tricks was firing passes on first downs when the other side's pass defense wasn't set.

Half of the Stanford line, I noted, charged through the opposing line, sideswiping rather than blocking to get at the enemy backs. This made it easy to suck the Stanford linesmen out of place, and turned out to be a weakness Nebraska capitalized on. For you will recall that at the opening of the Rose Bowl game the Cornhuskers marched down the field on power plays and put themselves two touchdowns ahead before Stanford's team recovered control of the game. They did that by letting these Stanford linesmen be sucked through only to fall on their noses.

The Stanford team had a backfielder, Pete Kmetovic, who was about the fastest, shiftiest runner on the Pacific Coast. "Never kick to Kmetovic," my notes read. Another pointer I picked up was to watch for Stanford passes on the first down. In the excitement of scoring the first touchdowns so quickly, the Cornhuskers forgot these tips. They kicked to Kmetovic and he ran through the whole Nebraska team to a touchdown. Alberts shot a pass on a first down, and it was another surprise touchdown. After that it was Stanford's ball game, but later Jones wrote me that the deceptive Stanford players would have made his powerful team look like babes in the woods if it hadn't been for the opening plays that took advantage of the flaws in the Indians' line.

I got my football training from the one and only Knute Rockne, when I

## TRY FOR AN *Art* SCHOLARSHIP

Copy this girl and send us your drawing — perhaps you'll win a COMPLETE ART INSTRUCTION COURSE FREE! This contest is for amateurs, so if you like to draw do not hesitate to enter.

**Prizes for Five Best Drawings — FIVE COMPLETE ART COURSES FREE, including drawing outfits. (Value of each course, $198.00.)**

**FREE!** Each contestant whose drawing shows sufficient merit will receive a grading and advice as to whether he or she has, in our estimation, artistic talent worth developing.

Nowadays design and color play an important part in the sale of almost everything. Therefore the artist, who designs merchandise or illustrates advertising has become a real factor in modern industry. Machines can never displace him. Many former students, both men and girls who are now commercial designers or illustrators capable of earning up to $5000 yearly have been trained by our Art Course. Here's a splendid opportunity to test your talent. Read the rules and send your drawing to the address below.

RULES: This contest open only to amateurs, 16 years old or more. Professional commercial artists and our own students are not eligible. 1. Make drawing of girl 5½ inches high, on paper 7 inches high. Draw only the girl, not the lettering. 2. Use only pencil or pen. 3. No drawings will be returned. 4. Print your name, address (town, county, state), age and present occupation on back of drawing. 5. All drawings must be received by Oct. 31st, 1941. Prizes will be awarded for drawings best in proportion and neatness by Art Instruction's Faculty.

was playing at Notre Dame. I had to learn the tricks to stay in the game, because I was a 151-pound right guard in the days when avoirdupois was the thing. Later, when I coached the Notre Dame frosh under Rock, I learned about scouting from him, too. Once, I remember, Rockne sent me to scout a rival, and I found myself beside an excitable woman and behind a post. At a crucial moment, a kick was blocked, and just then the woman leaned into me, throwing my focus off the play. The next Monday at a strategy meeting of the coaching staff, Rockne asked me who blocked the kick.

"I don't know," I said. "A post got in my way."

"The next time you get near a post, you'd better be careful not to knock yourself out," he said, with vinegar in his voice. Rockne always told his scouts that no detail was too insignificant to be of possible importance in preparing for the next game.

A broken leg in the Michigan State game ended my Notre Dame playing in my sophomore year. I finished at St. Mary's, playing under Slip Madigan, then played pro football with Jim Thorpe's Rock Islands, Paddy Driscoll's Chicago Cardinals, Brick Muller's Los Angeles Stars, and Ernie Nevers' Duluth Eskimos; joined Babe Hollingbery's San Francisco Olympic Club team the year they broke the winning streak of Andy Smith's California "wonder team." I've coached in six colleges and three high schools.

### How Scouts Get Started

What started me in the scouting racket, I guess, was the urge to eat, back in 1932, when I arrived in New York from a trip to Europe with exactly five cents in my pocket. At the Seaman's Institute I heard about a pro game to be played in Paterson, New Jersey, next day. I wangled a place in the Paterson lineup. Being thirty-six and out of condition, I almost laid down my life for dear old Paterson and two dollars that afternoon.

On a newsstand, I saw a Football Redbook. I couldn't resist spending two bits for this Who's Who of the gridiron to check up on some of my old Notre Dame pals who were coaching all over the country. An idea clicked in my noodle and I wrote a letter to each of them, offering my services as a professional scout. While I was waiting to hear, I landed a job with the late Frank Cavanaugh, coach at Fordham, teaching the Fordham frosh the St. Mary's system of football. Cavanaugh had a game coming up with St. Mary's and he wanted his frosh squad to give the varsity some St. Mary's competition. By the time I reached the Pacific Coast some pretty good spying jobs had come my way. The best assignment was one from Babe Hollingbery, of Washington State, to scout six games the following season.

At first, I followed a sort of hit-or-miss scheme for answering the questions raised by each coach about the team I scouted. Gradually, I worked out a system of covering every angle of the game with a thirty-page report. The kind of information that is useful about a player on the team you are scouting, for example, is indicated in this paragraph about Frankie Alberts of Stanford, lifted from my report to Biff Jones of Nebraska last year:

"ALBERTS No. 13—170—5'9"—Junior and All-America: OFFENSE: Have said plenty about his offensive ability. May be an all-time All-America before the end of next year. *Left-handed* passer and kicker. One of the most deceptive ball handlers I've ever seen. *Excellent passer long or short.* One of the greatest gamblers who ever handled a football. Fine quick kicker. *Fine kickoff man. Dangerous place kicker.* Will try placing kick from any point. Good on quarterback sneak. Fine running to his right when all the backs have gone the other way, or after he has faked to fullback through the line. Very clever, heady open-field runner. Not fast but very deceptive change of pace. Excellent faking pass, and then running with ball. Inspirational leader. *Must rush him on every play.* DEFENSE: Excellent safety. Best man they have on defense against passes. Only superior speed and height by at least two receivers in his territory has a chance. Lack of height against passes is *only* apparent weakness. One of the surest tacklers on the team. Can outmaneuver blockers. Rarely analyzes plays incorrectly."

Some teams are easy to scout, especially those that use orthodox plays. Others are tough. The toughest one I have run across yet is Fresno State College in California, coached by an old University of Nevada player, "Rabbit" Bradshaw. I had to make four trips to Fresno last year before I could analyze the Bradshaw plays for "Woody" Woodson, coach of Arkansas State. Woodson wanted details on Fresno's three best ground-gaining plays, including the exact assignment of each player in every play. Bradshaw had at least seven plays which I finally boiled down in the analysis to the five principal Fresno plays. Bradshaw had seven plays that started from what is known as the "pyramid shift." The players crouch in a bunch so close it is impossible to get their numbers. They come out of the shift so fast that they look like a covey of quail scattering. This is one of the reasons why the Fresno State team has been beaten but twice in four years when Arkansas State took them on in Little Rock last fall. Arkansas State was the 4 to 1 underdog and, to everyone's surprise, took Fresno State 13 to

What happened is revealing. While scouting Fresno, I discovered a spot behind center where Fresno couldn't cover passes. I also found that Bradshaw's fullback carried the ball three quarters of the time and that he was key to the whole offense which opened holes in the line by means of faking. Woodson cashed in on my notes by concentrating on the fullback and on the blind side behind the center. Arkansas State completed nine out of thirteen passes on Fresno's one vulnerable spot.

### Advance Agent for Tommy Harmon

Last year when Michigan scheduled game with University of California Coach Fritz Crisler wired me to scout the Berkeley team, keeping in mind scoring opportunities for his great triple-threat man, Tommy Harmon. I had scouted California for Washington State and Georgia Tech, and my notes showed that there were several tendencies pass weaknesses in the California defense and that the ends were easily suckered out of position on reverses. Crisler worked out some special plays designed to get these ends out of Harmon's way. Harmon began by running the opening kickoff eighty yards for a touchdown and later he raced down the field for three more scores. The California tacklers couldn't seem to touch him at all once he got out in the open.

As a rule, only the coaches and quarterbacks are the ones who see the notes a football scout compiles on the team they are going to play next week. Together they work out strategy for hitting the weak spots, and it is up to the quarterback to call these plays at the right time. If the whole team is in on strategy, the chances are that no overanxious kid would give away the stuff with a tip-off of some kind

d may pull out for a wide play; a
r may spit on his fingers, or rub
ngers on his pants. Green players
glance at the hole they expect to
. If players point in, you know
lay is coming that way. A block-
ack may be a tip-off; whichever
he goes, the play goes.

ten a good job of scouting by some
in spy enables the underdog to up-
ne betting favorite in a game that
iably is a thriller. Two years ago,
xample, Dayton University came
o play St. Mary's. Dayton wasn't
posed to have a prayer. Coach
y Baujan, with whom I used to
at Notre Dame, hired me to find
weak spots in powerful St. Mary's,
cond alma mater. About the only
I could discover were that St.
's had an end who was always
d by a certain reverse play, and
St. Mary's, having no one who
buck the ball over, had to pass to
touchdowns. That's about all I
find, but it was enough for Baujan.
eam hit that weak end with a re-
as soon as Dayton got the ball,
cored. Then it settled down to a
sive game against passes until the
whistle blew. Dayton held St.
's to a 6-6 tie, which was as much
upset as a victory.

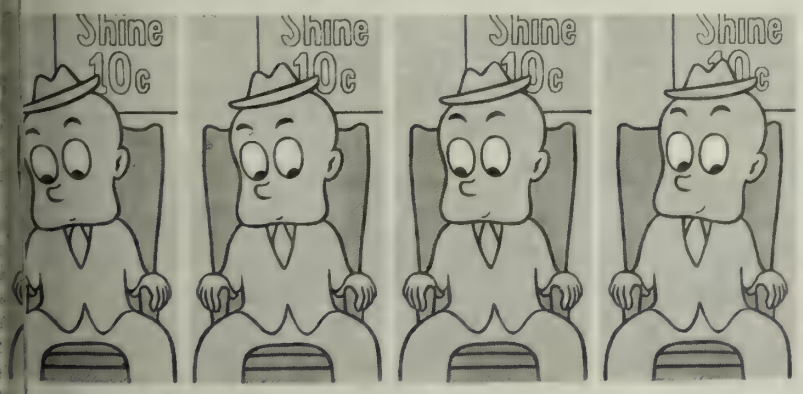
### One Reason for Upsets

ther time, spying St. Mary's for
Mathews of Portland University,
d that one guard played too close
ne tackle too wide, leaving too
space between them. Also, that
Madigan substituted an entire
eam every so often. I reported
le in the line to Mathews, who
d a power play with a ball car-
ehind two blocking backs to drive
gh it. He also decided to match
an, team for team, in substitu-
but Portland, being a small school,
scrape together twenty-two men
y using a guard with an injured
Mathews brought the guard along,
st before the game, borrowed the
ary's trainer to shoot some pain
er in the kid's foot. Mathews did
teams whenever Madigan did,
ept the Portland squad fresh. He
ne game with an 80-yard drive in
urth quarter through that hole
ted with my binoculars.

oping pull these upsets is the big
get out of the tedious hobby of
ulous scouting. One thing I have
in my spying is that a team with
average I. Q., say 120 or over,
aster and use twice as many plays
eventy per cent fewer mistakes
in execution than a team with an
verage of 100. The Stanford team
Shaughnessy is a good example.
eam started with only fair talent
he point of view of experience and
ue and used shifts, man-in-
flankers, and decoy plays based
eption and speed to set up their
ng touchdown plays. They out-played teams that were their superiors in everything but intelligence and outmaneuvered a new defense every week during the season.

These teams made football scouting the most exciting avocation I know. It is hard to catch well-coached players like Shaughnessy's and Pop Warner's in little give-away habits. Incidentally, the best football spy I know is Pop Warner himself, who, as Rockne used to say, has forgotten more football than most coaches ever knew. When I was scouting Fresno State for Arkansas State one of my fellow spies was Pop, who since his retirement from Temple had made it his hobby to advise Dud DeGroot, coach at San Jose State, which is Fresno's great rival. Pop wasn't leaving the scouting of Jimmie Bradshaw's pyramid shift to others. He went to see for himself.

Last season, I was scouting in Los Angeles and met Doe Rollins, head scout for Texas A. & M., in a hotel lobby. He was out there to play U.C.L.A. One of my associates had scouted Texas A. & M. for another school, and I said to him, "We've got a lot of good stuff on you fellows in our files." Coach Homer Norton had built his offense around a flashy fullback, Jack Kimbrough, and Kimbrough had some habits that gave his plays away.



Doe Rollins was interested, so I sent him a file of the notes. Later Rollins said, "Say, that stuff was certainly useful. It helped us patch up our weak spots."

Most coaches would be astounded if they knew what an experienced scout could pick up on their own teams from the press box with a pair of field glasses.

Incidentally, the press box isn't the only place to spy the game. It is a better spot than the side-line bleachers, because people are not jumping up and down and cutting off your vision. The side line is the place to watch the general play, but the end zone is the best observation point to spot the technical angles on the line.

The things to look for, if you really want to see the game from the inside, as a pigskin spy sees it, are these: Watch the blockers rather than the ball carrier when the play starts, and you'll see the holes open up for him. Most fans watch the ball carrier only, but he's helpless without good blockers. You can see that best from the end zone. On passes, watch for the receivers, rather than the passer, and you'll see the defense against passes, which is the tricky part of a passing game. After the pass play is over, check who covered the receiver, and you'll see who's a hero, or a goat. Also check the decoys and you'll discover what is the passing strategy. You'll see more inside football if you pick a certain player, watch what he does for several plays, then choose another and scout him.

Watch out, though, or the pastime will get you, and you'll wind up a pigskin spy.

KEEP AMERICA ROLLING

# The service station's job grows BIGGER!

In normal times the car owner was careful or wasteful . . . as he pleased . . . with the gas, oil, rubber, etc., consumed by his car. Now, however, conditions require him to be thrifty with these vital materials of defense.

To be *efficiently* thrifty you will need the services of a dependable automotive dealer. He can best help you make your motoring an effective part of the national defense. He will recommend, for instance, such conserving practices as properly inflated tires, clean spark plugs, expertly adjusted motor, adequate lubrication, a battery that's always in condition to start your car.

Your Exide Dealer is aware of his part in the program to "keep America rolling." He is scientifically equipped to learn the truth about your battery, conscientious enough to report that truth to you. If a recharge is the answer, he'll tell you so; if you need a new battery, he will urge the greater cranking power and longer life of an Exide Hycap.

This is *the* time in the year for a battery check-up and your Exide Dealer is *the* man to see about it.

# Hitler's New Book

WE RECOMMEND a wide reading in this country of a new book entitled My New Order (Reynal & Hitchcock, N. Y. C., $1.89, 1,008 pages, notes by Raoul de Roussy de Sales, introduction by Raymond Gram Swing). It is a collection of Adolf Hitler's most important speeches and statements from April, 1922, up to and including his lunge at Russia in June, 1941.

Collier's in a recent issue printed a most illuminating map of Europe as Hitler hopes it will look after he gets through remaking it. Material for the map was gathered by W. B. Courtney from authoritative sources in Germany. To anyone acquainted with prewar Europe, this exhibit was appalling.

From Hitler's new book, you can get a rough idea of what he would do to the United States if he ever should get control of it; which is why we hope most Americans will study, and we mean study, My New Order.

If Hitler could and should follow his European patterns in this country, his alleged reforms would hit at least 98% of us, rich or poor, in ways that would break the hearts of all but the stoutest-souled. These latter would be bundled off to concentration camps or would be shot.

Our money would lose its value and its meaning. We would be ruled by little rascals with ingrown inferiority complexes and a yen to take out their perpetual peeves on the rest of the human race. Labor unions would be merged into one big "workers' front," enslaved to the government by the army. Farmers would be tied to their lands like serfs, and told in minute detail what they might and might not produce. Racial groups would be herded into the poorest parts of the country and kept there—the groups, that is, that Hitler considers inferior. The "superior" groups would get the better parts of the country . . . but the orthodox members of the ruling party would have the right to tax, blackmail and graft on these groups and everybody else in sight.

These things all are happening in Europe today. Five years ago, it was only visionaries who could imagine them happening there. Visionaries and Adolf.

COVER GILBERT DARLING

# ANY WEEK

AS USUAL there will be a Roundup in Enid, Oklahoma, this fall. And if Mr. Perry R. Stark, General Manager of the Enid Roundup, has his way it's going to be worth going to some lengths to see. We've just had a letter from Mr. Stark who, in turn, has just read Ted Shane's article about Miss Margie Hart, the Poor Man's Garbo. "I read your article on Miss Margie Hart, the Poor Man's Garbo, and we are wondering if Miss Margie Hart is open for an engagement in the Enid Fall Roundup. At this roundup I put on a act where a girl is shot from a gun. It is quite safe although the last two girls we've had complained of slight headaches although Miss Margie Hart need not be afraid as we will look after her good if she gets a headache.

"In this shooting act the girl is shot from the gun which is 18 inches and calls for a thin girl into a tank of water except in some dry sections where water is scarce and we use a net, both perfectly safe. What we would plan for Miss Margie Hart is for her to enter the gun fully clothed and come out naked and fly through the air naked into a tank and climb out and we would have a man there or a woman rather to wrap a towel around her so she would be in the naked only a few seconds. . . . We would be willing to guarantee Miss Margie Hart $20 a week and a part of the proceeds from the act which is a sensation in Oklahoma owing to both water and nude women being scarce. I would add that the gun is fired by compressed air which we make ourself on the fairground and only a small charge of 40 per cent Giant powder about five pounds for smoke effect.

"We will have hooks put in the cannon and attach them to Miss Margie Hart's clothing when she enters the cannon so she will not have to pull a zipper like on the burlesque stage. Everything will be made easy for her. P. S. . . . Sometimes if we are near a river or lake we use them instead of the tank which leaks some for the girl in the cannon to be shot into. Can Miss Margie Hart swim good?"

WE SPOKE to Miss Hart about it. She is thinking it over. She's a little fearful about the hooks but is inclined to entrust herself entirely to Mr. Stark, who once was gored by a Brahma bull and lived to eat the animal, steak by steak.

RECENTLY we met a lady who has joined all the organizations which demand that America plunge into the war forthwith, shooting from both hips, making up for lost time. Come to think of it, we have never met a more militant person, man or woman. She told us that she had written several letters to English friends apologizing for America's nonparticipation in the actual shooting. But what interested us even more is what she had to say about an open meeting in her town. It was held under the auspices of one of her immediate-entry organizations. To show the noninterventionist elements in her town their error they were invited. They didn't behave themselves very well. "I have never known such rowdies," she said. "Before we adjourned they had started three fist fights and the language they used in replying to our carefully phrased arguments would not bear repeating. I am convinced that the majority of the noninterventionists are ignorant roughnecks incapable of understanding anything short of violence."

IT IS clear to us that these antiwar roughnecks would not be influenced by a sign seen by Mr. Max Smiggle of Spokane, Washington. This sign, hanging over the bar of a California tavern, read: "Notice to all customers. No fighting in this place this week. Our bouncer on vacation." Nor would they be swayed by Miss Florence Bandewagger of Dallas, Texas, who urges all patriotic women to adopt her method of encouraging men to fight the good fight. "Every time I meet a new young man," says Miss Bandewagger, "I ask him whether he is willing to step into uniform when the time comes. If he says yes and seems sincere I give him my friendship. If he says yes and does not seem sincere, I remain aloof. If he says no sincerely I try to reason with him. If he says no and is without principles, I not only warn him to never speak to me again but also post his name in the girls' club I belong to. Any girl seen with such a young man is expelled from the club. Some of the girls have tried to excuse themselves by saying it is confusing, but we feel they are not sincere. Wouldn't you?"

WHAT this magazine has done to keep its readers informed of what's going on in Europe, Asia, Africa and their flaming fringes is deeply appreciated by Mr. Alton Bury Hollowfield of Reno, Nevada. "But," goes on Mr. Hollowfield, "you don't go far enough. For example, why not have a couple of American correspondents too. A couple of good men roaming around the United States, the forgotten country, ought to pick up stories that would interest us men—Americans." Fortuna can accommodate Mr. Hollo stantly. A dignified Yankee Mr. Owen Draper of Mor Alabama, was visiting him, with at least one adventu demonstrates that in certa ties at least, the United Stat American. Unaware of loc regulations, the dignified Y not try like the natives to traffic light across the street he waited until the light Then as he stepped into with measured tread he whelmed to hear himself ad ringing tones from a lou hanging over the intersectio gentleman in the frock coat, erly waited for the light will pause another momer be given a ticket to the Theater." Whereat a traff warded him for his observa rules, bowing low as he ga theater ticket.

AND when Jim Marshall this moment trudging up the United States doing e Mr. Hollowfield suggests, this office he will be suitabl We have just received a bronze medal for Mr. Ma letter, from Colonel Frank retary of the Navy, rea great pleasure in forwardi the Navy Expeditionary M Congress has given me confer upon you in comme the services rendered by survivors of the United Panay upon the occasion ing and loss on Decembe

ACTUALLY we've just Mr. Marshall. While h bites in a restaurant in rado, Mr. Marshall behel her son, about fifteen yea and prepare themselves food. The lady produced and began to do her fa handed her son a comb. up and began to tidy h she sharply: "Sit down, many times do I have to to stand up while combi at the table?"

WE ALWAYS do. . . .

Ford

but she's seldom asked to play

Those weekly "get-togethers" really meant something to her. They were such fun! But then the invitations grew scarcer . . . and scarcer. She doesn't know what the trouble is . . . but she seldom plays, now.

Yet if she hadn't been so careless about the "Double O" (Offensive-looking teeth; Offensive breath) she might well be on her way to a bridge game tonight.

**What to Do About It**

To combat this double offense, why not use the delightful double precaution so many wise and popular women depend on. For the teeth, the new Listerine Tooth Paste. It's created especially to help bring out the natural beauty of your smile. It does a remarkable job on dull, dingy teeth, removing cloudy, loose deposits.

The new Listerine Tooth Paste is a special, new formula, the result of 8 years' work on the part of skilled scientists. Many women say they can see its beautifying effects in a surprisingly short time!

For a sweeter breath—Listerine Antiseptic, of course. It quickly halts food fermentation in the mouth, a frequent cause of halitosis.

**Delightful Daily Double**

If you want to remain popular, don't ever neglect the "Double O" (Offensive-looking teeth; Offensive breath).

Why not start in today with the delightful Listerine Daily Double: Listerine Tooth Paste for an attractive smile and Listerine Antiseptic for more appealing breath.

LAMBERT PHARMACAL CO., *St. Louis, Mo.*

*the double precaution against* double O — *Offensive Breath, Offensive looking Teeth*

LISTERINE TOOTH PASTE

and LISTERINE ANTISEPTIC

# WING TALK

**The Fowler flap projects for take-off and landing, retracts in flight**

ON THE airport are three twin-engine monoplanes. One of the planes is equipped with two-blade propellers; the propellers of the second have three blades and those of the third have four blades.

The engines on the ship with the two-blade airscrews, as the British call them, are of relatively low horsepower, maybe around 400. The two blades are sufficient to absorb that power. But in Airplane Number Two, the engines are around 1,100 horsepower each, and a two-blade prop would have to be longer, in which event there wouldn't be a satisfactory clearance between the tips and the ground. So a third blade is attached, and the knives are kept down in length.

The third airplane has engines of about 1,800 horsepower. A three-blade prop would work on these but, because they must be still longer, the matter of ground clearance again comes up. So a fourth blade is added, and the increased horsepower is utilized.

A two-blade prop would work on the three- and four-blade ships if the planes were built high enough off the ground. But that calls for a stork-leg landing gear which in turn must be retracted into the wings, fuselage or engine nacelles. That would reopen all over again the comfortably settled matter of retractable landing gear and cause no end of nail-biting by the engineers. What then are we going to do when we get three- and four-thousand horsepower engines? Counter-rotating propellers and six-blade propellers are being tested, but nothing more can be said about them now.

WHEN engines were of low horsepower, and airplane brakes were being toyed with, and controllable-pitch propellers were just around the corner, and monoplanes were not too highly thought of, planes were very slow as we know speed in the air today. Large wings, while having lots of lift and giving a short take-off and low landing speed, also have a lot of drag in the air and cut down speed in flight. The boys used to wish it were possible to have a single wing without struts and wires, a wing big enough to land the plane safely without brakes (because they didn't have brakes anyway). They also wanted a wing big enough to get the plane off without running a long way on the ground. Then once in the air they could turn a crank and telescope a good section of the outer part of the wing inwardly and presto, they'd have a racer wit the safety and take-off and lan characteristics of a slow plane.

The boys never quite got what hoped for but Mr. Harlan Davey Fo consulting aeronautical engineer, the same general idea and has suc fully worked it out in the Lock twin-engine transports and bom Instead of telescoping the wing-tip and reducing the span of the wing tip to tip he has provided for the tension of the chord of the wing distance from the leading edge b ward to the trailing edge), for t off and landing, and for its retracti flight.

Going under the name of Fowler the device is primarily to reduc landing speed of the ship. It work this: When the pilot is about to off, particularly with a heavy loa presses a button, the flaps slide ba tracks and, presto, the pilot has a wing area. In the air, he presse other button, the flap retracts snugly into the wing and, presto, a the plane has a smaller wing area air drag and flies faster. For lan down go the flaps on their track the big wing slows up the plane. pilot not only has his cake, but he it too.

THAT vertical ridge that rises o the back of the Boeing Strato the DC-3 and other highly stream types of aircraft, and blends in so tifully with the rudder, goes unde official name of dorsal fin, wh found on some of our very best fis purpose is to insure a conti smooth flow of air from the fusel the tail surfaces.

IN THE secondary stage of the Ci Pilot Training Program, stu have to execute a variety of mane —stunts. The C.A.A. inspectors this highly exhilarating phase course can give some terrific beati the airplanes, in some instances g punishment than the ships can So the inspectors have personally such ships with instruments measure the forces exerted on th craft by the maneuvers at v speeds. Then they have posted a ing notice in the cockpit ("placar is the aviation term) against, f ample, entering a snap roll at mor a specified number of miles pe

HOW AND HOW NOT TO TAME HAIR

No matter how wild and unruly your hair may be, DON'T douse it . . . because dousing with water or anything else makes it look slicked down . . . unnatural. Instead, comb in a few drops of 'Vaseline' Hair Tonic for good-looking, natural-looking hair.

DON'T JUST TAME YOUR HAIR

...FIGHT *DRY SCALP*, TOO

POSSIBLY you have Dry Scalp right now. It often goes undetected until it causes itchiness . . . showers of loose dandruff on your shoulders . . . abnormal loss of hair. There is real and effective help in a bottle of 'Vaseline' Hair Tonic . . . a quick and simple way to check Dry Scalp . . . to keep the hair neat and good-looking all day long. Just try these two easy steps:

**(1) EVERY MORNING,** shake a few drops of 'Vaseline' Hair Tonic on your comb and run it through your hair.

**(2) EVERY WEEK** before shampooing, massage vigorously with plenty of 'Vaseline' Hair Tonic. The special properties of 'Vaseline' Hair Tonic make it ideal for fighting Dry Scalp. Start using 'Vaseline' Hair Tonic today, and see a real improvement in the looks of your hair.

'Vaseline' Hair Tonic is different, containing no drying ingredients.

By actually supplementing the natural scalp oils, 'Vaseline' Hair Tonic aids in keeping the scalp supple . . . the hair lustrous, well-groomed and natural-looking. Try it!

# —New GRUENS so thin it took a new invention to make them come true

YOU'VE probably said it often . . . "Some day I'm going to be able to afford a really thin watch."

The Patented Gruen Veri-Thin‡ Movement

The day is here . . . the watch, Gruen Veri-Thin. It is not only the world's most popular thin watch but—as you'll see at the left—a major new invention in watch-making.

Note how the patented GruenVeri-Thin movement provides all-important bigness in working parts to assure pocket-watch accuracy and long service. Now observe the brilliant rearrangement of the parts . . . *the way it permits the watch to be made a full 50% thinner at sides and ends.*

It's a magnificently thin watch—one of Gruen's masterpieces. And remember—America's topmost fashion designers pick Gruen as the master watch stylist. See the new Veri-Thin models at your Gruen jewelers today.

Gruen watches from $24.75 to $250; with precious stones to $2500. Write for folder. The Gruen Watch Co., Time Hill, Cincinnati, O., U.S.A. In Canada: Toronto, Ont.

"First Lady of Fashion," one of the ten top-flight fashion designers who name Gruen "Master of Watch Style."

PRICES SUBJECT TO CHANGE WITHOUT NOTICE.

ing a silver baton as she strolled across the Ohio followed by ten thousand bloodhounds marching four abreast.

The little man went into the clubhouse while the mob stood outside working itself into a lather without soap. One mug tougher than the rest pushed against the door and to his consternation found himself inside. The crowd followed and there were two hundred fans around a short fat man on a bench. The stubby man, leaning over and tying his shoelace, said, "I can lick any man in the room"—a pause—"and I ain't even looked up yet."

The reverent crowd doffed its hat and tiptoed out backward. It didn't care to arouse the somnolent demon in Mac's repertoire even though it knew McGraw's record in fistibumps was worse than hay in the rain. McGraw couldn't flatten wet wash with a steam roller, but he had the guts that will carry a trout up Niagara Falls with a busted propeller.

Writing an article a day is sweet stuff with a winning team but it was pretty tough for us fellows in the District of Columbia in the days when they said Washington was first in war, first in peace and last in the American League. By the time August flat-wheels around, the whole season is agony right out to the fifth decimal point. You take a slam at anything and anybody. That's exactly what I used to do and made many an enemy.

So when I go into the Commodore dining room for a snap at a sandwich and a gulp at some coffee and see Cramer at a table I give him as wide a berth as the Pullman Company gives Kate Smith. Habits are all roots and it didn't surprise me any to notice that Cramer still clung to his umpire's habit of eating alone. Cramer was in the American League less than a season and spent that time in Washington. Then he disappeared as suddenly as if he had stepped on a trap door in the calendar.

IT WAS sort of amusing at first when Darber of the Post went after Cramer but soon it got as sickening as sugar on oysters. Newspapermen got to look on Cramer as Darber's special dish and we laid off him. Just the same, when Cramer stuck out his hand and said, "Hello," I gave him the limp mitt something like a dog's tongue. We all shake hands that way when we're not sure of the other guy's intentions. Cramer sensed that, for he said, "Sit down. The last active newspaperman I ate with was Darber of the Post."

Well, that was just like a prairie-dog village in a bowling alley. But when he continued, "You don't mind if Griff and a couple more friends join us, do you?" you could have knocked me over with the rice that gets into a society bridegroom's trouser cuffs. I guess I looked sillier than usual but don't forget I was trying harder. Cramer laughed and said, "I know all you fellows thought that Darber and Griff ran me out of baseball and that Ban Johnson got Darber after Darber got me. The truth is I quit baseball because I fell in love with a Washington girl. She made me quit after the fans had thrown so many pop bottles at me I had to get my hair cut by a glass blower.

"You know Ban Johnson was fairly stubborn and when he got an organized protest against any of his umpires he kept that man right there until they got used to him. And I want to correct the newspaper theory that Ban Johnson got Darber afterward. You remember Darber quit the same season I did?"

"That's right. We doped that Ban had thrown the harpoon."

"No, it was nothing like that." Cramer leaned over a little. "It was you fellows who got Darber."

"Send that dumpling back to the kitchen for more sauce, Cramer," I said. "How do you figure that?"

"Well," Cramer smiled, member your local basel passed a rule barring wo— the press box?"

"Sure, we got tired of s bringing that Blond Dazzle every game. She pawed h noon. And it was no dice yelled and yipped on every that dame used to faint a

"You didn't know the B was his daughter, did Cramer.

That set me back so fa with a brown derby and a

"I'll tell you about it bef here," said Cramer, "beca modest and blushes easy." of sloshed around in his c was getting comfortable fo haul.

"When I quit it wasn't got me although when he earnest, salt wouldn't sa stampeded you and the oth until my life in Washington a doctor's second visit. N pleased Darber and I got went nuttier than a choc any time he thought I m second base.

"Why, the man had a fet that is, about second base call it." I nodded now brought it to my memory in those days Griff was ju cher is today. He has to p sion to get fresh air and s surplus showmanship, lik first on a base on balls, managers in the newsreels.

"I talked with the other u Darber's bug on second b had noticed it, too. Cobb down there one close gam would win either way. H as a sailor on the park lak it that way. Darber wrote 'If the Forty Thieves met would be forty-one'—and a fan bounced a bottle off

"Ban Johnson's lawyer t a good libel suit but I pa asked Ban to transfer m behind his umpires to th Then I asked to be taken and put behind the plate.

"DARBER kept riding m a perpetual brass r featured me on the fron Post as the umpire who cow on short grass.

"And every rap he toc punctuated later by a po the stands. Why, the poli me a motorcycle escort ar cop brushed the sidecar ag graph pole with me in it away he yelled, 'There's o I'm no sooner on the job ag fool Boston player steals as safe as a sinner who ha I call it the way I see it. I his currycomb and next natic steps up and whips with seaweed on it. Rig ear like a rose on a Spani

"I had no more chance self than a fish in a barrel

"It got so bad they us me in and out of the park bat bag.

"When Darber said I h at second in one game an crooked as Harry Laud couldn't find a place to chair factory, I went aft

"I made up my mind Cramer tightened up a b job or mine.

"It was like going after in a shooting gallery with row, for Darber leaves t I do and I arrive there be saw him a few times in a

dy hear the volunteer referees
"Prove it!" That's just
tend to do; but first let's get

clear on *how* this shortage came about.

Popular belief is that we suddenly gave fifty tankers to Britain and that immediately our transportation facilities took a nose dive. Actually, no tankers were given to Britain, and none of our tankers carry British-aid oil across the Atlantic. The diverted tankers simply haul the oil in a shuttle service between Gulf and Atlantic Coast ports, so that the British ships won't have to make the entire trip. Moreover, the tankers were not diverted all at once, but gradually. Also fifty is not the number.

The rest of the story is that this diversion was not the first tapping of delivery facilities. Withdrawals started two years ago, with the outbreak of World War II. German and Italian tankers disappeared. Many English and other European vessels were transferred to the Mediterranean and the North Atlantic. This dug deeply into the South American and Caribbean service, and American tankers had to fill the gap, because we depend on Venezuelan and Mexican sources for heavy crude oil, for asphalt and industrial fuel oils.

In 1941, a second major factor appeared. New tankers, built by the oil companies, were requisitioned by the Navy.

Another important point has been generally overlooked: The diverted tankers came from the West Coast, as well as from the East. This means that there are fewer tankers now carrying California oil to the Western states, western Canada, Alaska, Hawaii, and the Philippines.

### The Shortage in the Midwest

The Middle West has been affected, too, because Eastern suppliers, trying by every means to obtain adequate stocks, have bought heavily from mid-continent producers. This has reduced Midwest supplies. In proof that this is not idle talk, the head of a large company in the Chicago area told us just the other day that he had gone to Oklahoma to buy 1,000 cars of crude oil, but could get only 450 cars.

On the Gulf Coast, the opposite situation was feared. Unable to get sufficient tankers to move oil to Eastern markets, that section expected serious piling-up of supplies. Such a situation, however, failed to develop. Oil has begun to move under the Lend-Lease program and, though the diverted tankers no longer carry oil to the East, they now carry it out of the Gulf in the shuttle service.

This, then, is the story of how the shortage developed. It all added up to a serious situation. *We had to do something about it.*

We believed that we had two duties: (1) To conserve our supplies; and (2) To restore adequate deliveries.

First, we tried voluntary conservation. We didn't get much help. Gasoline consumption went *up* instead of down. Nevertheless, I have no criticism of the public. After all, certain people had been assuring them that there really wasn't any shortage.

Next, we asked the 100,000 Eastern filling stations to close daily from 7 P.M. to 7 A.M. This brought little saving, but it produced a deafening thunder of denunciation from certain newspapers and radio commentators. Typographical tears and microphonic moans were emitted all over the place for the poor filling-station man whose business had been demoralized by "Oil Czar" Ickes.

After a few weeks had passed, proposals were made to rescind the so-called curfew. Having been told that we were ruining the gasoline dealers, we

*(Continued on page 80)*

A little attention to detail and you can match Jeffrey Lynn's informal elegance in tweeds. This one's single-breasted; with it he wears an American Fuji shirt, striped tie and semisports hat. Good-looking accessory is Warner Brothers' Susan Peters

Slightly more formal but equally good for town wear is Jeff's striped blue unfinished worsted. Note the perfect co-ordination of color achieved in suit, shirt and tie

With the striped blue suit above, Mr. Lynn wears an olive-drab topcoat, and his brown felt hat is worn in the new brim-up fashion. Shoes are of the semibroque type

# Two Will Do

DESPITE war, high water or taxes, you're go clothes this year or the police will interfer patched garment will keep the wind out, but t you'll lose won't make the saving worth while. T ful businessman will simply have to keep up.

There are two distinct types for business wear formal dressy type and the casual tweed affair. tical business suit, on the dignified side, your bes finished worsted, which tailors into a fine, hard-we The safest color is blue—not the dark navy blue th with the starched collar, but a lighter shade of colored stripes or subdued pattern. Both the single- breasted models are popular, although the double-b is getting a great run these days. Many prefer it waistcoat (sometimes known as vest) because the ways buttoned, and why that extra piece of cargo,

But omitting the waistcoat means that the shirt out in the open so you'll have to pick those acces carefully.

The favorite combination this season with th is a wine shirt, in solid color or with simple stripe blue tie. If you like a patterned tie, wear one; b colors subdued and in relation to your shirt and s shoes are perfectly acceptable with a blue suit d you may hear to the contrary. But avoid the yello shades and stick to the dark brown bootmaker, finish, as the stores call it.

A covert topcoat is a good choice with this ty outfit and in the hat department you might choo felt with bound edge and turned-up brim. Turn the if you like it better that way, but it's typical youn executive stuff to wear it up these days. Wear the with black shoes and a black turn-up-brim hat probably be mistaken for an important banker.

Just as correct for regular business wear is the which calls for less formal accessories. With this y soft Oxford shirt in plain color or simple stripe knit, Scotch plaid wool or even bold stripe tie. Wit suit you can wear a sports-type hat or the regula Both fill the bill. Brown brogues or the monk- which United States Army officers have adopted, a ate with tweeds.

Best color in tweeds for town are tan, brown, the O. D. (olive drab) shades. Give the grays a wide berth. Advantage of a tweed suit is that on you can wear the jacket with flannel or covert tweed suit should always be single-breasted as breasted style is too formal for this fabric.

Good choice in a topcoat to wear with a tw the vicuña shade camel's-hair. Vicuña is the na of the vicuña, a wool-bearing animal of South Ame the luxury class. Advantage of this color is that it doesn't soil as readily as the lighter, natural-color vicuña color camel's-hair is a good all-round coat i breasted, fly-front model with set-in sleeve.

Suit jackets are longer this season, but don't g gerated length or you'll look as if you're standin Trousers are moderate in width—not too wide narrow.

Newest shirt for fall is the American Fuji, whic silk and is a neutral cream shade that blends w colors. Most men think a white shirt is the safest nearly as flattering as the Fuji shade, which is tone.

In the way of socks, with the formal town suit, are best in solid color, simple stripe or with soft-co with the tweed suit, lightweight wool and Argyle

Here are two complete outfits that will see you occasions in town except those calling for evening worsted suit is fine for dress-up occasions in busin life; the tweed outfit is fine for everyday wear, for and for traveling.

We can tell you where to buy everything sh write us.

With the tweeds above goes a loose-fitting v camel's-hair topcoat. Shoes are monk front in

# Baby Fac

## By Manning Long

ILLUSTRATED BY GEORGE DE ZAYAS

CATHERINE closed the door after her visitor and leaned against it, feeling hollow and a little sick. That settled it, then. Alec would simply have to fire Miss Douglas. This was the third time within a few weeks that a friend had come to her, hinting delicately at disaster.

"If my husband had a secretary who looked like Miss Douglas," they had said, these three different friends, "I'd be *worried*."

Catherine lighted a cigarette clumsily and went into her bedroom. She sat down at her dressing table and leaned toward the mirror. A baby face. That's what hers was. Round and pink, with dimples, with round blue eyes and a round pink mouth, and yellow hair in a long bob that curled up at the ends like Little Lord Fauntleroy's.

She scowled at it.

There was her voice, too—a baby voice. "Like bells on a Christmas stocking," Alec had said once, affectionately. It was high and a little breathless, and ultimately betrayed by a tongue that would not pronounce an S.

"A case of arrested development," thought Catherine with bitterness. She dragged on the cigarette, coughed, and stubbed it out, viciously. She couldn't even learn to smoke.

Lately, she'd been experimenting with herself, trying to be different. Trying to be like Miss Douglas. Persistently and faithfully, she had been copying her husband's secretary.

There had been that night at dinner when, after long, secret practice, she had said casually to Alec, "Give me a cigarette, will you?" The casualness was only a part of it. The request itself had jarred Alec alert, but the voice it came out in, slow and bored and a good octave below its usual pitch, had brought him to his feet.

"Why, *Baby!*" he had said, alarmed. "Fine time to start smoking with a throat like that! Don't ever do it—*please!*"

That had been that, then. Fiasco.

Shaken but dogged, Catherine had tackled a bigger, harder job. "Decide on the type you want to be, and *be* it," a magazine article on make-up had told her with a happy disregard of nature. There had been no trouble deciding on the type and, locked in her room with pounds of new cosmetics, Catherine had set out to *be* it.

**Lately, she'd been experimenting with herself, trying to be different. Trying to be like Miss Douglas. Persistently and faithfully she copied her husband's secretary**

She had powdered her face a dead, dramatic white and painted her mouth large and vivid. She had penciled long level marks over her eyes, pointing them upward at the corners, Oriental fashion. She had slicked her hair back and rolled it into a low, meager bun. It would take time to grow as long as Miss Douglas' and even then, of course, it wouldn't be black, but Catherine felt she had done a bang-up job. The face that looked from the mirror was certainly different. It was certainly not a baby face.

Pleased and eager, she had unlocked her door and, with the self-assured, rather pivoting saunter of Miss Douglas, she had presented herself to Alec.

When his eyes had taken her in, when he could get his jaw back where it belonged, he had risen slowly, dropping his newspaper, staring in something like horror.

"Cripes!" he had managed at "What's happened to you? You like a zombie."

It just wasn't any use. She had lo like a zombie, a caricature—as ri lous as Miss Douglas would have lo if the latter had tried to imitate *he*

Still, Catherine reminded he Alec hadn't changed toward her. still cuddled her, called her his H his Snooks, his Lamby-pie. So she allowed herself to be reassured, h

Until today. Until Helen had in and stirred it all up again, goir about how she had seen Alec h lunch with Miss Douglas one day week.

"It may have been just busin Helen had said, doubtfully. "They reading over papers. But the wa looked at him, a self-assured, a tive woman—"

And in love with him, Catherin added in her heart.

Abruptly, she got up from the d ing table. She wouldn't wait for to come home. She'd march down, now, to the office and tell him he'd to do something about Miss Dou The sooner that woman and her gl were out of his sight, the better.

"YOUR husband has just steppe Mrs. McLean. Will you wait?

"If you don't mind," said Cath The women smiled at each other polite mouths, but their eyes frosted over, unseeing.

Catherine sat down by the wi and stared at a magazine. She sat and her heart jarred against her After a while, her dimples sh briefly. It wouldn't be long now.

Miss Douglas was talking ove phone, repeating an order, gettin details down in her efficient, as way. But her voice—what had pened to her voice? It wasn't sl low or bored any more. It had cli the scale and arrived, rather breat at the top. Her tongue caught s's, seeming almost to lisp them. bells on a Christmas stocking."

Catherine peered at Miss D slyly, over the magazine. It fell floor as her hands loosened. "Cr thought Catherine, using Alec's "What's she done to herself? she trying to look like?"

Miss Douglas had bobbed her It hung softly, brushing her sho with curled-up ends. A short fl bangs framed her forehead. Excep it was dark hair, it looked like Lord Fauntleroy's. As she we talking into the phone, the mout had been large and vivid, but wa ridiculously small and a delicate pouted like a baby's.

It came slowly to Catherine, came. And when it did, she leane in her chair while peace fell up like a gentle rain from heaven. S like that for some minutes. At l got up, crossed to the desk and there, looking down at Miss D as she pulled on her gloves.

"I won't wait any longer," sh serenely. "Just tell him I stoppe

She closed the door behin Gently.

# OUR NEW ARMY

LOUISIANA MANEUVER ECHOES. The general—no less a general than the 2d (Red) Army's commander, Lieut. Gen. En Lear—wanted to see us. The rea- being that we and Southeast Cor- pondent Dudley Haddock had the bious honor of being the first two (Blue) Army correspondents to be ptured during the realistic battle re- tly waged over 30,000 Pelican State d Texas square miles.

We had driven ninety-six miles north m 3d Army headquarters at Lake arles to the free town of Alexandria, the contested Red River, to nose ound; and we had scarcely turned our necks and the car, intending to evacuate the place, before it happened. A mess of 2d infantrymen saw our Blue pennant, blocked the road and wanted to know how come. We couldn't outtalk them. A sergeant climbed aboard, said, "No monkey business or I'll bat you on the head," and backseat drove us to the command post, whence, with command cars fore and aft, we proceeded twenty miles over dry red-clay roads to 5th Division headquarters. It was just too bad for us that the colonel in charge was on a reconnaissance mission, seeking ways for troop movements. Every time we hit a main highway the colonel snorted, and the procession scuttled back into a new set of dusty ruts through the hog and hominy country.

After chow and a rest at headquarters, another convoy eased us forty more miles back to 2d Army headquarters in the grade-school building at Winnfield. This institution was jammed with typewriters, telephone switchboards and personnel, which was all right with the Winnfield kids, who didn't finally get back to the grind until last week. Only one classroom had any space left in it; and in this space sat General Lear. He beamed at our approach. Our presence pleased him, in a gleefully dignified sort of way. "Welcome," said the general. "Thank you, sir," said we . . . Twenty-six hours later, three M.P.'s in a command car led us fifty miles still farther north to Ruston, at whose replacement center we were fingerprinted, photographed—and cut loose.

All of which is why this particular edition of Our New Army contains none of the news from our tireless correspondents in other sections of the country who faithfully rushed their reports to a Louisiana address as far out of our reach as a bowl of Manhattan clam chowder.

IF YOU haven't seen a newspaper for a couple of weeks it will be news to you that this country's greatest peacetime maneuvers occupied nearly 500,000 men—as large a force as the first A.E.F. Lieut. Gen. Lesley J. McNair, Chief of Staff of GHQ and maneuver director, called it "the biggest field exercise the Army has ever staged, the biggest it will probably ever stage, and perhaps its last." At any rate, it did more for enlisted-man boredom than anything since the first can of beer was sold in a post exchange. There were some casualties, but the boys learned to use the roads, despite lack of co-operation from civilians, who apparently thought the 35-mile speed limit imposed for the duration of the scrap was an Army whimsy.

STILL clicking, down in Gurdon, Arkansas, are the 2d Army's Claims Officers, trying to soothe those inhabitants

*(Continued on page 78)*

**The Army's jeeps—as soldiers from coast to coast fondly call the new command and reconnaissance cars—got a real workout in the large-scale Louisiana maneuvers. Here is a Blue Army jeep moving fast in difficult terrain on a scouting mission**

Russia's heroic women nurses sometimes go right up to the fighting front with their units. This one is aiding a doctor in treating a Rumanian flier who was shot down and captured

# Russian Women at War

## By Alice Leone Moats

BY RADIO FROM MOSCOW

**Bus drivers in Moscow have long, lacquered fingernails. But don't be deceived; they're taking the war in earnest. And so are the women doctors and fliers and factory workers. In fact, the Red women are doing men's work and doing it well**

THERE are thirty million women in the Soviet Union t ing an active part in the war effort. That's a lot of wo no matter how you look at it, and they must be regar as a very vital part of Russia's defense. This does not m however, that they are serving as soldiers with the Red Ar The story of women's battalions circulated abroad turns to be nothing more than a romantic myth.

In German-occupied territory there are, of course, th sands of women whose number can't be estimated who h picked up a gun or any handy farm tool and, leading a c made for woods to join the guerrilla bands. There are a a few aviatrixes serving in the air force as fighting pilots, all women who have tried to enlist in the regular army h been turned down. The government's attitude is that if when there should ever be a shortage of men for active serv women would unhesitatingly be called upon. That day is ne expected to arrive and in the meantime woman's place is d nitely on the home front.

Since newspapers usually devote most of their space to scriptions of heroic battles, the general public is apt to fo that an army can fight only as long as it is kept supplied v food, clothing and war matériel. That's where the Russ women come in. From the very day their country was tacked they began either to work harder at the jobs they ready had or to volunteer for every imaginable kind of defe work, and they are showing zeal, patriotism, courage a what's even more to the point, strength, endurance and abil

To anyone brought up with the American idea that the male is the weaker vessel, the tasks Russian women can complish are absolutely amazing. I have seen women at bottom of a deep ditch effortlessly throwing out huge sho fuls of earth that would cause a strapping man to groan grunt with exertion. This year's bumper crop was brough almost entirely by female labor, and a friend just back fro trip to a collective farm some two hundred miles from Mos reports that the entire countryside is swarming with wo driving heavy tractors, operating threshing machines and c bines and generally doing a major part of the work. The tories, now staffed with a greater proportion of women t men, are reaching and in many cases exceeding their pre norms. In other words the girls are more than carrying t share of the burden in this war.

When a man leaves a factory to join up, his wife very o takes his place. If his job is one that requires an expert, takes on some other work, for the factories have adopted rule of giving employment to the wife of any worker wishes to replace him while he fights at the front. I talke one of these wives, Anna Dimitrievna, a very pretty wo with big black eyes in an amusing and expressive little f Her husband went to war one week after it broke out and fore leaving took her to his factory where two thirds of the ployees are now women as opposed to fifty per cent bef The director found a kindergarten where her two children w be looked after during the day and she started a month's tr ing. Now she has her husband's job and manages to keep to his norm. She is wildly enthusiastic about the work says she doesn't get a bit tired even though it's all new to and she puts in more than the regular eight hours when she is allowed to volunteer for overtime. Besides this, twi week she takes night duty as a fire watcher on the roof of house. After the war she intends to keep on working in factory, for she says it's much more fun than staying h and doing housekeeping because of the companionship finds. "We have an hour off for lunch in the factory cafete she told me, "when we have a swell time talking and liste to music on the radio. Sometimes the workers do their singing, but that's only the young ones," added Anna pri speaking from the lofty dignity of her advanced age of thi four.

In the Stalingrad region alone there are over ten thous women operating tractors and *(Continued on page )*

# Murder in Retrospect

## By Agatha Christie

ILLUSTRATED BY MARIO COOPER

*The Story Thus Far:*

THE Crales—Amyas and his wife, Caroline—are living at Alderbury, an English estate that overlooks the sea, when Amyas, an artist, becomes infatuated with a young girl—Elsa Greer—whose portrait he is painting.

Aware of how her husband feels toward the girl, Caroline makes the resolve to hold him, come what may. . . . One afternoon, the Crales have tea with Meredith Blake, a neighbor. Blake's other guests are: his brother, Philip; Angela Warren, Caroline's half sister; and Elsa Greer. Before the party breaks up the host, an amateur chemist, takes his friends through his laboratory. A few hours later, he makes an alarming discovery: a bottle of coniine (a poison) is missing!

On the following day, Amyas, in his garden, is at work on the portrait of Elsa (who is posing for him) when his wife gives him a glass of beer. The beer—as subsequent analysis proves—*contains coniine*. Amyas dies. At the time of his death, he is still in the garden; and he is alone.

All the evidence—and there is plenty of it—points strongly to one person as the poisoner: Caroline Crale.

Charged with murder, Caroline is tried, convicted, sentenced to penal servitude for life. One year later, she dies in prison. Before she dies, however, she writes a letter, to be read by her young daughter, Caroline ("Carla") when she reaches the age of twenty-one. In the letter she asserts that she is innocent.

Sixteen years after the trial, Carla reads the letter. She calls on Hercule Poirot, brilliant Belgian criminal investigator, in London; she implores him to investigate the case and, if possible, *learn the truth*.

Poirot likes the girl. He promises to do what he can. Then, following a series of interviews with various persons who had figured, in one way or another, in the case, he has a fairly good conception of what happened at Alderbury when Carla Crale was just a child. The Blake brothers are, fortunately, still alive; and, after answering numerous questions, they promise to set down in writing all they can remember of the tragedy.

Poirot wishes to visit the scene of the crime. Meredith Blake escorts him to Alderbury. As they approach the fine old house, Meredith glances at the Belgian. "It—it all comes back to me," he murmurs. "Ghosts. *Ghosts everywhere!*"

### V

THEY returned to the quay by a somewhat longer and more rambling route. Poirot did not speak; nor did Blake. When they reached Handcross Manor once more, Blake said abruptly:

"I bought that picture, you know. The one that Amyas was painting. I just couldn't stand the idea of its being sold for—well, publicity value—a lot of city-minded brutes gaping at it. It was a fine piece of work. Amyas said it was the best thing he'd ever done. I shouldn't be surprised if he was right. It was practically finished. He only wanted to work on it another day or so. Would—would you care to see it?"

Hercule Poirot said quickly, "Yes, indeed."

Blake led the way across the hall and took a key from his pocket. He unlocked a door and they went into a fair-sized, dusty-smelling room. It was closely shuttered. Blake went across to the windows and opened the wooden shutters. Then, with a little difficulty, he flung up a window and a breath of fragrant spring air came wafting into the room.

Meredith said, "That's better."

He stood by the window inhaling the air and Poirot joined him. There was no need to ask what the room had been. The shelves were empty, but there were marks upon them where bottles had once stood. Against one wall was some derelict chemical apparatus and a sink. The room was thick in dust.

Meredith Blake was looking out of the window. He said: "How easily it all comes back. Standing here, smelling the jasmine, and talking—talking, like the damned fool I was, about my precious potions and distillations!"

Absently, Poirot stretched a hand through the window. He pulled off a spray of jasmine leaves just breaking from their woody stem.

Meredith Blake moved resolutely across the floor. On the wall was a picture covered with a dust sheet. He jerked the dust sheet away.

Poirot caught his breath. He had seen, so far, four pictures of Amyas Crale's—two at the Tate; one at a London dealer's; one, the still life of roses. But now he was looking at what the artist himself had called his best picture, and Poirot realized at once what a superb artist the man had been.

The painting had an odd, superficial smoothness. At first sight it might have been a poster, so seemingly crude were its contrasts. A girl, in a canary-yellow shirt and dark blue slacks, sitting on a gray wall in full sunlight against a background of violent blue sea. Just the kind of subject for a poster.

But the first appearance was deceptive: there was a subtle distortion—an (*Continued on page 37*)

**Then she was back. In her hand was a creased letter, the ink faded. She thrust the letter on Poirot**

To her complete confusion, he drew back, handed her a single spank and gave vent to a shout

# Sing It Again

## By Victoria Lincoln

**Remember who wrote I Love the Balloon Man? He's out of the doghouse again with another catchy tune you'll soon be wishing you could forget**

ILLUSTRATED BY GILBERT DARLING

YOU know what the trade calls a novelty song: The Wise Old Owl is one, and I Love the Balloon Man, and Three Ity Fitties. You can sing yourself right back to the beginnings of American history on them; The Music Goes Round and Round, Barney Google, Ja-Da, Hot Time in the Old Town Tonight. At Gettysburg they sang Shoo! Fly, Don't Bother Me, and at Valley Forge they whistled Yankee Doodle.

The life story of any one of them goes the same way. First you sing it morning, noon and night. Then you groan when your neighbor tunes up, or you catch yourself at it again. Then everyone forgets it and a generation passes, and suddenly, out of oblivion, someone digs it up, words and music, for kids to sing on picnics and sleigh rides and mothers to sing to make the baby laugh, and old people to sing to make themselves remember; and it has become an American folk song.

Nobody knows who wrote it, then, and nobody cares. But I can still tell you who wrote I Love the Balloon Man. It was Jed Wallace. He just picked it up out of a clear sky one August evening as he was boarding a cross-town bus.

Jed was the pianist with Whit Halsey's Horse Marines. He wasn't terrific, and neither were they, but their bookings were solid and respectable. Good second-rate, just about hits it. And then, as I've told you, he picked up one foot to climb aboard a bus and stepped right into the money. Everyone sang his tune, everyone danced to it, every juke box ground it out, and Jed threw up his job and went and saw all the places in the rotogravures, Palm Springs and Sun Valley and Tia Juana, and bought himself a good enough year to last him a lifetime.

He didn't save anything, because, what was the point? When it was gone, he told himself, all he had to do was write another. He might have to wait, but sooner or later the idea would just come up and hit him, a screwy line, a tune that belonged to it; and he'd run off and look up a bunch of instrumentalists, friends, and they'd sort of tease it out, all together, with him at the piano. That was the right way to do it, the good way; that was the way it came out sweet and easy with all the life in it.

He explained this to Sylvie to make it clear to her why it was all right for them to get married when he had just one hundred and fifty dollars left in the world and no job. He told her the whole thing because he thought you ought to be honest with a girl. For, of course, you never could tell. They'd be living in one room and eating around in Broadway drugstores and stuff like that if it was long coming. They might have to wait quite a while.

"That's all right," said Sylvie. "That's all right, Jed. It won't be new to me, living like that. Besides, I'll keep on singing."

Well, sure she'd keep on sin
Why shouldn't she? Before he
out about being gifted, Jed wo
have liked it so well. It would
looked as if she was keeping him.
who sponged on women made him
But this was different, because as
as it hit him, as soon as he got

# THE FIGHT GOES ON

## by Franklin and Roosevelt

1941, BY FRANKLIN D. ROOSEVELT AND BY THE CROWELL-COLLIER PUBLISHING COMPANY. REPRODUCTION IN WHOLE OR IN PART IS FORBIDDEN

**This article is made up of two sections of the notes written by the President to accompany his "Public Papers and Addresses" for 1937-1940, about to be published. Although designed to clarify certain official documents, these notes stand by themselves as expressions of the President's present attitude on the sit-down strikes of 1937 and explain the operation of the Lend-Lease Bill**

NINETEEN THIRTY-SEVEN was the year of strikes. During that year there were 4,740 strikes, involving 1,860,000 workers, resulting in about 48,000 man-days of idleness. It was the highest number of strikes for any year in the country's history up to that time, although there were more than twice as many workers involved in strikes in 1919 than were in 1937.

The unusually large number of strikes for that year was due to various factors. Underlying them all, however, was the simple fact that business was everywhere on the upgrade. Prices were rising. Conditions were therefore favorable for workers to make demands upon their employers.

The more direct factor, however, was the accelerated growth of the trade-union movement itself. Trade unionism, which had declined in strength and membership during the years of depression since 1929, had become revitalized with the beginning of the National Recovery Administration in 1933, guaranteeing the right to collective bargaining. Since 1933 trade unionism had made steady progress. The passage of the National Labor Relations Act in 1935 and the decisions of the United States Supreme Court on April 12, 1937, which sustained the constitutionality of that Act, definitely assured all unorganized workers of their paramount right to join the ranks of organized labor, and to protection from any discrimination by their employers by reason of any union activity.

In the meantime, during 1936, the trade-union movement had itself split into two rival camps—the American Federation of Labor and the Congress of Industrial Organizations. The difference between them was primarily in the method of organization, especially in the mass-production industries.

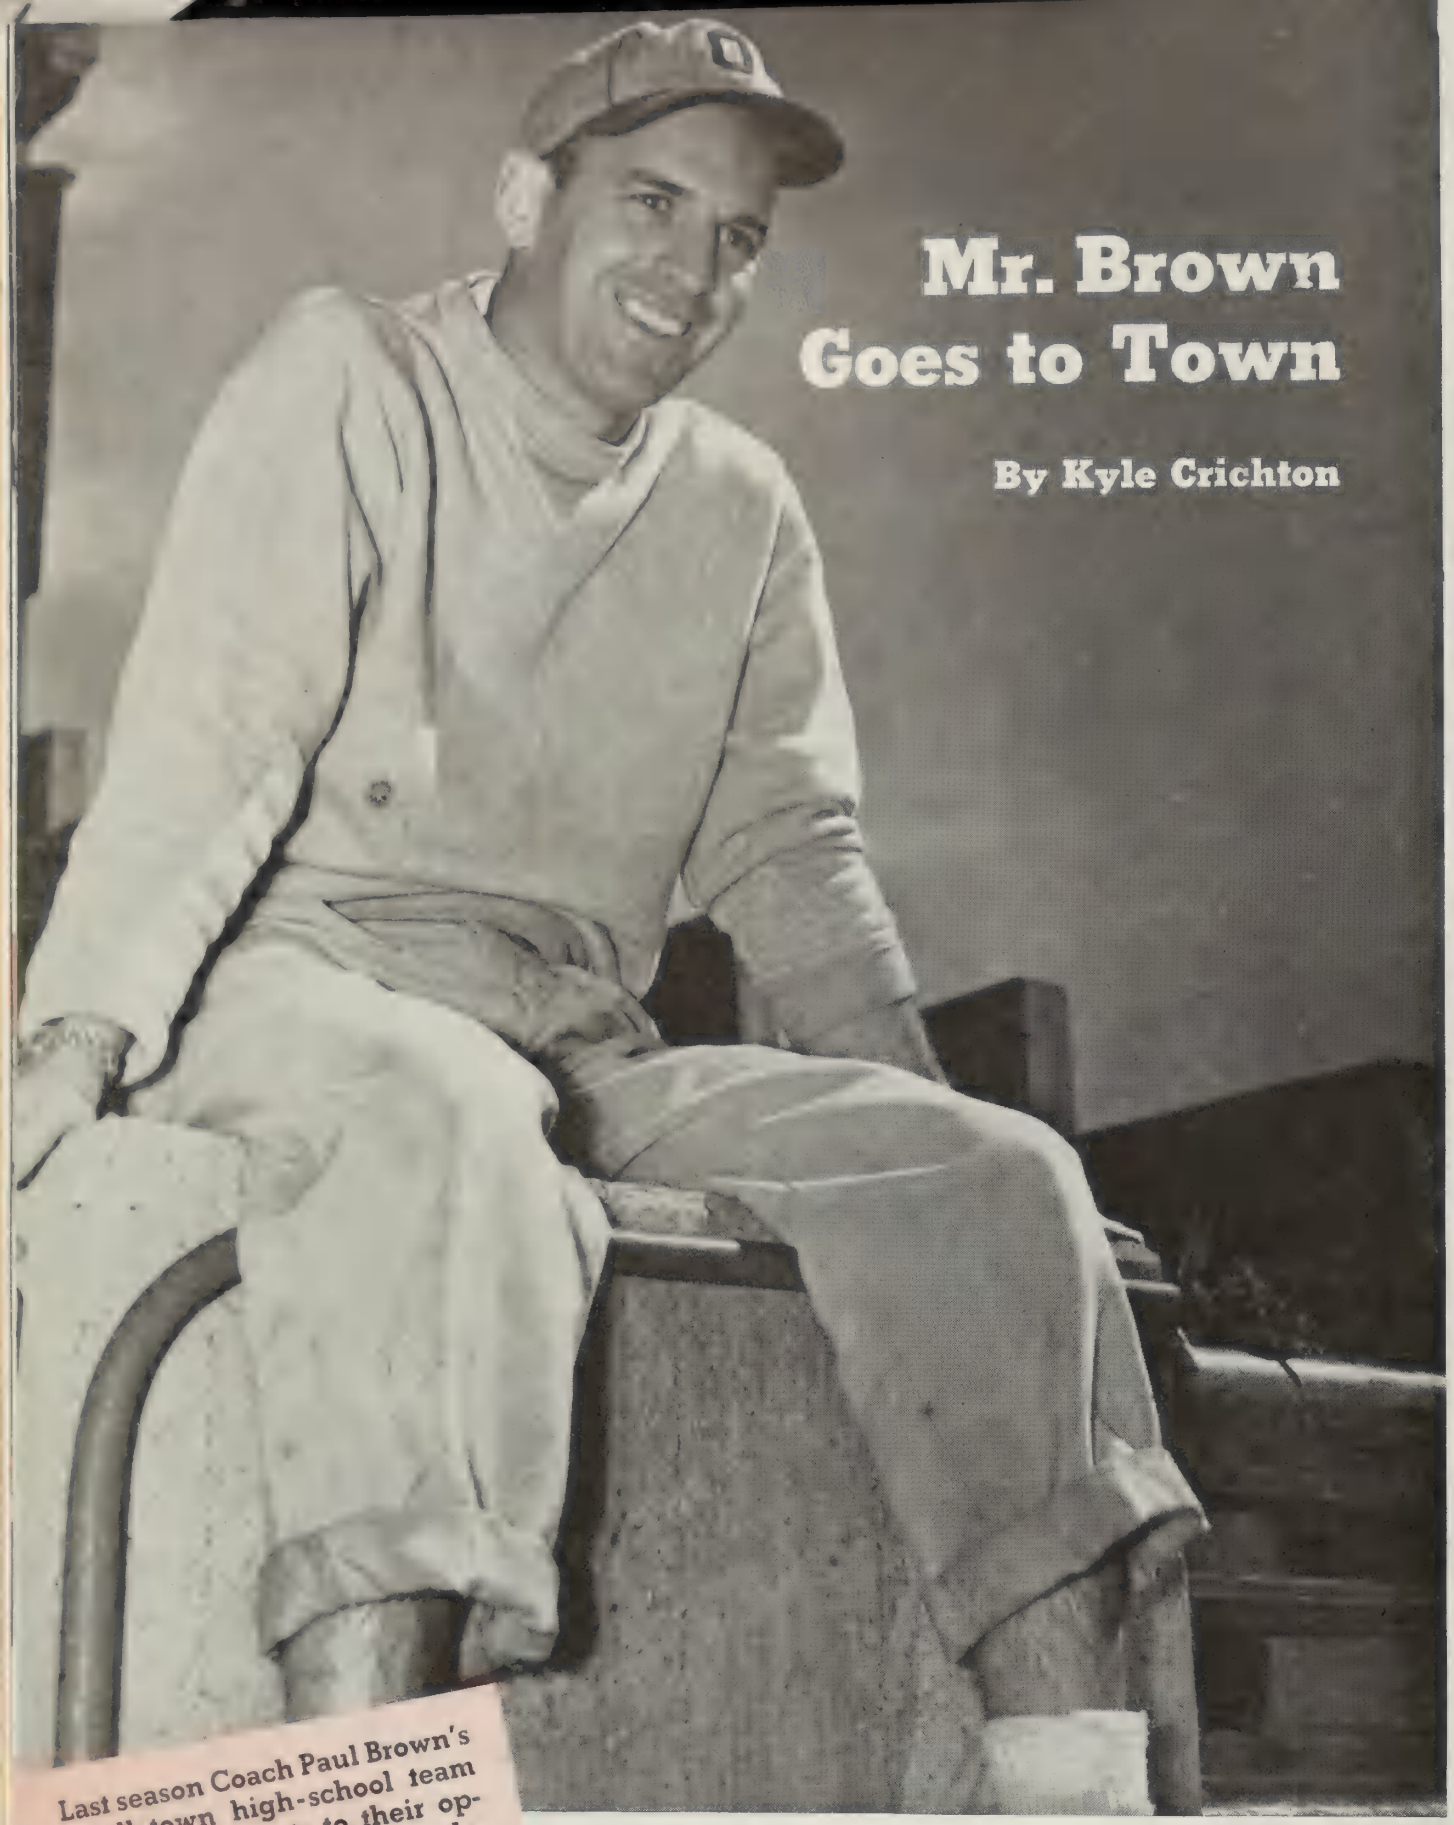
As a result of this schism, there was the normal increase of union activities resulting from the general revival of the labor movement. There were also competing organization drives by both of these factions of labor in all branches of industry. . . .

A distinctive feature of the 1937 labor disputes was the use of sit-down strikes. One out of every ten strikes in the United States in 1937 was a so-called sit-down strike, in which all or part of the workers involved remained at their places of work for one or more working days after stopping work. In addition, there were numerous sit-down strikes which lasted only a few hours; but no record is kept by the Bureau of Labor Statistics with respect to strikes lasting less than one day.

Sit-down strikes were at their height in March, 1937. Toward the end of the year they dwindled in number, and practically disappeared.

This year of strikes in 1937 was a period of great stress for the United States. Labor was having its growing pains. Labor, which had been subjected to much exploitation in the past, was just beginning to find its power under the new impetus of favorable legislation and a sympathetic government. It had not fully grown up to such power. In some quarters irresponsible leadership had *(Continued on page 62)*

**June, 1940, saw the beginning of real American aid to Britain. In that month $43,000,000 worth of surplus American war materials were sent to her, followed in September by fifty overage American destroyers, one of which is here seen in action depth-bombing a sub**



BRITISH COMBINE

# Mr. Brown Goes to Town

By Kyle Crichton

BRAD WILLSON

**Last season Coach Paul Brown's small-town high-school team scored 477 points to their opponents' 6. That item best describes the coaching ability the remarkable Brown is taking to his new job at Ohio State**

PAUL BROWN is now the new football coach of Ohio State University and his neck sticks out to here. He is young, he is ambitious—and his coaching heretofore has been confined strictly to high-school circles. If he flops he will not only be reviled by the famous Monday-morning quarterbacks of Columbus but he stands a good chance of being exiled. The athletic committee of Ohio State makes a pretense of having selected Brown but in reality he was picked by the populace of old Buckeye and the committee would have had nothing but lynching for its pains if it hadn't hired him.

Brown's record at Massillon (Ohio) High had been so spectacular that when the former coach, Francis (Gates of Mercy) Schmidt, was hurled into the night after a forlorn season, there was an outcry in the state that amounted to a clamor. The committee was swamped with letters demanding that Brown be signed. Governor Bricker was bombarded; President Bevis was hounded. The state high-school coaches' association put on a campaign on Brown's behalf. There were editorials, round robins, telegrams, blackhand notes and bombing threats signed in blood.

"And is that athletic committee sitting pretty!" cry the cynics around Columbus. "If Brown makes good, they're great guys. If he fails, everybody in the state'll commit suicide and there'll be nobody left to complain."

Since the inauguration of big-time, high-pressure football, there has been nothing to approach the Brown saga. Not only is he leaping from high school into the toughest of all football competition, the Western Conference, but he has taken three Massillon coaches with him as assistants. The plain inference is that the best of Ohio high-school coaching is good enough for the toughest football rivalry in the country. If the venture fails there will be nothing for Ohio to do but secede from the Union.

There is no possible understanding of the situation unless you have seen Massillon. It is the most fanatically football-minded community in America and we say this with full knowledge of Texas' football insanity. Professional football started in Massillon and its next-door neighbor, Canton, and the traditions of the sport go far back in the town's history. In 1905 when the Massillon Tigers, with the great Red Salmon of Notre Dame, defeated C ton, led by the famous Willie Hesto Michigan, there was a quarter of a m lion dollars wagered on the outco The impetus from that great day never faded.

"In that town," say the Massi rivals, "they wait only until they termine whether the new-born bab a boy or a girl—and then they h the boy a football."

Brown, who is now only thirty-t was born in Norwalk, Ohio, but the f ily moved to Massillon when he twelve and he immediately became of the maniacs. Although he n weighed more than 120 pounds in l school, he was quarterback his last years. He went down to Ohio S as a freshman but realized that weight would keep him out of that c petition and transferred to Miami U versity, where he was quarterback years, being a fine runner and an tra-good forward passer, although never weighed more than 140 pou at his best. His generalship and f ball knowledge were so apparent th was inevitable that he should be a c and he went immediately to Sever prep school for the United States N Academy at Annapolis, where he only one game in two seasons turned out, among others, the fan Slade Cutter of Navy.

### Massillon Does All Right

When he came back to coach Ma lon the town was in tears over a few seasons and he had some trouble in ting started. In his first year the t won six, lost three and tied one. I year he won eight and lost two, third year he won nine and lost After that it became remarkable the next six years Massillon won state championship every year, ning a total of sixty games, losing and tying one!

Last year, 1940, was a typical B season. Massillon scored 477 poin its opponents' 6, being scored on in the last game by Canton McKi In his six big years his team s 2,393 points to its rivals' 168.

"Boy, it is murder," they say ar Ohio. "They pour it on."

The Brown teams operate from a gle wing with an unbalanced line, turing power, the razzle-dazzle and of passing. Massillon defeated T Waite last year, 28-0, in the rai sheer power. Next week it swar Canton McKinley with passes. The ture of this game was a play wher left half took the ball and handed the right half on reverse. That ge man spun and handed it to the left who went laterally twenty-five with the oval and then hurled it d field over the goal line for a touchd

"I'll tell you why teams play th said a man in Massillon in answer question. "They want that dough."

Massillon High played last ye 175,000 people, averaging over 20,( game for the eight home games stadium seats 22,000 and it is sol months in advance for the big g With the exception of the Canton Kinley game all contests are hel Friday night under lights, and Mas puts on a show that might have done by Billy Rose but in reali handled by George Bird, the leader. The Massillon band goes i swing and intricate maneuvers. T are flag-raisings, living statues, legged drum majorettes, bombs bur after each touchdown and a betw the-halves performance often b than the game itself. They tell o young man who went up to the office window last year and said: me two tickets to the floor show."

*(Continued on page 64)*

# ...DON'T tell it to the Marines—they KNOW!

*Emblem of the United States Marine Corps*

WHAT'S BACK of that classic phrase "Tell It to the Marines"? Is it a touch of envy, perhaps? Is it admiration, in disguise?

The tough Marines don't give a hang. They just go on getting tougher. "From the Halls of Montezuma to the Shores of Tripoli" sing the Devil Dogs, and you get a glimpse of the colorful history of the United States Marine Corps—a history of brilliant service in many lands. In 95 of the years since the American Revolution the Corps has gone into action at the famous call "Send Marines!" They are *the soldiers that go to sea*—first on the war scene, *first to fight.*

If they'd let you visit the Marine Corps bases at Quantico, at San Diego, at Parris Island and Guantánamo, you'd see the Marines preparing your defense by ultra-modern attack strategy—each division training to be its own self-contained expeditionary force, complete with planes and tanks and artillery, trucks and tractors, and engineer and supply services.

Today International Harvester, dedicating its effort to the cause of NATIONAL DEFENSE, pledges its trucks to the needs of the Armed Forces of the nation. Today the lessons of rugged, world-wide service—such service as Internationals have long been privileged to render the Marines—bear fruit of inestimable value. Wherever duty calls them in the emergency, Internationals shall play their part—Defenders all!

# Wondering abou

## *Here is Buick's superb solution to the problems posed by making our national defense, as it should be, industrial America's No. 1 job*

IT was no time to duck or dodge the facts. So we didn't try.

Instead we said — these being the materials critical in the defense program, we'll do our planning for 1942 with that foremost in mind.

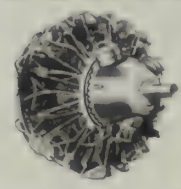
Not merely for an "acceptable" car—certainly not for any "ersatz" number. We bowed our necks against that.

No, we had to have a real and representative Buick. One we could be proud of. One *able* enough, *active* enough, *durable* enough to serve and delight its owner till that unscheduled time when annual new models are the rule again.

The world being what it is, that may be a long spell away.

Thus for our own good, too, we resolved on a 1942 automobile of such mettle and merit as could carry and cherish the Buick reputation without fault until other new Buicks, however far off, could come along to refresh

So went the specifications for however m or few we may build—now we're announc the cars.



Why waste words telling you how good t are! You can't put language in the gas tank

ERAL MOTORS VALUE

***No other car has*** **ALL THIS FOR YOU IN 'FORTY-TWO**

You get **FIREBALL STRAIGHT-EIGHT VALVE-IN-HEAD ENGINE** that gets more power and range out of every drop of gasoline.

You get **COMPOUND CARBURETION** (optional on SPECIAL models, standard on other Series) for top economy with extra power in reserve.

You get **OIL-CUSHIONED CRANKSHAFT PINS AND JOURNALS** that greatly lengthen the life of main bearings.

You get **STURDI-LITE CONNECTING RODS** — 25% stronger for the same weight.

You get **STEPON PARKING BRAKE** that goes on with a touch of the toe, locks and releases from dash.

You get **BROADRIM WHEELS** that prevent heel-over on turns, greatly improve car handling.

You get **FULLY ADJUSTABLE STEERING POST** that permits wheel to be set higher or lower.

You get **BODY BY FISHER,** in daring new styling featuring back seats up to 52 inches wide.

You get **WEATHERWARDEN** ventiheater (accessory) which provides winter warmth, summer comfort, freedom from noise and fog-free outlook in all weather.

# "Mother blocks kick—scores winning meal!"

There are times when men want—not frills—but food! That's the very time to serve Ann Page *Tender-Cooked* Beans, savory and nourishing. They satisfy masculine appetites so completely and please hostesses with a flavor-quality typical of all 33 Ann Page Foods, America's Pantry Favorites.

Surely you have already discovered that all Ann Page Foods are superlative in goodness. Three reasons are outstanding. They are made from selected ingredients . . . they are prepared according to the most rigid standards . . . they are laboratory-controlled by food experts, to give you guarded quality from source to sale!

You get this same assured quality in many other fine foods made and sold exclusively by A&P. Try them! Treat yourself to the famous A&P Teas and Coffees—top quality White House Evaporated Milk—Marvel "Enriched" Bread—Jane Parker Rolls, Donuts and Cakes—and many others.

And treat yourself to another "plus"—to the amazing thrift of foods sold exclusively by A&P. These foods offer you welcome savings! That's because A&P cuts out many unnecessary in-between costs and shares the savings with you in fine foods at lower prices.

Place Ann Page *Tender-Cooked* Beans at the top of your shopping list and start the day right! They're the easy way to a hearty meal in a jiffy!

*Many A&P brands bring you savings up to 25% compared to prices usually asked for other nationally known products of comparable quality. You'll enjoy the goodness of our A&P Teas and Coffees—Marvel Bread and Jane Parker Cakes, Rolls and Donuts—the 33 Ann Page Foods—White House Evaporated Milk—34 A&P Canned Fruits and Vegetables—Sunnyfield Flours—and many others.

**SOLD EXCLUSIVELY AT A&P**

**ONE OF AMERICA'S PANTRY FAVORITES!**

**ANN PAGE BEANS**

**CONSUMER FACTS:** Ann Page Beans are "Tender-Cooked", following our improved cooking process. The beans are fine pea beans, selected for quality. Expert inspection assures the best. Added to the beans are a luscious piece of bacon-type pork and a savory sauce. Ann Page Beans give guarded quality from source to sale. They are a worthy member of the famous family of Ann Page Foods, called "America's Pantry Favorites" by expert cooks.

*Enjoy the Thrifty 33 Ann Page Foods*

## Our new neighbor had the mopes

**MY! SHE WAS A CUTE LITTLE THING.** Pretty as a picture. But the way she used to pace the yard like she had lost her last friend. She couldn't even say "Good morning."

**WELL, WE WALK ALONG** to the drugstore to get ourselves a soda, when who should call up Sam the druggist but this same little neighbor. And she tells Sam, in no uncertain terms, to send up one of every kind of laxative, cathartic and purgative he's got. "So that's it," thinks I. "The poor little creature."

**ON THE WAY HOME,** we wait till she isn't looking and I leave on her doorstep a note and a package of KELLOGG'S ALL-BRAN. I suggest if her trouble is the ordinary kind that's due to lack of proper "bulk" in the diet, she should get at the *cause* and correct it. This crisp, toasty cereal will make her right as a cricket. She should eat it every day and drink plenty of water.

**A LITTLE BIRD** must have told her who did it, because, some days later, over from the little neighbor comes the most cheerful note you ever read, thanking us for telling her about ALL-BRAN'S better way, and inviting us to come over for tea.

## A tough day's work for Harry

**HARRY NEEDS A LAXATIVE;** but he's got a tough day at the office and he doesn't want anything to interfere with work.

So he puts off taking a laxative, puts off getting badly needed relief!

**HARRY CAN'T ADD** two and two. He gives the wrong answers, gets in wrong; of course, he has an excuse.

But who cares if a fellow *is* suffering from constipation and a headache?

## "Easy does it" for Jim

**JIM NEEDS A LAXATIVE;** he's got a big day's work ahead, too.

But Jim never puts off till tonight the laxative he should take this morning. Speedy Sal Hepatica for him!

**JIM FEELS MORE** like himself within an hour. Sal Hepatica acts gently, thoroughly, quickly.

He has a good day. Home from the office, he's ready to take his wife out stepping.

## Whenever you need a laxative —take *speedy* Sal Hepatica

DON'T PUT OFF taking a laxative just because you're all dated-up. Take speedy Sal Hepatica.

Within an hour usually you're relieved . . . gently and thoroughly. Sal Hepatica acts in a natural way, by attracting helpful liquid bulk to the intestinal tract; acts without discomfort, irritation, or griping.

No wonder 3 out of 5 doctors, recently interviewed, recommend Sal Hepatica.

*More than a laxative*, this sparkling saline gives decided help in counteracting excess gastric acidity, helps turn a sour stomach sweet again. Next time you need a laxative, try speedy, gentle Sal Hepatica.

# SAL HEPATICA

**"TIME TO SMILE!"** Tune in on EDDIE CANTOR—Wednesdays at 9 P. M., E. S. T.

emergency dry goods on my skull, 'take a look at that, for it's your work.' He said nothing.

" 'Darber, we're going to bat. I've been fielding long enough. You have run me bowlegged, so now I'm going to chase you knock-kneed.'

" 'Who are you?' he asked, and I couldn't blame him, for all you could see of my face was my eyes.

" 'I'm Cramer, Darber,' I said.

" 'The umpire?' and he seemed real pleased to meet me. He put out his hand toward me but about a foot to the right. It was pointing at an empty chair but I figure that's a newspaperman's idea of a gag and I pass it up. Some of you fellows are real funny when you're not getting paid for it.

"He pulled his hand back after it got tired and said, 'If you won't shake I'm sorry,' and seemed to mean it so much that I look at him kind of circular. He has me dizzy. He invited me to eat and I refused.

" 'I'll take stuffed celery with pimento, lamb chops and broccoli, coffee and Boston brown bread'—he looked at the menu for a second—'with cheese—' and I see he is holding the card upside down.

"That's startling until I remember any newspaperman who makes up his page in the composing room can read type upside down and from right to left faster than an average man can the right way.

" 'Won't you change your mind, Cramer?' he asked, again holding the menu out a foot to the other side of me. Right there I can spot there is something peculiar about the whole thing so I reach and grab the card. I have no intention of eating with Darber but I look to see what I will select later on when I am by myself.

"Not a thing Darber has ordered is on the menu for that meal. That is, outside of coffee and things like But there's no stuffed celery, t bread, lamb chops or broccoli.

" 'I've changed my mind, Mr. Da I said. 'Waiter, bring me roast rare, some fruit salad and coffee you care to look at the menu again I held it out to him about two fe his left.

"He said, 'Thanks,' and put his right plumb smack across the cen the table for the card.

"The man was as blind as an al the slums.

"I held the menu just where his d ter would have and he took it w slight fumble.

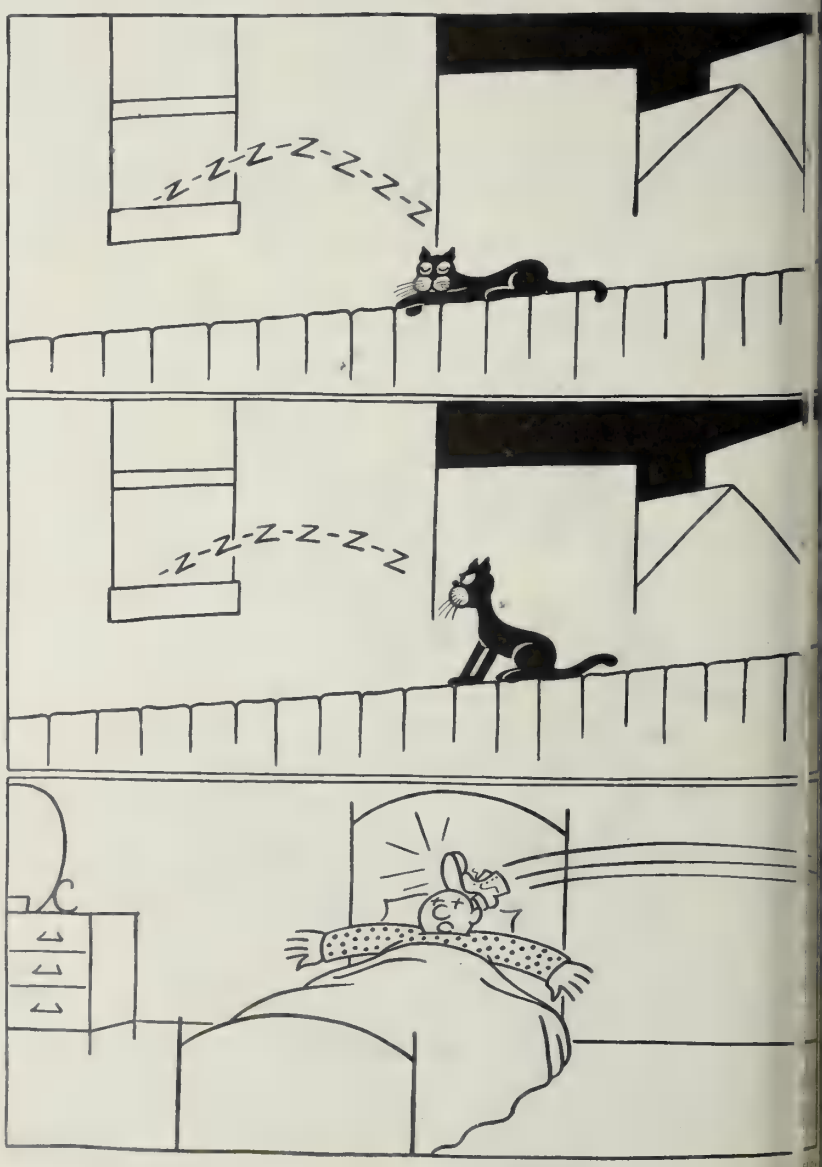
" 'Mr. Darber—' there was some that made me tack on the mister you see me across the table?'

"Well, he turned pale and the 'Not very clearly,' he admitted.

" 'Not at all,' I told him.

" 'It's not that bad, Cramer,' h me in a whisper. 'I can see some white where your face should be.

"WELL, that was about all an else could see but I didn't The moisture was forming on m under the bandages.



" 'You're right about that, Mr. ber,' I said. 'My complexion is th Irish linen. But tomorrow I will b self again—just for tomorrow. Ho is your fix?'

" 'I can tell night from day.' I smiled faintly.

" 'Mr. Darber,' I said, 'I know you understand psychology. why you picked second base. The ball fans who read your cracks abo bad umpiring at the farthest po the diamond would never suspe couldn't even see home plate. F

" 'Right,' he conceded.

" 'Well,' I said, 'from now on thing is as even as an oiled road

it was pretty tough on us umpires, wasn't it?'

"'You're right.' Darber nodded. 'It was their jobs or mine.'

"'Can you beat this thing?' I asked him, and he said, 'If I can hold my job until the first of the year I will have the money and the time for the best doctor in New York. That's easy if I can get by to October, for I don't cover football. That is, if you don't turn me in.'

"'The only thing I turn in are my toes,' I said, taking his hand and putting it on my face. 'That schoolgirl complexion you feel, Mr. Darber, is a school for trained nurses and I know that you suspect how they got there. You can square things by doing me a favor.'

"BEFORE he can answer, his daughter came back and I want to go on record as saying she was really a Dazzler. She turned awful red when her dad told her who was lurking under the first-aid kit.

"'I'm sorry, Mr. Cramer,' she said, and I know she meant it. When she found that I knew everything, we talked it over. That pawing you other reporters objected to was a system of arm signals they had worked out. And all that shrill excitement about high strikes, foul tips and boots was a broadcast. She was giving her father a running account of the game. The trouble was she hated baseball and wasn't a good actress.

"'I'm asking your father a favor,' I picked up where she had come in. 'Maybe two. The first is to lay off the other umpires and pick on me. I guarantee that I will kick enough close ones at second to keep him in copy.'

"Well, they laughed at that but not when I said I wanted her dad's okay to tell Griff all about it.

"'But, Mr. Cramer,' began the Dazzler, but I stopped her.

"'Griff is as tender as bob veal,' I told her. 'But he's been riding me as if I had a brass pole through my neck and it's your dad who is the calliope for the merry-go-round. I'll tell Griff, so I can hold my job. It started out as yours or mine. Now, it's both our jobs. Griff will keep as quiet as an oil burner. But you wouldn't want him to throw me on the spears, would you?'

"That was all right with them. The next day I told Griff and he was just as surprised as the chicken that was hatched in the egg beater. But he okayed the proposition.

"I kicked a close one at second and Darber sure took me over the bright red hurdles in the Post for that one. I was up at his home helping his daughter to write it and I gave her the gag about the umpire who was so crooked he counted his money in front of a mirror because he didn't trust himself.

"About a week before the end of the season the Dazzler told me the arrangement was off. What do you think was wrong? She couldn't stand seeing me panned in the paper. I give her a hug that was my graduation essay in a college of chiropractics.

"She will only marry me if I quit baseball, for she hates it. The season has a week to go and Griff is taking Darber up to New York for a quick examination. I resigned to Ban Johnson in a ten-word telegram that still owes me eight words. Ban gave me a year's vacation with pay on the line. He was tough but intelligent.

"Griff used his influence to drop me in a spot where I manage to get around the country and do some scouting for Griff on the side."

"Did you dig up Travis?" I asked Cramer.

"No, but he's a sweetheart. And here comes another sweetheart."

It was Griff with a now gray Darber. They were arm in arm with a beautiful woman who I knew was the Dazzler.

I couldn't tell whether they were steering Darber or not until I fou myself without asking question looked all right.

They didn't have much time the opening game of the series an ordered quickly. The Dazzler h the menu to Darber and he o landlocked salmon in aspic, m tawny soup, Black Sea caviar and dish apple pie.

When he laid the menu down I might take another cup of coff casually picked up the menu. on the card in very small type landlocked salmon, mulligatawny Black Sea caviar and the apple knew Darber's troubles were o I took chocolate cake, which I on under great mental stress.

It was an okay lunch and I ren Griff that I traveled with his team it looked as if they had been b back by Frank Buck.

"And, Griff, after all these ye said, "you have a shortstop who c his weight without going on a die

"That's okay if I had Walter Jo with him," Griff laughed. "And I use Milan, too."

"How about next year, Griff?"

"Cramer has gotten together th est crew of youngsters I ever saw,' said. "It will be a breeze."

"You're out of baseball, Darb said. "What are you doing?"

"Remember Jack Graham on th Star?" Darber asked. "He quit w sports to coach in college. He's dent of the college now. And I' public relations counsel among things that Griff lined up for me.'

"Griff's a fairy godmother with bag full of magic wands," I said, everything is setting as pretty nurse's cap. You folks are st where storybooks end. Can I ask Mrs. Cramer, if the former umpire good a provider as your dad?"

"Things are going nicely," Cram swered for her as he rapped on woo picked up where her dad left off.

"It was his job then," Cramer s at the Dazzler. "It's my job now.'

AND that's the way it is. Every is as pleased as a cat on a fish w An umpire marries a newspaper daughter, the newspaperman goes to college and a tough old ba manager plays Cupid because a figures it's either his job or the guy's. Outside the dining room a ers' band starts up with Take Me to the Ball Game, and Griff pay check and we stand up to go. All e Cramer and the Dazzler.

"Haven't you got tickets?" I a Cramer.

"Yes, we have," the Dazzler pr for him.

"Aren't you going out?" I spok rectly to the ex-umpire.

"We are," the Dazzler answered.

Well, I knew whether the old pire was a mouse or a man. He wa big for a mouse. I give it one mor

"I have a taxi waiting, Crame said.

"We'll walk," she said.

"What? It's ten miles to the ball Cramer, you can't walk," I warned "and see the ball game."

"We're going to see the Relu Dragon." The Dazzler made on those tight mouths like a fellow d ing lemonade without swallowing seeds.

As Griff, Darber and I start ou the ball game I look back and see luctant ex-umpire being towed off t equally unwilling dragon. And I denly realize that any girl who ca through an entire season of the W ington team must be tougher than a man's gloves.

And that the ex-ump's trouble second have reached home.

## Wing Talk

Continued from page 6

at particular type of plane. The d also recommends speeds safe h for other maneuvers. These mendations, if followed by both ctor and student, guarantee against ing of wings, ailerons or tail sur-

Of the 45 different types of air- s tested for use in the secondary g of the C.P.T. Program, 31 re- l the approval of the C.A.A. in- rs and 14 were rejected.

nation is blanketed with a net- k of radio airways and to it in part is due the safety and regular- cross-country flying in fair weather ul. But there have always been rawbacks to this system—static hantom courses. The transmit- ations operate in a wave band be- 200 and 400 kilocycles. Your hold radio operates between 500 ,000 kilocycles. In static-produc- nditions, reception is limited by nount of the atmospheric disturb- and pilots often have complained when they need the beam most can't hear it. Then too, in moun- us country, the beam develops the menon of splitting up into a y of courses, and if the pilot is not toes he could blithely follow one would lead him smack dab into the f a hill.

years the CAA and its predeces- gencies have been aware of these encies and they now feel they have nated them through use of ultra frequency transmission in a band 119 to 126 megacycles—short wave

Short wave is tricky but at last it een brought under control for di- nal use.

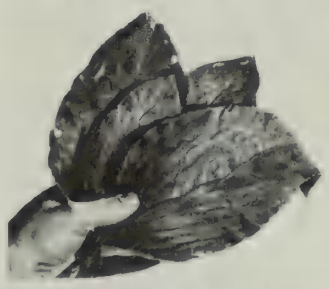
test airway has been established en New York and Chicago, with mitting stations 100 miles apart, and the short-wave beam signals, of the same characteristics as those of intermediate transmission, plow right through static and do not split up. Airliners and other regular users of this New York-Chicago radio airway need only provide a short-wave receiver.

If, after exhaustive tests, the U.H.F. airway lives up to present expectations, other stations will be erected throughout the country until finally all of the old intermediate transmitters are replaced.

BECAUSE of the limitations in operating planes from carriers, battleships and cruisers, Navy aircraft are different in many respects from the Army's. For example, the use of folding wings. Space aboard a carrier is as valuable as it is on Broadway. The smaller the plane, the more they can pack aboard. Torpedo and dive-bomber planes cannot be very small, so the wings are hinged about halfway out on the span. When the pilot lands on the carrier deck, he pulls a lever to engage a hydraulic pump. Safety locks automatically release, the wings break in the middle on each side, raise up and fold over the pilot's head like a tent, all the while he is taxiing up the deck to the parking area forward. This folding-wing device also permits greater ease in moving the planes about in respotting them for take-off.

Seaplanes are catapulted off battleships and cruisers and cannot land back on these ships. But they do come down on the water alongside, are hoisted aboard and put in cradles on deck. Sailors unfasten a few bolt locks on each side and push the wings back along the fuselage. The airplane is then small enough to be tucked out of the way.

F. R. N.



"This'll give you a rough idea of what I have in mind"

CHARLES CARTWRIGHT

*Pup gets cup! He's "top dog" since something new has been added! And say! Something new has been added to a famous cigarette, too! Gives you a great new flavor!*

Something
**NEW***
has been added!

***It's LATAKIA** (pronounced "La-ta-kee'-a"), a flavorful tobacco from the Eastern Mediterranean. Old Gold has a plentiful supply stored in America. Carefully blended with other famous tobaccos, Latakia creates an entirely new—even finer Old Gold flavor.

**Chosen by those Who Know.** Mrs. Haley Fiske, New York, tells us: "That added Latakia gives Old Golds the flavor I've enjoyed so much in expensive cigarettes abroad."

**A New Experience.** "I've heard of what Latakia does in expensive blends....New Old Gold is the first real change in cigarettes in years!" Jack Coble, architect, Greensboro, N. C.

**Same familiar pack—but NEW Old Golds!**

P. Lorillard Company, founded 1760—blenders of fine tobacco since George Washington's day

Byron Nelson, tense and jittery with the knowledge that his P.G.A. title hangs on his shot, addresses a simple 30-inch putt on the 38th green at Denver

The putt that any duffer could sink when the pressure is off rolls a few inches past the cup as Vic Ghezzi steps up for his chance at the title

Ghezzi, visibly fighting for control, taps the ball, which strikes the back of the cup, wobbles around a bit and drops to make him the new P.G.A. champion

# GREEN FREEZE

## By Ralph Trost

**A little white ball thumbs its dimpled nose at a big husky man, who just stands there shaking. Ain't golf wonderful?**

BYRON NELSON, defending champion, lined up his putt on the 38th green at Denver this summer in the P.G.A. final with Vic Ghezzi. Both balls stood thirty inches from the cup. It was the second extra hole of a slam-bang, nerve-shattering battle, with a tense gallery gathered around the green by the lake. After what seemed an age, Nelson finally tapped the ball—and it went by the cup at the right! Ghezzi, clamping down his nerves with an effort, hit his shot. It struck the back of the cup, wobbled around like any duffer's effort—and dropped in, for the Professional Golfers Association title.

For twenty years as a sports writer I have been watching strong men literally quake with fear at the prospect of making a two-foot putt. It seems the simplest thing in the world to tap that little ball into a cup amply large enough to swallow it. But when even the greatest of golfers haven't been shaking, they have been freezing so hard they have had to be moved. Nothing in any sport is worse.

I was present on that historic day when Pirnie had a *two-inch* putt to make to quali Winged Foot, Mamaroneck, New York, for the tional Open. He took careful aim, hit the squarely on the top—and it never moved! I Pirnie had decided to knock his brains out o spot, no brother golfer would have interfered. knew exactly how he felt. Pirnie had the jitter muscular heebie-jeebies. But the freeze is worse.

Tom Boyd, a huge Irishman and a fine g was playing in a winter tournament at Corpus C Texas, when the freeze struck him. He got his planted in front of the ball and for the life o couldn't lift it over the ball and get it back wh should have been in the first place. He stood like a strange hulk of sweating, olive-skinne After an interminable period of perspiring frig he took a deep breath and by sheer strength of acter got the putter to *(Continued on pag*

Field exploration has revealed millions of acres of land suitable fo ing rubber in South and Central America. Above, Dr. J. T. Gr Carl LaRue examine a soil-boring they have made in a Nicaragua

# Bringing Rubber Home

## By J. D. Ratcliff

**Largest U. S. import is rubber. What would happen if the supply line should snap? This problem government scientists have been working on and they have just about got it licked**

STAKE off a triangle with points in Mexico, Peru and the Amazon Delta. In this man-sized chunk of earth one of the strangest group of explorers ever assembled has worked quietly for the past year. They haven't sought publicity. Fact is, they have done something unheard of among explorers. They have actually tried to avoid publicity! But they have been writing an adventure story t have repercussions around th The men: the rubber exploratio sent out by the United States ment of Agriculture.

They have visited nearly ev where it might be possible to g ber. They have slipped throug streams in the Mato Grosso, at snakes festooned from ove trees. And waded through sw Colombia and worked their v the Andean watershed. They made headlines like other visi men. And they haven't drunk t speeches, and attended banq the shiploads of good-will amb we have been dumping in Sout ca's lap. This, perhaps, expla popularity. They are promisi Rubber is the largest United S port. Tropical America can and these men have been show

**age: The Department ure specialists direct- rvey that will give l States a close-to- ce of rubber supply**

ime Brazil produced nearly t of the world's rubber. Na- eir *estradas*—trails—that led ber trees scattered through Such a casual industry mpete with efficient planta- in the Middle East. Brazil's world market shrank to less ent. Sumatra, Java, Malaya, ylon and other Eastern ports e rest of the world's rubber. has been giving Washing- xe case of the jitters. What y annexed the Netherlands Vhat if the Japanese navy e rubber life line stretching s from Singapore to Akron? ht be disastrous to a country nes well over half the world's ction. It is a very real threat -dollar industry; and to the 100,000 men.

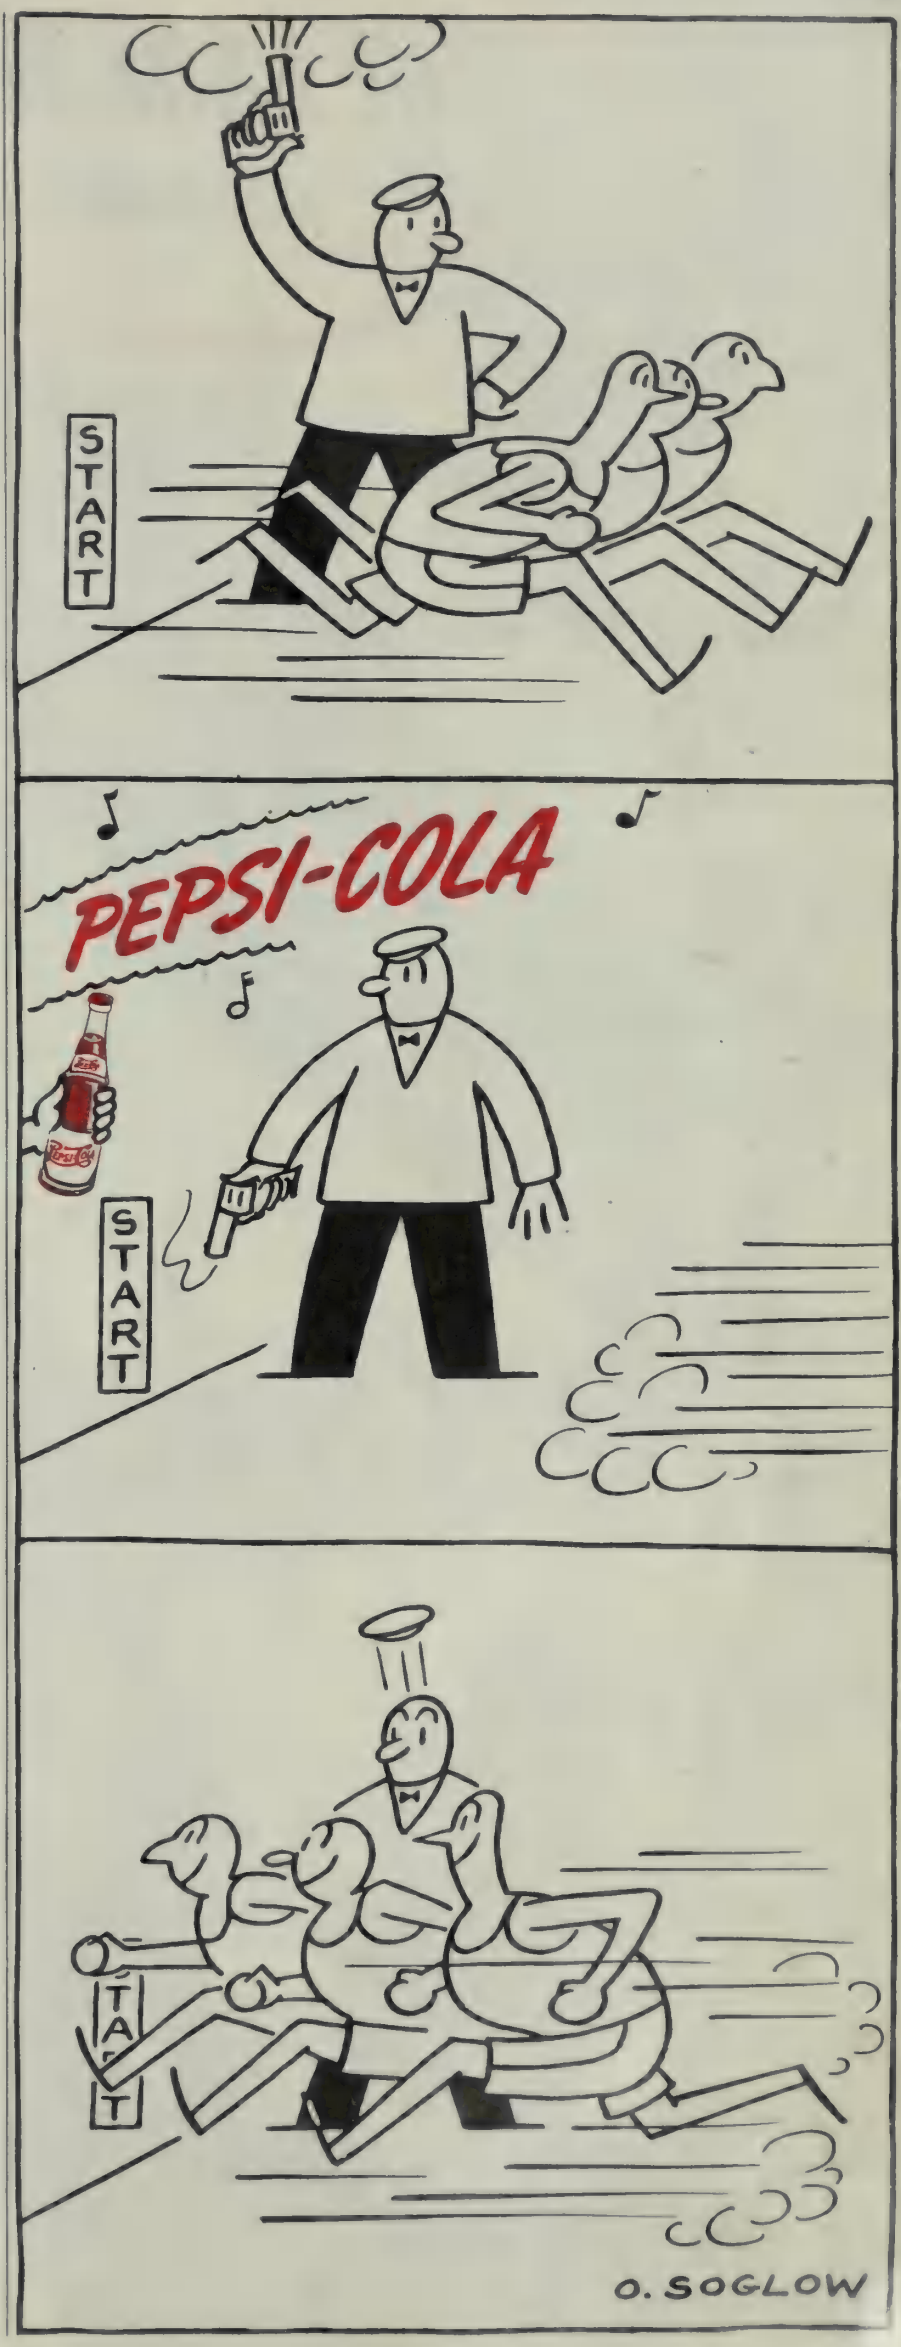
As s last year—the last de- igures available—less than of Germany's rubber de- synthetic sources. The rest stock piles, reclaimed scrap outside supplies brought in e runners.

ngs us back to our explorers. For some time representatives of government and industry have been dreaming a rosy dream of rubber culture in South and Central America. The relatively short haul through protected waters would eliminate danger of a stoppage of supplies. In addition, it would give us something to trade with our good neighbors. Something big and important.

We spend more for rubber than for any other import. This year we will spend more for it than for *all* imports from Central and South America. If the rubber trade could be brought back to the Americas we wouldn't be needing good-will ambassadors. Trade—and not tea, speeches and movie actors—breeds brotherly love among nations.

These points were discussed last year at a meeting held in the office of Secretary of Agriculture Wallace. Present were representatives of all the large rubber companies, as well as government experts. The men who sat in on this historic discussion decided that there had been enough talk. It was time to get to work and someone had to take the initiative. The United States government was elected. Congress was asked for an appropriation of $500,000.

Congress listened attentively and duly voted the funds—in June last year. This was the easy part of the work. The hard part was answering the thousand questions presented by that fabulous plant, *Hevea brasiliensis*.



This is the rubber plant—no relation of the Assam rubber tree found in funeral parlors. It is a plant which built hell-roaring boom towns; and in good time fed them back to the jungle. It is a plant which lured tens of thousands of Chinese to Malaysia and which caused a devastating trade war between the British and Dutch.

ing brilliance and clarity in the
And the girl—
s, here was life. All there was, all
could be, of life, of youth, of sheer
ıg vitality. The face was alive and
yes . . .
much life! Such passionate youth!
then, was what Amyas Crale had
in Elsa Greer, which had made
›lind and deaf to the gentle crea-
his wife. Elsa *was* life. Elsa was
ı.
superb, slim, straight creature,
ant, her head turned, her eyes in-
: with triumph. Looking at you,
ıing you—waiting . . .
:cule Poirot spread out his hands.
id, "It is a great—yes, it is great."
redith Blake said, a catch in his
"She was so young—"
rot nodded. He thought to him-
'What do most people mean when
say that? *So young.* Something
ent, something appealing, some-
helpless. But youth is not that!
ı is crude, youth is strong, youth is
-ful—yes, and cruel! And one
more—youth is vulnerable."

ROT followed his host to the door.
; interest was quickened now in
Greer, whom he was to visit next.
would the years have done to that
›nate, triumphant, crude child?
looked back at the picture.
›se eyes. Watching him . . . watch-
im . . . telling him something. . . .
›posing he couldn't understand
they were telling him? Would
·al woman be able to tell him? Or
those eyes saying something that
·al woman did not know?

Such arrogance, such triumphant anticipation—

And then death had stepped in and taken the prey out of those eager, clutching young hands . . .

And the light had gone out of those passionately anticipating eyes. What were the eyes of Elsa Greer like now?

He went out of the room with one last look.

He thought, "She was too much alive."

He felt—a little—frightened. . . .

THE house in Brook Street had Darwin tulips in the window boxes. Inside the hall ■ great vase of white lilacs sent eddies of perfume toward the open front door.

A middle-aged butler relieved Poirot of his hat and stick. A footman appeared to take them and the butler murmured deferentially, "Will you come this way, sir?"

Poirot followed him along the hall and down three steps. A door was opened, the butler pronounced his name with every syllable correct.

Then the door closed behind him and a tall, thin man got up from a chair by the fire and came toward him.

Lord Dittisham was ■ man just under forty. He was not only a peer of the realm; he was a poet. Two of his fantastical poetic dramas had been staged at vast expense and had had a *succès d'estime*. His forehead was rather prominent, his chin was eager, and his eyes and his mouth unexpectedly beautiful.

He said, "Sit down, M. Poirot."

Poirot sat down and accepted a cigarette from his host. Lord Dittisham shut the box, struck a match and held it for Poirot to light his cigarette, then he himself sat down and looked thoughtfully at his visitor.

"It is my wife you have come to see, I know," he said.

Poirot answered, "Lady Dittisham was so kind as to give me an appointment."

"Yes."

There was a pause.

"You do not, I hope, object, Lord Dittisham?" Poirot hazarded.

The thin, dreamy face was transformed by a sudden, quick smile. "The objections of husbands, M. Poirot, are never taken seriously in these days."

"Then you do object?"

"No. I cannot say that. But I am, I must confess it, a little fearful of the effect upon my wife. Let me be quite frank. A great many years ago, when my wife was only ■ young girl, she passed through a terrible ordeal. She has, I hope, recovered from the shock. I have come to believe that she has forgotten it. Now you appear and necessarily your questions will reawaken these old memories."

"It is regrettable," said Hercule Poirot politely.

"I do not know quite what the result will be."

"I can only assure you, Lord Dittisham, that I shall be as discreet as possible, and do all I can not to distress Lady Dittisham. She is, no doubt, of a delicate and nervous temperament."

Then, suddenly and surprisingly, the other laughed. He said: "Elsa? Elsa's as strong as a horse!"

"Then—" Poirot paused diplomatically. The situation intrigued him.

Lord Dittisham said: "My wife is equal to any amount of shocks. I wonder if you know her reason for seeing you?"

Poirot replied placidly, "Curiosity?"

A kind of respect showed in the other man's eyes. "Ah, you realize that?"

"IT IS inevitable," Hercule Poirot said. "Women will *always* see a private detective. Men will tell him to go to the devil."

"Some women might tell him to go to the devil too."

"After they have seen him—not before."

"Perhaps." Lord Dittisham paused. "What is the idea behind this book?"

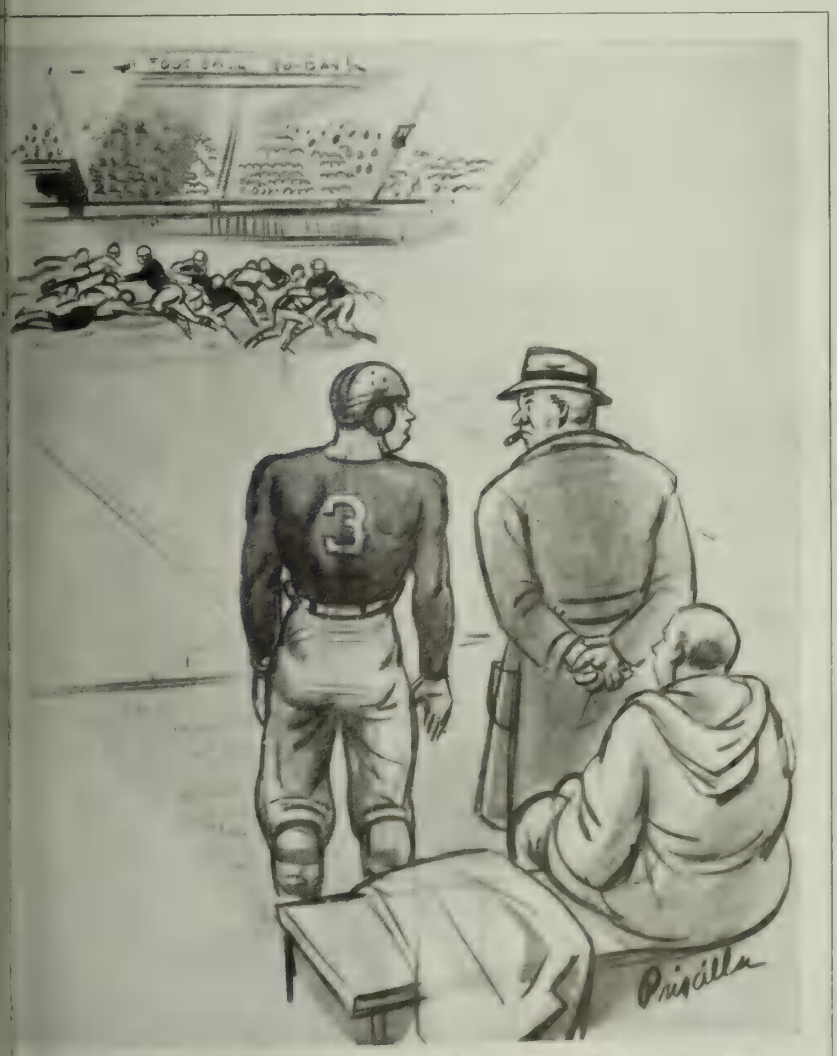
Hercule Poirot shrugged his shoulders. "One resurrects the old tunes, the old stage turns, the old costumes. One resurrects, too, the old murders."

"Faugh!" said Lord Dittisham.

"Faugh! if you like. But you will not alter human nature by saying faugh. Murder is ■ drama. The desire for drama is very strong in the human race."

Lord Dittisham murmured, "I know —I know . . ."

He rose and rang the bell. "My wife will be waiting for you," he said brusquely.



The door opened.

"You rang, my lord?"

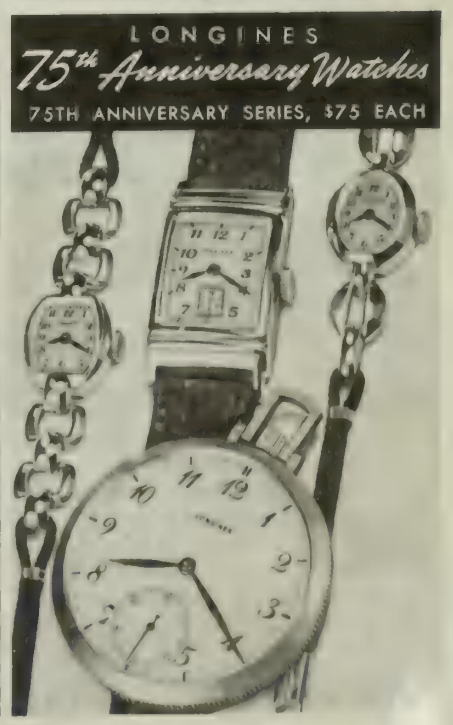
"Take M. Poirot up to her ladyship."

Up two flights of stairs, feet sinking into soft-pile carpets. Subdued flood lighting. Money, money everywhere. Of taste, not so much. There had been ■ somber austerity in Lord Dittisham's room. But here, in the house, there was only ■ solid lavishness. The best. Not necessarily the showiest nor the most startling. Merely "expense no object," allied to ■ lack of imagination.

It was not a large room into which

**"To be honest, I don't see any sense in putting me in with them leading fifty-four to nothing and three minutes left to play"**

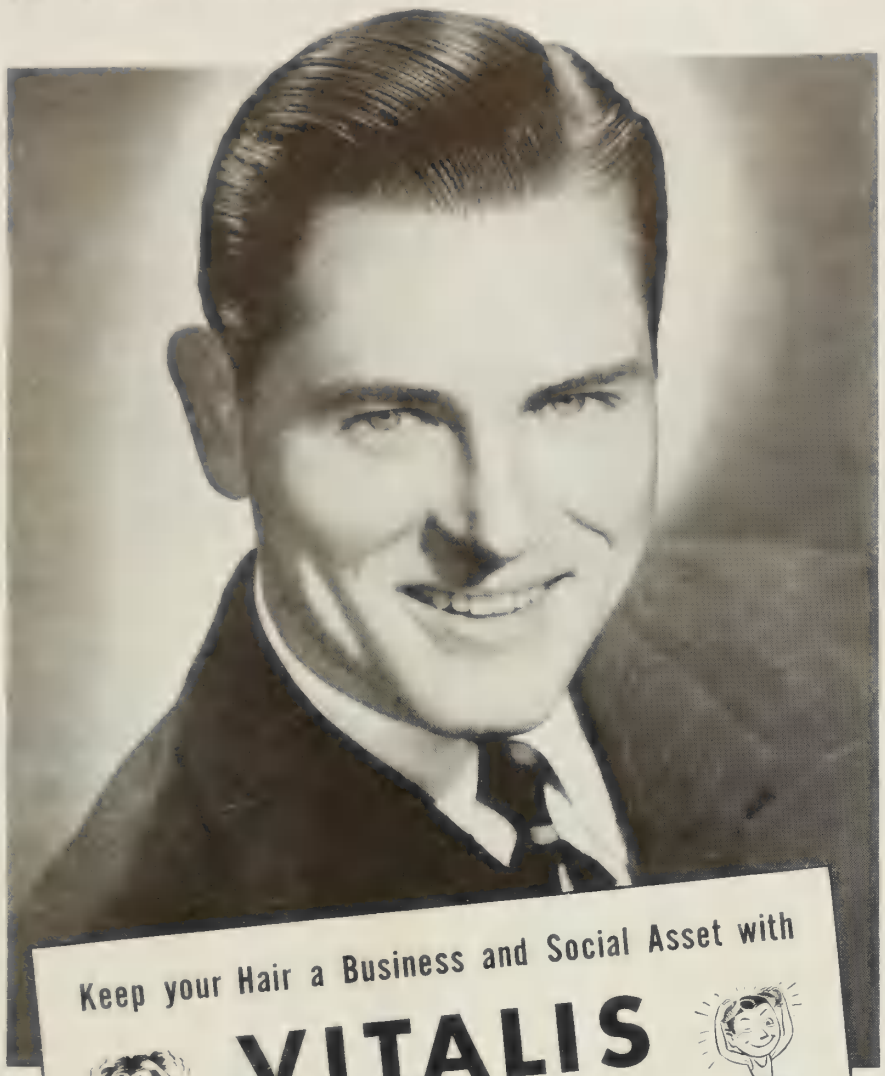
LONGINES
*the most honored watch in Football*



**IN FOOTBALL,** the official timing watch for most of the leading colleges is Longines. More than 100 colleges including Army, Cornell, Dartmouth, Navy, Texas A. & M., Washington and Yale chose Longines as official football timing watch for all games in 1940 and again in 1941. Longines is also official watch for the National Professional Football League. Longines is truly, *the most honored watch in football.*

Longines
THE WORLD'S MOST HONORED WATCH

During the past 75 years, millions of Longines Watches have gone into the service of discriminating men and women throughout the world. Many of these Longines Watches, fifty or more years old, are still treasured timepieces in daily use. Longines Watches have thus proven their investment qualities for timekeeping satisfaction.



Longines Watches have won 10 world's fair grand prizes and 28 gold medals for technical excellence and elegance; and more honors for accuracy than any other timepiece. Longines jewelers now show Longines 75th Anniversary Watches priced $40 upward; also a companion watch of outstanding value in the moderate price field, the Wittnauer Watch priced from $24.75; both products of -Longines-Wittnauer Watch Co., Inc., New York, Montreal, Geneva.

*A Product of Bristol-Myers Company*

**USE VITALIS AND THE "60-SECOND WORKOUT"**

Poirot was shown. The big drawing room was on the first floor. This was the personal sitting room of the mistress of the house, and the mistress of the house was standing against the mantelpiece as Poirot was announced and shown in.

A phrase leaped into his startled mind and refused to be driven out: *She died young. . . .*

That was his thought as he looked at Elsa Dittisham who had been Elsa Greer.

He would never have recognized her from the picture Meredith Blake had shown him. That had been, above all, a picture of youth, a picture of vitality. Here there was no youth—there might never have been youth. And yet he realized, as he had not realized from Crale's picture, that Elsa was beautiful. Yes, it was a very beautiful woman who came forward to meet him. And certainly not old. After all, what was she? Not more than thirty-six now, if she had been twenty at the time of the tragedy.

He felt a strange pang. It was, perhaps, the fault of old Mr. Johnathan, speaking of Juliet . . . No Juliet here—unless perhaps one could imagine Juliet a survivor—living on, deprived of Romeo. . . . Was it not an essential part of Juliet's make-up that she should die young?

Elsa Greer had been left alive. . . .

SHE was greeting him in a level, rather monotonous voice: "I am so interested, M. Poirot! Sit down and tell me what you want me to do?"

He thought: "But she isn't interested. Nothing interests her."

Big gray eyes—like dead lakes.

Poirot became, as was his way, a little obviously foreign. He exclaimed, "I am confused, madame, veritably I am confused."

"Oh, no; why?"

"Because I realize that this—this reconstruction of a past drama must be excessively painful to you."

She looked amused. Yes, it was amusement. Quite genuine amusement. She said: "I suppose my husband put that idea into your head. He saw you when you arrived. Of course, he doesn't understand in the least. He neve I'm not at all the sensitive sort o son he imagines I am."

Poirot thought to himself: "Yes is true. A thin-skinned person not have come to stay in Ca Crale's house."

Lady Dittisham said, "What is i want me to do?"

"You are sure, madame, that over the past would not be pain you?"

She considered a minute, and it Poirot suddenly that Lady Ditt was a very frank woman. She mig from necessity but never from c

Elsa Dittisham said slowly: "N *painful.* In a way, I wish it were."

"Why?"

She said impatiently, "It's so —never to feel anything. . . ."

And Hercule Poirot thought, Elsa Greer is dead." Aloud he sai all events, Lady Dittisham, it my task very much easier. Have good memory?"

"Reasonably good, I think."

"And you are sure it will not pai to go over those days in detail?"

"It won't pain me at all. Thing only pain you when they are ha ing."

"It is so with some people, I kn

Lady Dittisham said: "That's Edward, my husband, can't under He thinks the trial and all that terrible ordeal for me."

"Was it not?"

Elsa Dittisham said, "No, I er it." There was a reflective, sa quality in her voice. She went on: how that old brute Depleach we me! He's a devil, if you like. joyed fighting him. He didn't g down."

She looked at Poirot with a sm hope I'm not upsetting your illu A girl of twenty, I ought to have prostrated, I suppose—agonized shame or something. I wasn't. I care what they said to me. I wanted one thing."

"What?"

"To get her hanged, of course, Elsa Dittisham.

He noticed her hands—bea

## "By the way, Dr. Jekyll, whatever happened to Mr. Hyde?"

"Who, me? . . . Hyde?"

"Uh! Huh! You know what I mean. I can remember when you, my handsome hero, didn't have a pleasant word for anyone. You were thin as a rail and jumpy as a cat. You even used to . . ."

"Used to *what*, Nan?"

"*Mope at people*, like this!"

"Hey! Stop it! I was told I had a Vitamin B Complex deficiency. Ain't that something? It means a shortage of the vitamins you find in their natural form in fresh yeast. So I bought a week's supply of FLEISCHMANN'S, took two cakes a day in cool tomato juice, and in a few weeks . . ."

"In a few weeks . . . my good-natured Dr. Jekyll. But, what's this about tomato juice?"

"Oh! That's the new way to take yeast. Look! Mash a cake of FLEISCHMANN'S in a dry glass with a fork, add a little tomato juice, stir till blended, fill up the glass, and drink. It's delicious!"

Ever read the FLEISCHMANN label? This is the only yeast with all these vitamins. And the only sources of the important Vitamin B Complex are *natural* sources, such as yeast and raw liver. Remember, if you bake at home, that three of the vitamins in FLEISCHMANN'S, $B_1$, D, and G, are not appreciably lost in the oven, they go right into the bread.

**Fleischmann's Fresh Yeast For Natural Vitamin B Complex**

hands but with long, curving nails. Predatory hands.

She said: "You're thinking me vindictive? So I am vindictive—to anyone who has injured me. That woman was to my mind the lowest kind of woman there is. She knew that Amyas cared for me—that he was going to leave her—and she killed him so that *I* shouldn't have him."

She looked across at Poirot.

"Don't you think that's pretty mean?"

"You do not understand or sympathize with jealousy?"

"No, I don't think I do. If you've lost, you've lost. If you can't keep your husband, let him go with a good grace. It's possessiveness I don't understand."

"You might have understood it if you had ever married him."

"I don't think so. We weren't—" She smiled suddenly at Poirot. Her smile was, he felt, a little frightening. It was so far removed from any real feeling. "I'd like you to get this right," she said. "Don't think that Amyas Crale seduced an innocent young girl. It wasn't like that at all! Of the two of us, *I* was responsible. I met him at a party and I fell for him. I knew I had to have him—"

"Although he was married?"

"Trespassers will be prosecuted? It takes more than a printed notice to keep you from reality. If he was unhappy with his wife and could be happy with me, then why not? We've only one life to live."

"But it has been said he was happy with his wife."

Elsa shook her head. "No. They quarreled like cat and dog. She nagged at him. She was—oh, she was a horrible woman!"

She got up and lit a cigarette. She said with a little smile: "Probably I'm unfair to her. But I really *do* think she was rather hateful."

Poirot said slowly, "It was a great tragedy."

"Yes, it was a great tragedy." She turned on him suddenly; into the dead, monotonous weariness of her face something came quiveringly alive. "It killed *me*, do you understand? It killed me. Ever since, there's been nothing—nothing at all." Her voice dropped: "Emptiness!" She waved her hands impatiently. "Like a stuffed fish in a glass case!"

"Did Amyas Crale mean so much to you?"

She nodded. It was a queer, confiding little nod—oddly pathetic. She said, "I think I've always had a single-track mind." She mused somberly. "I suppose—really—one ought to put a knife into oneself—like Juliet. But—but to do that is to acknowledge that you're done for—that life's beaten you."

"And instead?"

"There ought to be everything—just the same—once one has got over it. I *did* get over it. It didn't mean anything to me any more. I thought I'd go on to the next thing."

Yes, the next thing. Poirot saw her plainly trying so hard to fulfill that crude determination. Saw her beautiful and rich, seductive to men, seeking with greedy, predatory hands to fill up a life that was empty. Hero worship—a marriage to a famous aviator; then an explorer, that big giant of a man Arnold Stevensen, possibly not unlike Amyas Crale physically—a reversion to the creative arts; Dittisham!

Elsa Dittisham said, "I've never been a hyprocite! There's a Spanish proverb I've always liked. *Take what you want and pay for it, says God.* Well, I've done that. I've taken what I wanted—but I've always been willing to pay the price."

"What you do not understand," Poirot said, "is that there are things that cannot be bought."

She stared at him. "I don't mean money."

Poirot said: "No, no; I unders what you meant. But it is not ev thing in life that has its ticket, so m There are things that are *not for s*.

"Nonsense!"

He smiled very faintly. In her was the arrogance of the successful hand who had risen to riches.

Hercule Poirot felt a sudden wa pity. He looked at the ageless sm face, the weary eyes, and he rem bered the girl whom Amyas Crale painted.

Elsa Dittisham said: "Tell m about this book. What is the pur of it? Whose idea is it?"

"Oh, my dear lady, what other pose is there but to serve up ye day's sensation with today's sauce?

"But *you're* not a writer?"

"No, I am an expert on crime."

"You mean, they consult you crime books?"

"Not always. In this case, I ha commission."

"From whom?"

"I am—what do you say?—wo on this publication on behalf of a terested party."

"What party?"

"Miss Carla Lemarchant."

"Who is she?"

"She is the daughter of Amyas Caroline Crale."

Elsa stared for a minute. Ther said: "Oh, of course, there *was* a c I remember. I suppose she's grow now?"

"Yes, she is twenty-one."

"What is she like?"

"She is tall and dark and, I t beautiful. And she has courage personality."

Elsa said thoughtfully, "I should to see her."

"She might not care to see you."

Elsa looked surprised. "Why? I see. But what nonsense! She possibly remember anything abo She can't have been more than six.

"She knows that her mother was for her father's murder."

"And she thinks it's my fault?"

"It is a possible interpretation."

Elsa shrugged her shoulders. stupid!" she said. "If Caroline ha haved like a reasonable human bei

"So you take no responsibility?"

"Why should I? *I've* nothing ashamed of. I loved him. I would made him happy." She looked a at Poirot. Her face broke up— denly, incredibly, he saw the girl c picture. She said: "If I could you see. If you could see it fro side. If you knew—"

Poirot leaned forward. "But is what I want. See, Mr. Philip E who was there at the time, he is w me a meticulous account of every that happened. Mr. Meredith the same. Now if you—"

Elsa Dittisham took a deep b She said contemptuously: "Those Philip was always stupid. Mer used to trot around after Caroline- he was quite a dear. But you have *any* real idea from *their* acco

He watched her, saw the anim rising in her eyes, saw a living w take shape from a dead one. She quickly and almost fiercely: "W you like the *truth?* Oh, not for p cation. But just for yourself—"

"I will undertake not to publish out your consent."

"I'd like to write down the truth She was silent a minute or two, t ing. He saw the smooth hardness cheeks falter and take on a yo curve; he saw life flowing into h the past claimed her again.

"To go back—to write it all dow To show you what she was—"

eyes flashed. Her breast heaved
nately. "She killed him. She

thought again of Juliet. . . .

"May I ask why, M. Poirot?"

Hercule Poirot considered his answer to the question. He was aware of a pair of very shrewd gray eyes watching him out of the small, wizened face.

He had climbed to the top floor of the bare building and knocked on the door of No. 584 Gillespie Buildings, which had come into existence to provide so-called "flatlets" for workingwomen.

Here, in a small cubic space, existed Miss Cecilia Williams, in a room that was bedroom, sitting room, dining room and, by judicious use of the gas ring, kitchen—a kind of cubbyhole attached to it contained a quarter-length bath and the usual offices.

MEAGER though these surroundings might be, Miss Williams had contrived to impress upon them her stamp of personality.

The walls were distempered an ascetic pale gray, and various reproductions hung upon them. Danté meeting Beatrice on a bridge, and that picture once described by a child as a "blind girl sitting on an orange and called, I don't know why, Hope." There were also two water colors of Venice and a sepia copy of Botticelli's Primavera. On the top of the low chest of drawers ,were a large quantity of faded photographs, mostly, by their style of hairdressing, dating from twenty to thirty years ago.

The square of carpet was threadbare, the furniture battered and of poor quality. It was clear to Hercule Poirot that Cecilia Williams lived very near the bone. There was no roast beef here. This was the little pig that had none.

Clear, incisive and insistent, the voice of Miss Williams repeated its demand: "You want my recollections of the Crale case? May I ask why?"

It has been said of Hercule Poirot by some of his friends and associates, at moments when he has maddened them most, that he prefers lies to truth and will go out of his way to gain his ends by means of elaborate false statements, rather than trust to the simple truth.

But in this case he proffered no specious explanation of a book to be written

on bygone crimes. Instead he narrated simply the circumstances in which Carla Lemarchant had sought him out.

The small, elderly lady in the neat, shabby dress listened attentively. She said, "It interests me very much to have news of that child—to know how she has turned out."

"She is a very charming and attractive young woman, with plenty of courage and a mind of her own."

"Good," said Miss Williams briefly.

"And she is, I may say, a very persistent person. She is not a person whom it is easy to refuse or put off."

The ex-governess nodded thoughtfully. She asked, "Is she artistic?"

"I think not."

Miss Williams said dryly, "That's one thing to be thankful for!"

THE tone of the remark left Miss Williams' views as to artists in no doubt whatever. She added, "From your account of her I should imagine that she takes after her mother rather than after her father."

"Very possibly. That you can tell me when you have seen her. You would like to see her?"

"I should like to see her very much indeed. It is always interesting to see how a child you have known has developed."

"She was, I suppose, very young when you last saw her?"

"She was five and a half. A very charming child—a little overquiet, perhaps. Thoughtful. Given to playing her own little games and not inviting outside co-operation. Natural and unspoiled."

Poirot said, "It was fortunate she was so young."

"Yes, indeed. Had she been older the shock of the tragedy might have had a very bad effect."

"Nevertheless," said Poirot, "one feels that there *was* a handicap—however little the child understood or was allowed to know, there would have been an atmosphere of mystery and evasion and an abrupt uprooting. These things are not good for a child."

Miss Williams replied thoughtfully, "They may have been less harmful tl you think."

Poirot said, "Before we leave subject of Carla Lemarchant—li Carla Crale that was—there is sor thing I would like to ask you. If a one can explain it, I think you can."

"Yes?" Her voice was inquiri noncommittal.

Poirot waved his hands in an ef to express his meaning.

"There is a something—a *nuanc* cannot define—but it seems to me ways that the child, when I ment her, is not given her full value. Wh mention her, the response comes alw with a vague surprise, as though person to whom I speak had forgot altogether that there *was* a child. N surely, mademoiselle, that is not na ral. A child, under these circumstan is a person of importance, not in hers but as a pivotal point. Amyas Crale n have had reasons for abandoning wife—or for not abandoning her. Bu the usual breakup of a marriage child forms a very important point. here the child seems to count for v little. That seems to me—strange."

Miss Williams said quickly: "Y have put your finger on a vital point, Poirot. You are quite right. And t is partly why I said what I did just n —that Carla's transportation to dif ent surroundings might have been some respects a good thing for l When she became older, you see, might have suffered from a certain l in her home life."

She leaned forward and spoke slo and carefully:

"Naturally, in the course of my w I have seen a good many aspects of parent-and-child problem. Many c dren, *most* children, I should say, su from overattention on the part of t parents. There is too much love, much watching over the child. I uneasily conscious of this brooding, seeks to free itself, to get away and unobserved. With an only child thi particularly the case, and of co mothers are the worst offenders.

"The result on the marriage is o unfortunate. The husband resents c

FIT RIGHT - FEEL RIGHT they're Walk-Fitted

ing second, seeks consolation—or rather flattery and attention—elsewhere, and a divorce results sooner or later. The best thing for a child, I am convinced, is to have what I should term healthy neglect on the part of both its parents. This happens naturally enough in the case of a large family of children and very little money. They are overlooked because the mother has literally no time to occupy herself with them. They realize quite well that she is fond of them, but they are not worried by too many manifestations of the fact.

"But there is another aspect. One does occasionally find a husband and wife who are so ill-sufficient to each other, so wrapped up in each other, that the child of the marriage hardly seems very real to either of them. And in those circumstances, I think, a child comes to resent that fact, to feel defrauded and left out in the cold. You understand that I am not speaking of *neglect* in any way. Mrs. Crale, for instance, was what is termed an excellent mother, always careful of Carla's welfare, of her health, playing with her at the right times, and always kind and gay. But, for all that, Mrs. Crale was really completely wrapped up in her husband. She existed, one might say, only in him and for him." Miss Williams paused a minute and then said quietly, "That, I think, is the justification for what she eventually did."

"You mean," Hercule Poirot said, "that they were more like lovers than like husband and wife?"

Miss Williams, with a slight frown of distaste for foreign phraseology said, "You could certainly put it that way."

"He was as devoted to her as she was to him?"

"They were a devoted couple. But he, of course, was a man."

Miss Williams contrived to put into that last word a wholly Victorian significance.

"Men—" said Miss Williams, and stopped.

As a rich property owner says, "Bolsheviks," as an earnest Commun says, "Capitalists," as a good hou wife says, "Black beetles," so did M Williams say, "Men."

From her spinster's, governess' li there rose up a blast of fierce feminis Nobody hearing her speak could dou that, to Miss Williams, Men were t Enemy!

Poirot said, "You hold no brief men?"

She answered dryly: "Men have t best of this world. I hope that it w not always be so."

HERCULE POIROT eyed her spec latively. He could quite easily vis alize Miss Williams methodically a efficiently padlocking herself to a raili and later hunger-striking with resol endurance.

Leaving the general for the partic lar, he said, "You did not like Am Crale?"

"I certainly did not like Mr. Cra Nor did I approve of him. If I had be his wife I should have left him. Th are things that no woman should p up with."

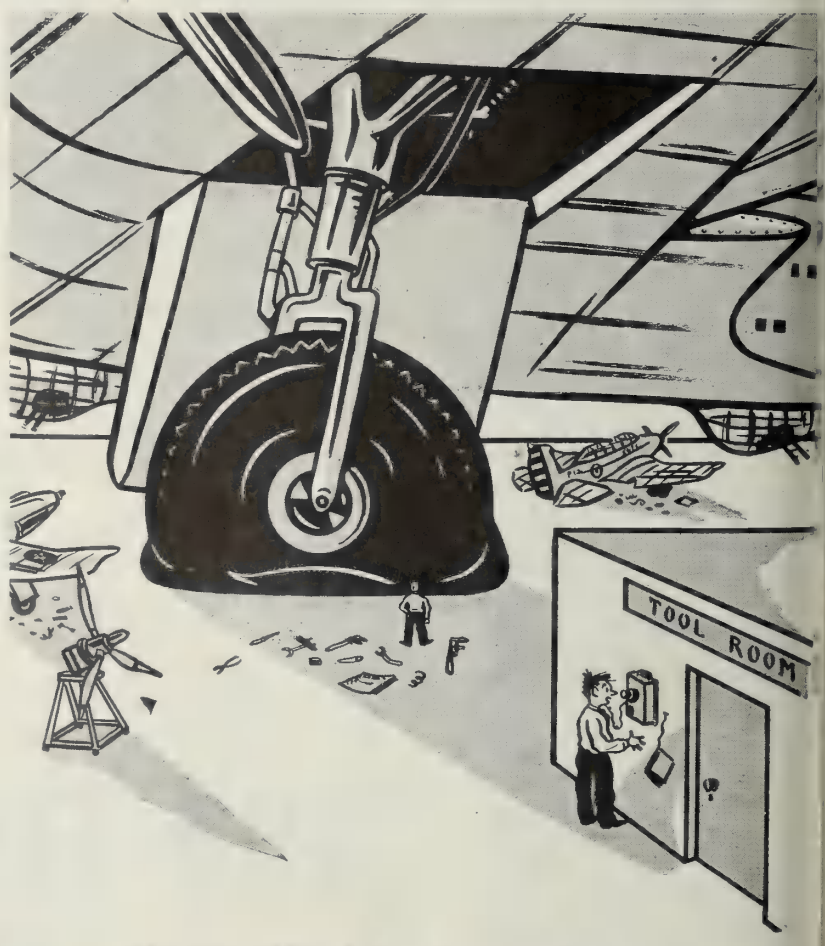
"But Mrs. Crale did put up w them?"

"Yes."

"You think she was wrong?"

"Yes, I do. A woman should hav certain respect for herself and not su mit to humiliation."

"Did you ever say anything of t kind to Mrs. Crale?"



"Certainly not. It was not my pl to do so. I was engaged to educ Angela, not to offer unasked advice Mrs. Crale. To do so would have b most impertinent."

"You liked Mrs. Crale?"

"I was very fond of Mrs. Crale." T efficient voice softened, held warr and feeling. "Very fond of her a very sorry for her."

"And your pupil—Angela Warre Poirot leaned forward, his eyes fi hard on Miss Williams'.

GM GENERAL MOTORS

WHETHER it's shell and cannon for the army and air corps, or motor cars for the folks at home, *you can always count on Oldsmobile!*

The nation's oldest motor car institution has been serving the needs of the American public, dependably, year after year, since 1897. And today, Oldsmobile offers, along with its large-scale output of arms and ammunition, a new car for the nation—the Olds "B-44."

This new automobile is built to keep America on the move—to step up the tempo of going places and getting things done. It is "stamina-styled" in a bold new military mode. It has new "Double-Duty" bumpers, new "Fuselage" fenders, new "Dreadnaught" frame and an engine of greater "fire-power," combining alert action with long-time dependability and rigid economy. Down to the last detail, it is traditionally and truthfully Oldsmobile in quality—in materials, craftsmanship and modern design.

Your Oldsmobile dealer stands ready to show you how ably our engineers and craftsmen have met the challenge of the new times—with a new "Olds-quality" car. Priced below your expectations. Available in five new series—two Sixes and three Eights—all offering Oldsmobile's Hydra-Matic Drive.

***YOU CAN ALWAYS COUNT ON OLDSMOBILE***
**IT'S QUALITY-BUILT TO LAST!**

***OLDSMOBILE IS TURNING OUT CANNON FOR FIGHTING PLANES - SHELL FOR THE ARTILLERY***

Defense comes first, with Oldsmobile! From Olds' 50-acre manufacturing arsenal at Lansing, Mich., pour large-caliber artillery shell at a rate of many thousands a day—while in a new Oldsmobile ordnance plant, automatic airplane cannon are now going into mass production.

# It shook us up...in more ways than one!

THE early motor cars were crude and uncomfortable. They shook us up, and they shook the country up too; shook it into a new pattern of living.

In those days, lubrication was crude, too. And when Quaker State Motor Oil was first introduced, over a quarter of a century ago, it was so advanced in its performance that it shook the automotive industry into quick attention.

Today, the motor car industry has surged to undreamed-of heights . . . and Quaker State has kept pace. In fact, the New Stabilized Quaker State Motor Oil is actually far ahead of any lubrication requirements of the modern automobile engine.

Quaker State has perfected a new method of eliminating the unstable elements from motor oil to produce a new kind of oil which resists oxidation and its resulting sludge, varnish and corrosion.

The remarkable quality and stability which have been painstakingly attained in Stabilized Quaker State Motor Oil give you surest possible protection against repairs and depreciation. It's engineered to battle heat and friction successfully! This grea improved oil still sells for 35¢ per quart. And yo probably find it costs no more than cheaper because you won't have to add so many qua between drain-and-refill periods.

Have your crankcase drained, clean and refilled with *Stabilized Quaker St Motor Oil*. Quaker State Oil Refining Corporation, Oil City, Pennsylvania.

## Russian Women at War

Continued from page 18

es, and in the east housewives nhesitatingly left their kitchens ıto the mines. At a place called nda five hundred volunteered as within the first week of war. In v the women are to be seen driv- ıst of the busses, trolleys and often with red-varnished nails look odd on hands holding big ; wheels. (Incidentally, Russian e the only ones I ever met who ike red fingernails. They are con- r reproaching me for not lacquer- ıe.)

e are women enrolled in the po- rce known here as the militia. mes they direct traffic, but they are on duty in the streets to der. One I interviewed, Natalie ıa, was a servant girl until she interested in social work and self elected to a minor post in the ɔviet. It was in 1929 while serv- re that someone suggested she makings of a militiawoman. It a good idea and she promptly up. After a month's training, g duties and how to shoot she to get practical experience and is ull-fledged lieutenant. "Are you shot?" I asked. "You bet," she ed, patting the revolver on her udly. "What's more, I'm a good ith a revolver, rifle, automatic d machine gun."

n she came into the room, wear- e regular blue uniform of the , except that instead of breeches ots she had on a skirt and oxfords, cked her heels together and sa- martly. Before sitting down she ff her cap, displaying a haircut ust have been perpetrated on her ıe fifth columnist. It looked like ıort bob from in front but was l straight across at the back, with ck clippered to a whiteness that n startling contrast with the r-brown face.

told me that she lives with her r and her seven-year-old child; ısband is at the front and their en-year-old adopted son is with altic fleet. "I wish I had thought ıg his picture," she said, speaking the latter. "You have no idea how handsome he looks in his blue uniform."

Like all the militiamen, Natalie Petrovna is on duty eight hours a day. Now that war is on she must remain on call another eight hours in case of emergency. Sunday is her day off, but this week she joined the "Voskresenie" (group volunteers who work Sundays giving their pay to the war fund) and helped unload freight cars in a railroad yard. Her job is to stand on the street, rifle in hand, keeping an eye on things. She says the war has done one good thing—it is keeping people too busy to have time to get into much trouble and she has not had to pull in any drunk for disturbing the peace since the twenty-second of June. Twice in recent weeks she has picked up suspicious characters. One girl who for no definite reason aroused her mistrust was found to have forged papers. The second was an old man whom she noticed in a streetcar because he was talking too much and asking a great many questions of his fellow passengers. She demanded to see his papers and when he couldn't produce any she arrested him. He turned out to be an escaped prisoner from Murmansk, who either had odd tastes or treacherous intentions, for his pockets were filled with flares. When I expressed astonishment at her being able to spot dangerous characters at a glance she explained it by saying, "As a militiaman one develops an instinct."

### You Get Used to Bombs

The moment the air-raid siren sounds, all militiamen must report at the stations with their steel helmets. Natalie Petrovna was on duty one night when a high-explosive bomb struck a house near by. She called for assistance to form a cordon around the house as crowds must not be allowed to form and panic must be prevented. She then helped carry out the wounded and what furniture was left intact and, when there weren't enough ambulances, commandeered passing cars to carry the victims to the hospitals. "What do you do when you see that a bomb is going to fall near you?" I asked. "I step back a few feet," she replied. "We are not

"He says he's only experienced in firing blanks"

# HOW I RETIRED ON A LIFE INCOME OF $150 A MONTH

### To men of 40 who want to retire in 15 years

"FIFTEEN years ago I made a discovery that changed my life. I believe it will interest you.

"At that time, I was worried about myself and my future. I seemed to be living in a circle. I used to dream of being able to relax and enjoy life, without money worries. I longed for security.

"But dreams like that seemed hopeless. I wasn't rich. I probably never would be. Like millions of others, I would simply live and work and die—spend a lifetime making ends meet.

"But that was 15 years ago. Now I have retired on a life income. I have no business worries—my security is guaranteed. I can work or play, as I like. Each month the postman hands me a check for $150 and I know that I will receive another $150 every month as long as I live.

### Here's What Happened

"My friends are envious. They want to know how it was possible. How, without being rich, I ever managed to retire on a life income. The answer is simple: When I was 40, I discovered the Phoenix Mutual Retirement Income Plan.

"The minute I read about this Plan I realized it was just what I needed. It showed me how to get an income for life beginning in 15 years. It showed me how to get immediate protection for my family in case I did not live until then. It even included a disability income for me if, before age 55, total disability stopped my earning power for six months or more.

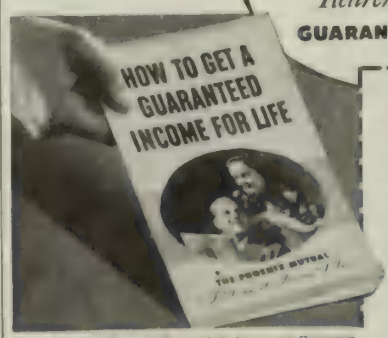
"Best of all, the cost of this Plan was within reason. In fact, the Plan called for far less money than ordinary investment methods would require to get the same income.

"Today, at the comparatively early age of 55, I have the things I want—life-long security and freedom to do as I please. I can laugh at the worries that used to haunt me. With an income of $150 guaranteed me for life, I can be sure of comfort and happiness in the years ahead."

This story is typical. Wouldn't you like to make sure of your own future?

Wouldn't you like to find out, for yourself, how the Phoenix Mutual Plan works? You can get the facts, without obligation, by sending for the booklet offered below.

### Send for Free Booklet



Send the coupon and you will receive, by mail and without charge, a booklet which tells about the Phoenix Mutual Plan and how to qualify for it. This booklet explains how to get a life income of $10 to $200 a month or more, starting at age 55, 60, 65 or 70. It shows how the Plan can protect you against emergencies, and how you can fit the Plan to your own needs. Don't put it off. Send the coupon for your copy *now*.

allowed to do more than that." I pursued the subject by asking if she wasn't scared during raids. "No," she said, "one gets used to them very quickly."

When the head of the British military mission, General Mason MacFarlane, returned from a trip to the front he told correspondents that he had seen four women very far forward in the lines. One was a clerk, another a chauffeur, the third a nurse and the fourth a telegrapher. The last doubled in brass that evening by cooking a goose which had been killed for the general's supper. The nurse, he said, had greatly distinguished herself by her courage when she carried wounded men off the battlefield while under fire. She is only one of many nurses who are writing a heroic chapter in the story of this war. Every day the papers publish stories of nurses' exploits at the front, and one in the north even earned the praise of Marshal Voroshilov when she carried six wounded men out of occupied territory.

### Women at War

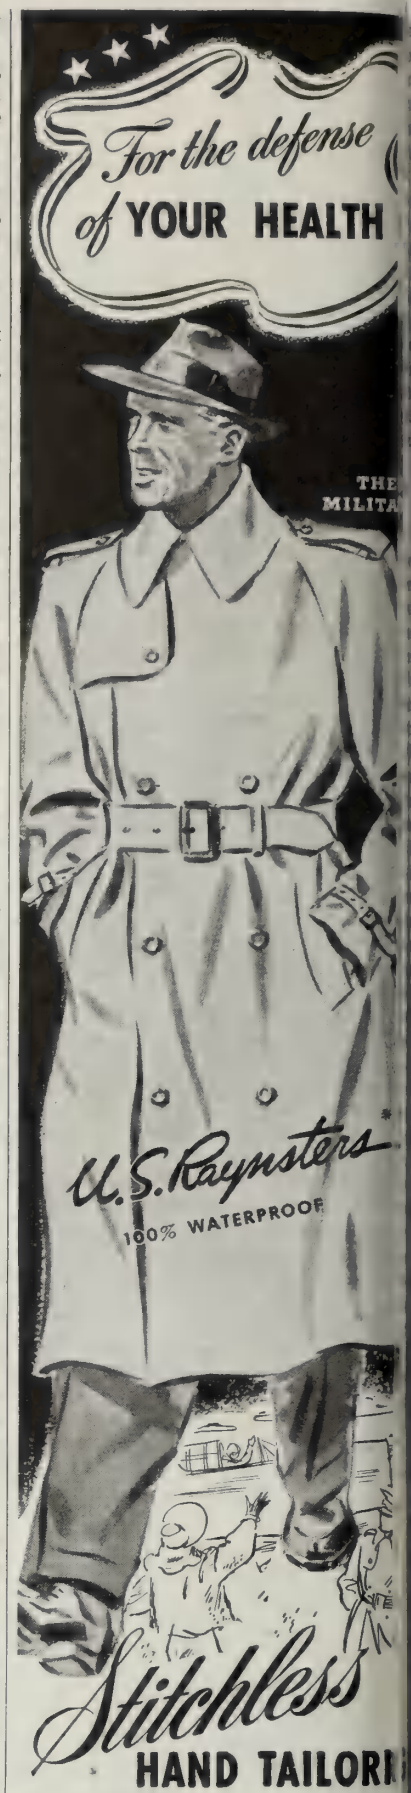
So far it has been the definite policy to send men doctors to the front in preference to women, but nevertheless there are many working in the first-aid stations and field hospitals. Also they have plenty to do behind the lines. It is possible to get a picture of their activities from the story told me by Lydia Alexandrova, who is head of her department with a staff of twelve doctors in a hospital for wounded soldiers which used to be a clinic until civilian patients were evacuated to another Moscow nursing home at the end of June. There are a hundred beds in her section, some filled with men so badly wounded that they were flown directly from the field in special planes. Many of those who were in base hospitals first have been wounded twice, once on the battlefield and once when the base hospitals were bombed. According to her the only things they want read to them are the newspapers, as they are eager for the latest news from the front, and talk of nothing but getting well quickly so they can return to fight.

She is on duty from nine in the morning to two-thirty in the afternoon except twice a month when she takes twenty-four hours' duty. Sunday is free and she spends the time at home with her husband, who has volunteered for the People's Army because he is over military age, and her children—an eighteen-year-old daughter who is studying to become an aeronautical engineer, and twins, aged eleven, who help edit their school paper and write rousing articles about patriotism and the duty of everyone to help his Fatherland. When the regular hours are over Lydia Alexandrova spends several more working in the laboratory and during the time when the raids were on insisted upon remaining nights at the hospital as she wanted to be on hand to see her patients moved down to the cellar and help keep their minds off the noise of bombing. If, however, she is caught at home during a raid she immediately joins the sanitary corps of her house. That's what might be called a full schedule.

Women who feel they would be most useful as nurses but haven't the necessary training join the sanitary corps, whose members work in the first-aid stations in the cities and are attached to battalions at the front and do first-aid work. I know three girls who put in an eight-hour day at regular jobs as typists and clerks, then go off to medical classes for training to become nurses. Three nights a week they serve as unpaid volunteers in one of the hospitals where they fetch, carry, dress and wash patients and generally assist the nurses. Once they were given leave from their offices to go with their sanitary corps when it accompanied a battalion from the city part way to the front, where it picked up its own experienced sanitary corps. The idea was to have the girls on hand just in case any slight accidents occurred on the way. They were very much disappointed because they hadn't a chance to get any practice, since no soldier so much as stubbed a toe on the trip.

Two nights a week the girls join the street and roof watchers of their apartment houses. I couldn't quite figure out when they got any sleep and said as much. They shrugged that question off as unimportant. "On quiet nights we get a chance to sleep in the hospital," they said. It's true they didn't look tired and their clear eyes and pink cheeks offered ample testimony of the Russian woman's remarkable stamina.

There are even female veterinaries attached to the army. Recently I read a story in the paper about one who went right up within a few miles of the front to look after the tired and wounded horses of the Red army battery. While she was there she cooked for the men and at night amused them with funny anecdotes and the story of her life.



Women pilots who were already in the air force when the war began are now being allowed to stay with it, in some cases even seeing active service at the front. No exact figures on their number can be obtained, but it apparently is small. Four or five have already distinguished themselves and have been awarded decorations for bravery. Others are staying at the home airdromes in various capacities. Captain Urasova, whom I met, is an instructor. She has the Badge of the Order of Merit, given her because of competence both as instructor and flier and she also wears the Parachute Badge pinned on the breast of her khaki tunic, showing she is a qualified parachutist.

At the age of twenty, after having worked three years in a textile factory, she decided to take up flying and entered the school for army pilots. It was a step which led not only to a military career but to the acquisition of a husband, for she married her instructor. He is now a colonel flying at the front, which makes her very envious as more than anything else in the world she wants a chance to take her pursuit ship up against the Germans. Unlike the militiawoman, Captain Urasova carries pictures of her husband and child, which she produced, asking me to note the Order of Lenin, which her husband was wearing. I inquired whether she had continued to fly while expecting the child, and she replied she had during the first five months, after which she was given a desk job. Somehow the idea of having to buy army officers' maternity uniforms struck my sense of humor. She laughed with me about it but explained that hadn't really been necessary since Russian tunics are full. All she had to do was keep punching holes in her Sam Browne belt.

### Girls Who Fight Fires

Women are not excluded from the regular fire brigades. I know two female fire fighters, Valentina and Katie, who are nineteen and twenty-one. Valentina is a good-looking girl with a magnificent complexion, who looks very smart in her blue uniform and high boots. Katie is plump and snub-nosed and brims over with vitality and enthusiasm. They both think fighting fires the most wonderful job in the world. Theoretically they are on duty twenty-four hours, with a layoff period for the succeeding twenty-four, but during the period of raids they often stayed on much longer. Valentina during a fire stays on the telephone to keep the firemen in touch with the sta-

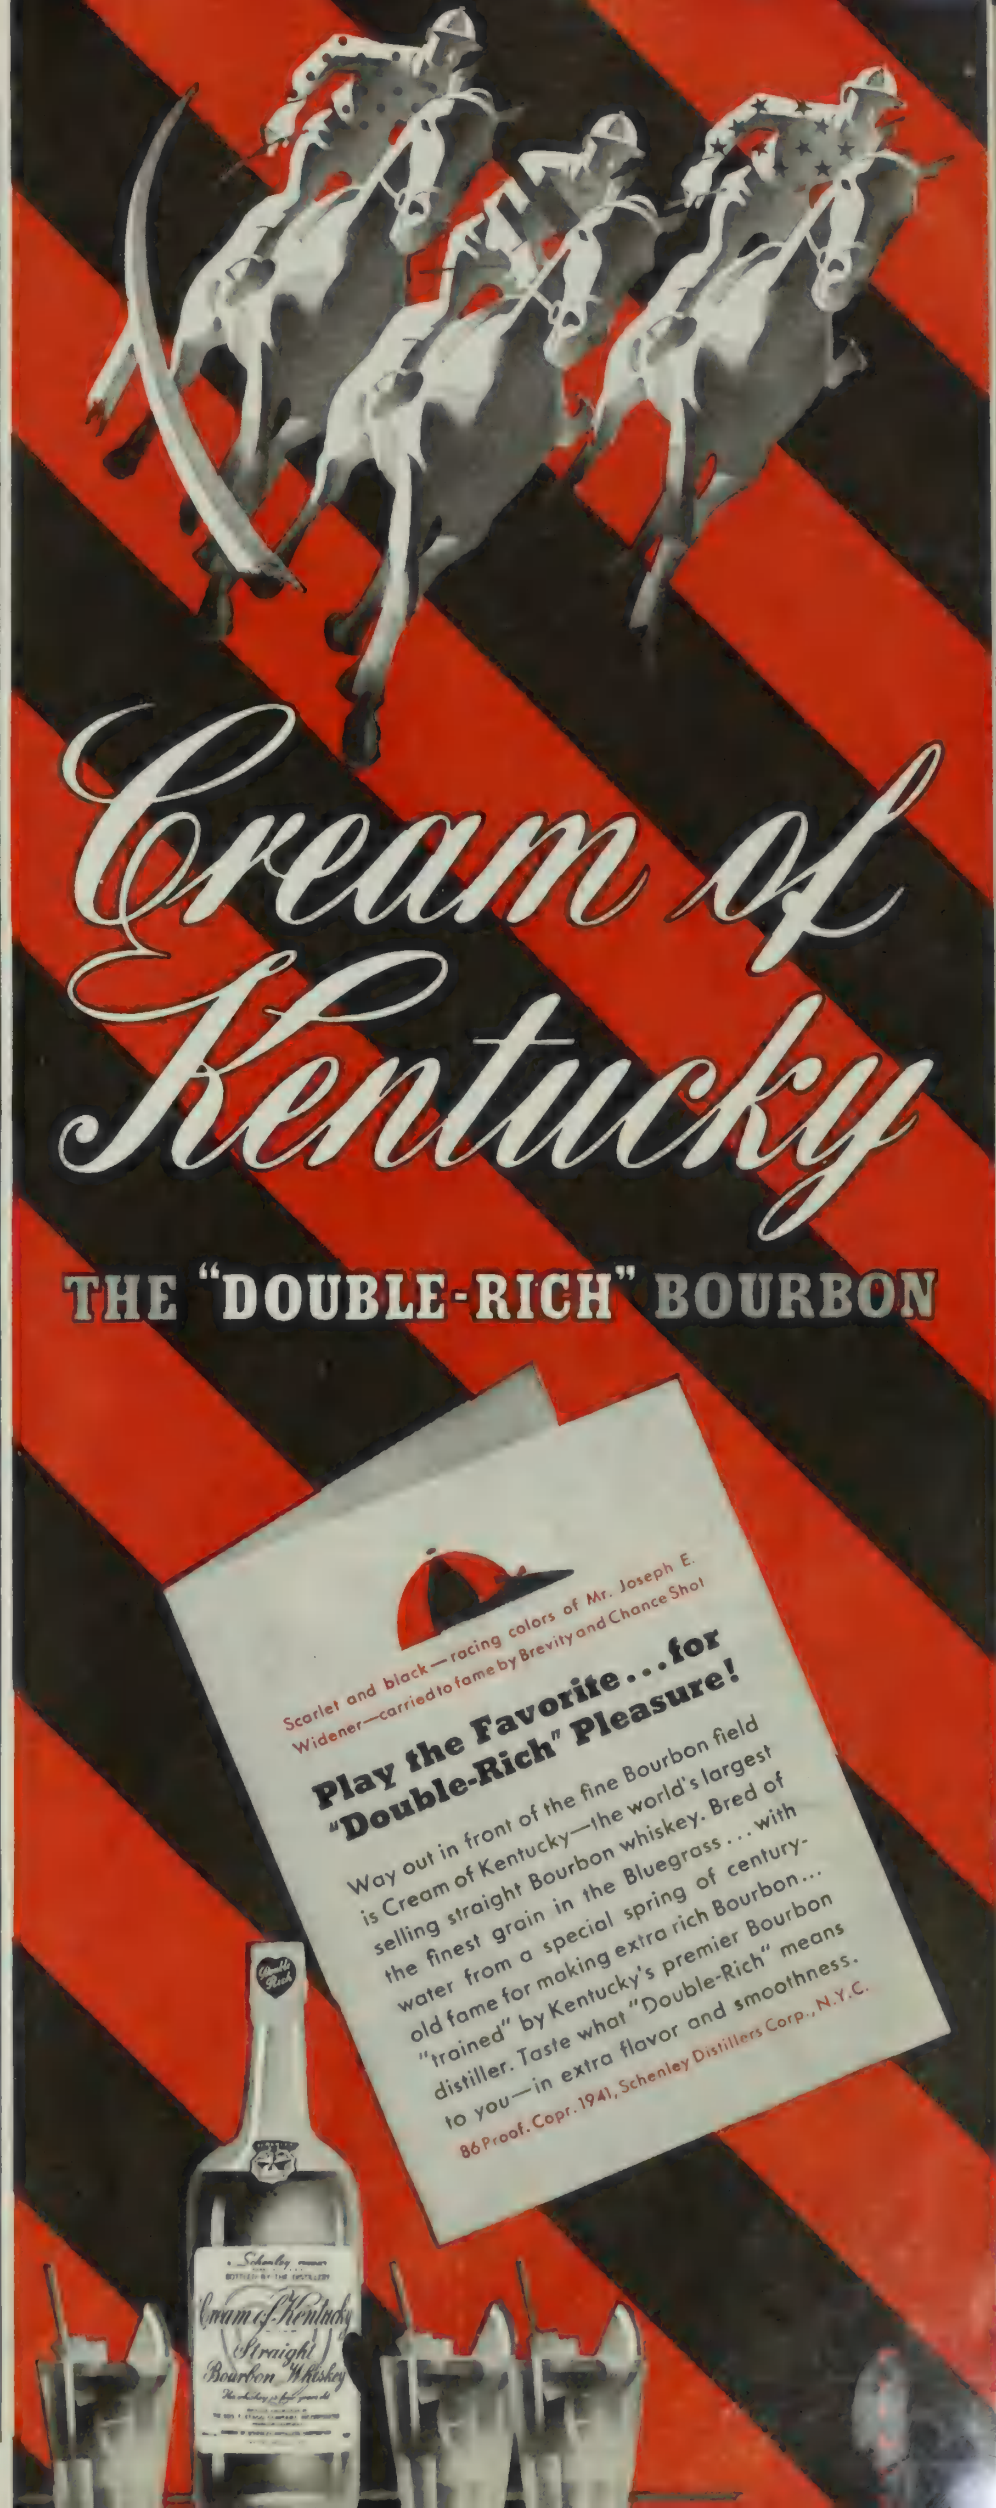
sses and ballet dancers take their
oo as roof watchers and between
rehearsals attend fire drills in the theaters. There were fifty-six actresses in five Moscow theaters who studied to become trained nurses and had finished their courses by the end of September. On nights when they weren't acting they went to the hospitals to get practical experience in caring for the wounded. Others are doing their bit by traveling up to the front with their companies to put on shows for the soldiers. One troupe has just returned from Odessa; another recently got back from the Gomel area.



I spent a couple of hours one afternoon with Maritta Chaginian, the popular author of fifty-eight books, who besides continuing work on her thesis for a degree in philology and doing her regular writing, writes articles for the papers explaining Naziism to the Russians. She is soon bringing out a small book on Rosenberg, a criticism of his theories. We talked about the war work being done by women and she told me that her daughter, who is six months pregnant, has insisted upon taking her turn on the roof and has helped put out several incendiaries. Chaginian herself enlisted for the same kind of work in her house but was turned down because of deafness. She was indignant at first but since then has had to admit maybe there was some point in refusing her services as one night when she was sitting in the cellar reading an American detective story (her favorite air-raid reading matter), she was jolted off her chair. She turned on a neighbor, crying, "Stop pushing me." The man looked surprised, as he was entirely innocent; the jolt had been caused by the explosion of a bomb across the street which Chaginian had not even heard.

Five ARP workers were brought to a press conference one afternoon to tell the foreign correspondents about their work. All had been decorated and one held the record for extinguishing sixty-six incendiaries one night. Another was a very young girl with a pudgy face and a high, child's voice who looked as if she should have been out with the other kids skipping rope. Instead she works in an electrical plant and wears the uniform of a regular ARP worker—blue skirt, full-belted khaki tunic and forage cap. When we asked her what she would do if a German parachutist landed on her roof she answered, "I'd break his neck." No one doubted for a moment that she would.

# Surprise in Armor

Continued from page 15

to yell words above the motor's grunting, the two soldiers relapsed into silence.

A hand reached in through the driver's door and beckoned. Dimly a voice shouted:

"Come outta that, Terry, and stand by to tow!"

The driver climbed out through his doors, which opened like horizontal cellar flaps, while MacGinnis went up the turret. Outside all was pitch-black, with now and then a drop of rain. Behind them, in the dark, MacGinnis and Terry, the driver, could hear the pounding of hammers as the crew of a disabled tank took out the towing clevis and attached their towing cable.

"Tank behind us is in the ditch or over a culvert," decided Terry. "These damn' things will stick if you look at 'em."

"Well," suggested MacGinnis, "let's go get the rear clevis workin' before the sergeant comes back an' takes away our appetite for even a chocolate bar."

THE towing cable of the forward tank was run back and attached to the cable of the disabled one, then, climbing back into his seat, assisted by MacGinnis repeating the sergeant's signals through the side door, Terry snaked the ditched tank back to the road again. Then the towing cables were strapped into place and the crews prepared to descend into the lower regions to take their places again. From the darkness appeared the sergeant, and seized MacGinnis by the arm.

"LeClaire's tank hit a concrete milepost, it knocked him cold an' the tank commander hit the gun and *he's* cold, too. So me and Red are gonna take over the tank. Tell Terry. We ain't far from bivouac. We got the maintenance truck behind us, the rest have gone on. You act as tank commander, see, an' when you see two parallel blue lights close to the ground, that's the battalion bivouac. There'll be somebody there to meet you."

"Sergeant," faltered MacGinnis, "I ain't had much service. I'll do as you say. My father was in the last war, an' he says, 'Use your discretion about doin' what some second looey tells you, but when a sergeant speaks, you just co-operate.' So now, whatever you say, I'll do, but I never guided a tank in my life, an' after dark, with the brigade loose in this part o' the country an' operatin' without lights, I just as soon not be in a tank turret directin' the driver."

"A'right," the sergeant said. "I'll go first. You folly me."

The two tanks lurched forward, tracks clattering, engines panting, down the road to catch up with the column.

A hand tugged at MacGinnis' coveralls, where he stood in the turret. He bent down. Dimly he could see Terry's goggled face looking up at him in the glow of the radio dial. Terry, seeing that he was observed, touched his goggles. MacGinnis obediently wiped them with a piece of waste. Terry signaled impatiently that that was not the trouble, then returned to his controls, and MacGinnis saw him pull back the steering lever that threw the tank to the right and off the road. Clank! the long gear-shift arm went into neutral. The roar of track and motor died.

"I can't see a dad-blamed thing!" roared Terry's voice up the turret. "Why don't you give me a signal once in a while? Yuh playin' solitaire up there or readin' a book or what?"

"I can't see nuthin' neither!" protested MacGinnis. "So how coul read a book?"

"Ah, don't be no dumber than was born! When did you see the ot tank last?"

"Not since we took off."

"You ain't! Why didn't you do so thin' about it? You dope! What a cruit! What'd yuh think we come here for, our health? Just whadd think we're doin' out in this neck o' world this time o' night—snipe hunti

MacGinnis crawled down out of turret and leaned over the driver.

"Why, it's to prepare us for war, see if we could live with no chow that chocolate bar the colonel inven an' to meet the enemy in the shap them five milishy divisions. The c nel's got a plan, I heard tell, tha pretty near perfect, about a pene tion an' then wide envelopment, c the envelopment comes from behind enemy, instead of in front of th Guy sleeps next to me in the barra he's the striker for a major, was t in'—"

"Ah, bolts an' nuts!" With a gest of reach, Terry swept the switch o and cut the motor. Silence that hur once ensued. "Listen, MacGinnis," c tinued Terry, his voice ringing nov the steel walls, "you pay attentio what you're doin', an' stop wande in your mind like a pasturin' jackas a field of oats! We were right clos bivouac an' we probably run by it! shoulda been in long ago. We had e miles to go an' we've gone ten by speedometer. The sergeant an' the in bed by now, you cluck!"

MacGinnis at once projected him from the turret, like a grub from a b and listened.

"Nah!" he called down again. " outfit ain't bivouacked. I can hea Maintenance is still behind us. I hear 'em, too. G'wan down the courageously. My father was in last war. 'Always go courageously, says, 'if you want to get somewher

DIMLY MacGinnis could see the la like form of the driver project i from the door and hold on to the non, while he listened. All about th coming in waves like the beat of ocean on the shore, was a steady vi tion of sound, the thunder and the of the armored brigade on the ma Tracks clanking, motors throbbing backfiring, four hundred armored n sters were surging forward through streaming darkness.

"They are too, bivouackin'," Terry. "The outfit don't make all noise on the march!"

"Well, if they're bivouackin', we find 'em, then, can't we?"

Terry climbed all the way out, stood on the lap of the tank.

"That ain't the point," he announ "That noise we hear is what they the bulk of the brigade. Our regi was to turn off to the west, so they c do that envelopment you spoke abo

A third voice spoke from the d ness: "Hey, what's the matter with guys, broke down?"

"Who wants tuh know?"

"Maintenance. If you're broke d say so, an' let's get at it. If you dump the lead outta your britches let's get on. We wanna get to slee night, strange as it seems!"

"Just keep on your coveralls, yuh?" barked Terry. "This stupe I in the turret went to sleep an' I t we lost the column. They turne west somewheres."

"I never went to sleep. I didn't

o fight to the bitter end and yet be gracious in victory or de- ...*that* is the very essence of American democracy and unity.

We, the nation's brewers, are proud that beer and ale are so often the favorite beverages at these autumn gatherings of lovers of good sportsmanship.

Yet, it is only natural that beer and ale should be so honored! Brewed from Nature's rich grains and fragrant hops, beer and ale are delightful to the taste, relaxing, wholesome. But above all, they are the "beverages of moderation," which traditionally go hand-in-hand with a wise and tolerant way of life.

*se beer is a beverage of moderation and so great a national favorite, it deserves to have its good name guarded well. We who brew America's beer are co- ting to prevent abuses wherever they may occur in the retailing of beer and ale. You can help with understanding and support of the brewers' "clean-up or up" program... described in a booklet sent free on request. Address United Brewers Industrial Foundation, Dept. B10, 21 East 10th St., New York, N. Y.*

UNITED BREWERS INDUSTRIAL FOUNDATION

*Do you smoke fast?*

When you're nervous or excited, do you puff harder on your pipe? Then you re a candidate for a Carburetor Kaywoodie. There's a tiny Carburetor at the bottom of the bowl, that lets in a tiny geyser of air. The harder you puff, the more air comes into the bowl through the Carburetor. Your smoke stays cool, serene, no matter how furiously you puff away. Of course, that ingenious "Carburetor" is only part of the enjoyment story. Kaywoodie pipes are made from the costly, rare old briar, imported before the war, that produces an incredibly sweet smoking pipe.* Four dollars initiates you into the society of Carburetor Kaywoodie devotees.

*Kaywoodie briar is dug out of the ground years in advance : so the war has not interfered with our supply.

Here you see a giant imported briar burl cut in cross section to show the "prime cut" segment from which Kaywoodie pipes are made. Only this prime cut produces pipes with the sweet-smoking qualities of Kaywoodie pipes.

Yours for the asking: *The Kaywoodie Pipe Almanac* which knows how to get the fullest pleasure from pipe-smoking.

KAYWOODIE COMPANY
New York and London [ In New York 630 Fifth Ave ]

no column. You stopped an' cut your motor. You got rattled, so there. My father said that when a guy got rattled, he was already three-quarters licked."

"Pay no attention to him," advised Terry. "He's a psychological case, like the medicos say. The regiment has swung west, an' we come straight on. I figure if I turn around an' go back we can find the turn."

"There ain't no left turn," said the maintenance man. "I wasn't asleep, I was watchin'. If they turned off, they went cross-country. I heard the bivouac area was Eelbeck. Let's get there an' get to bed."

A wild burst of rain ended the council of war. The maintenance man ran back to his truck, Terry climbed into the tank, and MacGinnis slid halfway down the turret.

"Keep your eye peeled!" admonished Terry. "I gotta button up my doors, or drown. Now, kid, it's up to you. If I go off the road or over a cliff, or smash this tank, you'll regret it! An' what I mean 'regret' with a capital 'R'. Jumpin' James! An' all this for a chocolate bar!"

THE motor was started, the gears clanked, the patient tank shook its head and settled into the collar to haul its fifteen tons along the streaming road.

The road was unpaved, and the swift rain soon turned it into a butterlike consistency. The tank banged and lurched out of deep potholes dug by preceding traffic. They had, thank heaven, plenty of gas.

The motion of the tank became easier after a time; it lifted and fell to the inequalities of the road with the easy rise and fall of a small boat over moderate waves. When he was certain of the motion, and that it did not change to the violent thump and jar of the potholes again, Terry cut the gas, put the gear shift into neutral, and pulled on MacGinnis' leg.

"Hey, MacGinnis, we're off the road. We're goin' across country. I can tell by the motion."

"I know it. It's all right. You can't run into no ditches here. I was scared to death on that damn' road. This is a good wide field by the looks."

Terry raised his head to look up the turret.

"You dish-dashed fool!" he called. "You ain't got the sense God gave a bedbug. This is no time to go wanderin' around fields. It's late! We're due in bivouac. Why didn't you stop me the minute we got off the road? Whaddyuh want to do, promenade around these turpentine swamps the rest o' your life?"

"I see lights," admonished MacGinnis. "I'm directin', ain't I? I thought we could cut across country. There's a string o' lights over there, that's the main highway."

Terry cut the motor. "Climb out an' open my doors!" he ordered. Then, when it had been done, he climbed out and looked about him.

All around was blackness, palpable, almost. Rain hissed on the hot mufflers, and rattled on the armor. There was no sound of the other elements of the brigade.

Terry spoke his feelings, blue flame, splashes of fire, like a cold tank backfiring.

"Show me that road where you seen all the lights!" he demanded.

There were no lights now. Maybe they turned the lights off at one o'clock or something. Those small towns did. Or then maybe it had come on to rain so hard that you couldn't see the lights. At these thoughts of MacGinnis', Terry sneered.

"Applesauce!" he raged. "Them was the lights of a bunch of motorists held up by a column. They was goin' home to bed. You know my thought on this? We're lost."

There was a silence. The rain, which had ceased for a time, once more fell heavily.

"I can't go on," said Terry. "I can't. I'm too tired."

Pause.

"Well," said MacGinnis, "I ain't had but about five hours on a tank, but if you'll say so, I'll drive for you."

They re-entered the tank.

"Wind her up!" crisply ordered Terry. "You can't fall off no cliffs, nor hit no tanks in front account of because there ain't no tanks in front. If we get stuck, we c'n spend the night like I planned to anyways. Let's go!"

The motor subsequently woke to thundering life, the gears clanged into position, and with a growl of tracks the tank lumbered into the night, tossing its head like a plow horse as it crossed the furrows. The road where MacGinnis had seen the lights was not far away, not more than a field or two. He kept his door open despite the streaming rain that ran down his windpipe.

The crew of a tank in motion are celled in from one another and the world outside by more than steel. With the roar of the motor and the beat of the tracks, speech is impossible. The driver can see little, even with the door open in the daytime. The man in the turret, who guides the beast as the front man of a stage horse guides his fellow, can see in the daytime, but not at night. The only perception that can register on the tank crew is the cracking of trees torn down by the ponderous march of the pachyderm of steel.

The crackling of wood, and the brushing of the branches under the belly of the tank apprised MacGinnis that he was entering woods, big timber by the sound. But he had seen no woods! There had been no woods between him and the lights he had seen on that road, else he could not have seen the lights! Crrrrack! Down went another tree.

In such circumstances, it is better at night to have a man dismount from the tank and, walking ahead, feeling with his hands if he cannot see, lead the willing monster between the trunks it cannot knock down. A tank is steered by two huge levers, and the gear shifted by another one almost as big as the reverse lever of a locomotive, and requiring almost as much strength to operate.

MACGINNIS' hands flew from one lever to the other, as he thought he felt the track biting into a tree. The rain beat in remorselessly, to the point where he finally had to drop his door in self-defense. It seemed to him that he was at the bottom of the sea. He had felt the descent of the tank going downhill, the speed had increased so that he had not had to use his accelerator to keep the engine revolutions high, but there had been no corresponding climb on the other side. He could not tell now whether he was still in the woods or not. Well, what did Terry say? MacGinnis put the tank into neutral and turned. The turret was empty.

MacGinnis was out of the seat like an eel, he had a flashlight out of its socket, and, shielding it with his hand, he swung it into the turret. No, Terry was not hiding there. The turret was "buttoned up"; that is, the cover had been closed. Then MacGinnis found Terry, a tumbled heap in the hole behind the driver's seat. He was alive, there was no sign of blood on him; he had fallen down the turret and had the wind knocked out of him. Or maybe worse. The first thing to do was to open the turret and get some air in there. Then to find out where they were. But the turret would not open. The latch was not locked, yet some invisible force held down the lid.

'm tryin' to find somethin' on the
o," answered MacGinnis. "Some
c or somethin'. I ain't goin' to sit
alone in the dark an' just listen to
elf be frightened."

E chilling wind that comes before
e dawn awakened the colonel of
Ginnis' regiment in his "black" tent
e depths of the regimental bivouac.
ead of burying his head beneath the
kets again, he leaped out like a
ng man eager to run a race, and
ed on his boots.
Torbert!" he called. "Come, get up!
re to be queen of the May. Come
the blitzkrieg takes off! I'm goin'
it the defending infantry in the solar
us. Rouse out! Come on, Torbert,
get up those lazy umpires, and let's have a cup of coffee!"

Shortly a knot of sleepy officers gathered in the black tent, rubbing their eyes and sipping gingerly at scalding coffee.

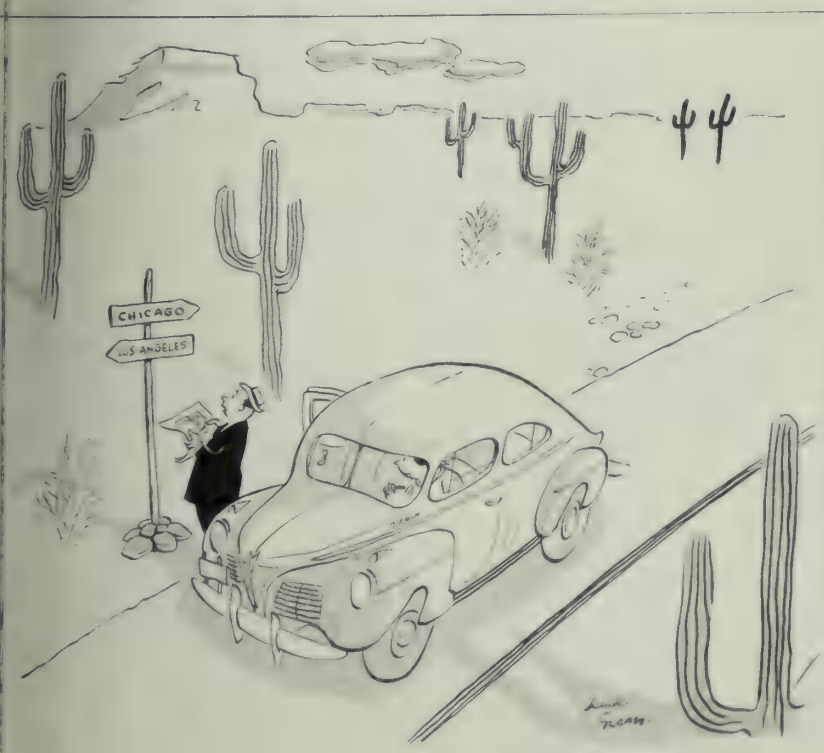
"Gentlemen," began the colonel, "we are some two miles on the enemy flank in concealed bivouac. This regiment will attack just at daybreak, generally west. The brigade will simulate a withdrawal, the enemy will pursue, thus getting stretched out in front of us, then we hit their command installations, their communications, and when we're right smack behind them, the bulk of the brigade counterattacks. Armored-force tactics, gentlemen!"

The umpires made notes on their score sheets. In maneuvers, since no one gets killed, umpires have to pass on the probability of success of a projected attack, and decide who wins an encounter, based on the disposition of the forces, and the weapons employed on both sides. Their chief was a hard-bitten colonel, who chewed upon a cigar.

"We'll allow it!" he said decisively. "They didn't have a single outpost nor road block, nor antitank measure that I saw. And I was out on the roads until midnight. All right, let's hear your attack order."

"Have it all written out for distribution!" smiled the colonel. "Have some more coffee? We heat it over an alcohol stove, sir. Tasty, don't you think at this time of the morning? . . . Yes, orderly, what is it?"

An orderly stood there, like an attendant slave in the darkness. He held aside the tent door. Three shrouded individuals entered. They wore campaign hats, on which blue bands could be made out in the light of the gasoline lantern.



"Colonel Mell?" smiled their leader. "Landers is my name. Chief of staff to General Collins."

"Yes, but you men are Blues!" expostulated the colonel. "What's the matter? The maneuver off? What are you doing here in my post of command? Dammit, I've a good mind to take you prisoner!"

"No," smiled Landers. "We regret to inform you that you are ours."

"What is this folly?" thundered the colonel. "I'm in my own bivouac!"

"About to be bombed from the air,

**"Hmm-m, Chicago the other way. That probably explains why the sun rose in the west this morning"**

taken under artillery fire, and destroyed. In addition we have every exit covered by antitank weapons."

"We'll run 'em down!"

Landers smiled. "I have my umpires present. May I present them for conference with yours?"

The coffee turned cold while Colonel Mell waited. The umpires muttered together. Finally the hard-bitten senior spoke:

"He's got you, Mell. You surrender or wait attack?"

"Never! Bring on your ding-donged attack! I don't believe it!"

"You'll hear the planes in a minute," said Major Landers, consulting his watch. "The artillery umpires will be here fifteen minutes after the batteries open fire. If you want to inspect the antitank measures while you're waiting—"

"I didn't see any last night," said the senior umpire.

"We kept them concentrated, sir, to be emplaced about the bivouac under cover of darkness."

Colonel Mell, held by the maneuver rules, could not leave the tent until the first planes appeared overhead. He beat upon the table in his impatience. His language smoldered like a burning coal.

"Got a piece of that famous Ration Z chocolate of yours?" smiled Major Landers. "I'd like to try it."

The colonel paid no heed. He was listening for the drone of planes overhead that would mark the destruction of his regiment.

A quarter of an hour passed.

"Where are your planes?" asked the senior umpire.

"Well, they'll be here any time!"

"Colonel Mell now planned to be moving from bivouac," continued the umpire, "according to his order. Go ahead, Colonel, you're released. See where the planes catch you."

"Well, the first thing I do is to declare Landers and all this bunch of jokers prisoners!"

"Allowed."

"But the artillery—"

"Where is it? Produce the smoke pots and the artillery umpires! I don't see any. Nothing is simulated in this maneuver. Produce 'em; if not, then we don't count 'em!"

"Well, sir," pleaded Major Landers, "the antitank guns are emplaced. I can show them!"

"And I can show you what a hundred tanks will do to them!" exulted Colonel Mell.

Five minutes later, with the roar and thunder of an advancing hurricane, the armored regiment burst from its bivouac to the assault.

ABOUT eight-thirty that same morning, two command cars, one bearing the white flag that marked it as an umpire vehicle, steered across a field toward where a lone tank rested, all enmeshed in telephone wire, much like a fly imprisoned in a spider's web. Gnome-like tank soldiers were already busy about it, snipping the wire, hacking with axes at the enveloping strands.

"What happened here?" demanded Colonel Mell, getting down from his car.

"He knocked down a telephone pole, sir, in the dark, an' kinda got wound up in the wire." Thus explained a sergeant who directed the untangling operation.

The senior umpire got down from his car, accompanied by the disgruntled Major Landers. The ground told its own story. A trunk telephone line here cut across open country. Two telephone poles were down, one underneath the tank. Their wires had finally caught and held the impetuous monster. After all, even a tank cannot tear down ten lines of telephone wire and a mile or so of poles. But the tank revolving sprocket, and the lower track had drawn this wire tightly over turret to driver's doors, imprisoning the crew.

Major Landers turned pale, the

"Sir," he cried, clutching the umpire's arm, "I protest! This done on purpose! No wonder tl tack on the bivouac didn't com We were going to telephone the ai instead of using radio to start tl tack. The Germans used comm circuits in Flanders; I guess we It was to preserve secrecy! So C Mell goes and destroys the comm circuits! That's forbidden!"

"Well, he didn't know your pl why would he wreck the telephon tem? What's the crew got to sa

First out was Terry. Then Ma nis. Both reeled from stiffness a got down, and regarded the gro officers with apprehension.

"What happened here?" aske colonel.

"Sir," replied Terry, "I do not I was knocked cold by some enem

"I couldn't go no further, sir, MacGinnis, "account it's against lations to move a tank with no observation in the turret. So I s too. Anyways, we couldn't get o was tied in."

IT COULD be seen also that th true. The sheaf of wires on th phone pole's crossarm had been in the running gear of the tank, down across the bow, and then sli the turret as the tank advanced wire catching beneath the lid of tl ret which opens forward, had sla it down upon the head of the unsu ing Terry. More of the same, wi help of one of the recumbent pol finally stalled the tank.

"And look," cried Major La "there's the umpire wire all tang with the rest of it! That's wh artillery attack didn't come off e

"H'mmm." The senior umpire grave. "Didn't you see the red t those umpire lines?" he asked M nis. "You should have known th pire lines followed the comm poles. How can we run a maneu the umpires have no telephones

"Sir, there was lights here," saic Ginnis. "I thought they was a When I got here they were gone was the road."

"Probably signal-corps trucks ing the umpire lines," said the umpire. "Being neutrals, they keep their lights burning. Well, i have happened in battle. My stands." He coughed. "But I really know who's going to pay f destruction of property, two pole phone, and some miles of wire."

Major Landers turned like a ing hawk. "Why didn't you m your radio if you were lost?" manded.

"We ain't radio operators, sir, one of us!" answered Terry. "V receive, but it's somethin' else a run a transmitter. You have t beat it, an' that."

"You men run along now a some breakfast!" growled Colone "The less questioning here, the b

"We ain't hungry, sir," replied Ginnis. "We had the Ration Z late bars that the other men in th hadn't eaten, sir. We ate the meals straight and liked them fin

The colonel strolled away, the smile of the inventor on his calm tenance.

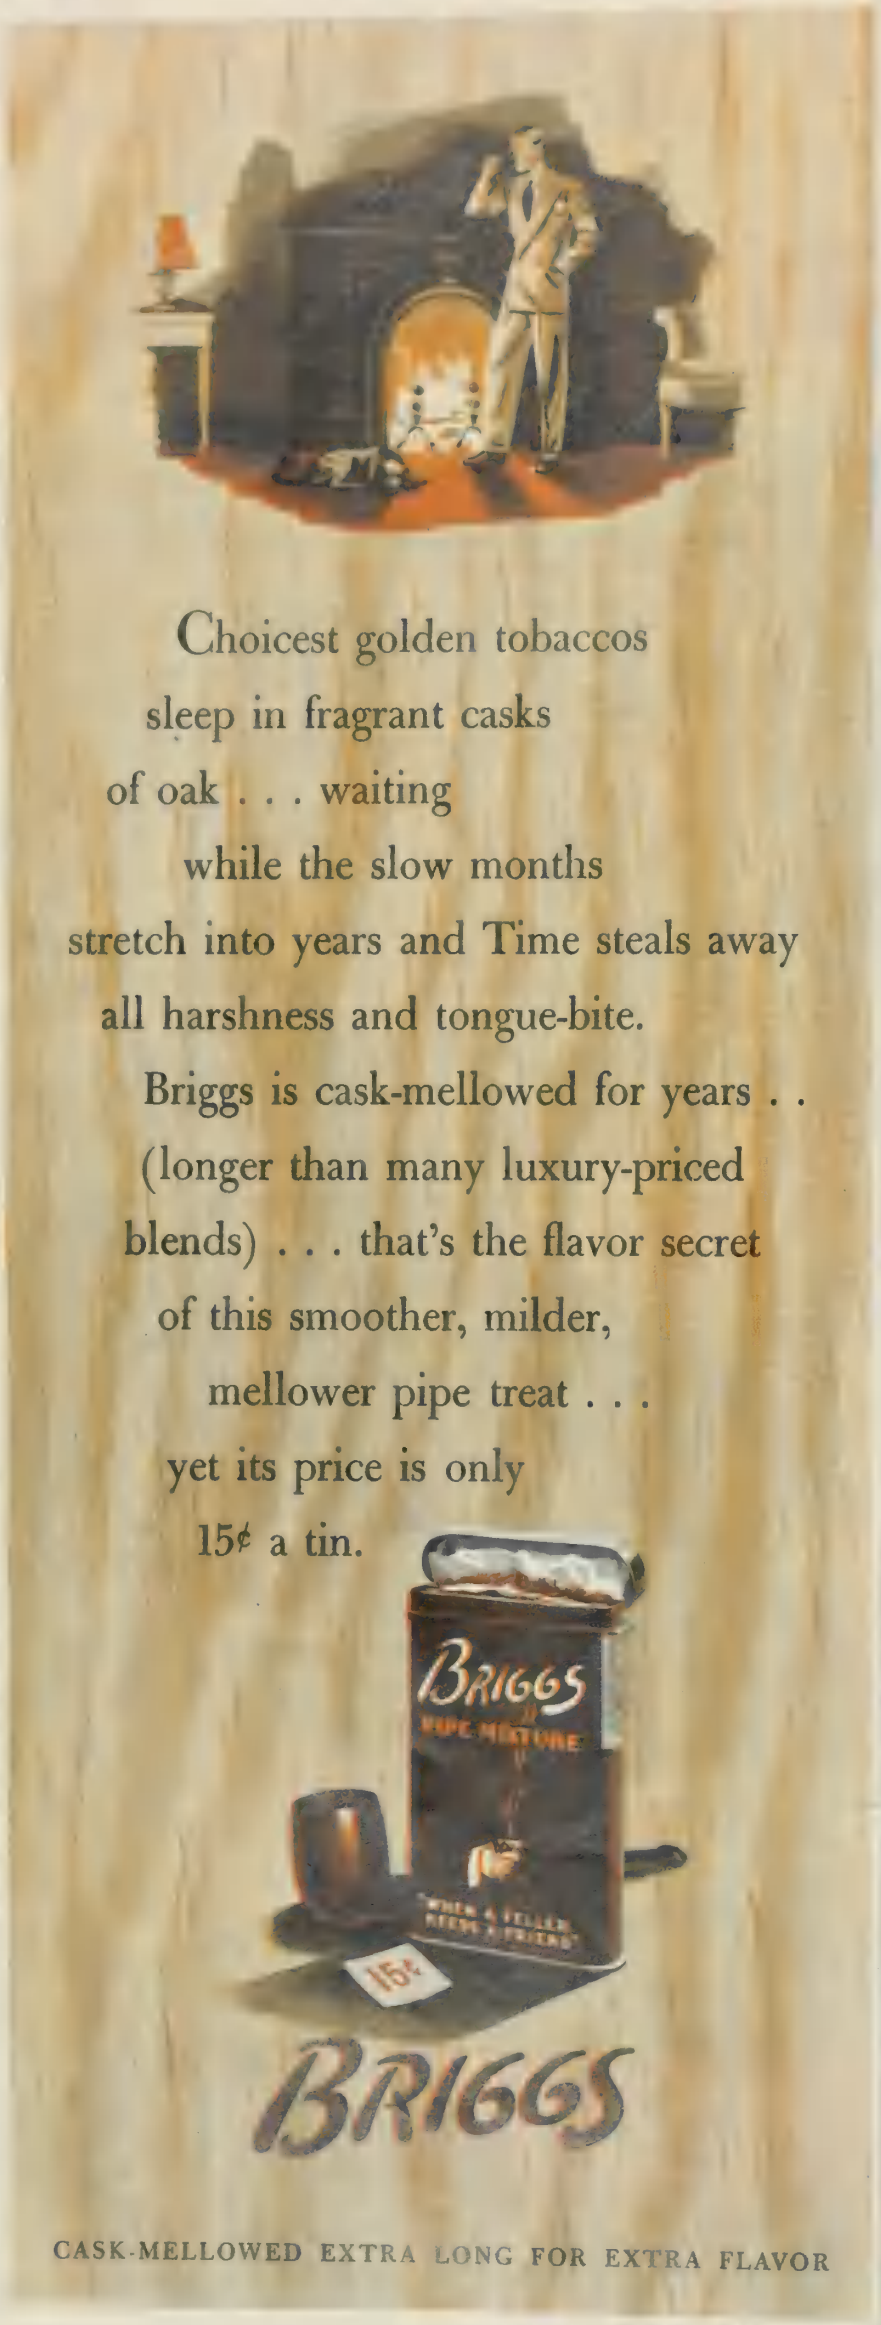
"You liar!" marveled Terry, wh officers had gone. "It was the ser sardines we et for breakfast! Wha you say it was that chocolate ba

"Huh. Do you want us to find a poles and wire on our pay roll? I have a father in the last w nuthin'!"

# u Pont tells how to choose the right anti-freeze for your car

**$2.65 A GAL.** **WON'T BOIL OUT! ONE FILLING LASTS ALL WINTER LONG . . .**

▶ Du Pont "Zerex" is an outstanding premium anti-freeze. It's non-evaporating. It's for the man who will pay a little more to get complete freedom from winter worries.



**$1.00 A GAL.** **ECONOMICAL! REQUIRES ONLY AN OCCASIONAL CHECK-UP**

▶ Du Pont "Zerone" is America's largest-selling anti-freeze. It's the type preferred by the American motorist who wants maximum anti-freeze economy with great efficiency.

**IN THE INTEREST OF NATIONAL DEFENSE,** conserve anti-freeze so there will be enough to go around. Don't buy or use more than you need. Stop leaks. Have your dealer tighten and clean the cooling system of your car, and use "Zerex" or "Zerone" in accordance with directions.

*nt makes "Better Things for Better Living—through Chemistry"... "Zerone" and "Zerex" anti-freeze are chemical compounds*

# Bringing Rubber Home

Continued from page 35

Growing rubber consists of a great deal more than simply sticking a seed in the ground and waiting for it to grow big enough to tap. Bringing Hevea back to the Western Hemisphere—its original home—posed a thousand problems.

What areas had the 80 inches of annual rainfall needed? (Denver has 14; Chicago, 32; New York, 43.) What localities had a mean temperature of 72 degrees? And good soil, available transportation and adequate labor supply? What could be done about rubber's chief bugaboo—the leaf-blight disease? This disease, unknown in the East, had wrecked previous efforts at plantation culture in the Guianas and Trinidad. It doesn't hurt wild trees growing in the jungle—they are too widely separated. But when trees are packed tightly together on plantations it goes through them like influenza through an army camp.

Fortunately, the U.S.D.A. had a man thoroughly equipped to handle the job: Dr. Elmer W. Brandes of the Bureau of Plant Industry. He is forty-nine, grayish and biggish; looks something like OMP Director Knudsen. Most of his professional life has been spent solving problems of tropical agriculture. He has worked with diseases of bananas and other fruits. His biggest achievement was conquering the sugar-cane mosaic disease.

Brandes had the rubber campaign perfectly planned long before Congress voted money. He knew where he could put his hands on soil scientists who had worked in Sumatra, pathologists with experience in Liberia, and plant breeders trained in Java. He began recruiting by telephone the day Congress made funds available.

From the University of Michigan he got Dr. Carl D. LaRue, botanist with wide experience in British Malaya. H. H. Bartlett of Michigan knew Sumatra rubber culture. E. C. Stakman of Minnesota was ■ plant pathologist. C. B. Manifold, of the Department of Agriculture, had studied rubber-growing in the East. The big rubber companies sent along top-ranking technicians. Altogether, twenty men joined up.

In the jungle, their chief job was to find spots suitable for rubber culture. With soil augers they took soil samples. Microscopes told the story sect pests and plant diseases i area. Types of vegetation disc told the experienced botanist w mean temperature of the area w how much rainfall it had.

Out of this exploration work one solid fact: Immediately to th of us we have millions of acres capable of growing rubber—times as much land as is planted ber in the Middle East. Much already cleared and available f mediate planting. For the bette this land was formerly plan bananas but abandoned when struck the crop.

### Seeds via Army Bomber

Whenever party members fou teresting specimens of wild growing in the jungle they ga seeds—large, mottled affairs th like pecans. These had to be h quickly because rubber seed power to germinate in a few time. This fact had been plann in advance. While exploration were poking around the Amazon waters and through Central Am swamps, other men had been busy ing and fencing land for nu Twelve of these were established tered from Haiti to Peru. Seed rushed to them—sometimes by bomber.

Meanwhile, plant breeders wer in three experiment stations: Brazil, one in Panama, one in Rica. There are a few facts abo ber culture you must know to stand what they are up to. Rubbe are as unalike as human beings tree will be disease-resistant; a will not. One tree may produce pounds of rubber a year, while a produces 50 pounds! Poets ma their ideas about who can make but so have plant breeders. A breeders are out to produce a made tree having all desirable acteristics.

To get a high-yield tree they grafting. They take a pea-size (which would have eventually into a branch) from a high pr Four or five inches from the

### Blightproof Rubber Trees

e next problem of the plant breed- leaf blight. This tree sickness is own in the East. Wickham's seeds t carry it and extraordinary pre- ons have kept it from slipping in importation of the original seed- tock. But it is widespread in South Central America.

has thwarted efforts in the past ow rubber on a plantation basis in Guianas and Trinidad. And it has a curse to the vast Ford planta- now struggling in the Brazilian e. Ford started operations in 1928 2,500,000-acre tract on the Tapajos r, a tributary of the Amazon. Be- ed for five years by lack of mois- and by leaf blight, plantation gers finally decided to move. y miles downstream they chose her site and started again. The ,000 blight-resisting trees now ing should be in production by

e plant men know that they can l almost any degree of resistance the new plants. Here, again, they lots of good material with which ork. For the better part, it comes old plantations that have been de- ed by blight. One derelict planta- in Costa Rica, for example, had surviving trees out of an original cing of 36,000. The trees still stand- hust, of course, have a high degree sistance to leaf blight. Otherwise, would have perished.

Breeding this resistance into a line is tricky business but it can be done precisely and positively. Trees—like barnyard stock—are selected for mating. Platforms are built around them and cheesecloth bags are placed over blossoms—to avoid accidental matings. Then pollen from a wanted parent is introduced under the blossom covering.

Resulting progeny is tested for resistance—by spraying with the spores which cause leaf blight. The leaves of some will shrivel, blacken and drop off. Others that have inherited the characteristics of their parents will go untouched—and these are the interesting ones.

### The Groundwork is Done

The job of producing the wanted tree, and persuading people to make large-scale plantings, is admittedly large. It will take time. Seedlings must stay in nurseries for one year; and four years more on plantations before tapping can begin. But the important point is this: The groundwork is completed. Promising seedlings are already available. Earlier exploration parties filled files with the facts they gathered, but the present one wrote its report in trees.

Co-operating countries have responded enthusiastically. Brazil put up $175,000 for a big research laboratory at Belem. Mexico, Peru, Haiti and others similarly appropriated funds and assigned their best scientists to the job.

Meanwhile, plans are afoot which promise a short-range solution to America's threatened rubber shortage. This is cultivation of guayule. This tough, spidery bush grows in semiarid regions —from Texas south to Mexico and west to California. These bushes are harvested like hay and fed into ball mills which pound them to pulp—the rubber being extracted by flotation. Mexican guayule once supplied about 7 per cent of the world's rubber requirements!

Estimates indicate that it can be produced for 25 to 30 cents a pound (as opposed to 20 cents, the present price of Hevea rubber). Even at this higher price guayule represents a good hedge against a rubber shortage, and efforts are being made to get the government to finance a 45,000-acre experimental plantation.

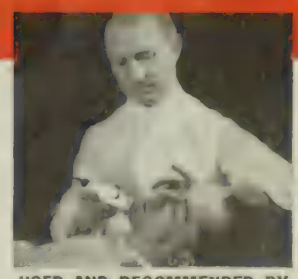
This project, along with the one in South and Central America, makes it apparent that rubber is on the way home. Several million seedlings are already growing in nurseries. Distribution to big plantations, and to small native farms, will begin in a few months.

It is hoped that balance between large and small producers will be fairly even. Hoping to encourage native growers, an educational campaign is already under way. Small landowners are being taught the rudiments of rubber culture. And field demonstrators are showing how to prepare latex for the market: how rubber is coagulated from sap; how it is squeezed through wringers that look like ordinary clothes wringers; and how the resulting sheets are smoked.

Successful termination of this widespread effort doesn't necessarily mean the end of rubber culture in the East. With uses of rubber constantly expanding there should be room for all. Big Army trucks, remember, have as many as ten wheels which require tires. Big tanks need half a ton of rubber; and farm machinery is beginning to run on rubber-tired wheels. Yet, even after considering these things, there is every indication that the greatest agricultural upheaval in history is beginning. The stakes are enormous.

The scientists working on the problem have no doubts about the outcome. Dr. Brandes is very confident about the whole thing. "It is just another job for scientific agriculture," he says.

TODAY'S BIG HEAD-LINE



**REMINGTON DOUBLE-HEADER.** Magnetic-type, power unit. Extra quiet. AC only. $12.75

**REMINGTON DUAL.** The original two-headed shaver that amazed the world with its 90-second shave. AC-DC. $15.75

**REMINGTON TRIPLE-HEADER.** Now smashing all sales records for electric shavers! The famous Remington Dual plus a special head for trimming sideburns, mustache, stray hairs on neck or Adam's apple. AC-DC. $17.50

**REMINGTON FOURSOME.** *Three* full-length cutting heads *plus* a special trimming head. Today's most sensational advancement in electric shavers. In a handsome de luxe carrying case that contains a non-breakable shaving mirror. AC-DC. $19.50

HERE IS the greatest concentration of shaving power that has ever been turned loose on man's whiskers. Here are electric shavers that don't rely on just *one* shaving head. They've got *two, three* and even *four* heads to whisk away the whiskers before they know what clipped them. No wonder men are cleaning out dealers' stocks of Remingtons as fast as our overtaxed factories can turn them out. So see your dealer right away, try one out and at least get your name on the "priority" list! *General Shaver Div. of Remington Rand Inc., Bridgeport, Conn. ## 16-inch Reasons Why Mrs. Clark Couldn't Get a Monel Hot Water Tank

★ ★ ★

At first Mrs. Clark was mighty disappointed when they turned down her order for a water heater with a Monel tank. But now she understands why.

For that Monel, instead of delivering rust-free hot water for dishes and baths is now helping deliver protection for her country.

Naturally Mrs. Clark is glad to help. She knows that Monel is a strong, tough, rustless metal, good for years of service. And what makes Monel an A-1 metal for hot water tanks makes it an A-1 priority metal for Defense.

So while hundreds of thousands of existing Monel tanks are giving rust-proof, trouble-proof hot water service, tons of Monel that were headed for other water heaters are now going into National Defense. And thousands of housewives like Mrs. Clark are willingly waiting.

They know that *their* Monel is helping speed the day when they *can* have a new water heater with a Monel tank.

**MONEL** *Water Heater Tanks*

## The Fight Goes On

Continued from page 21

developed. In a few had come dishonest, racketeering leadership.

The history, however, of capital, of industry, of finance, in their own periods of rapid expansion, had shown the same kind of faults, the same excesses, the same irresponsibility—even in greater degree.

Enemies of labor were quick to condemn in 1937. From familiar circles came the old cry of the Tories: "Something drastic must be done to curb labor; it is getting too powerful." Of course what these people really want and strive for is to return to the good old days when labor was unorganized and weak, and starving for jobs. It used to be so easy to bargain with one man who had a family to support when fifty other men wanted the same job. You could always reason with a starving applicant for a job. But it is so inconvenient to bargain with a strong, united group of employees who know that they are entitled to a fair share of the profits of an industry.

From a few hysterical sources came even the demand that federal troops be called out to put down the strikes.

### Plants Must Be Kept Busy

I consider the calling out of federal troops during a strike, except in a national emergency, one of the most dangerous things that can happen in a democracy.

Similar demands to use the Army came again during the strikes in some of the defense industries in March and April, 1941.

I have always felt proud and gratified that during my service as Governor of New York and as President of the United States, up to June, 1941, after the full unlimited national emergency had come, I have not once called out the militia or the troops in a labor dispute.

As of the date of writing this note, in July, 1941, the single exception I have made in all my public service was in June of 1941, when I directed the Army to take over the struck plant of the North American Aviation Corporation, which was engaged in making airplanes for the defense of the United States. This was a vital spot in our armament program which, in the interest of our national existence, could not be permitted to remain idle. Besides, the responsible leaders of labor in the United States all realized that this was not a bona fide labor dispute, but a form of alien sabotage, inspired and directed by Communist forces, interested not in the advancement of labor, but in the defeat and overthrow of the United States.

The history of strikes in 1937 and in 1941 has justified the validity of the calm, sensible, peaceful approach to the settlement of strikes.

### NOTE ON THE LEND-LEASE BILL

IN THE decade since 1931, international lawlessness practiced successively by Japan, Italy and Germany has been casting a lengthening shadow over the world. Repudiation of solemn treaty pledges, invasion of independent countries, bombing of civilians, enslavement of captive peoples—those are the principles which have seemed to guide the aggressor nations.

The policy of our government has been consistently designed to keep war out of the Americas. Clearly this will become impossible if the last European bulwark of democracy, Great Britain, falls before the Axis powers. For over a century, Britain's fleet has been standing guard in the Atlantic Ocean, complementing our own fleet in an almost consistently friendly fashion, and helping to give us in 1941 the naval protection which we otherwise would not be able to build quickly enough for the present crisis. We now understand that one of the ways in which we must defend America is by enabling the British fleet to stay on guard so as to preserve the integrity of the seas.

Our defense policy has had to be developed in response to the spread of international brutality. In my message to the Congress on January 4, 1939, I proclaimed the need for methods to curb the aggressors. Even before the outbreak of the European War, I urged the repeal of the embargo upon arms and munitions contained in our Neutrality Act, which operated to the detriment of peace-loving nations and for the benefit of the dictators. But those who claimed "better private information" about the danger of war refused to act to remove this handicap to the democracies.

When Hitler plunged Europe into war, I again asked, and this time secured, the repeal of the arms embargo. Yet, as the cruel forces of lawlessness crushed nation after nation, America's peril became greater and greater. We needed time to expand our productive facilities to meet the threat of aggression in this hemisphere. We needed time to build up our land and naval defenses. And time was fast getting short, with aggression on the quick march which modern warfare had developed.

In June of 1940 it became clear to me that it was necessary immediately to send to Great Britain much more than the matériel which she and France had ordered in America, and which was then coming off the assembly lines. Accordingly, in that month we sent to Great Britain more than $43,000,000 worth of our surplus stocks of rifles, machine guns, field artillery, ammunition and aircraft. This was equipment which would have taken many months to manufacture and which, with the exception of the aircraft, had been produced during the World War period at a cost of $300,000,000. Most of this matériel would not have been usable if we had kept it much longer. It arrived in Britain after the evacuation at Dunkirk, where great quantities of guns and military supplies had been lost by the British. No one can tell how much of an effect these supplies had upon the success of Great Britain's resistance in the summer and fall of 1940.

### Efficient Production for All

Since June, 1940, this government has continued to send surplus war materials as well as matériel which had been produced by private manufacturers. As part of this supply was the fifty old-age destroyers turned over to Britain in September, 1940.

As 1940 drew to a close, Britain's financial assets reached a dangerous low point. In her heroic fight to repel the Nazis, her gold reserve and dollar exchange assets left small leeway for additional purchases in this country. Action became imperative to bolster her position and at the same time strengthen our own defenses.

In my annual message to the Congress (January 6, 1941) I pointed out that a mere loan of dollars would

quick and as productive of results
oan of war materials, to be repaid
d after the close of hostilities. By
facturing war supplies for all the
racies, we could fit our own needs
heirs, and could provide more
nt and speedy production for all

suant to these recommendations,
end-Lease Bill was introduced
ne Congress on January 10, 1941,
R. 1776 and S. 275. . . .
r several days of debate, the
of Representatives passed the
Lease Bill on February 8th by a
f 260-165. The Senate opened de-
on February 17th, and amended
assed the bill on March 8th by a
f 60-31. The bill was then returned
House for concurrence in the Sen-
mendments, which was obtained
arch 11th by a vote of 317-71.
gned the bill (Public No. 11, 77th
ess) on March 11, 1941. Within
minutes thereafter, army and

**How Lend-Lease is Working**

hould be borne in mind that lend-
orders, although they are based
e requirements of a foreign gov-
ent, are actually United States
nment orders, and are treated the
as any other United States defense
act. When they are delivered pur-
to a lend-lease contract, they can
nsferred to the custody of a for-
government only with the consent
e President.
e Act made possible the placement
ders on the basis of requirements
itted by those countries the de-
of which the President deems
to the United States. As of May
941, over $4,275,000,000, or 60 per
of the $7,000,000,000 appropriated
e Congress for lend-lease orders,
already been allocated for specific
oses.
addition, as of June 11, 1941, $75,-
00 worth of defense articles have
dy been actually physically trans-
d by the Departments of War,
, Treasury, Agriculture and the Maritime Commission under the provisions of the Lend-Lease Act. These defense articles consist of aircraft, water craft, ammunition, explosives, ordnance equipment, clothing and medical supplies, signal and chemical equipment, machinery, agricultural products and raw material and metals.

In order to carry out the operations under the Lend-Lease Act, I established, by executive order dated May 2, 1941, the Division of Defense Aid Reports in the Office for Emergency Management. This division provides a central channel for the clearance of transactions and reports, and co-ordinates the processing of requests for aid under the Lend-Lease Act. It also maintains a system of reports and accounts, and acts as a clearinghouse of information for agencies participating in lend-lease operations.

Under the Act, actual purchasing operations are carried on by each department operating in its own field, in the same way as for any other defense contract. The Division of Defense Aid Reports acts as a co-ordinator, and its work falls into six categories, namely: processing of requirements, fiscal accounts, statistical operations, transportation co-ordination, liaison between governmental agencies and foreign governments, and legal problems.

The general procedure is as follows: The request from the foreign government desiring defense aid comes first to this division on formal requisitions and is then forwarded by this division to the proper procuring agency of the United States Government. This agency determines whether the items called for should be supplied from stock on hand, whether they should be supplied from existing contracts, or whether new contracts should be executed for them.

The division thereupon proceeds either to secure presidential authority to transfer the articles to the foreign government, or secures an allocation of funds so that the procuring agency may actually place a new contract for the defense items. Even such allocation of funds, however, still requires the approval of the President before the defense article can be transferred to the foreign government.

Of course, as of the time of the first report and as of the time of this writing, the lend-lease operations have really only just begun. When they are operating in full swing, and when the defense industries of America are functioning at their full expected capacity, America will really be performing the function which its Congress and its people have outlined for it since last January, of becoming "the great arsenal of democracy."

"At last I have some clothes my brother-in-law isn't gonna wear"

WHY GUESS?

I know this BATTERY GIVES EXTRA DEPENDABILITY & LONGER LIFE

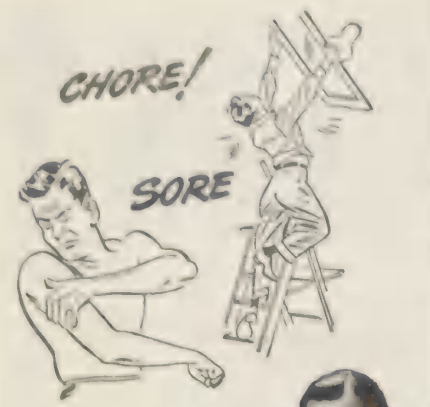
Here's Why—

OCEAN-SPANNING CLIPPERS USE AUTO-LITE BATTERIES IN AN EXACTING SERVICE THAT HAS ESTABLISHED THE WORLD'S GREATEST TRANSPORTATION RECORD

1 OUT OF EVERY 3 CAR MAKERS SPECIFIES AUTO-LITE BATTERIES AS STANDARD EQUIPMENT AFTER EXHAUSTIVE TESTS BY THE INDUSTRY'S TOP-RANKING ENGINEERS

To get power, dependability, longer life in your next automobile battery follow the example set by the world's top ranking engineers. Their recommendations have made Auto-Lite Batteries standard equipment for 1 out of every 3 car manufacturers. What's more, these batteries are used by giant flying clippers spanning the Atlantic and Pacific Oceans. Now every car owner can enjoy the advantages of a top quality battery—for today Auto-Lite Batteries are priced with the lowest. See your nearest Auto-Lite Battery Dealer today!

USL BATTERY CORPORATION
*A Subsidiary of The Electric Auto-Lite Company*
NIAGARA FALLS, NEW YORK



ONLY AUTO-LITE BATTERIES GIVE YOU ALL THESE FEATURES

- Battery engineered for your car
- Built by world's largest independent manufacturer of automotive electrical equipment.
- Packed with power of "Activite."
- Specified by one out of every three car makers.

NOW PRICED WITH THE LOWEST!

AUTO-LITE BATTERIES
ENGINEERED AS A BALANCED UNIT OF THE ELECTRICAL SYSTEM

**Help Nature Reduce Fatigue Acids in Sore Muscles!**

Unusual exercise tires muscles, makes them hurt! But cheer up! An accumulation of fatigue acids is probably to blame and many of the muscles affected can be reached by the stimulating action of Absorbine Jr. Follow directions below.

***Relief!*** Splash these sore and aching muscles with Absorbine Jr. It speeds the blood flow through these muscles to carry away fatigue acids. This helps reduce swelling—ease pain and stiffness. Then your muscles can relax again. Keep Absorbine Jr. handy. At all druggists, $1.25 a bottle. FREE SAMPLE—write W. F. Young, Inc., 201T Lyman St., Springfield, Mass.

"My little girl had a bad cough from her cold. Results from Foley's wonderful. Cough gone. She's playing again." Mrs. Harold Steinbach, Michigan City, Indiana.

**Mommy, I've Quit Coughing ALREADY!**

***QUICK*** —to soothe the throat
***QUICK*** —to curb coughing spells
***QUICK*** —to hasten loosening of the cough

If your child has a cough from a cold, give your youngster the *quick results* formulated in FOLEY'S HONEY & TAR COUGH SYRUP. It's the cough syrup specially adapted to children; delicious, gentle-acting, does not upset the child's digestion, contains no narcotics.

Because of the FOLEY formula (result of 65 years of making better and better cough syrup), FOLEY'S aids your child's natural forces of repair in three vital ways: soothes throat . . . curbs coughing . . . acts internally to speed breaking up of cough.

**FOLEY'S** *Honey & Tar* **COUGH SYRUP** contains no Narcotics, Chloroform, Ipecac, Codeine

Check your child's cough before it gets worse. Don't fool! Check it with a triple-acting cough syrup . . . with FOLEY'S. Experience the joy experienced by thousands of mothers at the quick relief, continuous comfort, speeded-up loosening of the cough which FOLEY'S HONEY & TAR COUGH SYRUP gives. At all druggists, 30c.

# Mr. Brown Goes to Town

Continued from page 22

But if that was part of Brown's showmanship, the painstaking coaching work was what provided the crushing football squads. The systems in the two junior highs were also under his direction, with the result that a steady flow of material was poured into his high-school teams. In a survey made last year it was established that only Minnesota and Columbia, among the colleges, bettered the equipment of the Massillon team, which spends $7,000 every season on uniforms and paraphernalia. Each player has three playing suits and a practice suit.

As a coach Brown is a strict disciplinarian. A player caught having a date with a girl during the season is bounced. Smoking and drinking are of course taboo and the boys must be in bed at ten o'clock week nights and eleven on Saturday. Any Brown players who lay on the field to rest during a game would be yanked immediately and never used again. They are not allowed to take a drink of water during the game.

"It's psychology," they explain. "The other guys look at that bunch and think they're supermen."

Behind the Massillon team is a Boosters Club of 1,000 members that supports the players. They found a boy from a destitute family, who was living a life of squalor. They rescued the family, put it on its feet and later kept it going while the boy attended Ohio State. When L. W. St. John, athletic director at Ohio State, congratulated the boy on his arrival, the kid said:

"Mr. St. John, if it hadn't been for Paul Brown, I'd have been down here in Columbus before this, but in another institution."

He was referring to the state penitentiary.

Five athletes turned out by Brown were All-America candidates last year. One of the five, Eddie Molinski of Tennessee was an almost unanimous choice for the 1939 All-America. Other headliners last year were Mike Byelene and Jim Miller of Purdue, Charley Anderson, the giant colored end at Ohio State, and Don Snavely of Columbia. Miller will be captain this year at Purdue.

### Right into the Lion's Den

Brown's influence on Massillon is extraordinary. On a recent trip out there we tried hard to find somebody who would knock him but it was impossible. They think he is a great guy and the greatest football coach in the world. The idea that he might fail in the Ohio State berth that has been a nightmare for every coach that has tackled it is scoffed at.

The campaign for him aroused some resentment in quarters where it was felt that he was being fobbed off on Ohio State but that all disappeared when Brown met the interested parties.

"Won 'em over in five minutes time," they say proudly in Massillon.

He has a good personality, speaks well before public gatherings and possesses an astonishing knowledge of football. Around Massillon the folks know him as "Pee" Brown and he keeps open house for all fans and players. Football in Massillon is like politics in New Mexico; they work at it all year round. One of the features of the Boosters Club meetings were nights when Brown ran off motion pictures of the games and explained the strategy of the combats. As many as 2,500 people attended those evenings, with the result that the average spectator at a Massillon game knows as much about what is happening as the opposing coach.

In taking over the Ohio State job, he is certainly entering the lion's den. Nowhere in the country is the yearning for victory so great as at Columbus, and nowhere is a coach criticized so harshly when the team loses. When hearts break in that neighborhood they break with a loud report and there have been plenty of occasions for it.

There was the day in 1926 when 90,000 people saw Michigan take a pathetic 17-16 victory. The state almost died in 1935 when Notre Dame snatched an 18-13 victory away in the last few seconds in what many contend was the most exciting football game ever played in America.

### Strictly High-School Stuff

Schmidt came north from Texas with a great reputation for razzle-dazzle football but eventually succumbed like all the others. Not the least remarkable thing about the accession of Paul Brown was his decision to stand or fall with his high-school associates. With him he took Widdoes of Otterbein, McGranahan of Mt. Union and Heisler of Miami, his assistants at Massillon. With that group of men from small colleges, whose only coaching experience has been in high school, he is facing the best men in the Middle West. Among his opponents will be Harry Stuhldreher, also a Massillon boy, who now coaches Wisconsin.

From last year's Ohio State team he loses such stars as Don Scott, Jim Langhurst and Charley Maag. Despite that and a schedule that calls for games with Missouri, Southern California, Purdue, Northwestern, Pittsburgh, Wisconsin, Illinois and Michigan, you can get plenty of bets around Massillon that he won't lose more than two games the first year. After the third year they will perish of chagrin if he ever loses one again.

Brown has two sons—Robin, nine; and Mike, five. Mike can't read as yet but he likes pictures and when he saw the heroic deeds Superman could do with a sheet, he stripped one off his bed, climbed a ladder to the garage roof and leaped off. A month later they removed the cast from his broken leg. It happened just before one of Massillon's big games and it made Papa Brown wince when Mike said:

"I'll bet you're glad it was me instead of Horace Gillom."

They tell that story around town with a wry smile but nobody denies that subconsciously young Mike had hit on something. They take their football seriously in Ohio and nobody fears that Paul Brown's strict training will work any less effectively at Ohio State than it did at Massillon. They contend that the college men will be eating out of his hand.

"What do you think all those high-school coaches recommended 'Pee' for?" they demand in Massillon. "Just to get him out of their hair?"

The answer could be yes but it probably isn't. We found general agreement over Ohio that Mr. Brown was going to put Ohio State on the map. In that event, the only one to feel sorry for is Bud Houghton, who was left behind in Massillon to coach Brown's old team. All he has to do to get a reputation is win *all* his games forevermore. And the folks in Massillon are certain he can do it.

"Why shouldn't he?" they yell, "with all those whiz-bangs coming up from junior high. What's the use of losing when you can just as easily win?"

# Green Freeze

Continued from page 32

e. But he still couldn't lift it. All ucceeded in doing was knocking the backward off the green and into a !

'ild Bill Mehlhorn was even more rtunate at Dallas. He got his putter en behind the ball, found himself ble to move it and finally gave it a fic and terrified jerk. The ball car- the hole on high and landed out on fairway.

Took me a thirty-yard chip shot to back," reports Bill sourly.

hese incidents are amusing enough etrospect but they are tragedies for essionals who have big money rid- on every shot. Johnny Revolta, posed to be a deadly putter, started ournament at Greensboro, South lina, with a spectacular 30-foot for a birdie on the first green— then took five putts on the second n and bumped himself right out of money.

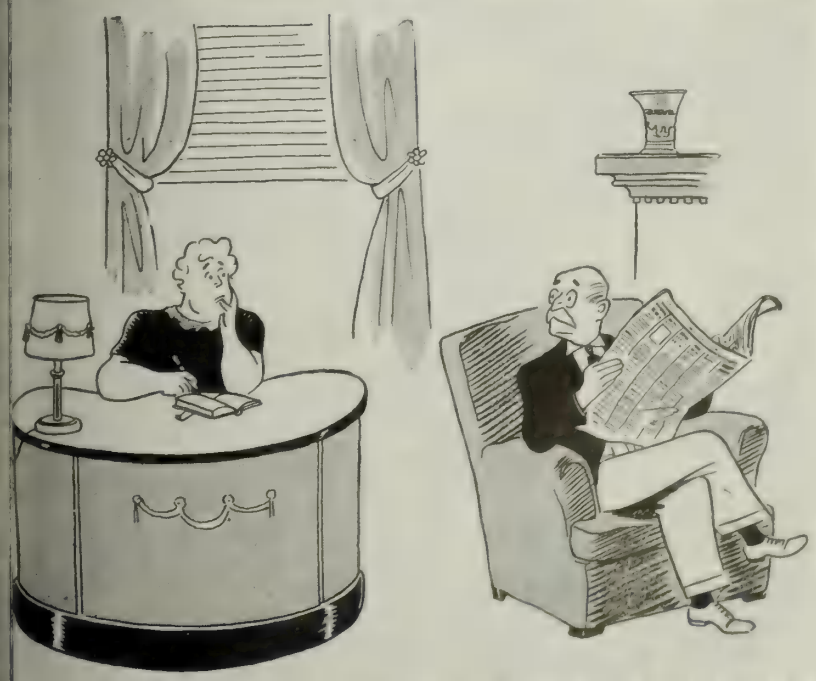
Each of those extra ones cost me t $150," says Johnny, "not to men- the agony."

aul Runyan and Horton Smith are rded as the greatest putters in the e today, with Craig Wood joining pair in the spells when he is hot, Runyan is as jittery about his put- as if he had taken up the sport last nesday. He reported for the Na- al Open this year with a grotesque er featuring the paddle grip. It ed something like an oar degraded rdinary purposes. The U.S.G.A. e him take an inch off the grip and lid well with that, but it was plain he was unhappy. Runyan is so ful about his work on the greens on short putts he is down with his almost to the sod, holding his ds almost down at the club head nudging the ball gently along.

e Turnesa went along for years, banging the ball into the cup, and suddenly everything went black. He couldn't hit the ball and the hole ned to be a mirage. From being one he superb putters of golf, he turned one of the worst. As a last resort ried putting one-handed—and won Long Island Open in that strange ner, putting on the highly tricky ns at Lakeville!

mong historians it is maintained that the greatest exhibition of putting ever given was by Walter J. Travis at Sandwich, England, when he captured the British Amateur crown in 1904—the first time it was ever won by an American. His performance was so phenomenal that an American friend made a small fortune by betting that Travis would get his putt down no matter where it was on the green. Travis consistently canned putts from as far away as forty feet. The English refused to believe the evidence before their eyes and kept doubling the bets. If it had lasted long enough the empire would have been broke.

### Mr. Jones Outdoes Himself



The world's longest putt was made by Bobby Jones at St. Andrews in Scotland the first time he won the British Open championship. The Scottish greens are so large that they are often used for two holes. Bobby, simply hoping to get close on an approach shot, took his putter 100 yards away and gave the ball a bat. It not only rolled up close but it rolled in.

The nearest approach to that was Walter Hagen's disgusted putt of 250 yards on a sand course in Phoenix, Arizona. The fairway had been burned so hard by the sun that it was like cement. Having tried several iron shots that had given indications of never stopping, Hagen took out his putter for the next attempt and whacked the ball severely. It almost holed out, the ball stopping a foot from the cup!

The most distracted of putters has been Leo Diegel, who twisted himself into a knot on every green and looked like a picture of terror over every inch-long putt. On one occasion when he was leaving to play in England, he went to a New York sporting-goods store, sat down among thousands of putter heads, carefully pulled off the little cotton sock that encased each one and finally selected sixty-eight, which he had shafted for his trip. To all remarks about this, Mr. Diegel had one answer.

"How do you think I'd feel if I got over there and found I had forgotten the right one?" he asked miserably.

The saddest case of all is that of Ralph Guldahl, who found a rusty-

"I don't know why I bother to keep a diary—I never have time to read it!"

bladed putter while rummaging around his attic and went on to win the opens at Detroit and Denver with it. Like all golfers, he had a moment of aberration and presented the club to Vic Ghezzi. Later on he regretted it and tried to get it back.

"I'll *pay* you for it," he moaned. "I haven't won anything since I lost that old wreck."

Johnny Rogers, who started the school of tremendous hitters and is reputed to have taught the art to Jimmy Thompson, once came east with a putter that he regarded as perfect. It was a gas-pipe putter a mile long. When he started a money match with Tommy Armour, he was putting with the handle somewhere around the top button of his shirt. As he lost, he kept whacking pieces off the shaft. When he finished he had lost all his dough and was putting with the same club, now about four inches long.

### Shut Your Eyes and Swing

Bob MacDonald, the big, tall Scot with the magnificent swing, has been called the world's greatest "yipper" around the green. Yipper means jerker, a nervous gent. Alex Smith, another Scot, is the fastest big-time golfer. He fairly races around the course, charging up to the ball and taking a smack at it almost on the run. "If you're going to miss 'em, miss 'em quick," is the Smith motto. MacDonald's putting got so bad that he thought the matter over at length and came to a somewhat heroic decision.

"From now on I'm going to putt with my eyes closed," he declared—and did it. The results were not astonishing, nor were they any worse than they had been, and he had the comfort of not witnessing the horror.

Perhaps the greatest exhibition of putting courage ever seen was given by Johnny Farrell when he defeated Bobby Jones in the play-off for the National Open title at Olympia Fields in Chicago. On one hole when he had a seven-foot putt for a win, he held up his hand at the crowd and the bustling photographers.

"Just wait a minute till I can this putt, boys," he said, "and you can have all the pictures you want."

He was in such control of his nerves and had such confidence in his playing that he never considered missing. He went back and tapped the putt in without a tremor.

In the early days of golf, the gre were merely a continuation of the fa ways, but the new greens are as soft a Persian rug and are tended with eq care. It has always been maintair that Harry Vardon, the old English m ter, was the poorest putter of all great stars, but his record shows that must have been consistent. It was arrival of Bobby Jones and his fam putter, Calamity Jane, that transform the standards of putting. Walter Tra had shown what could be done; Bo did it consistently.

Under present conditions of comp tion, the big professionals don't c sider they are putting at all if they worse than thirty putts for eight holes. Some of them are so much in habit of going around in thirty or that their idea of good putting me less than twenty-five putts a round.

The nearest approach to a per game was turned in by Charles H. Ma Jr., Long Island amateur champion, one-putted seventeen consecutive gre until he came to the home green. drive over the hill wasn't much to about, but he could have reached sc part of the long putting carpet in t Instead he elected to play short, sc would have a simple chip and an e one-putt. But he fooled himself chipping weakly—and then missed putt. His chance for the one absolu pure, nondebatable putting record v glimmering.

However, as is the custom of goli anything less than perfection w have been a signal for moaning ra than congratulation. In the Metrop tan Senior tournament this year Au F. Kammer used up only thirteen p in the first nine holes. Most of the p were sensational, being from as far as forty feet, but when the mem crowded into the clubhouse to acci Mr. Kammer after the match, found him immersed in gloom.

"Did you see those two that hun the lip!" he moaned sadly.

And that's the way it is with gol When the putts go in, that is only is to be expected. When they stay it is murder; it is tragedy; it is hel earth. Your drive may be great, approach may have the finality of fa but the little man with the tally pays off on putts.

And that is why golfers rarely g good night's sleep after a match. confounded little ball acting in confounded stupid fashion!

# Sing It Again

Continued from page 20

of Sylvie. That was her gift and her power.

Jed didn't want to take advantage of her. It was only, thought Sylvie, looking at him out of quiet, steady eyes, that he was off on a bum steer. And he was right about himself, in a way. He had rung the gong once and he probably would again. Only somehow or other he'd got the idea that the way to do it was just to sit still and be good like a kid waiting for Santa Claus. And let Sylvie take care of him in the meantime.

I shouldn't let him, thought Sylvie. I shouldn't let him. He'll wait too long and he'll forget what he's waiting for.

Only what could she say, how could she begin, with a fellow as really proud as Jed was, and as really generous? And, she thought, It's all right. He knows where he's going. He's no fool. He's nobody's baby. It's all right.

NEVERTHELESS, she was relieved when they renewed her engagement at Chez Candide and she was sure of the next week's food and rent.

But with the relief she realized that she was tired. Three songs a night made a long assignment. She wasn't feeling just like herself. She wished that Jed wouldn't take it for granted the way he did, the cooking and cleaning up and singing till three. Did he know how much she wanted a good night's sleep?

She was really tired. The night Whit Halsey turned up the way he did she thought for a minute that he must be an answer to prayer.

She had been looking in the hatbox to make sure that she had forgotten nothing.

"Jed," she said, "look at that. A run. My last pair of stockings wrecked. Tomorrow we eat beans."

Jed was reading Variety.

"That's fine, dear," he replied at random. "That's swell. Listen, do you remember that punk, Hymie Bass, that was over at the Club Moro last year? Well, give you three guesses."

At that moment, Whit knocked briskly at the door.

Sylvie opened to him. She had never seen him before, but she smiled and threw the door open wide, for her upbringing had taught her the face of the salesman, the face of the man with trouble to make and the face of the man with a favor to ask, and this was none of them. So it was a friend.

Whit Halsey was a round, bald, red-to-purple little man in a hound's-tooth checked suit with a harmonizing tie and handkerchief. On his finger was a star sapphire in a fat platinum band. His voice was high and excited:

"Hello, hello, Jed. Well, you old so-and-so, did I have a time running you down. Just heard you got hitched. And this is the little bride. Not too late to kiss her, am I? Well, Jed, you sure can pick 'em. My name's Whit Halsey, Mrs. Wallace. Don't mind me."

Sylvie gave him her hand.

"I just recognized you," she said. "Glad to make your acquaintance. Come in, Whit."

He came into the room and looked around. With the bed up, no one could tell that it was the only room they had. The white paint and the draperies made the room look pleasant, comfortably off; but there was no splurge. And it was, after all, a walk-up over a delicatessen. Something, obviously, he still had, but he was far from being in the heavy sugar. Whit began without hesitation:

"I got something for you, Jed."

Well, thought Sylvie, listening, what luck! You couldn't tie Jed for luck. Must have been born that way.

Look at the whole thing. He makes money, and the old gang is outclassed. They're jealous, they're sore. They drop away and never turn up except once or twice for a touch or something.

Then he's broke, and he drops his new gang. Then he meets me. That's my luck, too, but it's luck all the same. He gets taken care of, while he's waiting, reading Variety and playing the piano and waiting. And then I feel that I got to stop work for a while, and what happens?

Well, out on Broadway nobody knows how many musicians are out of work, trying to bluff it, trying to shoulder a way into anything, anywhere. And Jed sits in here, and Whit Halsey has a dream about him or something and runs him down to hand him a job on a plate. He sits and plays the piano half the day and now he can do it with the Horse Marines again for three times my pay.

I never saw luck like that.

Then she turned perfectly white.

"What?" she said. "Jed, what did you say?"

"No soap," he was repeating. "No can do, Whit, no can do."

"Listen, Jed, that's more'n I paid Pink Tyler."

"The money's all right."

"Oh, for . . . Listen, did that—did Toddy Parks sign you on? He said last night he had a surprise for me."

"I'm not going with anybody else, Whit."

The little man turned to Sylvie:

"You tell me, darling. What's *with* him, anyways. What's the dope? Is he sore? It wasn't *me* that walked out on *him*."

Sylvie gathered up her hatbox. Her own voice sounded far away to her.

"You know as much as I do," she said. "So long. I've got to get going. I'm late to a date. And I'm a little sick to my stomach."

WHEN Sylvie came back at a little after three that morning, she thought that she had never been so tired in her life. She sat down at the head of the first flight of stairs with her head on her knees and remained so, motionless, for ten minutes before she could get up and go on. Her hands were cold and heavy and the arm that held the hatbox ached.

She pushed their door open. The lights were still on and Jed was still dressed. His face was small with unhappiness and his mouth pinched in hard. He looked like a child who wants to cry so bitterly that he doesn't dare let go. But she was too tired to give him more than a glance.

"Pull the bed out, will you, Jed? I want to lie down."

He opened it and stood over it, staring down at her, not daring to touch her.

"Sylvie, you're mad, aren't you?"

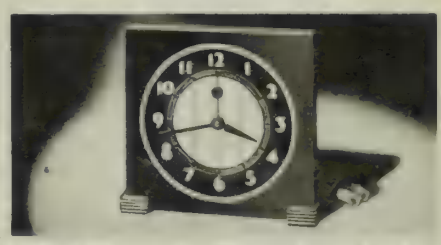
"I don't know, Jed. Yes, I guess I am. I'm sort of too tired to know, now."

He stood still by the side of the bed looking at her face.

"Sylvie," he said. "Don't be sore, Sylvie. I feel that I'll get it any day now. The song. I mean. You never know when it'll hit you, Sylvie. I should go monkeying around doing a couple of specialty numbers for Whit when any day now I'll get it! Why, a year ago he'd've been scared to come up and brace me for the price of a drink."

Sylvie looked at him, her throat aching with tiredness. If he would only stop talking, she thought. Till morning, anyway.

"I didn't notice he was bracing you



IS YOURS A ONE CLOCK HOME?

Running a one clock home is hard on feet and tempers. Why put up with it when there's a stunning Westclox electric for every room, at moderate prices.

# "Not Malt, Not Rum, Not Wine, Not Nuts,

## *So Help Me, It's Tobacco!"*

6137 No. Meridian St.,
Indianapolis, Ind.
June 27, 1941

Larus & Bro., Richmond, Va.

Gentlemen:

I'm still a young fellow, or like to think so, and as long as I've smoked, I've smoked a pipe. Life for me has been a continual round of trying different tobacco.

I've paid as high as six dollars a pound for the stuff. I've had mixtures made to order.

I've smoked tobacco that tasted like honey, that tasted like rum, that tasted like wine, that tasted like maple sugar, that tasted like nuts, that tasted like burning hickory, that tasted like sweet grass. I once smoked a British blend that tasted like somebody's old tweed suit, so help me.

But Edgeworth—I can't possibly explain it, but Edgeworth tastes an awful lot like tobacco! Possibly it *is* tobacco and not malt, not apples, not rum, not wine, not something to disguise the taste of a product the manufacturer is ashamed of.

I shouldn't take up your time like this, really. But I long ago promised the first time I found a tobacco I could smoke for a month or more steadily without tongue-bite, throat irritation, dizziness, and at the same time enjoy the flavor every time I lighted the pipe—when I found that kind of tobacco, I was going to write the manufacturer and tell him about it. *Thanks for Edgeworth, gentlemen!*

*(Signed)* G. T. Fleming Roberts

# KIDNEYS MUST REMOVE EXCESS ACIDS

**Help 15 Miles of Kidney Tubes Flush Out Poisonous Waste**

If you have an excess of acids in your blood, your 15 miles of kidney tubes may be over-worked. These tiny filters and tubes are working day and night to help Nature rid your system of excess acids and poisonous waste.

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness.

Kidneys may need help the same as bowels, so ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

for anything, Jed," she whispered. "Looked to me as if he was trying to give you something."

"You don't get it, Sylvie. Why, any time, now, it'll hit me. It's just about time. I got a feeling. And then I'll make it all up to you, darling. We'll be on easy street."

It was like talking to a drunk, she thought, closing her eyes. He heard what you said and still he didn't. Like talking to a drunk. The words didn't get through.

"Oh, what's the use?" she exclaimed harshly. "Let's get some sleep."

She sat up and began pulling off her clothes. She threw them on the foot of the bed and let them lie there crumpled. Jed stood still, looking at her.

She had always been so orderly, brushing her clothes, hanging them by the open window, emptying ash trays and folding papers, making the room where he had spent the day into a fresh, quiet bedroom. Night after night he'd watched her, tired, perhaps, and late; and maybe he'd been sleeping across the in-a-door bed already or in it; but she'd say, "It's time for us to go to bed," and make the room all clear and quiet.

And now her clothes lay crumpled at the foot of the bed, and where was the kindness and the peace? Jed was frightened. He jerked out the light and got under the blankets. He lay by her side, not daring to touch her.

Then he felt her hand on his shoulder and he turned and held her.

"Look dear," he said. "I was dumb. I'll look up Whit tomorrow. Okay, Sylvie?"

She was so thin. She must've been getting so tired. A steady engagement and all the stuff she did for him. And worrying, too, about whether he was turning into some kind of a punk. There must have been that, too.

"Don't cry. Sylvie, Sylvie, don't cry."

"Oh, Jed, you are good. I always knew you were all right. You are all right, Jed. Everything's all right."

And it would have been, too, except for Whit's going out of town so that he couldn't get him that day. No one knew where he'd gone. No one was very friendly. Jed had been away too long.

Whit was gone for several days. And when he came back, he was sorry:

"Tough break. Rather have you, myself. But I signed Pink Tyler on again."

When Jed told Sylvie she sat for a while without a word, the silver-blond head bent forward, the blue eyes fixed on the edge of the table.

"I'm sorry for that, Jed," she said slowly. "Because you'll just have to find something else. Because, look, I guess I'll have to stop singing in a little while myself."

"Stop singing?"

"Well, look. What I mean is, Jed, I guess I'm going to have a baby."

SHE raised her face then and looked at him full and earnestly. For what he said now would tell her if things were going to be all right, or just nothing, finished, and better not started at all.

He got up and came around the table.

"You feel all right?" he said. "You ought to quit there this week. You got to get your sleep regular."

"What do you mean, Jed, this week? How can I?"

"I'll start around the agencies this morning. Now. What time is it, twelve?"

"Jed, you don't mind? You aren't sore? About the baby, I mean?"

He looked at her, trying to figure what it meant and what it would mean. Responsibility, a child. It didn't come into the picture up to now. It was new stuff. Maybe he was sore in a way, and scared. But there was more to it than that.

"No," he answered. "It's my kid."

His voice was full of tenderness and pride.

But the agencies didn't have anything. The people he looked up didn't have anything. They had resented his success, but they resented still more seeing him running around looking for something, anything.

The nightly story, however, far from alarming Sylvie, seemed to her to be the wholly natural course of events.

"Isn't that the way it goes?" she would say. "Lie down, dear, and take your shoes off. You ought to get a rest and drink some beer before you try to eat. Probably tomorrow you'll get a break."

And the next day:

"Gee, it's typical. My legs ache when I think of it. Do you know how long it was before I got that job at the Candide? Of course I didn't have anything on the ball like you. But I think, good or bad, it all comes down to luck, pretty much the same."

Then there were the less-reputable agencies, the little fellow who offers to get a band together for a night or two and does, at less than union rates. The first break was a nasty little job like that.

"See," said Sylvie. "I told you. Your luck's changed. It's going to be fine, now."

"It's dirty and it smells," he replied. "But it's dough. Beans are a lousy diet for an unborn kid."

That day Sylvie quit at the Candide. She was waiting up to tell him when he got in at four.

"I was just waiting for your luck to turn," she explained, cheerfully. "I told them my husband was in the money and I was going to loaf for a change. Beginning Monday they got Raoul and Margie. How was it out in Queens?"

And she was not at all surprised when he came home the next day, shouting up the stairs:

"Listen, Sylvie, listen. I got a steady job. I mean steady."

"It changed fast, didn't it?" she commented, happy and casual, as he came in the door. "Your luck, I mean. It usually does, once it gets started. What's the job?"

He loved her for being no more overelated than she had been downcast. It showed him how deep her confidence had been.

It was a good job, too. Radio. Sitting at an organ full of trick waiting for a program to end too begin too late or break down al line; just waiting to make it p sure that there should not be o ute of blessed silence during time that the station was offic the air. That was the job, p fifteen-minute sustaining progra Reverie Time.

Sylvie looked at him, at h fident, satisfied face with dou apprehension. At length she pelled to put her misgiving int

"Won't it drive you wacky?" "Now a band is natural to you. well, look, dear, it's a place wh can show off. You're gifted. used to excitement. I'm the on life you ever had.

"Maybe it isn't right, you t solitary all day."

"Nuts," replied Jed.

And he meant it.

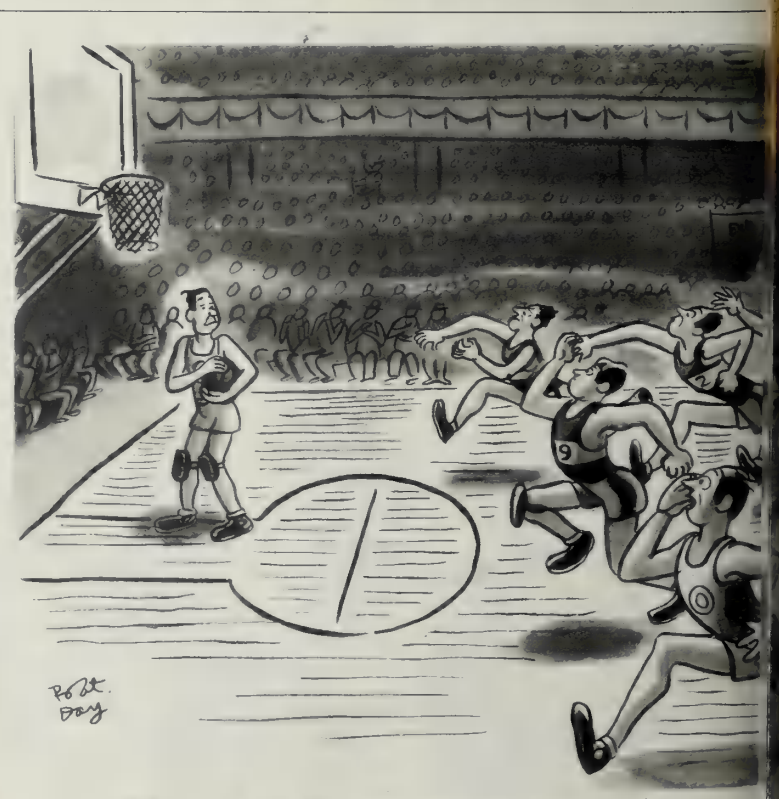
SYLVIE expected him to hate she hardly expected him to sti stuck it, and what was more, he to like it. They were respectabl bers of the middle class, the b of America, a man who worked lar daytime hours with Sundays a woman—occupation: housewi

"Gosh," said Sylvie, "home w like this, as the old song says."

Jed looked at her sitting acr him at the supper table. Her white apron hiked up in fro and her color was higher than to be. He was not used to things into words, and still he that he could express the way you feel good to look at her, the As if things were quieter and portant than they used to be, so

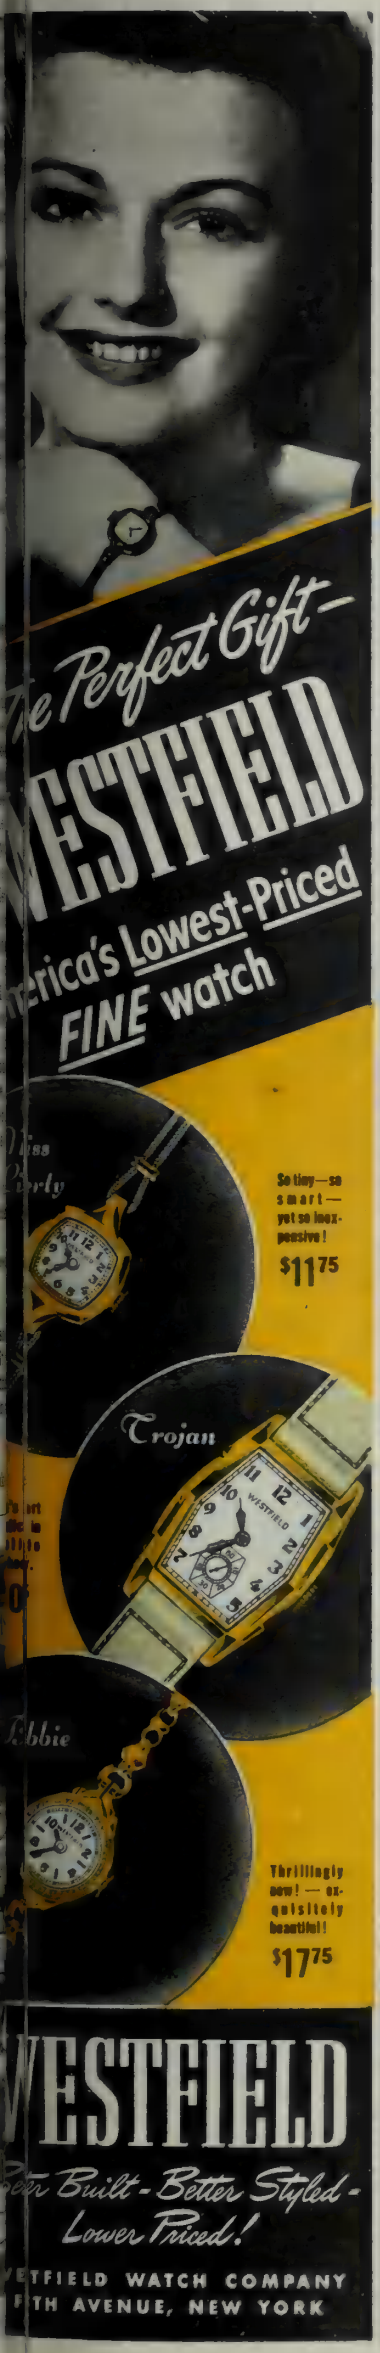
"What do you mean, never li he said. "It was just like this, o rooms and more kids."

It was what she loved to hea that unsuspected strange backg his, so unfamiliar to her.



"Go on, Jed. Was it honest Fidelity?"

"Fidelity, Illinois."



"Some difference to me, isn't ing up in show business? It w nice and comfortable, thou vaudeville went and died on u traveling."

"Could your Ma cook?"

"Not her. Pop could make

"The moment will never be more opportune, Blake!"

coffee, but mamma couldn't boil water. She was lovely, though. She was a real good mother, Jed. She always thought about keeping me fixed up pretty and making us laugh when the bookings weren't so good and everything like that."

"Sure," he replied gently. "Sure. Only what I always want to know is, how'd you learn to cook stew and sew a curtain and like that?"

"I don't know. I always liked to watch people, wardrobe mistresses and cooks in boardinghouses and people. Or maybe I'm just a natural. Pop said he had a bohunk grandma used to live on a farm out in the country someplace."

Jed rubbed his cheek with the flat of his hand.

"You're wonderful," he said. "You're beautiful and you're wonderful. Tell you what, after the kid comes we'll look up a place with a yard and I'll commute."

"Oh, Jed," said Sylvie. "I'd like that. I'd like that."

I knew it would come out all right, marrying him, she thought; but I certainly never expected it to come out as all right as this. I suppose it's the kind of folks he's from.

DAY by day serenity rose in her. Her confidence, her joy, were something to see. The doctor told Jed that she was perfect, that she was the way God meant all women to be, and that it was a shame that most of them had forgotten how. Jed said that the doctor wasn't telling him a thing. For three seasons of a year, they were completely happy.

Everything feels so solid, Sylvie used to think. I never knew that being alive could feel so solid. I guess I never did like excitement much.

There was no excitement, right up to the finish line. The child, their son, was born easily and well after Sylvie had been three hours in the hospital. He was named Jeremiah Wallace and like his father he would never admit it.

"We'll call him Jerry," Sylvie said, when he was a day old. "Hello, Jerry."

She smiled at him and at Jed, and settled herself to sleep. Then she opened her eyes again.

"I like having a private room," she whispered.

And she slept.

The private room had been a surprise. Jed had saved for it without telling her. The money to pay for it was all in the bank. That was what made it good, that was why she liked it so much. It meant nine months' love and care and patience. It meant that things had been steady for a long time. It meant that they would go on the way they were.

"I like having a private room," she said again, a week later.

It was evening. Jed came to see her every evening, after work. They let him stay to see the baby get his ten-o'clock feeding, because it was the only time he could get off all day and because it was a private room.

"I'm glad," said Jed. "I thought you would. It never seemed right to me, the idea of you stuck in a room with a lot of strangers, not the way you like it quiet."

"It was awful good of you."

"I liked keeping it for a surprise."

Jerry sighed, full to repletion. He hiccoughed once, gently, and smacked his lips. The dark blue eyes half-opened and closed again.

His father regarded him tenderly.

"Dead drunk," he said.

"Best boy in the world," said Sylvie. "Nobody in the world has a boy as good as Jerry."

She lifted the small, warm weight a little upward on her arm and breast and began to chant, slowly and tunelessly.

"Oh, Mamma hen has a very nice chicken, but it's not as nice as Jerry."

An electric silence trembled over the chair at the side of the bed, but she did not notice it.

"And mamma cow has a very nice calf, but it's not as nice as Jerry.

"And mamma sheep has a very nice lamb, but . . ."

A loud cry filled the room. Jed had sprung to his feet. He stood over her, waving his hands at her.

"Shut up! Sylvie, shut up! I got it! I got it!"

He began to pace around the room, muttering, scowling, flapping his hands at her for silence, but not looking at her at all.

Then he began to sing.

At the first notes, at the first line, Sylvie knew. He'd got it, all right. He'd got it.

*"Oh, mamma hen got a very nice chick*
*But it's not so nice;*
*And mamma cat got a very nice kit,*
*But it's not so nice;*
*And mamma sheep got a very nice lamb*
*But it's not so nice,*
*Oh, it's not so nice-a like-a you."*

She tried to speak, to say something, but still the hand flapped at her.

"Wait a sec, Syl. Hold on, hold on. It's *not* so nice, it's not *so* nice, yeah, that's better. . . ."

"You got it, all right, Jed."

"You bet, Sylvie. You bet. I got to get going. Want to look up a bunch and start working out a good arrangement while it's hot."

He began again:

*"Oh, mamma hen she got very nice chick,*
*But it's not so nice. . . ."*

The nurse, coming in for Jerry, turned her head. She tapped her foot and hummed after him.

"Say, that's cute," she remarked. "Never heard it before."

This particular patient's husband was a quiet young man whom she had always tended to overlook. Now, to her complete confusion, he drew back, handed her a single spank of remarkable force and precision and gave vent to a shout.

Then he spoke. "No," he said. "You never did. But you will, sweetheart, you will."

He leaned over the bed, kissing his wife, hitting her shoulders with rough, excited hands.

"I told you," he said. "I told you, I always told you. Tops on the Hit Parade. Jed Wallace does it again. It's Not So Nice. Everything I promised you, beautiful. Mink coats, go everywhere, everyone fighting to get near you. Oh, boy, Sylvie, we'll kill them. You too, Jerry. Papa's going to show you life."

HE WAS singing again as he ran out of the room, slamming the door behind him.

"Is he crazy?" said the nurse. "I mean it, should I get someone to chase after him?"

"Not a chance," said Sylvie. Her fingers stroked the back of the child's head as she relinquished him, sleeping.

"Not a chance," she said.

She closed her eyes.

"See you later, Jerry," she whispered. "And don't let it get you. Something we did once, we can always do again."

She heard the excited voice, she saw again the sharp, wild brightness of that well-loved face.

I guess that's life, she thought. Always being ready to do it again.

She sighed. Her lips puckered softly, and the ghost of a new-born tune went around the room.

# Mercator Island

**By John P. Marquand**

ILLUSTRATED BY ELMORE BROWN

**"Never mind that wrench," Mr. Kingman said. "Do what you can with the one you've got"**

*The Story Thus Far:*

HAVING resigned his commission in the Navy, where he has not been recommended for promotion, Bob Bolles buys a sixty-foot schooner—the Thistlewood: after which he cruises aimlessly about in the Caribbean.

In Kingston, Jamaica, Captain Burke, an American naval officer, tells him that he is searching for a crated airplane, left by a French vessel in some out-of-the-way Caribbean port. The plane, according to Burke, contains a remarkable war mechanism of which there is no duplicate. . . .

In the pay of the Kingmans—Malcolm Kingman and his wife, Helen, who say they are New Yorkers—Bob takes them, together with Oscar, Mr. Kingman's valet, to Mercator Island, which they seem eager to inspect. There they find part of the crate in which the plane had been shipped. After which, a "Mr. Moto"—a Japanese who owns a little shop in Kingston—suddenly appears on the scene. He says that he has come on a motor launch, which has returned to Kingston. He says that he is trying to find the same thing that has drawn the Kingmans to the island: the airplane with its valuable apparatus.

Listening to the Japanese and Kingman, as they talk, Bob gathers that the Kingmans are agents in the pay of the Vichy French government: he gathers, furthermore, that he is in peril; the two men calmly discuss the advisability of doing away with him, and finally decide to spare him—for the time being, at least.

Bob has a one-man crew for the Thistlewood: Tom, a colored boy. Acting on Bob's orders, Tom had swum ashore before Kingman and the others had landed. He swims back to the boat and sails away.

Inspector Jameson (a stowaway on Mr. Moto's motor launch) is on the island. He suddenly appears and arrests Kingman on the charge of being an accessory to the murder of Charles Durant, a spy, whom (so he asserts) Oscar had strangled. Kingman does not submit to arrest—he knocks Jameson unconscious, gags and binds him. Then Oscar, angered by something Bob says, shouts: "You shut your mouth or I'll shut it for you!"

"Here," Mr. Kingman says quietly. "What's the trouble here?"

## VII

OSCAR was still scowling. "By damn," he said, and he stabbed the muzzle of his rifle at Bob Bolles. "He talked to the Yap."

Mr. Kingman laughed. "All right, Oscar, let him talk," he said. "Perhaps you can have your fun with him later. Bob, I'm leaving Helen here to reason with you. She's a very sensible girl and a nice girl, isn't she? We've got to find some way of getting that boat back. I'd like a painless way. She wants to try to help you, Bob, don't you, my dear? And, Moto, you and I'd better start looking for that plane. We'll go down and try that sugar factory. Are you ready?"

Mr. Moto bowed. "It has been so pleasant. We have stayed so long," he said. "Yes, all ready."

"Well," Mr. Kingman said, "then everything is hunky—hunky-dory, isn't it? Oscar, keep an eye on Mr. Bolles. If he makes a jump for it, you know what to do. And if you get a chance give that policeman a little water. We may need him later. You never can tell. Come on, Moto."

Mr. Kingman and Mr. Moto walked out on the terrace.

"Heigh-ho," Mr. Kingman was humming, "heigh-ho."

Bob Bolles stood listening to their footsteps and then he said, "It's nice to be rid of him for a while. I wish I had a gun."

Mrs. Kingman was holding her sunglasses delicately between her thumb and forefinger. "Don't talk that way," she said. "You see, he knows I care about you. He's awfully, awfully clever."

"Care about me?" Bob Bolles repeated. He was utterly surprised. It was all so strange, given the time and place.

"Let's go out on the terrace," Mrs. Kingman said. "I don't like it here, and be careful. Oscar's watching."

THEY walked across the terrace and sat on the stone railing, while Oscar sat in the shadow of the gaping window, holding his rifle. Bob could see Mr. Moto and Mr. Kingman, like two old friends, walking down the old avenue in the direction of the sugar factory—a logical place to look, since there had been nothing in the house—and he watched them disappear beneath the trees. When he looked at the blue of the sea and the waves on the reefs, when he saw the blackish-green contours of the island and its red volcanic earth, he could almost believe that he had been asleep, that Inspector Jameson had never appeared, that there had been no talk of sudden death. But parts of it were still with him, and last of all, that amazing speech of hers. It came so suddenly that he could hardly believe it.

"Do you mean that?" he asked.

She was sitting on the rail beside him, looking not at him but straight ahead of her at nothing.

"Yes," she said, "of course I mean it! It happened somewhere on the boat, I suppose, or somewhere in Kingston. How do those things happen know. On the beach this m don't know. But he knew. H through everything. There time to be nice about it. H if he can. And he says you ca Do you?"

He heard her question, but answer immediately. Someh never thought of it that thought that he had been puzz and sorry for her, but there something else. All at once to see it perfectly clearly.

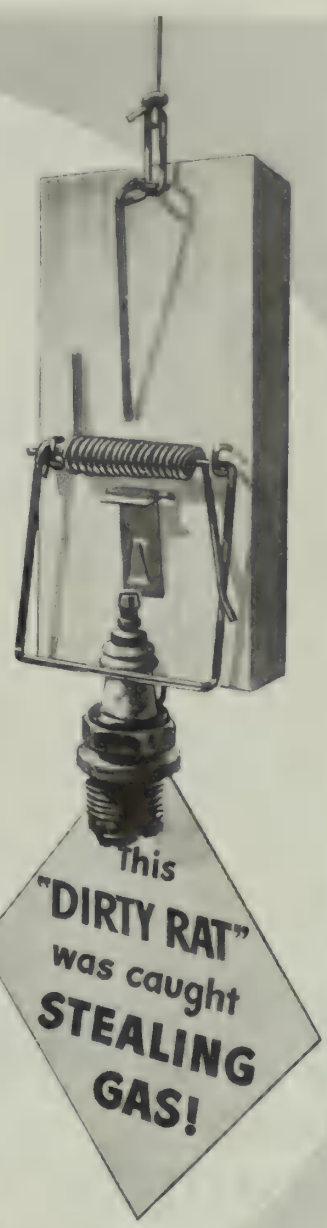
"Why, yes, I do," he said, mention it, but I don't know

"Nobody knows why," she were probably lonely, and I for you at first. Nobody kn But that's why he left us here

"It's funny," Bob said. told you anything I've thou you, and this doesn't seem time or place, but listen—"

He was still surprised by it found it hard to believe.

"Yes?" she asked. "What



"If I can get Oscar's rifle him—go up and talk to him get behind him—we can get yet."

His instinct had always direct action. In his present ing would have made him pletely happy than to get his Oscar. If he could get near was strong enough to handle haps because she was sitting he felt a complete confider

Daintiness is half a woman's charm

strength. Once he was through with Oscar, he could untie Inspector Jameson. Jameson was stupid, but he was a good stout man. If he was not armed, and probably he was not, at least they would have Oscar's rifle between them.

"Come on. What do you say?" Bob asked. "Get me near enough so I can jump him and we'll bust this thing wide open."

From the way she looked he might have been telling her that she was beautiful, and she was almost unbelievably pretty. In spite of everything she still looked like a girl who was on a pleasant picnic. She seemed to be smiling at her own thoughts, staring straight ahead at nothing.

"No, dear," she said. "We might—but I'm not sure. I have to be sure. I'm going to play it another way. It's Mac I'm interested in. It's Mac—and that part on the plane." She looked down at her dark glasses. "You see, that's what I'm here for. I want that part of the plane."

"But you can't get it," Bob began. "When he gets back—"

"You're wrong there, dear," she answered quietly. "I think I can. At least I'm going to try. That's what I'm here for. Wait. We'll both wait and see."

HE KNEW then what it was he had always seen in her. It was something that had nothing to do with him, something he'd never be able to touch. She had warned him of it down there on the beach.

"Nothing's going to stop you, is it?" he asked. "I can see that. I guess I've always seen it."

"That's true, dear," she said. "Nothing's going to stop me."

"Well," he answered. "I guess that's why I love you. I said I didn't know, but that's why."

"It's sweet of you to say it," she answered, "because it's so impossible, and we can't think about ourselves now, not at all. You've never seen a man like Mac, but you know a little what he's like now, and he's going to be worse. He's got to get off this island or he'll be hanged. That was a mistake he made in Kingston. He's desperate, I think."

"All right," Bob said simply. "I hope to God he is. I'm pretty desperate myself."

"Listen, please," she said. "When you sent Tom away you must have arranged some signal to call him back. Mac knows it. Everybody knows it."

"Suppose he does," Bob asked. "Then what?"

"He's going to ask you and you've got to tell him."

"Oh, no, I won't," Bob said.

"You've got to, dear, or he'll make you. You don't believe it, but you'll tell him in the end. I know. I've seen it. Please—no, wait. I'll tell you something else."

"What?" Bob asked.

The insistence in her voice changed into a note of grimness: "It won't change what's going to happen. It won't do any good."

"What's going to happen?" Bob asked.

She shook her head. "I can't tell you that yet. Don't you see? I can't bear to have him hurt you. It's so unnecessary. Please, tell him."

Bob looked down at the gray stone of the terrace. "You're not just trying this on me? Saying that you care about me to make me tell?" he asked.

"No," she answered quickly. "Please, please, don't think that. It makes me sick. I hate all of it. I wouldn't do that, dear."

"All right," he answered. "I didn't think you would. I'm glad you wouldn't. Let's get this straight. You're working for what you believe in and I'm not trying to stop you. Well, you before—I don't know what it i want on that plane, but I guess I've the ace card. None of you are to get it off this island. Either I or the British will. That's flat, isn'

She was silent for a moment and eyes met. Hers were deep and like the colors on the sea, and she not hurt or angry with him.

"I thought you'd say that," she "You're too honest not to."

"Then, let's forget it," Bob tol "It doesn't do any good—that si you or me—and the rest of it—wh rest of it is as out of place as the Jameson looked. But let's talk abo rest of it. Suppose we did live

"Yes," she said, "let's talk abou rest of it. I knew I couldn't mak do anything else. That's why I you, dear. There isn't anything le to talk about something else, bu awfully sad."

But she never told him why i sad. Instead she was gay again they seemed to be entirely by t selves, although Oscar sat there w ing them. She was asking him the island and about the trees, a told her about how he had bough Thistlewood. He never remem how long they sat there talking, s ingly alone together—until she sai

"It's over now." Oscar was o feet listening. A voice was calli the distance. It was Mr. King voice and Mrs. Kingman slipped from the stone railing.

"Oscar," Mr. Kingman was calli

"I think they've found the pl Mrs. Kingman sounded breathles unsteady. "It's all over. He'll wa suitcase with the tools. Yes, th found the plane."

OSCAR signaled Bob Bolles wit muzzle of his rifle, and Bob w along the terrace to the front o house with Helen Kingman beside When he stood by the stone stai that led from the front door and l across the open space he saw tha Kingman and Mr. Moto were far the drive. When Mr. Kingman them he waved his hand and sh again.

"Come on," he called. "Every come. The tools in the suitcase, We've found it!" The case was Oscar had put it when they had ascended the steps, a heavy, pra piece of luggage with Mr. Moto's board suitcase and his raincoat ju side it.

"You pick it up," Oscar said, an picked it up. Its weight told him t was certainly full of metal. Then walked across the open space t Mr. Moto and Mr. Kingman. moment he wondered why Mr. and Mr. Kingman were both there, it would have been as easy for o them to have gone to the house, b most at once he understood the re Neither one of them could have le other. They had evidently been s bling through the undergrowth, for clothes were stained with mud and and they both looked hot and w Mr. Kingman was paler and his was drawn and thin. Mr. Moto's was thrust a trifle forward and his were beady and restless.

Mr. Kingman pushed back his helmet and rubbed his sleeve acro forehead. "By jove, it's hot work said, "as—as hot as hell. It's in sugar factory—in a cellar on the e it, under the old chimney arch. been crawling through those confou vines. It is very annoying to thin had a full equipment, axes and e thing, on the boat."

"Is it all there?" Mrs. Kingman a Mr. Kingman nodded.

"All there. Not crated. They

# A FAIR QUESTION—Which of These Two Men do You Wish to be?

HESE two pictures tell a story—a story of failure and success. They tell a story of one man who ssed up his opportunities in life and another who made the most of them. And yet, both of se men had the same start. They had the same oong, the same chance to get ahead. Life ked to each one equally, but why are they so apart now? Because one squandered his time while the other devoted himself to planned lis—which brought him pleasure, advancement nd profit and put him on an equal plane with associates. He thus obtained the cultural backgrun he needed to build for himself a successful ins and social career.

### READING YOUR WAY TO SUCCESS

Charles W. Eliot, for forty years President of rvd University, and America's most eminent cabor, gave to Americans in The Harvard Clas-, ie greatest of all libraries, for stimulation, erinment, self-help and profit. He realized te the value of assembling together the pure d f the world's literature so that men and mo could read and grow to greater stature—ces and happiness. He appreciated thoroughly t lowledge gives power and confidence, and he ce within The Harvard Classics, the essence of h ower for the everlasting good of mankind.

### NO ONE NEED DENY HIMSELF THIS SUPERB LIBRARY

rthermore, this superlative library is within the ch f every ambitious home. It is now offered at one-third the cost of current fiction. Here, in The Harvard Classics, are fifty magnificent volumes, 22,407 pages of superb reading, 418 of the world's masterpieces, including the Lecture Volume, the Daily Reading Guide, and the unique Index of 76,000 entries, costing itself $50,000 to prepare and which is the key to the treasures of The Harvard Classics. All this comes to you at a cost amazingly low.

### YOURS FOR ONLY FIFTY CENTS A WEEK

We also offer the most liberal terms. For an initial payment of as little as $2.00 you may have this complete luxurious set dispatched to your home with all shipping charges prepaid.

### SEND FOR VALUABLE FREE BOOKLET

Our beautiful free booklet, "Fifteen Minutes a Day," supplies you with a full description of The Harvard Classics. It will tell you how Dr. Eliot put into his "Five-Foot Shelf" the essentials of a liberal education, how he so arranged it that even fifteen minutes a day are enough for you to get the knowledge of literature and life—the culture that every university strives to give. This beautiful brochure is yours for the asking. It will entertain and stimulate you and it will be a treasured booklet on your library table. Take the first step in your self-advancement today by sending for this booklet. Mail the coupon below.

## DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

(THE HARVARD CLASSICS)

THIS COUPON ENTITLES YOU TO *FREE* BOOKLET

P. F. COLLIER & SON CORPORATION
250 Park Avenue, New York

By mail, free and without obligation, send me the Booklet that tells about the most famous library in the world, Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics) and containing Dr. Eliot's own plan of reading. Also, please advise how I may secure the books by small monthly payments.

have broke her out to cut down on the weight when they carried her—one of the newer convoy pursuits—BCS-38-B. That is right, isn't it, Helen?"

"Yes," Mrs. Kingman said.

"All right," said Mr. Kingman briskly. "Then let's get going. You first, Bob. Let Oscar follow Bob, my dear. You'll see the path by the ruin, Bob. You'll see where we went through."

Then Mr. Moto raised his hand. "Excuse me," he said. "May I ask a question, please? From the house where you left, there was nothing on the sea?"

"*Nein*," Oscar said hurriedly, "it was all clear."

Mr. Moto glanced at his wrist watch and looked happier. "I think that is very nice," he said. "There should have been at least smoke by now. At least I do not think the American ship is coming." The gold in Mr. Moto's front teeth glistened. "Does it puzzle you, Mr. Bolles?"

"I never said a ship was coming," Bob Bolles told him.

"Thank you," Mr. Moto said. "Perhaps we may go now," and they walked along beneath the tall trees—Bob Bolles first, then Oscar, then Mrs. Kingman, and Mr. Moto and Mr. Kingman brought up the rear of the party, walking side by side. There was a path down by the ruins of the sugar factory which Mr. Moto and Mr. Kingman had broken through the brush and Bob took it, stumbling over logs and stones. Mr. Kingman was right—it was fearfully hot in there.

THE sugar factory had been built on the side of a hill and he could see the remains of its chimney through the brush. The floor of the factory had been supported by masonry arches and those arches were still intact, making shadowy caves. Before Bob Bolles saw the plane he saw a gap in the undergrowth toward the right which must have been certainly recently opened, but which now already was being choked with vines. The plane must have been wheeled up the avenue, and then through this opening to the sugar mill. A few steps farther on he saw its nose jutting out from beneath one of the arches, with a tarpaulin lashed tight over the engine.

Although he had been prepared to see a plane there, it was startling to see it, with all its paint still almost new, with the transparent plastic of the hood still shining above the observer's and the pilot's seats, for all that new beautifully co-ordinated mechanism was so completely out of place beneath the stone ruin in the middle of the jungle. It stood there in the greenish shade as lonely and as fantastic as a surrealist picture. The ferns and vines, all the rank unconquerable vegetation of the tropics, were already creeping up to it and it was already stained by the weather.

Bob's eye took in the line and the details of the construction. He was fitting those details into classifications based on his own experience. In a combat plane, of course, the accent was always on speed—speed in flight and speed in climbing. Such a machine would live or die by its margin of speed and maneuverability over its opponent. The plane looked fast, very fast, and yet there seemed to be nothing revolutionary or radical about the general design and nothing which he could see that was unusual about its method of construction. In fact, now that he looked at it, he had a puzzled sense of disappointment, for he had seen other models which were as good or better. Very little of the stressed duralumin skin was flash riveted, just the nose section and the entering edge of the wings, and the split trailing edge flaps were mounted in the old-style manner. There was nothing in the body design worrying about, but the motor hi beneath the tarpaulin might tell a ferent story.

The weight of the suitcase dra on his arm reminded him that he still holding it and he set it down. he did so, he saw that Mr. Moto Mr. Kingman were both watching as though they hoped to read some revealing in his expression.

"Well," Mr. Kingman said, "wh you think of her, Bob?"

"Just standing here," Bob Bolle swered, "I don't see anything new. good, but not too good."

Mr. Kingman nodded and Mr. bobbed his head.

"Thank you," Mr. Moto said. confirms Mr. Kingman's first im sion. I think as we are as far as th may as well consult Mrs. Kingman please."

Mr. Kingman nodded again an Moto bowed.

"If I may ask Mrs. Kingman, pl he said, "Mr. Kingman tells me th has withheld her information up t point, which is very, very right, hope so very much you will feel f tell us now, without our makin trouble, Mrs. Kingman. We know definitely now what new p is, I think."

Mrs. Kingman sighed, as thoug did not like the question. "Do you me to tell now, Mac?" she asked seems to me—" She stopped and l at Mr. Moto.

"My dear," Mr. Kingman sai know Mr. Moto's being here is e rassing, but we have to get the thing, whatever it is. We shall m the other details later."

"Yes," Mr. Moto said, "later."

"You can't keep it to yoursel longer, my dear," Mr. Kingman soothingly. "You understand t don't you? We must know—right

"Yes," Mrs. Kingman said, and she laughed.

"Please," Mr. Moto asked her, is so amusing?"

"It's only amusing," Mrs. Kin answered, "because none of yo fools. You must have had you ideas all this time. It's on the r of course, a type of turbo superch Get it off, and you can leave th of it."

MR. MOTO and Mr. Kingma tened, their attention comp absorbed by what she said, an pause which followed when she ha ished showed that they both had le what they wished to know. It ma end of all the mystery. It placed cards upon the table. Somehow there by the ruined sugar mill that ern jargon sounded strangely c place. The words somehow con an element of anticlimax and it s to Bob that a little of the antic was reflected in Mr. Kingman's although he could not be entirely

"So that's it, is it?" Mr. Kin said. "Something new in turbos

"Yes," Mrs. Kingman answere new design."

Mr. Moto said nothing, but his traveled back again to the plan Bob Bolles saw that he was look the pilot's seat.

"Low octane gas, I suppose," Kingman said.

"Yes," Mrs. Kingman answered, low," and Mr. Kingman nodded.

"Pretty soon we'll be burning sene. Well, that's exactly wh need, what, Moto?"

"Yes," Mr. Moto answered car "a variation of the Root invent suppose. Very, very interesting. old superchargers are so diffic think."

Bob Bolles was thinking tha

were complicated, but not the e behind the words, for all s were simple. They were talk- device for forcing a mixture of and air into the cylinders of nal-combustion engine, a de- ncrease the efficiency of the ex- mixture which made the engine out of that simplicity came an s complication. It took you a labyrinth of theories on which ines were based. It meant the of speed, it meant the margin of power, and the efficient use of le fuel, for which the flying as always struggling. Given a ign, it might mean almost any- t was one of those secrets which, n in time, might give a warring ommand of the air.

right," said Mr. Kingman, and looked up at the sky through the "Let's get over with this—this We've got some work ahead of it's getting late. Open up that , Bob. Here's where you come b Bolles turned his head from le.

re do I come in?" he asked.

an idea of ours," Mr. Kingman —a cracking good idea." Mr. ughed behind his hand.

this way, please, Mr. Bolles," he Mr. Kingman and I are both so us." Mr. Moto paused to laugh . "I am so afraid Mr. Kingman erhaps make some very serious with the motor if he worked and Mr. Kingman is so very fraid that while he is working the motor I might be tempted –liquidate the situation. Excuse is so very funny."

said that before," Mr. Kingman, d Bob Bolles noticed that his as growing edgy.

Moto placed his hand before his and coughed again. "I have one uggestion to make, please," he We are getting so very near the our—ah—association and I have o very, very tempted, so sorry times that I have made the ent. I have counted at least four nities when I might have ended ."

't be so sure," Mr. Kingman. "Would you like to try it now?" Moto's hand dropped carelessly e right-hand pocket of his soiled oat.

would be so foolish, don't you he said, "until we have finished siness here? I only suggest we at we are looking for and walk the house upon the hill. Now hould see a vessel coming—it is er which still worries me, please, n still not sure about Mr. Bolles ay have to co-operate further."

ahead," said Mr. Kingman. "Go

if everything is clear," Mr. Moto , "as I hope so very much it will He paused and nodded at Mr. an.

"Then the—the sky's the limit. Is that what you mean?" Mr. Kingman asked. "That's all right with me—when we get to the mainland."

"Thank you," Mr. Moto said. "I only wished that we understand everything so very clearly. Now, Mr. Bolles, you are to work on the plane. Take out the—ah—supercharger, please, and listen to me carefully: Mr. Kingman and I will watch everything you do. We will be so very interested. You must break nothing, make no mistake."

"He won't," Mr. Kingman said. "I know how to take a motor down. You understand, do you, Bob?"

Bob Bolles squared his shoulders.

"So sorry for you if you do not," Mr. Moto said before Bob could speak.

"I'll get it off for you," Bob Bolles said, "if you'll get that trained seal of yours to put down his gun and give me some help."

"Seal?" said Mr. Kingman. "What trained seal?"

"Oscar," Bob Bolles said. "He can do everything but balance a ball on his nose."

"You shut your damned mouth," Oscar said, and Mr. Kingman gave a shout of laughter.

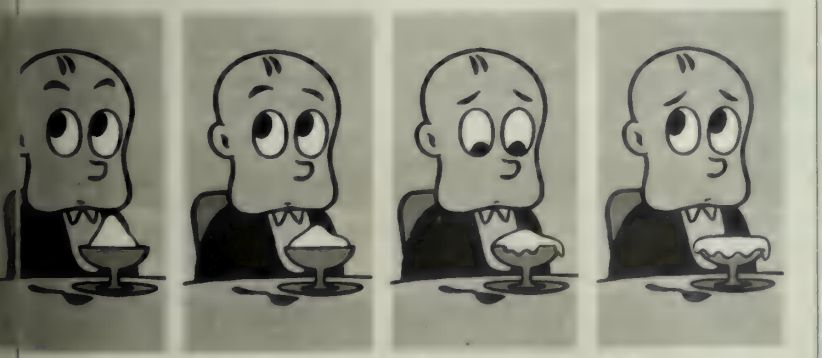
"You're a—a good egg, Bob," he said. "Oscar, get the cover off that engine and do everything that Mr. Bolles says. I'll be watching. Get moving, Oscar."

"Trained seal," Mr. Moto said half to himself. "Why is he like a seal? I do not understand."

"I'll take Oscar's rifle, Mac," Mrs. Kingman said. It seemed to Bob Bolles that a shade of perplexity crossed Mr. Kingman's face.

"What?" he said. "What's that, Helen?"

"I just said I could hold Oscar's rifle, Mac," Mrs. Kingman said.



"Why, of course, my dear," Mr. Kingman answered. "Unload it, Oscar, and give it to Mrs. Kingman. I mean nothing personal, oh, no, of course not. It's just in case you might do something you'd be sorry for. Get the cover off, Oscar. Open up those tools, Bob."

Bob Bolles opened the case. It was beautifully fitted with a set of tools: socket wrenches of all sizes, a kit that any ground mechanic would have been proud of.

"Hello," Bob said. "It's made in Germany!"

"Don't talk," Mr. Kingman told him. "Get to work."

OSCAR had ripped the tarpaulin off the engine and Bob picked up the tools. He was familiar enough with the business, for he had been through it often and he had seen it done by others many times. While he and Oscar dragged up some stones from which to make a platform on which to work, and when he asked Oscar for a hammer and handed Oscar another screw or nut, most of his actions were mechanical. After he had unfastened the quick, detachable latches and had opened the engine-compartment cowling, the whole

It's Easy to See How GAINES DRY DOG FOOD Can Save as Much as 50%

We're in the Army Now!
Sound and sturdy after two years in the Antarctic, dogs of the U. S. Antarctic Expedition are in the U. S. Army service.

OFFICIAL PHOTO—U. S. ANTARCTIC SERVICE—Expedition dogs rest after a long trek over the barren wastes of Antarctica.

● There's practically *no moisture to pay for* in Gaines! It's 92% moisture-free when you buy it. Result: When *you add the moisture* you may save up to one-half—and at the same time bring your dog great benefits!

● And your dog will like Gaines—thrive on it! Gaines was the dog food chosen for all dogs and puppies by the U. S. Antarctic Expedition. Gaines is the decisive choice of many of America's foremost professional dog raisers. Gaines is the deliberate choice of thousands of "one-dog" owners who thrill over its valuable nutrients, and rejoice in the way it can save them money.

**This does it!**

● *Indeed each one pound of Gaines dry dog food* makes two pounds of moist food for your dog to enjoy. It offers Vitamins A, $B_1$, $B_2$(G), D, E, proteins, cereals, minerals. In fact, Gaines contains everything normal dogs are known to need to help them develop glossy coats, clear eyes, sound bones, and plenty of pep.

● Could your pet ask for more? Why not try a sample! There is one waiting for you. It will be sent free if you will simply sign and return the coupon below. Or perhaps you would rather buy a bag of Gaines at your dealer's today. You need risk not a penny. Gaines is sold under a money-back guarantee.

AH! VITAMINS!
Gaines dog food contains vitamins A, $B_1$, $B_2$(G), D, E

## EMBLEMS OF EXCELLENCE

**NATIONAL INVITATION CHAMPIONSHIP CUP.** At the close of the season each year, ten of the leading New York colleges sponsor a National Invitation College Basketball Tournament in which the two top New York teams compete against six outstanding teams invited from all sections of the country. A replica of the perpetual trophy shown at the right is awarded to the winning team. You can be mighty sure the college that wins the cup in this tournament of champions has a five-star team—they have to be better than good!

**ETHYL EMBLEM.** There is an award for excellence in gasolines too. It is the Ethyl emblem. Gasoline in a pump which bears this emblem has to be better than good. It must be "tops" in anti-knock (octane number) and all-round quality. "Ethyl" means a quicker-starting engine in cold weather; extra power throughout the year. When you stop to buy gasoline, the Ethyl emblem tells you which pump contains the best.

*THE BETTER THE GAS, THE BETTER YOUR CAR*

ETHYL GASOLINE CORPORATION, NEW YORK CITY

maze of mechanism was exposed behind the cylinders. The whole space up to the fire wall, protecting the pilot's compartment, was crisscrossed with braces, wiring, piping, fuel pumps and generators. He began dismantling these obstructions, groping through the center of the mass for the turbo supercharger. It was not an easy job, for the tools in that German kit were in metric sizes, always a little too tight or too loose. He looked down once at Mr. Kingman from where he was standing.

"Too bad you didn't bring American tools," he said.

"There was every reason why this engine should be metric," Mr. Kingman answered. "The plane was for the French. These confounded English inches—some day the whole world will be on the metric system."

"I suppose it will," Bob said, "if boys like you run it," and he searched among the tools for a ratchet-head, socket end wrench.

"Just get it out," said Mr. Kingman. "Get it out."

PERSPIRATION was streaming into Bob Bolles' eyes and his face and shirt were smeared with grease.

"He does well, I think," he heard Mr. Moto say.

"Yes," Mr. Kingman said, "he knows his job. I do not like liquid cooling."

"Fetch that hammer, Oscar," Bob Bolles called, and if they said anything further he did not hear it for a while. The pipes and the wires were cleared and the turbo supercharger was in front of him.

He did not hear their voices, because he was too much concerned with a dull, bewildered surprise of his own. It was modern, but he had seen the whole thing before. It was all like a book or a picture he had known; that piece of mechanism which they wanted had already been shipped across the water in hundreds of other engines. There was something wrong somewhere. He knew it, because he had examined the very type before. There it was—heavy and bulky, about the size of a man's hatbox. He could see the outlines of the twin housing and the intercooler. The finish was already scorched and chipped and scaling from the heat of the test runs. If they wanted that supercharger, they were mistaken. He knew they were mistaken. If they wanted it, he was face to face with a secret he must keep. There was something else in that plane—certainly something else. Still holding the wrench, Bob looked down at Mr. Kingman and rubbed the perspiration from his eyes.

"Well, there it is," he said. "Do you want to see it?"

"We'll see it when it's off," Mr. Kingman said.

Bob looked down at the octagonal bolts which were holding it. There was certainly something else and it was not there in the engine. There was something they did not know about. He turned his head away from them, hoping they would not see any change in his expression.

"This end wrench keeps slipping," he said. "Do you mind if I look in the cockpit for a minute?"

"What for? What is it you want?" Mr. Kingman asked.

"There ought to be some tools," Bob Bolles said. "If I could get an end wrench that fits—"

"Very well," Mr. Kingman said, "but hurry, you understand?"

Bob Bolles climbed slowly into the cockpit. He knew that they were watching him and he could not stay there long. His legs felt weak and watery. Since it was not in the engine, it would be on the instrument board, as sure as fate. He would only have a minute to look at the complexity of the dials, just

a minute, as he peered down ins

Moto said. "I should like to see if the horizon is clear."

"All right," said Mr. Kingman. "We can leave the tools here. Come ahead, Bob."

But Mr. Moto still hesitated as though something careless in their haste disturbed his conscientious sense of order and his hesitation seemed to annoy Mr. Kingman.

"What is it now?" Mr. Kingman asked impatiently. "You said we ought to hurry."

"So sorry," Mr. Moto said. "Are you so very sure we have everything?"

Mr. Kingman's voice was hearty and positive. "There isn't another damned thing here," he said, "that isn't on any other ship. That's so, isn't it, Helen?"

"Do you think we'd come away out here and leave what we want?" Mrs. Kingman asked Mr. Moto. "Of course we have everything."

"But the controls, please," Mr. Moto said, "the instruments."

"Really, Mr. Moto," Mrs. Kingman told him, "you're not being very sensible. Our intelligence has been over every specification."

"It was only a question," Mr. Moto said. "So glad to take your word. Do you agree with them, Mr. Bolles?"

"Yes," Bob Bolles said, "absolutely. There's nothing novel about the design or the equipment. And now I'd like to ask, since you've got the supercharger, what else do you want with me?"

His question appeared to make them forget the plane. It met with a moment's embarrassed sort of silence.

"Keep—keep your shirt on," Mr. Kingman said. "You're going back with us to the house. We'll take up the matter of the boat next."

IT WAS the beginning of sunset when they reached the old avenue again. They walked back in the same order as before, except that Mrs. Kingman walked beside him. Bob Bolles glanced over his shoulder. Oscar was just behind them, his rifle ready, and some paces farther back came Mr. Kingman and Mr. Moto. The sky was growing red with the setting sun and there were purple colors in the hills, now that the bright glare of the day was going.

"Look at the sky," Mrs. Kingman said. "It's growing pink like wine and water. When I was a little girl—"

"You lived on Park Avenue, didn't you?" Bob Bolles said.

"No," Mrs. Kingman answered, "perhaps I'll tell you sometime. When I was a little girl my father would put a spoonful of wine in my water glass. The color was just like the sky. Bob—"

"What?" Bob Bolles said, because she seemed to be waiting for him to say something.

"You should learn to live in the present, always in the present, like the rest of us. Just the moment—nothing more."

"I've got a good deal to think about," Bob Bolles said.

"Don't," she told him. "Think about the sky."

He was trying to hear what Mr. Kingman and Mr. Moto were saying.

"Heigh-ho," he heard Mr. Kingman humming, "home from work we go."

They were nearly at the top of the rising ground. The walls of the ruined manor house, stark against the sky in front of them, were also changing color with the sunset, and then the sea and the harbor lay below them. There was nothing in the harbor, nothing on the horizon.

"Very well," Mr. Moto said. "I am so very much relieved. I do not think that we will be disturbed until tomorrow."

"Yes," said Mr. Kingman slowly, "it looks all—hunky-dory. It's about time that we—we simplified matters, isn't it, Moto?"

"Yes," said Mr. Moto softly, "I agree to that."

"All right," Mr. Kingman said. "Oscar, light up a little fire inside there and put some coffee on. We'll all do better with a little wine and coffee and chicken."

Oscar looked at Mr. Kingman questioningly and Mr. Kingman nodded.

"It's all right, Oscar," he said. "Bob, you can set that thing down now, gently, very gently. It's too heavy to be stolen. It will be safe right here."

Oscar crossed the terrace and disappeared through one of the gaping windows inside the house and Bob Bolles set down the canvas bundle he had been carrying. Although the weight was off his shoulders, his muscles still ached and his back was still bent and all at once he felt deathly tired. He could see that the sun was dropping fast. There would be a few minutes of twilight and then it would be dark.

"Now," Mr. Kingman said, and Mr. Kingman did not look tired at all, "it looks as though we must begin to simplify matters. You had your chance to talk to Bob, Helen. Did you get any satisfaction out of him?"

There was no doubt what Mr. Kingman meant, although his voice did not show it, but there was no doubt that Mrs. Kingman understood, because she looked deathly ill.

"Answer me, Helen," Mr. Kingman said. "Can he get the boat back?"

But Mr. Moto answered before she could speak and his voice was as smooth as silk.

"There is no need for Mrs. Kingman to answer, please," he said. "We no longer have necessity for Mr. Bolles, I am so very much afraid. So sorry, when he has been so helpful. Yes, the boat will come back, when a fire has been built upon the beach."

Something seemed to catch Bob Bolles by the throat. He never thought that it was fear as much as blank astonishment that Mr. Moto seemed to know almost everything. He could not imagine how Mr. Moto could have guessed it.

"What the devil!" Mr. Kingman said. "Did he tell you, Moto?"

Mr. Moto looked childishly pleased and he gave one of his short artificial laughs.

"Oh, no, please," he said. "When your little boat came in I was so interested to watch. I saw a black man slide from her into the water and swim to land. It did not seem to me correct. When he came to shore I stopped him. That was all. It was not necessary to be rough with him. He was so very much afraid. He told me that he was to take the boat away. Oh, yes, he told me everything."

"Why the devil didn't you tell us sooner?" Mr. Kingman asked.

MR. MOTO'S whole face broke into a happy smile. "So many things, Mr. Kingman," he said, "that I do not tell until necessary. Please, I wish so much to make use of Mr. Bolles as long as possible."

"Well," said Mr. Kingman, "that's about all we need of him, isn't it?"

"Yes," Mr. Moto answered, "I am so afraid I really think so."

Mr. Kingman looked troubled and Bob could almost believe that Mr. Kingman did not like any of it. "It's a little—tough," he said. "You—know too much. Anything you want to say, Bob?"

When Bob Bolles thought of it, there seemed to be absolutely nothing. He was thinking of the plane by the sugar mill. He would have liked to have had the chance of getting to the plane again, but there was no chance. They had used him. They had driven him like a horse, until they were finished with him.

"No," he said, "to hell with the whole lot of you!"

This FLEXIBLE INSOLUBLE LEAD solves your COLORED PENCIL PROBLEMS

YEARS of laboratory research have perfected for Eagle "Chemi-Sealed" VERITHIN a lead made with pigments so insoluble that not even running water will wash away its marks! And by patented processes, the lead is interwoven with countless tiny filaments to make it amazingly *flexible* and resistant to breakage.

**A Perfect Point Every Time!**

VERITHIN's flexible leads do not crumble nor break. You get a needle point in any sharpener every time.

**4000 Checks From One Point!**

By actual test, one VERITHIN point makes over 4,000 bold check marks before it needs resharpening. Use VERITHIN and save money.

**Protects Your Records, Too!**

VERITHIN insures your records against water damage. Its marks will not smear nor run under moist hands or accidental wetting.

*Made in 30 Brilliant Colors . . .*

EAGLE PENCIL COMPANY OF CANADA, LTD., TORONTO

whose cotton, fences, watermelons and other fragile possessions were rendered extinct by the 130,000 men ranging over southwestern Arkansas for two weeks before tangling with the 3d Army. But there's at least one claimee who undoubtedly won't be able to collect. What he wants is dough to pay for damage that was done to his house. So many soldiers, he asserted, came to see his daughter that the front steps caved in and the porch fell off.

Claims officers may be in Louisiana until next July 4th discussing dollars with the disgruntled. Into Alexandria, even before the fracas began, strolled a Negro leading a mule, which he tethered at City Hall. In Mayor W. George Bowden's office he reported that a soldier had somehow stabbed the "hard tail" with a bayonet. "Soldier man said yo'all would pay me," the Negro explained. "We," the mayor told him, "don't pay Army claims. Is the mule dead?" The owner wrinkled his brow. "Naw, suh, he ain't daid—but he sho is pow'ful low down."

MANEUVERS brought manna to small-store owners, most of whom maintained a decent level of prices. Between Alexandria and Winnfield a gang of soldiers literally bought out a grocery store; and, having done so, advised the owner it was against the law to keep a store open when there was nothing in it to sell. The more than slightly flabbergasted merchant allowed maybe it was so, and locked up the place.

MOST of the troops agree that the real enemy in Louisiana wasn't the 2d or 3d Army (and vice versa) but the chiggers. General Lear himself declared that chiggers—sometimes known as red bugs—were a real menace, causing infections which kept the Medical Corps scrambling. Most widely used antichigger substance was sulphur, either taken internally or dusted on shoes and clothing (Collier's, Aug. 30th). Trouble with the internal treatment—which makes a soldier so nonfragrant that the pests won't have any truck with him—is that it often causes dermatitis, which is worse than a barrel of bugs. No two soldiers seemed to agree on a prepared ointment. A Kentucky lad itched his way into an Alexandria drugstore and asked the clerk what sort of a remedy he had for insect bites. "What kind of insects?" asked the pill roller. "Don't make no difference," groaned the soldier, "I'm bit by 'em all."

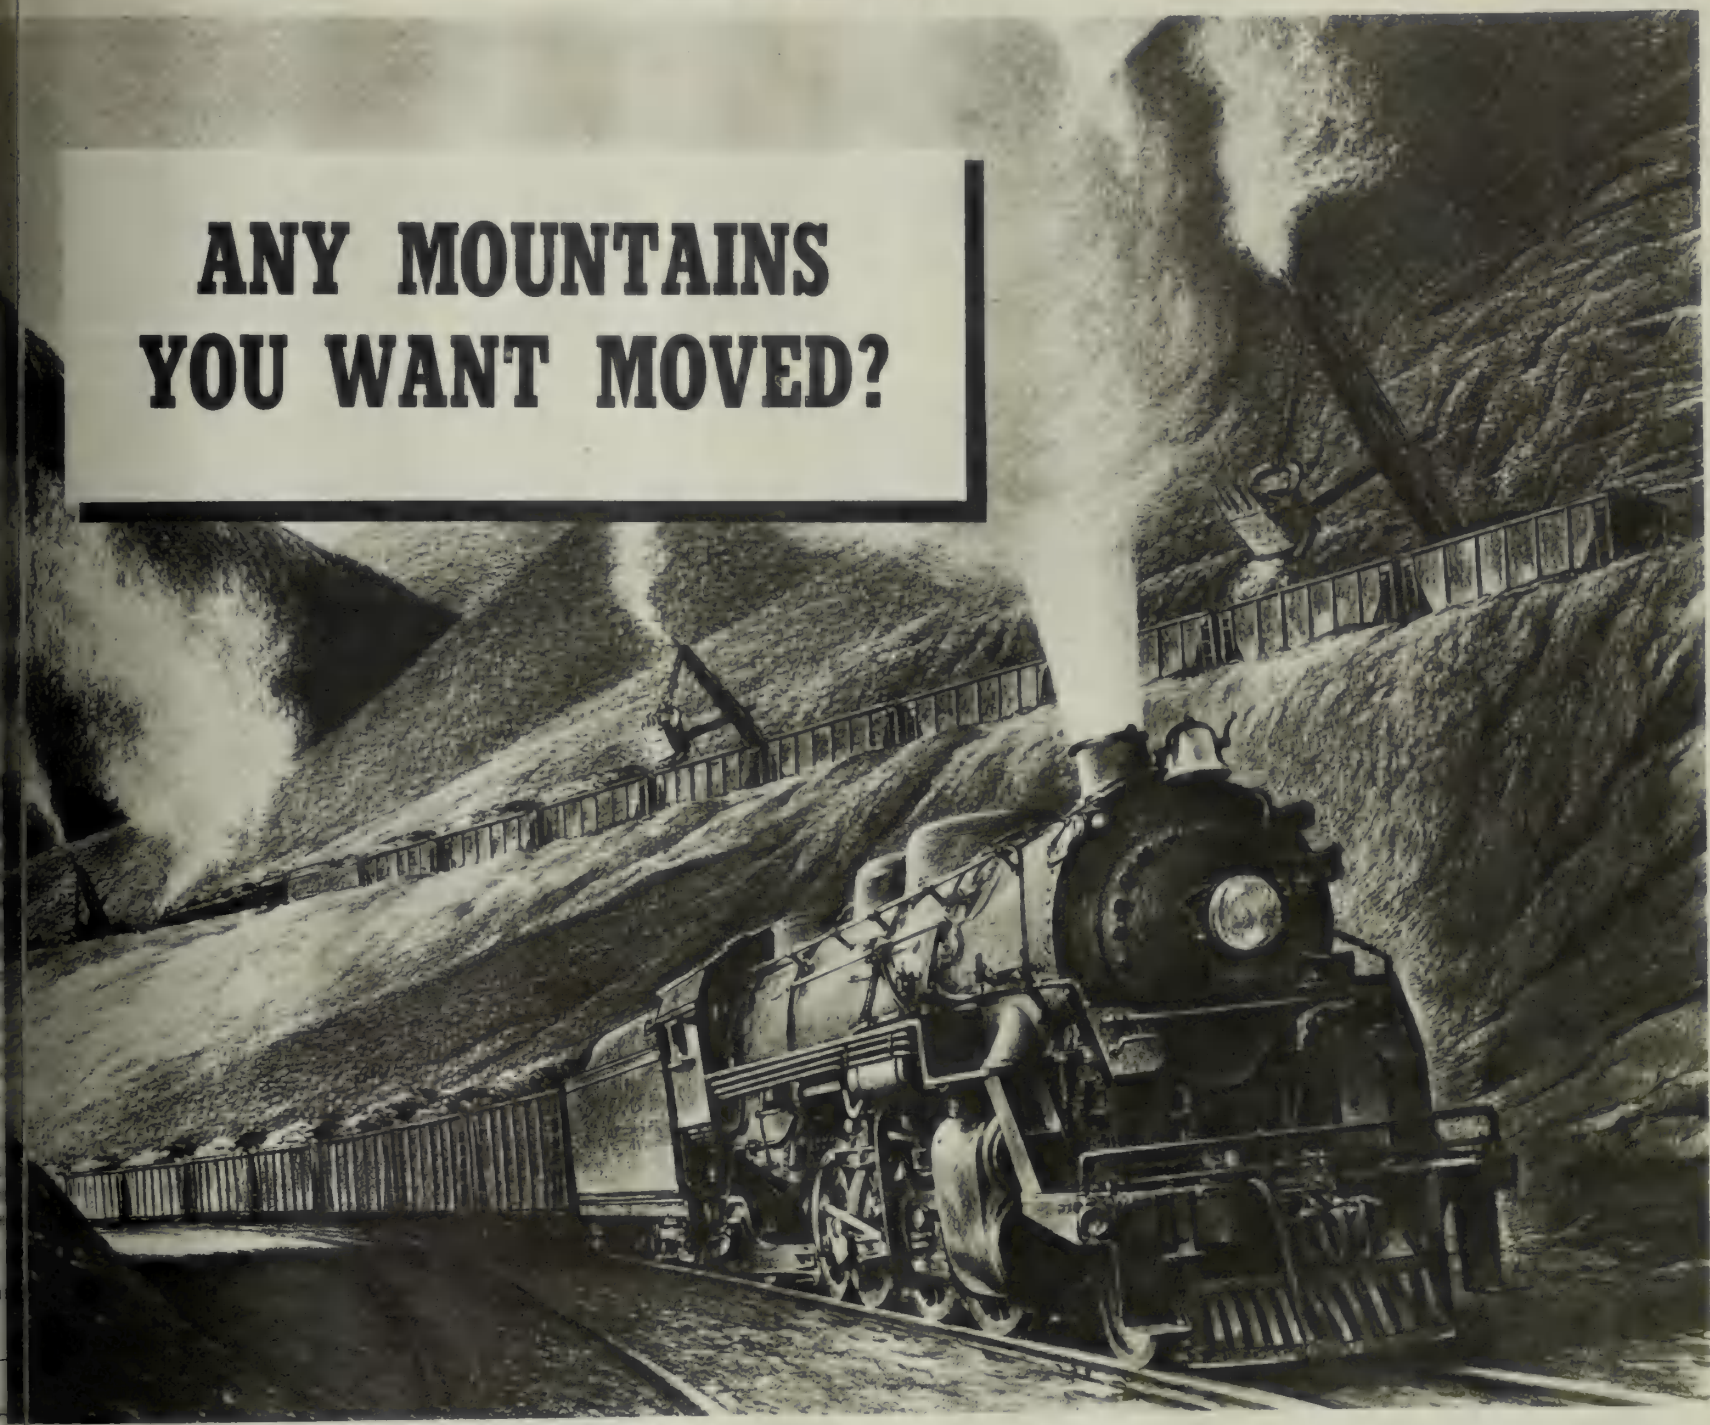
FARM boys from the cotton belt figured out how to beat chiggers at night. Fifteen minutes after a Mississippi unit had moved into town there wasn't an inch of cotton bagging or plow line, or a hoe handle left in any of the stores; and half an hour later every man had a hammock rigged between trees and above the chigger line.

Unless cold weather discourages them, chiggers will be disturbing the personnel of the 1st, 2d and 6th Army Corps, just starting their chores in the Carolinas. In addition, the boys will have to contend with seed ticks—cute little devils the size of a pinhead and black as the ace of spades. But perhaps by that time the new googus compounded by a St. Louis chemical company and being tried on 10,000 men in the field will prove to be as good as it's said to be, which is plenty.

WEARY soldiers raved about Southern hospitality. Half a dozen 35th Division boys are still talking about the elderly couple who turned their house and icebox over to them, then retreated to a relative's home for the night. One lady stood in her front yard and carnival-barked a dinner invitation to whom it might concern. Twenty soldiers responded and the lady was left without a vittle to her name. Getting a bath was often more difficult. One soldier from Camp Jos. T. Robinson took a bath in his raincoat. What he did was dig a hole in the ground and line it with his coat to make a reasonable facsimile of a tub. Sounds pretty unsatisfactory. It is, rather.

ONE of the saddest men in the whole Army was Pfc. Charles Goulding, of Camp Shelby's Co. A, 102d Antitank Btn. While he was maneuvering in Lake Charles he received a Railway Express notification that a twenty-five-pound package was being forwarded to him from Hattiesburg, Miss. Just before the package reached Lake Charles, Pfc. Goulding marched out into the field. When he returned to Lake Charles the package had been shipped back to Hattiesburg. Next day he got a card from a young lady in LaCrosse, Wisconsin, asking him how he liked the case of beer. As he keeled over Pfc. Goulding informed his parched pals that the name of the donor was a military secret.

IT WAS cute of the Fourth Corps Quartermaster's publicity office to publish mess-hall menus in advance, so that families could eat at home what son Joe was eating at the same time in camp, but the idea went into a dive when the boys in the field read about it in isiana paper. To the paper som later came a package containing t sandwiches wrapped in an u letter. The letter: "It was inte to read the menu in youre paper 2 that was to be serve to the thir Sept. 4. We are sending you one lunches that was ser Sept. 4. There seams some mix up in the mer lished in youre paper one used by the third Army on th In case some one there failed to of these at the restaurant they m one free of charge." The packa marked Non Perishable.



"THIS," writes Sgt. Clyde V. Jr., a Marine at Camp Ellio HQ, San Diego, "is written in b that not inconsiderable corps of raphers, clerks and typists who a cerned with answering the innu How-Is-My-Boy inquiries. You sure your readers that their lovers and relatives are perhap cared for in the various branche service than when under the pr wings of the home folks—thus official desks for more importa ters. Field training is not well for letter writing, and failure from Dear John does not mean i ing disaster. By the same token, no sense in John's writing ho details of his last headache clearing away of correspond curred as a result of such new relieve many clerks for line d other military matters. If a bo enough to be drafted or wise en enlist, then he's old enough ar enough to know when to write, find the post office, and when t in out of the rain."

OR GET out into it with a soap.

"They seem to prefer any sort of game that dice come with"

BARBARA SH

IF it's a penny postcard you want to send to a friend in the next town, the railroad carries it.

If it's a mountain you want moved, the railroad moves it.

And for the past year, the railroads have had mountain piled on mountain and still have kept them all moving.

First, the defense program doubled and redoubled far beyond the government's own estimates.

Consumer buying, rising to a ten-year peak, meant a marked increase in traffic.

The demand for ships brought a vast shift of tonnage from water to rail.

The strike dislocated the movement of the vital coal traffic; thousands of coal cars stood idle for weeks and then had to do double duty to catch up.

All these the railroads are moving—without congestion or tie-ups.

Then, on top of it all, came a bumper crop of grain—and all of this for which storage can be found, the railroads are moving.

And the railroads are preparing to move still greater mountains. In the past two years they have put in service nearly 200,000 new and rebuilt cars. The schedule calls for 120,000 more in 1942—150,000 more in 1943, if the materials it takes to build them can be obtained.

Railroad transportation is one problem this country hasn't needed to worry about in the present emergency. The railroads have been able to handle the job so well for two reasons—one is that they entered the emergency period at the highest state of efficiency in railroad history. The other is that they have had the cooperation of government departments and shippers in making the most effective use of all available equipment.

# Harold L. Ickes on That Oil Shortage

Continued from page 13

braced ourselves for a deluge of messages demanding the end of "Ickes' Curfew."

Messages came, all right—from the filling-station operators themselves. BUT, of some 700 received the first two days, all but three insisted that the curfew be retained.

"It is the first time that we have been able to live the lives of normal people," they told us.

From the individual stations and from associations representing literally thousands of dealers, the word came. AND, from the Middle West we are now receiving dealers' pleas:

"Why can't we have the 'curfew,' too?"

Anyhow, voluntary curtailment failed. So, on August 15th, we got supplies to filling stations cut 10 per cent under July. Later, this order was extended through September. We did not like to force this reduction, despite the fact that some people love to picture us as demoniacal sadists, thrilled at opportunities to make people unhappy. We sincerely wish that everyone could have brimming tanks. But it just can't be done until we can get more oil. We prefer to be unpopular now, and make sure that nobody who burns oil goes cold this winter.

### We Suggested Pipe Lines

But, important as conservation is, the really great task has been to get the oil. If you believe some of the things in the papers, you may think that nothing whatever was done until Senator Maloney and his committee began their oil investigation. Well, I will outline some things that we did before Mr. Maloney and his colleagues even got the hearing-room benches warm.

More than a year ago, the President asked me to survey facilities for transporting oil to the East. I found that, while they were then adequate, an emergency would cause a transportation deficiency. I suggested then that one or two pipe lines be built to the seaboard region.

Shortly after I became Petroleum Co-ordinator, I urged the oil industry to build a pipe line to deliver 250,000 barrels of crude oil daily from Texas to New Jersey—the equivalent of fifty tankers. The suggestion was not unanimously applauded. Several large companies feared that such a huge pipe line would too greatly assist small Southwestern producers to get their competitive products into the rich Eastern market.

Nevertheless, word got out that a big pipe line was being considered. And who do you think immediately popped into the picture? Why, our old acquaintance, the Association of American Railroads—that fabulously financed propaganda and legislation-influencing agency.

The A.A.R. master minds raced onto the scene like cats after a fishcart—lawyers, backslappers, corridor-whisperers and statistical prestidigitators—and they swung into action with everything from dollars to diatribes.

And why? Well, I do not want for a moment to impugn motives carelessly, but may I mention this: A pipe line delivering 250,000 barrels of oil daily from Texas to New Jersey would approximate 25,000 tank cars moving continuously between the same points. That is a lot of railroad business.

Be the motives what they may, the A.A.R.'s $60,000-a-year president, Mr. John J. Pelley, promptly got up a good head of steam—not on oil but about oil. The Battle of the Lobby

"Shortage?" Mr. Pelley inqu effect. "Tsk-tsk. Why, if th needs oil, we can haul all you w

The newspapers and the M committee quickly concluded t Pelley could solve the problem i minutes by waving a wand an ping up 20,000 tank cars—may 30,000. In fact, so unhappy w Pelley in the thought that so wasn't doing right by the Eas that he hinted the railroads mig go so far as to reduce freight r oil below existing exorbitant This, he made plain, would enta corporate sacrifices, but the r would gladly bear the cross, pur patriotic action in the public

Oh, well . . . Let's see ab matter of tank cars. To begin w back on June 25th I formally u oil companies to use any availa cars, even though such transp would be about six times as ex as a tanker movement under ra existing. We asked tank-car companies for a complete repor available. We also asked Mr Budd, Commissioner of the Div Transportation, Office for Em Management, for this informatio

On August 20th—two months Mr. Budd reported to Mr. R Davies, Deputy Petroleum nator, that some 18,000 cars were able." Mr. Davies discovered, h that Mr. Budd had made no count of 18,000 actual, idle cars. the figure was a mathematical tation, highly theoretical. It mean that 18,000 *additional* ca available: it meant that *if* ca tions were brought to maximu ciency by all concerned, the eq of the *capacity* of 18,000 ad cars might be achieved, *if* the were right.

Mr. Pelley reached into his pulled out 22,000 idle cars. B it developed, he meant "idle for four hours or more." Which m actly nothing, for a car can be long before it is waiting to be l unloaded, is undergoing repairs, steamed out so that it can car ferent product, is being held fo a company to which it is under or for other reasons.

### Estimates Don't Transport

Nevertheless, on August 2 Davies telegraphed these estim the oil industry and renewed th exhortation that cars be utilize

Now, the Petroleum Co-or office cannot give orders. It recommend. But this second tank-car use we implemented thority from the Department o to the industry to form, in effec so that the added cost of rail tra tion might be fairly spread.

Let us be frank about the The oil industry did not respon tensively as we had hoped. Davies called leading compan sentatives to Washington on ber 4th. They finally gave, in their pledge to use tank car fullest extent possible. Other meeting with railroad traffic ex obtained rate reductions for th New York haul. These cuts bro freight on crude oil from $2.08 to $1.37; on gasoline from 5. per gallon to 4.16 cents.

So, we hope that the railr right: That they do have 22 cars—even though it will cos

es $250,000 more daily to move
00 barrels of gasoline from Texas
i would by tanker.
ut it was a little amusing, when
ca d a showdown with increasing
ar s for actual cars instead of "es-
te" that a tank-car executive
ne:
*N* are *dizzy,* looking for cars."
e the information presented to
S ate committee, together with
fu calculations of the additional
nc being delivered daily to the
t ast as the result:

AI Y INCREASES OBTAINED

rg l legislation permitting heavier

ar increased efficiency in opera-
ans .....60,000 bbls.
rc ght about fuller use of existing
e- l pipe lines .....20,000 bbls.
b ned greater use of barges for
in oil .....10,000 bbls.
bt ned additional movement of oil
ru: .....15,000 bbls.
in uraged greater and more effi-
t e of tank cars. By December
it hoped this may produce trans-
at n *capacity* equivalent to 10,000
c s .....73,700 bbls.
L AIN IN TRANSPORTA-
O CAPACITY .....178,700 bbls.

he our program started, the total
sp tation deficiency was calculated
53 00 barrels daily for the balance
hi year. Thus, the shortage has
i ore than halved, and we are
zi every facility to continue re-
ng t. Deliveries of 70,000 barrels
il ily will be made by January by
n pipe lines: The Southeastern,
i rt St. Joe, Florida, to Chatta-
a and the Plantation, from Baton
ge Louisiana, to Greensboro, North
li a. Under consideration is a
o l to extend the latter line to
er Norfolk or Hampton Roads—a
an of 250 miles.
he biggest project of all is the pro-
d $80,000,000 National Defense
I he—the bogeyman of the A.A.R.
n g 1,580 miles from eastern
as Bayonne, New Jersey. Planned
el er 250,000 barrels of crude oil
y, t can be stepped up to 350,000
el daily. It could be finished in six
th if steel were available. It
ld have an initial capacity of ap-
ri ately fifty average tankers. As
w s being written, eleven oil com-
ie had agreed to build the line at
r wn expense—and I don't think
fey'd spend $80,000,000 if there
e o shortage.

**Wh a Pipe Line Should Be Built**

he dvantages of such a line are tre-
de s.
ir it would avoid the hazards we
ld face, in the event of attack, in
in tankers in convoys over 2,000
s open sea between the Gulf and
N th Atlantic.
ec d, it would avoid the loss of both
l d oil that would occur from fur-
s king of tankers.
hi , it would avoid burdening other
sp tation facilities already being
d t ever-increasing degrees. It is
e pty half the time returning for
th load.
he most striking comparison of
T e increased transportation rates
ch il companies would have to pay
m e 200,000 barrels of oil daily
n xas by tank car would just about
f *the pipe line in one year.*
he proposed line is not a "big
p y" plot. Any company may
ic ate. The railroads violently op-
ed his pipe line—just as they con-
ed to the Senate committee that
y ve fought the Plantation and Southeastern pipe lines. Who, then, wanted it? The War Department. The Navy Department. The Office of Civilian Supply. The Office of Production Management. The Petroleum Co-ordinator. The President of the United States. All have so gone on record. Most important of all, if the reports reaching my office are true, the people want it, although necessary steel is scarce.

This does not mean we do not want the other facilities also. We do. We are building tankers. We are using barges and railroads and tank trucks. The efficiency of all existing means of transportation has been increased.

Meanwhile, what part can the public play in alleviating the situation? The first thing that the public can do is realize that there *is* a shortage.

Figures are dull, but let me mention just a few as to storage on the East Coast on September 7th the latest figures available as this is written) as compared with September 7, 1940:

Gasoline: Down 2,000,000 bbls.
Light heating oils: Down 1,000,000 bbls.
Heavy fuel oils: Down 3,000,000 bbls.
Crude oil stocks: Down 2,800,000 bbls.
Total decline: Nearly 9,000,000 bbls.

These are the official figures of the American Petroleum Institute and the United States Bureau of Mines.

**Here's How You Can Help**

In the face of these shrinking reserves, demand for petroleum products during the rest of this year is expected to be up 10 per cent over the same period last year, or 19,000,000 barrels over deliveries. If this deficit were supplied out of reserves, it would mean this to the public:

Gasoline stocks at the end of the year would be about 4,000,000 barrels below normal.

Light heating oils would be about 3,000,000 barrels below the level necessary to assure the heating of homes for the balance of the winter.

Heavy industrial oils would be exhausted before the end of winter.

So to you who drive automobiles I plead again: Minimize unnecessary driving, hasty getaways after stops, racing to stop lights, speeding. Have your engines adjusted to prevent waste. If you in the East, alone, will do these simple things, you can cut gasoline consumption by at least 1,260,000 gallons daily. If all of you will save, we can build up our gasoline reserves and free precious tanker space for the delivery of heating and industrial oils.

You who heat your homes with oil: If you will get your heaters adjusted to maximum efficiency, you can save at least 10,000 barrels of fuel oil daily.

With these voluntary steps by the public, the oil shortage this winter can be alleviated so that, barring further complications, we hope no one will suffer. Otherwise, there is danger of further restrictions.

My job is to make as sure as may be that all essential needs for oil are met. If demands are increased, we must be ready to supply them. We cannot gamble today with our country's security tomorrow. Obviously, this may result in inconvenience—even economic loss—to many people. But every American is willing to make the small sacrifice necessary.

When I became Petroleum Co-ordinator, I knew that my actions would be misrepresented by those who had their reasons for so doing. I knew that I would be criticized, condemned, ridiculed. And I was right. However, in view of all of the circumstances, I have no choice except to conduct my office in conformity with what I believe to be the facts. There is a job to be done. I intend to do it.

# SAVE GAS
## -and conquer CARBON too!

"I see they are talking about saving gasoline again," said a motorist the other day. "But if everybody did what I'm doing, we wouldn't have to cut out so much driving and still we could save gas, sometimes as much as 10 per cent."

• • •

"What's your secret?" he was asked. This was his answer:

**IN 1094**
**CERTIFIED ROAD TESTS**
**MACMILLAN**
**RING-FREE**
**MOTOR OIL**
**increased gasoline mileage an average of 1.3 per gallon!**

• • •

Competent automotive engineers will verify the fact that at 40 miles per hour on a level road 50% of the horsepower developed by the engine is used in overcoming internal friction in your motor.

Therefore, any oil that gives you a greater reduction of friction in your motor is bound to give you increased gasoline mileage by delivering more power to your driveshaft. There is nowhere else for this released power to go!

In the tests mentioned, increases as high as 10 per cent were not uncommon. This means, in effect, that if you drive your car 5,000 miles per year you may get with RING-FREE, as high as

**500 MILES**
**OF FREE GASOLINE**

*More than that,* the increased gasoline mileage and the reduction of motor temperatures in your car prove that with RING-FREE there is less wear in your motor, increased acceleration and greater pep — as well as a substantial saving in repairs and maintenance.

**RING-FREE**
**REMOVES**
**CARBON**

The *continued* use of RING-FREE offers ECONOMIES in both Oil and Gasoline Consumption. In the operation of an automobile it is always true that partly consumed gasoline and oils are bound to form carbon. But you are not bound to sit idly by and let it get thicker and thicker.

You turn the tide against carbon when you put in RING-FREE. Its secret refining process—a patented process—retains in the oil a solvent which keeps ahead of the formation of carbon. You conquer carbon!

Almost at once you will find the benefit of RING-FREE—in added acceleration, in greater smoothness of driving, in increased zip and pep. And as you continue to use RING-FREE you will save in added mileage, in wear and tear and in your repair bills. Start using it today!

MACMILLAN
RING-FREE
MOTOR OIL

Copyright 1941 by
Macmillan Petroleum Corporation

**Try it at OUR risk!** Macmillan RING-FREE Motor Oil is *guaranteed* to remove carbon, cleanse your motor, save gasoline, reduce wear and repairs. It makes your motor run smoother, reduces friction by thorough lubrication and adds pep and zip. Try a fill and if you are not satisfied that RING-FREE is doing these things, your money will be refunded by your dealer immediately.

# Second Lesson

## By John Hawkins

ILLUSTRATED BY C. C. BEALL

**No woman can ever bring two men together unless one of them is honest enough to admit the truth**

IT WAS early in January when Hurry-Up McCrinnon came to the Squaw River Dam. "Pile-buck," his ticket said, and if that doesn't mean anything, then, "Wharf Dock, Bridge and Jetty Builder" is the way it reads on the union card. He went out with the swing shift —4 P. M. till midnight—and he met Tommy Ireland on the working deck.

"How'd you get here?" Ireland said.

He knew, of course, for he'd requisitioned a man to fill his shift. And McCrinnon was a man, in spite of his white hair and his fifty years. Big-shouldered and solid, he looked at Ireland, waiting. His mouth was set in a hard grin, but his eyes were cold, watchful.

Ireland said, "I'd rather have a four-year-old kid or a beer-hall blonde around, McCrinnon. But you're here an' you can stay as long's you do your share."

"That's big of you," McCrinnon jeered softly.

They were building trestle, working high. It was something more than a hundred feet from the deck to the bottom of the hole, and that distance would grow with the passing of each day. Wind boomed out of the gorge above the dam, sleet-laden, strong. It was just dusk and already there was a thin coating of ice on the calk-scarred plank of the pile driver.

Hurry-Up McCrinnon went to work. And, as always, the other pile-bucks watched, withholding judgment until they knew the man. McCrinnon did his part and more. He had a deft hand with an inch-and-a-half manila line; he could use a crosscut saw, a top maul. He walked a six-inch stringer without a downward look. When the shift was an hour old, the inspector came to stand beside Ireland.

"That new guy knows his stuff," he said.

"He should," Ireland replied.

"You worked with him before, eh?"

"I have," said Ireland. "And what's it to you?"

**Ireland cried, "Coming, John! He threw himself onto the b reaching. Too late! Their fi brushed—and then Worth was**

"Nuthin'." The lanky inspect ored under Ireland's stare. "I w makin' a little talk."

Ireland didn't bother to answ was watching McCrinnon again *run a hundred jobs,* Ireland t *Now he's pile-buckin'. He mu money bad. . . .*

"Ain't that McCrinnon?" the man asked. "Ol' Hurry-Up M non, the guy that was the big pus High Dam?" He tipped his head was back in thirty-three, thirt Seems I remember some troubl

"You remember too damn' Ireland said.

But all of it was real again, up at him out of the past: Th Dam and Karen. . . . She'd bee teen then; he'd been twenty-t youngest of the rigging bosse they'd ridden, on Sunday, up t row, winding cliff trail to rea high plateau. They lunched v gentle wind made a thigh-de of the grasses. Towering cloud sailed across the hills and o the awful emptiness of the gorge far down, was the foam-streake ing river. And thrust into it f far shore was the stubby finge cofferdam. . . .

"It looks unimportant from Karen said.

"Ten million bucks went in It'll be the biggest of its kind on of this man's world."

"Maybe it's too big."

"Hey!" he said. "This's Your father's the super dow You've been around constructi you were knee-high to a ja mer. You cut your teeth on a glove. You—"

"That's just the trouble."

HE LEANED back, pillowing on crossed arms. "I like yo he said lazily. "It's red and ye red. It's dusty fire in the su smiled at her. "You're a love gadget. Let's get married."

"A steel man was killed yes

"I was talking about love. ber?"

"And I was worrying out louc

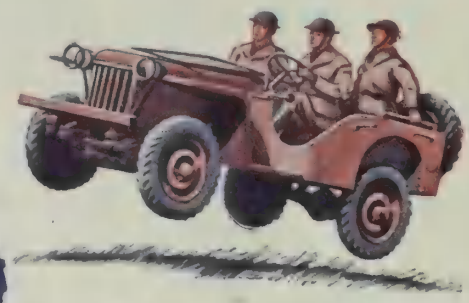
"You're afraid I'll be next." cold was inside him then, dra the muscles of his stomach. "I jobs are highball, Karen, but thi let that thought go, for a frown tiny lines between her eyes. " safe as long as he remembers handholds and footholds in trouble."

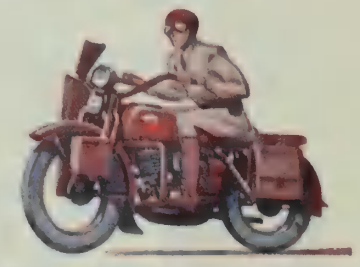
"You will be careful, Tom?"

He took her hand. "I'm care ways. And I've got a good cre know high-line work. They'll ever." . . .

But they didn't. And the s whip of that cable was s Tommy Ireland would never fo was in the glory hole, where the tions were being poured, lookin saw the main line tighten befo ready; saw the cliff tower sway snap and lunge of it, and cr though made of matchwood guys let go. And then the rig shaken loose by the last of tha steel. Terror in a single cry, and faint. Hurtling bodies, etc against clear sky, tumbling over, arms and legs wide-throw the long way from the cliff tow bottom of the glory hole. . . .

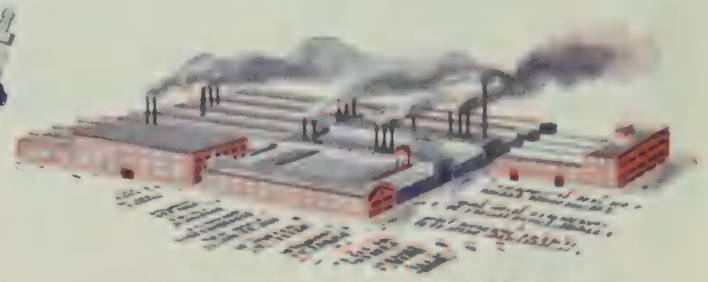
Ireland didn't move; he cou the echo of that cry still ra head. *That was Shorty,* he thou





In bomber, trainer, airliner or light plane, Champion Spark Plugs are rapidly establishing a record for outstanding dependability, as they have in the automotive world. Revolutionary new ceramic types are important contributions to dependable performance in high output aircraft engines.

In tanks, maximum power and utmost dependability are paramount. Champion Spark Plugs are a major factor in supplying the "horses" for these mobile forts.



The Reconnaissance car or "Jeep" is a versatile adjunct to our armed forces. Its ability to negotiate rough terrain depends greatly on dependable ignition. Champions equip the majority.

The motorcycle is a vital means of liaison for mechanized forces. Most of this mechanized cavalry use dependable Champion Spark Plugs.

"PT" boats of the "Mosquito Fleet" represent one of the swiftest and most versatile offensive and defensive arms of the Navy. Champion-equipped engines give speeds up to 60 miles per hour.

American industry is manned by men who depend more than ever before on reliable transportation to and from work. Champion Spark Plugs are the first choice of the majority for dependable service and maximum gas mileage so imperative to our national economy.

he trucking industry of the nation has come to its own in the national defense program. el very of vital materials is speedily and ep dably effected by the nation's leading et of trucks where—once again—Champ- io are the preferred spark plugs.

"Food will win the war", and intensified power farming is the answer to this need. For years Champion Spark Plugs have been first choice on the farm because of their proven dependability and economy for all types of farm service.

*night we split a beer, and he showed me a picture of his kids.*

Shorty Edwards, Mike, the Finn and Cocky Ryan—gone where good riggers go. Not men, but a red mess on the floor of the glory hole. Ireland closed his eyes but that was worse than the other, for then he could see them falling again. . . . Men closed in around him and someone thrust a flask into his hand. "Drink deep, guy! You need it!" The raw whisky burned and stung, but it could have been water for all the help it was.

"That damn' operator—" a mucker began.

"He jumped the gun," Ireland said, and with the clear shock of awakening anger he knew exactly what had happened. "He's like everybody else on his highball madhouse—afraid he'll be fired if there's a shutdown. He thought the main line was ready, but he didn't dare take time to make sure. He opened the throttle."

The mucker said, "An' now he will get canned!"

"Sure." A hard-bitten foreman cleared his throat: "But that ain't goin' to help them riggers. Irish's got the right slant. This's a haywire job. It's high-ball, an' God help the man that gets in the way."

Ireland said, "Front-office trouble."

"An' it ain't goin' to change."

"Maybe it will," Ireland said. "Maybe—"

He placed the flask on the jut of a near-by form and carefully wiped his palms on his faded shirt. The men were silent, held so by the pallor of Ireland's face, the harsh set of his mouth. They watched him turn away.

"Mad!" the mucker said. "An' nine feet tall!"

The pink-and-white clerk guarding the office of superintendent of construction felt the same way. His head jerked up at the crisp, biting sound of calks in polished wood. He yelled, "Hey! You can't—" and then hoped Ireland hadn't heard. He sat quite still until Ireland had passed.

ONE wall of the room held a bank of windows. In front of these McCrinnon stood, the wash of sunlight falling across the brown mask of his face. Solid and tough, about forty, he had the shoulders and chest of a hard-rock miner.

"Irish," he said. "I'm glad you weren't on that tower. I saw it all from here. I—"

"You killed my men!"

"Are you crazy?" McCrinnon asked.

"Crazy?" Ireland's voice was cold, bitter: "You're the one who's crazy! No sane man would drive a job the way you do. You howl for speed and more speed, and to hell with what happens to the men!"

"I'm just the super, Irish. I take orders—"

"Nobody with guts would do what you've done."

"Go on. Get it out of your system."

Ireland said, "Come away from that wall!"

"You're going at it wrong." A muscle jerked in McCrinnon's cheek. "You—" He stopped then, for Ireland was moving in, fists cocked, mouth thin and savage. "I'm coming," McCrinnon said.

The pink-and-white clerk brought armed watchmen, but they came too late. The hurricane had struck and passed on. McCrinnon sprawled face-down in the wreckage of a table; and Ireland stood against the wall, his battered hands limp at his sides. Slowly, he turned his head to look at the gun in the watchman's fist.

"You won't need that," he said.

The watchman said, "You sure played hell!"

Ireland moved past him to the door. He met Karen there—a breathless Karen, whose eyes were wide.

"Karen." His voice broke on harshness. "He got what he rated. He killed my men with his crazy driving!"

"You didn't—" She was looking past him at the inner room. The blood went out of her face.

"I won't work for him," Ireland said. "Not ever. I'm leaving, Karen. You can come with me, or you—"

"Let me by!" she cried.

Heavily, he said, "You know what you want. . . ."

That was the last the High Dam saw of Tommy Ireland. He shied away from construction, knowing his name would be written large on a hundred blacklists. He worked the woods until one of the big guns of building passed that way; he shipped as a deckhand on a harbor tug. And he changed, growing taciturn. He seldom smiled.

He was twenty-eight . . . twenty-nine. The headlines screamed of National Defense. Shipyards sprouted up like mushrooms along the river. Every pile-buck, rigger and bridge man on the coast was working. Tommy Ireland went out to Squaw River to push a gang of pile-bucks, to build trestle. . . .

THE swing shift was three hours old when Jensen, one of the engineers, came out along the catwalk. Giving Ireland a cheerful grin, he said, "Some view you got from up here, baby."

"If you like views," Ireland said.

Floodlights spilled white glare down into the ragged pit, a hundred feet below the trestle deck. Power shovels, cats and drillers worked there, cutting into the belly of the island, going deep into bedrock for the foundations of the No. 2 powerhouse.

"I talked to the chief," Jensen said. "No soap."

"Did you show him how the rock crumbled?"

"I did everything but sprinkle it on his head. He says you're full of balloon juice, and I think he's right." Jensen smiled. "How come you're short a man tonight?"

"I'm working a full crew."

"Not by my count," Jensen said.

McCrinnon was missing. Ireland found him, after a ten-minute search, on the floor of the hole, standing by one of the big shovels. He lifted his head at Ireland's call.

"What're you doin' here?" Ireland demanded.

"Nothing very important."

A grease smudge lay across McCrinnon's mouth, looking oddly like a purple fist bruise. Memory stirred in Ireland, and with it came tired anger. *He's too old to be working high,* Ireland thought. *I ought to fire him now an' get it over.*

"I'll get back on the job," McCrinnon said.

"An' stay there," Ireland snapped. "You're paid to build trestle. Do your loafing on your own time."

McCrinnon smiled faintly, nodded and turned away. Ireland stared after the man. "He knows," Ireland whispered. "The old goat knows I'll keep him around as long as there's a chance that I'll see Karen. . . ."

Through the following nights, McCrinnon was never away from the trestle during shift time. Even when things were slack he was there, making a point of it, the ghost of a grin haunting his hard mouth. But the lunch hour was his own; he spent it prowling the glory hole.

Nor was that all. Jake Grosset, a chunky, smiling rubber ball of a man who captained the night guards, and who was "Joe College" to every bull-neck on the job, came to Ireland. "That old guy hangs around after shift," he said. "I thought I better check with you about him."

"What does he do?" Ireland asked.

"Nothing—that's what gets me. He just watches the men down in the hole.

MARCHING OFF FOR DUTY?

Take along an accurate watch! Attention to promptness often paves the way to a promotion. Get the watch of *railroad* accuracy.

Hamilton's experience building watches for railroad men insures greatest possible accuracy in every size and grade that Hamilton makes.

Your jeweler now has many sturdy new Hamiltons, all containing 17 or more jewels. Shown below: the *Lexington* and the *Barry*.

For free descriptive booklet, write the Hamilton Watch Co., 107 Columbia Ave., Lancaster, Pa.

*Like other American industries, Hamilton places National Defense first—meeting rigid needs for finer, more intricate precision timing instruments essential to our armed forces.*

"Not where you're concerned."

"But what about Dad?" she asked, grave again. "I want you two to be friends. You were wrong about that—thing at the High Dam."

"That accident was your father's fault," he said raggedly. "I can't change my mind about it. Sorry."

Fiercely she cried, "Stop this car!"

Hot color burned in her cheeks, and her eyes were blazing. He touched the brake, halting the heavy coupé.

"It would never work," she said. "You can run from everything but the past." She fumbled with her purse, and then opened the door. "We passed the bus on the hill; it will be along in a minute."

"I'll take you on into town."

"No, Tom. And we want no loose ends. Here"—silver coins spilled from her hand to the seat—"is my fare. One way. I'm paying for my ride!"

THE days went on. A dozen bents were added to the trestle—spidery legs striding far into the deepening glory hole. Storms howled out of the gorge and the sullen river climbed to its winter level.

"Another pump," Ireland said. "A big one."

"There's always some seepage, Irish."

An inspector stood beside Ireland on the catwalk, body slanted against the gusty strength of the wind. Far below, half obscured by the driving rain, a labor gang skidded a heavy pump in place against the north wall.

"The carpenters move in tomorrow, Irish."

"Yeah? An' I've got a guy to see."

Ireland headed inshore. He had gone but a little way when Johnny Worth, a pile-buck, hailed him: "We're out of sixty-penny spikes, Irish."

"Send for more." Ireland's voice was harsh: "An' don't sit around till they come. Find something to do."

Quietly, Worth said, "We'll keep her movin'."

Afterward, Ireland remembered that

"Two gallons of gas and two thousand gallons of water, please"

FOR FIRMER GUMS — CLEANER TEETH

matter-of-fact promise. He was on the catwalk again. Directly below, McCrinnon and Johnny Worth crossed a needle beam. They were halfway between bents—walking the narrow edge of a three-by-twelve, a hundred feet in the air—when it happened. Ireland saw Worth's up-turned face twisted by swift, awful fear. He saw the beam tremble; saw one end pull slowly away from the piling to which it was nailed. . . .

"Back," he shouted. "Go back!"

They tried, and death was but a breath away. Carefully they pivoted. Carefully!—for a jerky move would kick the beam end free. Ireland scrambled back and down to meet them. McCrinnon was nearest the still solid end. Tools slipped out of his hands, hurtled down through light and shadow. A metallic clang came up from below. And the needle beam fell. . . .

Both men jumped. McCrinnon caught the sash brace, his hands slapping the wood almost at Ireland's feet. Worth caught it too, but the inward swing of his body slammed him hard against a piling. One hand slipped off the brace, and he hung there clawing for a new hold, his whole weight dragging at the grip of the remaining hand. Ireland had dropped to straddle the brace. He leaned out to grab McCrinnon's forearms in an iron grasp. Savagely, he heaved the man up.

"Get him!" McCrinnon gasped. "Get—"

Ireland cried, "Coming, Johnny!"

Hs threw himself onto the brace, reaching. Too late! Their fingers brushed—it was that close—and then Worth was gone. Horror on his brown face; his mouth open in a silent scream. . . .

"Oh!" Ireland whispered. "Oh, oh!"

McCrinnon said, "Why'd you pick me?"

"You were closest. I couldn't get to him."

THERE was a space marked "Cause of Accident" on the blue form, and here Ireland wrote: "Piling had rotten patch beneath outer shell where it could not be seen. The nails used were not long enough to go through rot to solid wood. . . ."

The timekeeper said, "Finished, Irish?"

Ireland signed the form and pushed it across the counter. "They were out of sixty-penny spikes. They used thirties instead. I should—"

The timekeeper said, "Tough!"

Raw wind met Ireland at the office door. The graveyard shift had taken over. Another crew was building trestle. From the glory hole came the deep muttering of many engines.

"Irish." It was Jake Grosset, the guard, stocky and square in a rain-streaked slicker. Troubled lines framed his mouth. "I was wonderin' if you—"

Ireland said, "Not now, Jake."

He went past the man, moving toward the glory hole. Johnny Worth was gone, killed by the same drive that had taken the four at High Dam. The highball pattern had repeated. It was something a man could control—that was the hellish part!—but you forgot. The pressure came all down the line, from the contractor, the engineers, the super, the bridge boss. Gradually, you were caught in the quickening pace, driving your men. Nine times out of ten thirty-penny nails would have held. But that was the margin of safety, and you'd thrown it away. You'd used up your luck, and Johnny Worth's.

"Ireland," a flat voice said. "Hello."

That was McCrinnon, coming out of the deep shadow. For a long ten seconds he faced Ireland, hostility in the set of his mouth, bitter judgment in his eyes. "So you never highball a job," he said bleakly. "What do you call it when you won't let your men wait for proper gear?"

"Take a sock at me. I rate it."

"That won't bring Johnny back."

"No. But it'll even things up a little."

McCrinnon's mouth jerked. "What makes you think I want to even things up with you? I learned the hard way. Now it's your turn to sweat blood. I'm goin' to watch." His hand came up. "Maybe you'd like to know there's goin' to be more hell around here. An' soon!"

"You mean the cofferdam?"

Surprise showed in the flick of McCrinnon's eyes. "Yes. I worked a mine up here, years back. You can't trust this rock; the seepage proves it. First they had one pump. Then two. Now they got six, an' still they can't handle the water. The sheet piling ain't deep enough to hold. The dam's goin' to go!"

"How long have you—" Ireland stopped, for he knew, suddenly, the answer to his own question. "You weren't hiding out that first night," he said. "You were checking seepage. And that's why you've been hangin' around after shift."

"Maybe," said McCrinnon. "So what?"

WIND plucked at Ireland's slicker; rain stung his lifted face. He could hear the suck and snarl of water along the island shore, where it eddied before plunging down the intakes of the No. 1 powerhouse. Here—where the powerhouse butted against the island—there was but a narrow strip between the sheet-piling walls of the hole and the river. A twenty-foot strip of strange gray rock. . . .

Ireland wheeled to look down into the glory hole. It was a sheer drop of a hundred and eighty feet to the bottom now. In the morning, carpenters and steel men would move in to build forms on the floor of the pit. . . . And if the north cofferdam gave, it would go suddenly.

"There'll be five hundred men in the hole," said Ireland. "Maybe six. They'll be working three shifts."

"Not for long."

The words got to Ireland with the impact of a savage fist. It was like hearing a surgeon say, "Cancer," in a dry and quiet voice.

"This rock crumbles under long pressure," McCrinnon said. "And the river's undercut the bank here."

There was no hope of getting an order for work on the cofferdam. Ireland had tired, nagged by doubt born of experience, of watching the seepage grow from day to day. He'd talked to a dozen of the engineering staff, and, finally, to the chief engineer. That frowning man had listened—impatient, restless, harassed by the constant ringing of his phone. "We'll spend no more money for piling," he'd said. "Our tests show that rock's all right. You're a foreman, Ireland, not an engineer. It might be wise to remember that. . . ."

"The contractor," Ireland said. "He might—"

McCrinnon shook his head. "I talked to him. He's scared stiff, but he can't do a thing without an order."

And so the old, old pattern was repeating again. Another man was caught in the rush and drive of the work, in the pressure to get things done. Routine tests showed the rock to be good. Why bother to check its endurance under sustained pressure? Sheet piling had held at that depth before, it would again. . . . Thus, unknowing, he cut corners, and threw away the margin of safety. He used up his luck, the luck of the men who would be deep in the hole, trapped there, when the river came bursting through.

"We've got to stop this," Ireland said.

"Go ahead." McCrinnon's eyes held a bleak challenge. "I'm just a pile-buck. I don't carry any weight around here.

ay. You can start for the other ow."

Crinnon's hand closed on Ireland's "What if somethin' goes wrong. 's plenty of men in the hole. You kill—"

"I'll worry about that."

"You better!"

McCrinnon strode abruptly away. Ireland crouched on his heels in the dark, waiting. Below him, the land fell steeply to the rim where floodlights sent white glare down into the hole. Ireland watched the dip and swing of shovel booms, thinking of what lay ahead—

The compressor-house whistle squalled suddenly—not in a series of short pipings normally used to tell of a blast, but in a long-drawn, warning howl. "He tied her down!" Ireland whispered, and something inside him drew up tight and cold. Down in the hole, men were shouting, running. And Ireland counted. One operator and an oiler for each shovel, a driver for every truck, one man for every jackhammer. . . .

Streaming away from the equipment, they sought the truck ramps, harried by that tireless scream. The first of them gained the far rim, clustering there. Ireland knew that guards must have reached the compressor house; that soon they'd comb the rim, seeking a reason for the alarm; and still he waited, his restless gaze searching the hole. The ramps were empty when, at last, he reached for the firing battery.

"Now!" he whispered.

The blast was faint and muffled—a vague thumping, felt as much as heard. Aching silence came as the whistle choked off; and, dimly, voices rode down the wind. A moment passed. Another . . . And then Ireland saw the first rush of water on the floor of the hole. Swiftly it leaped away from the north wall, foaming and white. Lumber piles burst apart at its touch; went tumbling away. A truck vanished in the flood. The ground trembled. Then the cofferdam ripped open, and the thunder of its crumpling shook the night. . . .

QUIET had come again. The glory hole was a plank-strewn lake when McCrinnon picked his way along the rim, back of the lights. Ireland rolled the last of the black wire into a tight

"I'm homesick!"

**ON THE WHARVES** of Liverpool and Singapore, in a freighter's hold halfway across the Atlantic, in a truck on the Burma Road, you will find them—three words stencilled on a thousand boxes and bales: "Made in U.S.A."

Yesterday, three big words to look for. But today they stand for more than the unequalled engineering and production that have made them familiar on every dock and pier in the world. They stand for the productive strength of a free people—a productive strength that cannot be matched; they stand for a determination to "deliver the goods"—a determination that will not be thwarted. And in the ports of the world's embattled democracies, where men are hourly risking their lives to take delivery, they stand for *freedom* itself!

To keep this great flood of goods moving is the most important job in the world today. Wherever it moves, General Electric helps to provide motors and propulsion equipment to keep it moving. In trains hauling ore to America's factories; in factories building guns and tanks and planes; in ships carrying oil to Britain and food to China; in destroyers and cruisers and battleships—the words "General Electric" stand beside "Made in U.S.A." *General Electric Company, Schenectady, New York, U.S.A.*

WHEN OTHER

LAXATIVES FAIL

TRY THIS FAMOUS WATER

Smooth, Gentle Relief Usually in One Hour!

When acute constipation leaves you on edge, try the famous PLUTO WATER treatment. Although PLUTO works swiftly, it works by gentle osmosis, creating fluid bulk in the colon, flushing digestive waste, usually within an hour. Pluto is a concentrated, fortified and scientifically stabilized saline mineral water with all minerals and salts in complete solution. It passes through the stomach without disturbing its function, is not absorbed, and acts in the colon where physicians want a laxative to act. Try Pluto now! You must get refreshing, comforting relief from acute constipation in one hour or your money back. French Lick Springs Hotel Co., French Lick, Ind.

STATEMENT of the ownership, management, circulation, etc., required by the acts of Congress of August 24, 1912, and March 3, 1933, of Collier's, published weekly at Springfield, Ohio, for October 1st, 1941. State of New York, County of New York.—ss.: Before me, a notary public in and for the state and county aforesaid, personally appeared A. E. Winger, who, having been duly sworn according to law, deposes and says that he is the Treasurer of Collier's, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, as amended by the Act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to wit: 1. That the names and addresses of the publisher, editor, managing editor and treasurer are: Publisher, The Crowell-Collier Publishing Company, Springfield, Ohio; Editor, William L. Chenery, 250 Park Avenue, New York, N. Y.; Managing Editor, Charles Colebaugh, 250 Park Avenue, New York, N. Y.; Treasurer, A. E. Winger, 250 Park Avenue, New York, N. Y. 2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern its name and address, as well as those of each individual member, must be given.) The Crowell-Collier Publishing Company, New York, N. Y.; Stockholders Owning 1% or More of Stock: Bankers Trust Company, Trustee for Ella Gardner Hazen, New York, N. Y.; Gardner Hazen, Easton, Md.; Frederick W. Jaeger, Jr., Jersey City, N. J.; E. T. Sanders, Jersey City, N. J.; Flora E. Whiting, New York, N. Y.; Publication Corporation, New York, N. Y.; Publication Securities Corporation, New York, N. Y.; W. Roosevelt Thompson, New York, N. Y.; Samuel Untermyer, New York, N. Y. 3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: None. 4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him. 5. That the average number of copies of each issue of this publication sold or distributed through the mails or otherwise, to paid subscribers during the twelve months preceding the date shown above is———— This information is required from daily publications only.) A. E. Winger, Treasurer. Sworn to and subscribed before me this 11th day of September, 1941. (Seal.) Mary L. Walker. (My commission expires March 30, 1943.)

NOTE—This statement must be made in duplicate and both copies delivered by the publisher to the postmaster, who shall send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office. The publisher must publish a copy of this statement in the second issue printed next after its filing.

ball; shoved it into his slicker pocket.

"The men . . ." he began.

"All safe, Irish. What about the battery?"

"It's back in the powder house."

"Good." McCrinnon let his breath go in a relieved sigh. "Look at her, Irish. Two sticks of powder made that mud puddle. Two sticks! Hell, man, if that dam'd been right, two cases wouldn't have touched her."

"It's time you went home," Ireland said.

McCrinnon's head came up; his voice roughened: "You ain't fool enough to stick your neck out and tell 'em what happened? You ain't—"

Ireland said, "Go home, man."

"You would!" McCrinnon swore bitterly. "We did a job here—a good job. Just because somebody might get canned, you're goin' to get yourself in trouble. What if one or two guards do get bounced? Ain't that better than havin' a whole shift go to hell? That dam wouldn've lasted another day, an' you know it!"

Ireland said, "Quiet! Here's company!"

The flashlight ray found them then, held steady. Gravel crunched under booted feet. McCrinnon's breathing was suddenly loud as the shadowy figure approached.

"Jake," he said. "Jake Grosset!"

"That's right." The flashlight shone on Ireland's face, McCrinnon's, and blinked out. "We've got trouble to burn around here tonight. Did you see the dam go?"

"I did," Ireland answered.

"A mess." Thoughtfully, Grosset paused. "But it's not as bad as it looks. Once they get new sheet piling in, they can pump the hole dry. The cofferdam's gone, some lumber, some time—that's the size of the damage. Next time they'll build a dam that'll hold."

McCrinnon said, "Nobody was killed."

"I've been afraid of that dam," Grosset went on, softly. "I'm a geology major. I'm working here to get money for my last year. When the seepage got out of hand I sent samples of the rock down to school." He switched the flashlight on, tucking it under his arm so that the wash of light struck upward across his face. "I tried to tell you about that tonight, Irish."

Steadily, Ireland said, "Did you?"

"I knew the dam would go. I was afraid the men wouldn't be able to get out ahead of the water. I sweat cc erable blood, worrying." Grosset' stirred with the hint of a grin; he l squarely at Ireland. "The chief neer's over on the other side now big shot himself. He had the shak I told him the men were safe. I tol I saw it comin' and got to the whis time."

McCrinnon swallowed. "A thing."

"Without that warning, not a would have gotten out of the hole a Grosset paused again, smiling. chief engineer says the new pilin go halfway to China. I though might like to know. Good night two. . . ."

Softly, Ireland said, " 'Night,

McCrinnon said, "Yeah. Now w both go home."

THEY walked in silence up th hill and past the offices, where l windows were squares of yellow night. A guard said, "That was something, wasn't it?" and stood to let them through the gate.

"Well, I'll see you tomorrow, land said.

"I generally have coffee an' a b eat before I turn in," McCrinnor "You might's well come along."

"Thanks, Mac. I—"

"Dad!" Swift footsteps rang frosty walk, and Karen was there pallor beneath the golden tan face. "I heard there was trou came—" She paused and surprise her voice husky: "Tom!"

"Hello, Karen."

"There was some grief," McC said. "But we took care of it. M Irish." He looked at her; his s eyes bright beneath lowered brow was just comin' up for coffee snack."

"If you've room for company land said.

"Of course we've got room."

"He's a big lug," McCrinnon gr "He's got a pine knot for a hea he'll make a hand one of these He'll do to take along." He s fierce glance at Ireland. "I stil sock at you comin'. Remember first time I catch you highballi goin' to collect. With a top mau

Karen laughed and came b them, taking an arm of each. "Co you two. Coffee's waiting. . . ."

"Darling, didn't we see this last year?" A. JOHN K

# U.S. Government Advises Insulation of Homes As National Defense Measure to Save Fuel

## U. S. BUREAU OF MINES ISSUES OFFICIAL BULLETIN INFORMING HOME OWNERS THEY CAN SAVE UP TO ONE-THIRD ON FUEL WITH PROPER MINERAL-WOOL INSULATION

**ut expert *installation* of the Mineral Wool is nportant, too—and only Johns-Manville can offer ou the practical experience gained through nsulating more than *half a million* homes.**

TUALLY TRUE that you s eup to one-third on fuel bills, ar-round comfort . . . and th National Defense Program e me time. This new U. S. u f Mines Bulletin tells you th can be done by insulating h e now with Mineral Wool. I is is the very type of Home at h that Johns-Manville has er for more than twelve years o y to improve constantly the it efficiency of the Rock (Min- Wol itself, but also to develop e ct the methods used to in- t onomically.

r e Rock Wool is actually vn into the spaces between the a l in the attic of your home, n by expert crews Johns- vil trained, to seal up *every* were heat could "leak"—leak n winter, leak *in* in summer— s nich less experienced insula- nt easily overlook.

e Bureau of Mines Bulletin, a nt f which is yours for the ask- te of fuel savings up to one , very welcome saving in your oil as you'll agree. But now also ec d saving. For while there is no age of fuel itself, the *trans-* a n of fuel will be a very real le this winter, as defense au- tie have warned.

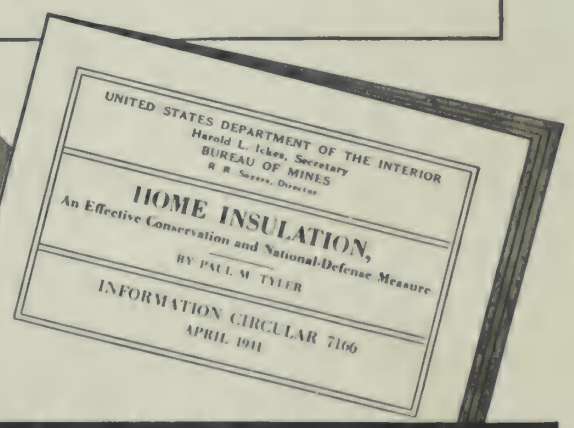
e are other benefits, too, from Wool Insulation, as *half a mil-* o ers of "J-M" insulated homes es fy . . . in summer, rooms are e u to 15° cooler on hottest days.

In winter, warmer more comfortable rooms . . . less discomfort from drafts, less wear and tear on furnace equipment —and a real, added protection against the hazards of fire.

**CONVENIENT MONTHLY INSTALLMENTS . . NO DOWN PAYMENT**

While "J-M" Rock Wool Insulation is actually and literally "comfort that pays for itself," its original installation cost varies, of course, as houses vary. But fuel savings make it easy to buy, and time payments may be spread over 12 to 18 months. On the subject of costs, however, the Bureau of Mines Bulletin, as quoted below, sums up the story in simple and convincing terms . . . gives findings based on thorough study and impartial tests.

***So send for your government bulletin today.*** You'll find it interesting and helpful reading. Just clip and mail the coupon, and a reprint of this 12-page official bulletin will be sent to you promptly.



**Snow on the roof tells the insulation story. The house on the left is *wasting* fuel, but the house on the right is saving it.**

**You can see that the heat has "leaked" through the roof on the left to melt the snow, while on the house next door the heat has been kept *in* . . . away from the snow. Fuel bills? Well, if your roof leaks enough to melt the snow on a cold day you're paying out money for heat that you're not enjoying . . . and that now you have no *right* to waste. But a house like that on the right, insulated with "J-M" "Blown" Rock Wool 3⅝ inches thick, has protection equal in insulating efficiency to a wall of concrete *eleven feet thick!***

## SEND FOR THIS *FREE* OFFICIAL GOVERNMENT BULLETIN ON HOME INSULATION

**Here's what it says about costs: "The tests proved that insulation, in this case Mineral Wool, does not cost the house owner a cent. It begins to pay for itself the day it is installed and continues to do so as long as the house is occupied."**

**IF YOU'RE BUILDING A NEW HOME** *of course you want to insulate as an investment as well as for comfort. Your Building Materials Dealer will show you "J-M" Rock Wool batt form, made especially for the insulation of homes under construction.*

# ohns-Manville

**WN" ROCK WOOL HOME INSULATION**

Fuel-Conservation officials urge every home owner to make this pledge and to display this official "sticker."

## Just clip and mail this coupon today!

JOHNS-MANVILLE, Dept. C-A-10, 22 E. 40th St., New York. Please send me a FREE reprint of the U. S. Bureau of Mines Information Circular, "Home Insulation, An Effective Conservation and National-Defense Measure."

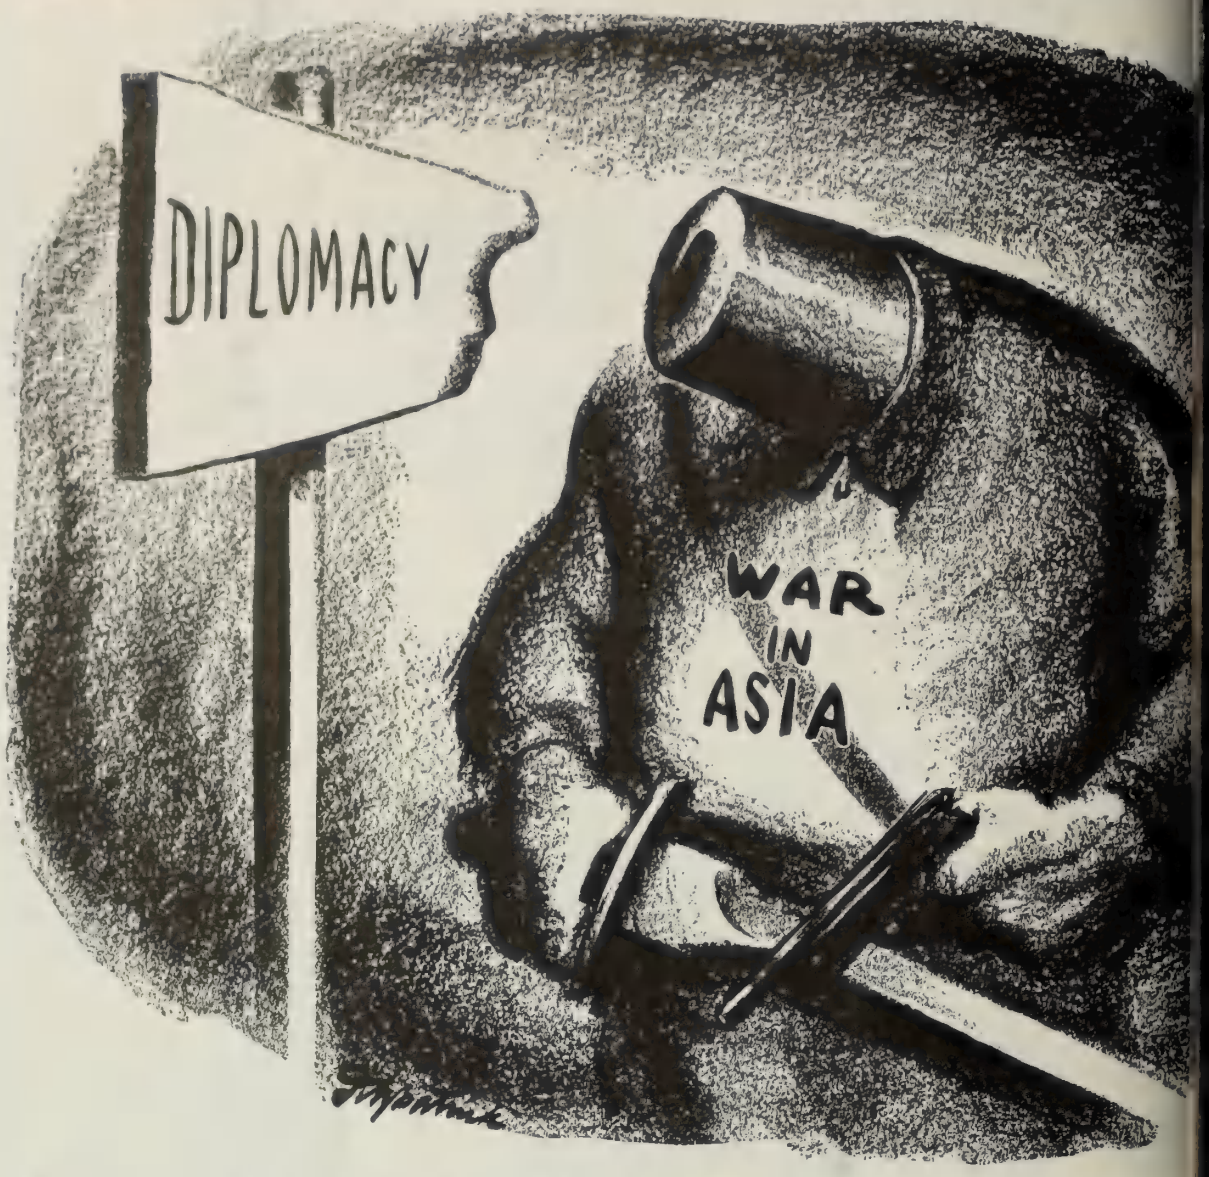
## Open Letter to Georgians



DEAR Citizens of Georgia: You haven't asked us for our opinion: but just the same, our opinion is that your Gov. Eugene Talmadge is doing your great state no good and much harm. Remember what a black eye the Scopes monkey trial gave Tennessee? Well, Mr. Talmadge is doing your commonwealth a similar disfavor.

Intelligent educators in Georgia advocate improved educational opportunities for colored youngsters. They do *not* advocate social equality between Southern whites and Southern blacks. Talmadge accuses them of advocating social equality, and proceeds to hound as many of them out of their jobs as he can. He uses every time-dishonored appeal to race prejudice and passion that has been invented since the War Between the States.

This chicanery hurts you in every conceivable way. It postpones solution of your racial problems—real problems and very tough ones, for all the airy dismissals of them by some Northern intellectuals. It takes your poorer white people's minds off improvement of their own economic condition, and inflames them with profitless hatreds. It diverts much of the mental energy of your intelligent white people (of whom you have plenty) into unproductive channels.

To add insult to injury, Talmadge hasn't even the picturesque full-bloodedness of the late Huey Long. Huey was an economic screwball and a potential American Hitler, but at least he had magnetism and vitality, and made good newspaper and newsreel copy. Talmadge is an unattractive little sourpuss who is making you and your great state look foolish without giving you a run for your money.

## Can't We Talk It Over?

WHEN the first American tanker reached Vladivostok with high-octane gasoline for Russia, having passed unmolested through Japanese waters to get there, it was taken as a sign that Japan was lowering its gun sights on the United States and Great Britain. Japan may re-elevate those sights; we may find ourselves in a Pacific naval war yet.

But at this writing Admiral Nomura, Japanese ambassador to the United States and reputedly a splendid fellow, is doing everything he can to detour such a clash; the fire-eating Matsuoka is out of power in Tokyo; and other signs indicate a Japanese desire to talk things over.

How are the chances? The Tokyo pivot of the Rome-Berlin-Tokyo Axis is notoriously the least enthusiastic and sickest of the three just now. Is it possible for the Washington-London Axis, so to speak, to win the Tokyo pivot away from its pals without banging off any guns?

Having put on our head and shin protectors against dornicks from both the interventionists and the isolationists, we proceed to state that we think it would be a great thing if that could be accomplished.

For the interventionists' comfort, we'll say we don't think London and Washington could agree to a physical Japanese taking of the Dutch East Indies, or to a Japanese penetration of Thailand, or to an extension of Manchukuo down into China. It seems inescapable as well as right that China must be secure from molestation as a nation. More than that, China must have an audible and equal voice in any settlement.

For the consolation of the isolationists, we'll say that Japan's geographical position would have to be given its proper weight in any such agreement. After all, Japan is in the far Pacific; we aren't. The Japanese are a vigorous, enterprising, mechanized, manufacturing, overcrowded people. They are entitled to utilize all their political influence in tha world, we believe, and to keep their islands defended. They ought to let other nati trade in that area on a fair-competition b

To come to a workable arrangement easy for either side. It will be chiefly a ma saving all around—which seldom is witho and embarrassments.

The Japanese would have to find s damper the ambitions of their military cliques. Britain might have to relax if n some of its extraterritorial rights on the A land. And above all, both the act and the of selling China down the river would avoided if an enduring Far East peace achieved.

For all these difficulties, we have a hu Japanese would be willing to dicker at thi are badly bogged down in China. The R a large army and a powerful air force p easy invading distance of Manchukuo and bombing range of Japan's house-of- American and British sea and air forces i are strong, while Singapore's muscles are bly by the day.

Is it the highest statesmanship to screws any tighter than necessary on Jap risk a war which may ruin for years to com which for decades past has been our b customer?

We think it would be far higher state try out every hope of wooing Japan Berlin and Rome, and that it would be a achievement if American and British st could succeed in so doing. We cannot se can come of unnecessarily spreading the w already tormented with war or the fear most of its civilized land area.

# ANY WEEK

FRANKLY, we don't know what we'd do if we had to do our own thinking and write brain pieces in this space from week to week, outthinking ourself from column to column. We were discussing this with a daily columnist, a terrific fellow who seizes the latest situation every afternoon and shakes the fight out of it. He told us that it was a very soft job, that all you had to do was to scream a little louder the day after you had released a mess of inferior analysis, thus distracting the attention of the reader from what you said the day before. Besides, he told us, there's so much professional emoting getting into print every day that the readers are always far more muddled than the writers. But all's well. We don't have to think. You readers—particularly you letter-writing ones—are doing a tidy job of it. All we have to do is pick your brains and sit pretty. Even better, most of you are doing the kind of thinking we'd like to do if we had to do some.

For example, here's a trifle from Mr. Beggs Brandt of Billings, Montana. Mr. Brandt refers, somewhat callously, we think, to Mr. Roosevelt's official family as "a stock company that's been playing Uncle Tom's Cabin with phony ice every night for the past eight years." The only changes, goes on Mr. Brandt, have been occasional role switches inside the cast—"Henry Wallace instead of Harry Hopkins as Little Eva and Harold Ickes as Uncle Tom in place of Henry Morgenthau. The only characters who have not switched roles are Simon Legree and the F.B.I. bloodhounds." It's time for a complete change of bill, thinks Mr. Brandt, because "the audience is walking out."

FROM Mr. Dudley Virginius Haddock of Tampa, Florida, we've just received word that it now costs you nothing if you kill a cow on a Florida highway provided that the cow kills you. Hitherto cows and other livestock had all the right of way on roads in Florida's open-range counties, legally permitted to wander at will at all hours. If a motorist crashed into the animal in the dark or if the beast, emerging without warning from the roadside jungle, smacked into the car, the motorist paid—and no nonsense about it either. The law operated on the theory that cows and such can't be expected to understand traffic rules. But Mr. Haddock, widely known throughout the South as Ole Number Nine (after the Memphis, Little Rock and Natchez flier on which he was born), says that the latest Florida legislature has decreed that only if the motorist survives his collision with a stray animal is he liable for full damages to the creature. And yet should the fellow die, his family has no cause for action against the owner of the animal. In the words of Mr. Haddock "in case of death it's jest a doggone tie."

WE HEAR from Mr. J. Dipless of Yreka, California, that something's gone wrong with the war of nerves that the State Department is waging on Japan and Germany. "It's supposed to break down Hitler and the Jap militarists but I dunno. I bet they can stand it longer than I can. I'm beginning to chew rugs too." From Mrs. Laurence Mitting of Haverhill, Massachusetts, and others we learn that "there are too many mystery men, miracle workers, round-the-world gallopers and secret agents around scaring the populace." Mrs. Mitting says that while she was in Washington not long ago she heard that Mr. Roosevelt asked a caller—a sixteen-cylinder industrialist—what could be done to bolster up civilian morale. The industrialist suggested "a little new blood in your official family." Mr. Roosevelt is supposed to have thanked his caller heartily, wrung his hand and replied: "Just the thing. Just the thing. And I have just the man—Harry Hopkins."

WE HAVE a pretty furious letter from another Mr. Hopkins — Mr. Franklin Hopkins of New York City—chastising us for an assortment of light words we allotted to the funny-money schemes that we've been receiving lately. We regret that we can't reprint Mr. Hopkins' letter but give you a hint. He starts off by calling us a "little scarlet harlot of the press" and soars to real depths from there. But we were particularly interested in what Mr. Hopkins is. He is, according to the letterhead, "Advancer of Land Currency." We're not sure what Land Currency is but the letterhead goes on to explain that it is a cure for "debt, credit, riches, poverty, monopolies, prostitution, chance employment, wage slavery, intemperance, destitution, panics, labor strikes, industrial freakishness, extravagance, miserliness, child labor, self-destruction, race suicide, divorce, sex hatred, spinsterhood, feminism, futurism, sartorial freakishness, anatomical freakishness, churchianity, institu[illegible]alism, reform, philanthro[illegible]literacy, crime, dis[illegible]ar." Doubtless [illegible]s that the President meant.

ANOTHER snatch of intelligence comes from Mr. James Street, whose fiction appears in this magazine now and then—too now and th quite a number of our disc readers. Mr. Street dropp Natchez bar that has a pecu tion for young fellows wh nothing but a good poke i will meet their immediat ments. In short a great m ous fights occur in this bar there's a sign over the caught and held Mr. Stre tion: "Count yourself agai you ain't so many."

WHICH stirring item goes a few facts we've gathere George Patrick Torpey, wh geant in the A.E.F., is now in a popular den of iniqu cago. Mr. Torpey has a about the comparative dr ties of the boys of '18 anc '41. He tells us that it t make today's soldier drun to stagger the heroes "Also," says Mr. Torpey, the liquor or the early tr boys of our present Ar when the soldier today there's no fight in him. Irish were the best drink did the most fighting wh drunk. I'm Irish myself to say that the Irishmar today is about the worst c lot. He can't hold it and fend it. The colored soldi drinker and if what he doe on means anything, he fighter. Things have com pass. I don't know wh prohibition or if we've ju but I do know that the can't drink, although I w credit for trying."

AND for some time we'v ber of isolated items ha looking for a chance t We're advised to set the forget them. So: On a ning the Santa Fe River forbidding you to hoid c it. A guy in Pismo Bea advertises Fourteen-Inc A reader tells us that F popular in the Southw on to inform us that Flu skins wrapped in celloph in Dallas."

WELL, that gives you

Give both old and new addresses.

# Do you know your best ally against *Cancer?*

THE X-RAY, radium, modern surgery—or a combination of these lifesavers—today offer more hope than ever of successfully treating cancer. Your most important ally, however, is something that you alone may control.

It is *Time.*

By going to your doctor *promptly*—at the first sign that might mean cancer—you make it possible for competent medical judgment and skill:

1. **To determine whether you really have a malignant growth.**
2. **To treat cancer, if you have it, while there is the best opportunity of cure.**

### *Some Common Signs To Look Out For*

The development of painless lumps or other abnormalities in the breast should be regarded with suspicion. Unexplained bleeding is also a danger sign. Unaccountable loss of weight, chronic indigestion, or a "general run down feeling" call for thorough medical examination, too.

When you discover that a mole, wart, scar, skin growth, or blemish is beginning to change in *color* or *size* or *texture*, or to become painful—that *may* mean the start of skin cancer. Open wounds which stubbornly refuse to heal may develop into skin cancer.

Skin cancers, fortunately, are the easiest of all to detect and cure. Most of them, promptly and properly treated, can be cured without causing disfigurement.

### *Some Dangers To Beware Of*

Growths constantly exposed to irritation frequently become cancerous. Amateur razor-blade surgery or medicine-cabinet doctoring of moles and warts often is followed by the development of true cancer.

Cleanliness is especially important in the prevention of mouth cancer. Bad teeth should be cared for or removed. Jagged edges of teeth should be smoothed. Dental plates and bridges should fit comfortably. Some persons have a mouth condition known as leukoplakia—"white spot disease"—which, if untreated, may develop later into cancer. In these cases particularly, the excessive use of tobacco and sharp condiments should be avoided.

Beware of quack remedies and "cures" for any condition which may be cancer. There is just one safe, reassuring thing to do when you notice a suspicious sign or symptom: *have a thorough examination!* To make the most of your best ally—*Time*—have it *right away!*

For further information, send for Metropolitan's free booklet, "A Message of Hope About Cancer."

*An interesting 10-minute Technicolor movie on food and health—*"PROOF OF THE PUDDING"*— has been produced by Metropolitan in co-operation with the United States Public Health Service. It is a contribution to national nutrition education. See it when it comes to your neighborhood.*

# MAKING AVIATION HISTORY

There's a quick beat in all our hearts for the members of the U. S. Army Air Corps. Their wings speed them in their watch over American skies in miracle time—the nation's modern Minute Men. Among the Air Corps' most advanced aircraft is our Bell Airacobra—the world's only single engine fighter carrying an armor-piercing cannon. Bell Aircraft has grown to 10,000 loyal employees in meeting the urgent need for Airacobras. Masterfully trained in the important tasks of volume aircraft production, each Bell worker now joins in a faithful pledge that the U. S. Army Air Corps shall be proud of the job that's being done in producing Bell Airacobras.

**Great numbers of planes now** [illegible] **way present a new problem—** [illegible] **Elaborate preparations (see te** [illegible] **necessary for storing bombers**

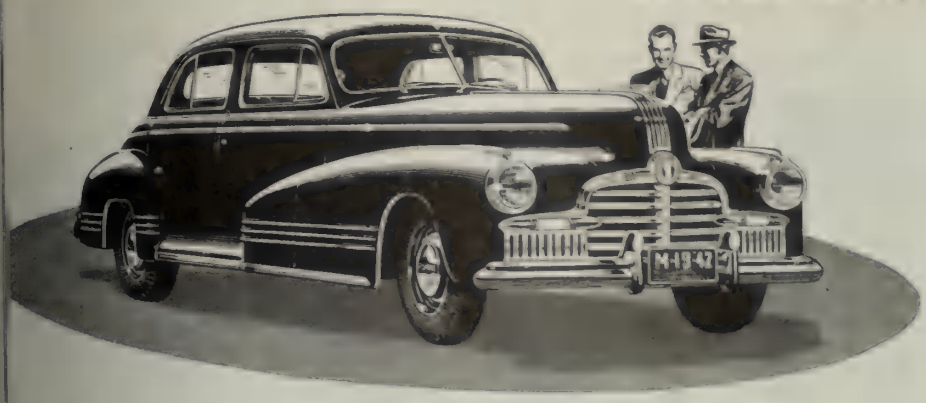
# WING TALK

AWARE that some day soon the factories will be turning out combat planes faster than pilots and maintenance crews can be trained and squadrons organized, the Army Air Forces (which now include the Air Force Combat Command, a strictly tactical and operational organization, and the Air Corps, devoted to procurement of equipment and training) are preparing for another difficult problem. You would think the answer easy; just store the planes until ready for use.

If there were sufficient storage space for the great number of planes on the way, and there isn't now, that would at least get them under cover. But to have to stake down many of them outdoors means that double attention will need to be given. To prepare them for these outside hangars is a special operation in itself. Oil, to prevent rust, must be sprayed into the engines through the exhaust stacks and spark-plug holes with the valves in an open position. Waterproof-paper covering must be securely fastened over the exhaust ports and the carburetor air-intake scoop. The controls must be locked by a special parking harness. The armament must be covered with a heavy grease. Batteries and instruments must be inspected and the exterior of the plane kept clean. This procedure must be repeated at the end of every thirty days.

Sturdy though they are, these planes, from heavy bombers to tiny pursuits, need this attention, for nobody knows better than the Army the trouble there'll be when the ships are put in operation if they are not kept in tiptop shape.

A POPULAR pastime among the people who go out to the airport to see the planes come in is to count the number of women who get off the airliners. Sometimes a good number get off but they always seem to be in the minority, except when a press agent brings in a plane-load of models. Many surveys have been conducted to determine the proportion of female plane passengers and the latest and most exhaustive, taken by the Air Transport Association, indicates that about one fifth of [illegible] fly the lines wear skirts. The su[illegible] cluded the heaviest traveled rout[illegible] York-Chicago; New York-Wash[illegible] New York-Boston; Chicago-W[illegible] ton; Chicago-Los Angeles an[illegible] York-Los Angeles.



WE TALKED about the Fow[illegible] (or retractable wing) last ti[illegible] there wasn't room to tell of a c[illegible] ment now under way which will [illegible] much to the operators of all kind[illegible] craft—full-span flaps. Flaps, [illegible] brakes in common use, are hin[illegible] tions which drop down from the[illegible] side of the trailing edge of the [illegible] slow the plane for landing. Th[illegible] extend only to the ailerons to a[illegible] terference with these up-a[illegible] movable sections of the win[illegible] provide lateral control.

With full-span flaps runni[illegible] one wing tip to the other, ou[illegible] airliners, bombers and even fa[illegible] pursuiters could retain their [illegible] landing speeds and fly faster [illegible] they would need less wing are[illegible] keeping the wing areas as of n[illegible] could go to lower landing spee[illegible] military will always sacrifice lo[illegible] speed for high top speed beca[illegible] speed means so much in comba[illegible] tions. But commercially, any [illegible] peg the existing landing speeds[illegible] are, or even lower them witho[illegible] ficing the present top speeds, [illegible] welcomed and full-span flaps [illegible]

This is not wishful thinkir[illegible] full-span flaps. Real work is g[illegible] ward on them at the N.A.C.A. [illegible] ries at Langley Field, Virginia. [illegible] can't hurry it along, it's that [illegible]

HERE'S an item we've been s[illegible] cold weather—it's about el[illegible] heated flying suits. The Army [illegible] on contract a large number of [illegible] ments, wired to keep the pilots [illegible] temperatures of from 70 degre[illegible] zero to 60 degrees below. Adap[illegible] the Army's standard summer fl[illegible] the high-altitude clothing [illegible] throughout and the amount of [illegible] plied electrically is controllabl[illegible] gloves go with it. The young p[illegible] take to them without ques[illegible] there's one old-timer who n[illegible]

# *Even Better* than the Pontiac that won over 330,000 friends last year!

...TORS' MASTERPIECE
...WITH THE LOW PRICE

MORE THAN 330,000 owners of 1941 Pontiacs may be surprised at this—but it is actually true that the new Pontiacs for 1942 are even better cars than the models which they supersede.

They are more beautiful for one thing. Their new, low-swung front-end styling and their long, sweeping front fenders give added smartness to Pontiac's substantial fine car appearance. New fittings and upholstery materials enhance their interior beauty and luxury.

Mechanically, changes are few. However, when they do occur, they represent definite progress. Vital parts such as pistons, crankshafts, bearings and connecting rods remain completely unchanged. Handling ease and riding comfort, on the other hand, have been noticeably improved.

You can buy a new Pontiac this year with confidence that, in addition to new style and luxury, it will give you extra thousands of miles of dependable, *economical* travel. And that is important to farsighted buyers at this time.

[ ONLY $25 MORE FOR AN EIGHT IN ANY MODEL ]

**Pontiac** *with the things you've always liked* - AND 15 NEW ONES TOO!

**Rapid-Fire Production of Rapid-Fire Cannon!**

Charged with building a large number of automatic anti-aircraft cannon for the U. S. Navy, Pontiac is now turning out these complicated weapons with production-line speed and efficiency. This important assignment we regard as our first responsibility.

The FLORSHEIM Shoe

# NOT HOW MANY... BUT HOW GOOD!

The American way of life needs economic as well as military protection. As the big job of arming the nation strains the resources of its citizens, they must be safeguarded from inflated prices, deflated quality, depreciated value in the things they buy and use. It is up to American Business to hold the home front against all these dangerous trends . . . and our unqualified pledge is that we will maintain regular Florsheim Quality at the lowest possible price!

Twenty-five years ago this country went through another National Emergency. Good materials were scarce . . . yet we paid a premium to maintain Florsheim quality, and we refused to accept materials that failed to meet our exacting specifications. And now, if and when necessary, we'll do the same again. If the time ever comes when we can't get all the good leather we need, then we'll make fewer shoes. In 49 years of fine shoemaking we have never sacrificed quality for quantity . . . we have never traded value for volume . . . and we never will!

# DEFENSE PRODUCTION LINES NOW RUN *Along Our Highways!*

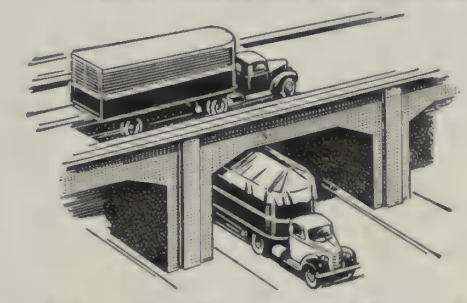
YOU'RE HEARING a lot about assembly lines ...e days . . how they're being geared up to turn out the ...fense material we need. And, quite naturally, you may ...k of these lines as being housed in factory buildings.

**As a matter of fact, however, our highways are now an integral part of the assembly lines for national defense production!**

...ew products are completely fabricated in one place. ...et metal is rolled in Pennsylvania, made into ailerons ...Michigan, and assembled in completed planes in Ten-...see. Cloth from New England mills is hauled to New Jersey to be tailored into army uniforms. Carbon from Ohio and fabric from North Carolina travel many miles overland to meet in a gas mask plant in Indiana. Timber is logged ...Washington mountains, milled on Puget ...ound and built into ships at Los Angeles.

...h these and thousands more cases, ...sembly lines *begin and end miles apart* . . possibly halfway across the country!

★ ★ ★



*World's Largest Builders of Truck-Trailers*

...RUEHAUF TRAILER CO. ★ DETROIT

*Sales and Service in Principal Cities*

...CITIES: DETROIT, KANSAS CITY, LOS ANGELES, TORONTO

**And the mid-portion . . yes, the heart . . of these assembly lines is our highway system and America's motor transport industry!**

Motor transport has been assigned this grave responsibility because it has proved its ability to deliver the goods . . and *do it on schedule.* Materials must flow smoothly . . in exactly the right quantities . . at precisely the right time. Production schedules may change on an hour's notice . . and the flow of materials must change accordingly. This hair trigger control, as any manufacturing man will affirm, is the secret of efficient assembly line production.

As schedules call for more and still more speed, America can depend on motor transport to keep things moving on the assembly lines!

## . . . brings you thrilling new inventions . . . outstanding new radio-phonograph features for greater musical enjoyment

IN performance . . . in cabinet design . . . in effortless, easy operation, this 1942 Philco Photo-Electric Radio-Phonograph sets a new standard for luxurious enjoyment of radio and recorded music!

For one thing, you never have to change a needle or buy one. Instead of the old-fashioned steel needle that *scraped* the record, there's a tiny, rounded jewel that *floats* over the grooves and reflects the music on a beam of light to a photo-electric cell. That's why the tone is so brilliant, so clear, so free of annoying needle scratch. Your records never seem to wear out—they actually last ten times longer!

In radio, you enjoy the glorious reception and superb tone that have made Philco America's favorite radio for twelve straight years! And many models offer you Frequency Modulation—at *new low cost*, through the *exclusive* Philco FM System.

Visit your Philco dealer today and see the 1942 Philco radios and radio-phonographs. He has just the model you want in a wide variety of exquisite cabinet designs at the price you want to pay, with a liberal trade-in for your old radio!

## MUSIC ON A BEAM OF LIGHT

STRATED BY
BLOSSOM

in he life of Jean-
Guichard, obscure
France—how he
as the saying
thousand deaths

THE Restaurant Aux Gourmets d'Auvergne is one of the oldest and best in Paris. It is hidden in the Rue Brienne, a dark little one-way street where parking is prohibited and whose one way is that which nobody wishes to go. The interior has room for only sixteen tables and is gloomy with walnut paneling, dark red velvet upholstery and deep red Brussels carpet. Here and there are imitation palms whose fronds rattle skeletally when agitated by the breeze from a hurrying waiter's coattails; but, of course, in a restaurant so admirably ordered as Aux Gourmets d'Auvergne, haste is deemed unseemly and such disturbances are rare.

During the early months of the occupation, the Germans kept largely to those boulevard establishments with white marble façades, chromium trimming and undistinguished cooking. The Gourmets remained a sanctuary where Frenchmen could escape at least the visible reminders of their humiliation while seeking that solace in familiar savors which was not to be found in the meager, rationed substance. Most of the people who dined there had been regular clients for years, but whereas in happier times they had merely bowed when entering, or perhaps murmured a formal *Mesdames! Messieurs!* now they paused at one another's tables and talked of the miserable present and the terrifying future.

Monsieur Joly, the proprietor; Lambert, his *maitre d'hôtel;* the waiters, the bus boys and even the little chasseur took full and equal part in these conversations; for here, as throughout all France, trivial social distinctions had yielded to an aching need for fellowship. But great as was this craving for communion, no man dared wholly satisfy it. It was strange, at the Gourmets, to see how guardedly they spoke—whispering, grimacing, gesturing—often changing the subject without apparent reason, or checking themselves in midsentence to glance over their shoulders toward the door.

The pitiful truth was that these beaten Frenchmen did not trust one another. Sold out by their statesmen, their generals and their press, they now saw in every friend and neighbor a spy, an *agent provocateur,* a writer of anonymous letters, awaiting only an incautious word to denounce them to the Germans. The notable exception was Old Mustache.

OLD MUSTACHE—real name, Jean-Joseph Guichard—had come to the Gourmets as waiter in 1903. In those days, he was called Big Mustache. In 1914 he had joined his regiment, was bundled into a taxicab and hustled to the front, where he was shot, bayoneted, blown up, buried alive, gassed and taken prisoner. He came back to the Gourmets in 1918, hating the Germans and all their works. Now, like all other Frenchmen, he hated them more than ever. Unlike most of them, he did not hesitate to say so.

"Pah! What ignominy!" he would chide the little gatherings in the restaurant. "You call yourselves Frenchmen but you behave like worms! Why all this winking and nudging and whispering? Why all this cowardly nonsense

about 'ces *messieurs*'? If it's the dirty Germans you're talking about—well, call 'em 'dirty Germans' right out, as I do, and to hell with the lot of 'em!"

At the beginning of such an outburst, his hearers would laugh nervously and murmur, "Bravo, bravo!" But as the tirade mounted in fury, they would drift one by one to their tables and sit studying their menus or newspapers with elaborate, frowning intentness, to make sure that any *Gestapo Spitzel* who might be present could plainly see that they had no part in the sedition. And at length the old waiter, realizing that his audience was the empty air, would snort through his big white mustache, flick his napkin savagely and move off toward the kitchen with that painful, flat-footed shuffle peculiar to the ancients of his calling.

Several of the more timorous clients had suggested to Monsieur Joly that Old Mustache be discharged in the interests of the common safety, but the proprietor could not conscientiously accede. "He is sixty-seven," he said. "He is married. He has been with us for thirty-eight years. After all, you know, one cannot turn such a man out of the door for being—patriotic!"

Still, Monsieur Joly was worried.

One day at lunch time, when the subject under discussion was French collaboration with Germany, Old Mustache worked himself into a particularly violent tantrum.

"For shame, gentlemen! For shame!" he cried. "Come—why don't you dig up the sacred bones of the Unknown Soldier, while you're at it, and sell them for souvenirs to these bloody bandits of Boches? Surely, you have no souls left to sell! By day, half of you are prating and sniveling of 'collaboration,' while by night the other half are out chalking silly V's on walls, like so many kids scrawling smut where they know the teacher'll see it on her way to school! Frenchmen? You? Pah!"

THERE was the usual nervous laughter; someone said, "Well, the old war horse is feeling his oats again!" while others said, "Sh-h-h!"

"Eh? What's that? You tell me to sh-h-h?" Old Mustache leveled a trembling finger toward the corner whence the cautioning sounds had come. "Well, you poltroons, I won't sh-h-h, I refuse to sh-h-h, I . . ."

"But Jean! Now, Jean! Hold on a minute, old fellow!" Monsieur Joly restrained him. "This bellicose talk of yours is all very fine—when it's just among ourselves! We know as well as you do that it is only talk and nothing more. But when the Germans start coming here—well, then you'll have to cut it out!"

"Right!" cried Old Mustache. "Absolutely! Oh, you'll see, when the dirty swine do come, I won't say a word! . . . I'll—*act!*"

"Act?" Monsieur Joly smiled indulgently and winked at the company. "Act? Why, what will you do, Jean?"

Old Mustache clenched his fists and shook them above his head. "Monsieur Joly and gentlemen!" he said, tensely. "With heaven and yourselves as my witnesses, I swear that when the first German comes into this restaurant, I'll spit in his soup!"

There were cheers and laughter.

"All right, laugh!" barked Old Mustache. "You'll see!"

"Oh, come, Jean!" protested Monsieur Joly. "You really don't mean it!"

"You heard me swear it, didn't you?"

"But you're mad, Jean! Why, they'd shoot you!"

"Of course they'd shoot me—if I were mad enough to let them see me do it! But, heh-heh-heh!" he cackled, craftily. "Please don't imagine I'm quite such a fool as all that!"

"H'm!" Monsieur Joly rubbed his chin and nodded thoughtfully; then he gave a savage chuckle. "Well, yes, by George! Why not? It would be a fine trick to play on the strutting roosters, at that! But—it would take plenty of nerve!"

Old Mustache beat his starched false shirt front resoundingly. "Monsieur, I am a Frenchman!" he declared.

They realized that he was in earnest. "Bravo!" cried somebody. "Oh, what a grand old boy!" Others slapped him on the back. All looked up to him with new admiration and respect, for so low was the morale of these men of yesterday, so filled were they with repressed, seething hate, that they felt keen satisfaction in contemplating this childish project. They spoke of it as "retaliation," as "revenge." But even as they sat there gloating over it, the old mutual mistrust asserted itself. They felt that they had become conspirators in an anti-German plot, and they were uneasy.

"Well, then, it's settled—but mum's the word!" said Monsieur Joly, glancing toward the door. "Please remember, gentlemen—not a hint, not a breath of this to a soul!"

"Oh, talk about it all you want to!" said Old Mustache, recklessly. "It makes no difference to me!"

IN THE days that followed, it was remarked that several old clients no longer appeared at the Gourmets, and it was tacitly assumed that their courage had proved unequal to the strain. To the others, Old Mustache explained his plan. At the rear of the dining-room was a pair of swinging doors that gave upon the kitchen, and concealing them was a high screen. In the narrow space between, the deed could be done with impunity. No one could actually see it; therefore, no one could definitely prove it.

"It cannot fail!" he declared. "I come out of the kitchen. I am behind the screen. An instant—only an instant—and it's done!" But the oftener he rehearsed it and the more he talked, thought and dreamed of it, the less confident he became. He was unable to see how a slip could occur, but—what if one

**The door flapped shut like a coffin lid, and he was alone behind the screen. Now was the time! He retracted his head between his hunched shoulders**

did? Those brutes of Germans w be content merely to shoot him— they! They'd beat him to a pul torture him; they'd beat and tor wife; they'd, they'd . . ."

Still, he had sworn to go throu it; honor and self-respect were a there was no backing down! Out he gave no sign that his coura waning; indeed, he bragged an tered louder than ever. But hi became fitful and his appetit Despite himself he, too, fell i habit of glancing toward the dreading the moment when th gray-green uniform should appe then, one evening, there it was!

The German was a short, dap onel. Behind him came a six-fo poral with an automatic pistol a grenades at his belt. In the chi which followed their entrance, ficer touched his visor politely, three times from the waist an handed cap and gloves to his bod

"I am dining alone," he said fair French to Lambert, who hurrying forward rubbing his har you have no objection, the *Gefrei* stand here by the door."

"Oh, most certainly!" purr *maître d'hôtel*. "He may stand ever you wish, my colonel—ce certainly, sir!" Lambert was t "Pray permit me, my colone about this table here? Is it pe satisfactory, sir? Ah, thank yo

THE table was Number Three, Mustache's station. Feeling t marrow in his leg bones had tu milk, he shuffled over and took hi while Lambert prepared to wr order. The German selected wit deliberation. Throughout the see endless wait, Old Mustache wa that all eyes were upon him—esp those of the bodyguard at the doo giant—that murderer—would shoot a man than look at him simply poke that pistol into yo and *Pam! Pam! Pam!* there yo Yes, and then, if he saw you we squirming a little, he'd kick ou teeth, shove one of those grenade your throat and . . . !

Old Mustache shuddered. H afraid that he would faint. He the soft hiss of a perforated page torn from an order pad and f paper thrust into his hand. "Her *çon!*" came Lambert's brisk, voice. "For soup, *Monsieur le* will have the *crème de volaille.*" as Old Mustache mechanically his acknowledgment, he saw La right eyelid flicker in a scarcely p tible wink.

Somehow, he made the k Dumbly, he pointed to the great pot at the back of the stove wh knew contained the *crème de v* With palsied hands he extended h and received the steaming turee turned and started out. By the t had reached the door, he was tre so badly that he paused for a m and rested the tray on the little s shelf to the right of it. Then, in he pushed open the door with hi It flapped shut after him like a lid, and he was alone behind the Now was the time! He retract head between his hunched sho Now! Now! But—he dare not And even had he dared, it woul been physically impossible—f mouth was as dry as ashes.

As he came from behind the he saw that every French face room was turned toward him. H dered if his own was as pale as Lambert was awaiting him at th man's table to help him serve the

# Hellfire Pass

## By Frank Gervasi

**In Africa the British Tommies' life is not a happy one as they battle the Axis invaders in the desert. Collier's correspondent, who ranged from Cape Town to Cairo, detours now to watch them work under fire**

**Trucks are vital in desert warfare, sometimes joining in the fighting. This one is on long-range patrol duty**

**A British desert outpost antitank unit sets up and camouflages its gun in a rock-and-sand wilderness**

BRITISH COMBINE

THE general sat in what the British call a caravan but what we'd call a bus—a very fancy bus. It had once belonged to Fascist General Gallini and contained a bed with a spring and a comfortable mattress, a table, chairs and curtained dressing room at the rear. It had blue glass windows to filter the desert glare, and awnings. It was now the headquarters of a tallish Yorkshireman with blue eyes, pale yellow hair and a face that seemed hatched out of polished red limestone, its redness accentuated by the loose white woolen muffler the Briton wore about his throat. The general's bus was parked in the desert. We had trouble finding it because first of all, generals commanding divisions don't advertise where they are and, secondly, because it is merely a name on the map. If after reading war stories about the fighting you have formed images of Beau Geste forts and palm trees and streets filled with goats, camels and Arabs, forget them. This place is merely where the road that runs from bad to worse becomes very much worse and where there are some wells the Italians forgot to poison.

Earlier that morning, in the blue-black twilight of the desert dawn, the general had set into motion the mechanics of the British drive against the Germans. When we arrived he got out his map and told us what was happening, what had happened and what the British intended to accomplish. He explained that desert warfare had come full circle, that it is fought from machines which move on caterpillar treads, tires or wings. Lawrence and Allenby would be amazed at what has happened to that once glamorous business known as desert war. It has become about as glamorous as a garage and smells like a garage.

The general showed us where the British tanks and clattering little Bren gun carriers were deployed. He pointed out the disposition of artillery and arranged for us where we could obtain gasoline and petrol on our journey forward into the combat zone. The object of the British operations was to push the Germans back from their positions at Salum on the sea coast and from their well-traced points on the great Libyan escarpment that encroaches upon Egypt from the eastward from Salum to the submarginal Qattara salt marshes like a huge brown glacier.

### The Highway of Invasion

It was obvious that whoever controlled the escarpment, a wilderness of sand and rock and camel thorn brush, dominated the approach to Egypt from the west. But there are no roads on the plateau, only vague desert tracks of yesterday that passed the day before. The wind obliterates the trails within a few hours and you move on the escarpment by compass and sextant. At Salum the escarpment tumbles into the sea. A road zigzags down the blunt face of the plateau through what the Arabs call Halfaya and the British "Hellfire" Pass and connects with the shore road—the highway of invasion of Egypt that leads to Alexandria and Suez.

It was the British, with inferiority in numbers of tanks and other mechanized equipment and until recently in manpower, too, have been able to prevent German control of the Libyan plateau and the Hellfire doorway to the coastal roads a measure of their courage and endurance. They have also proved themselves inventive. They have mounted cannon on trucks and, with these vulnerable, makeshift weapons, have fought and sometimes defeated German tanks. Trucks—the tenders of the dreadnoughts of these sand seas—are as important as tanks. The desert kills trucks.

# e American Miracle

## By Walter Davenport

**in scapable confusion and shouting we are completing he dous plant, the largest that the world has ever seen. e composite product is just emerging, an industrial fa hioned by large and small manufacturers working in n. While it is built for war, it is our best hope for peace**

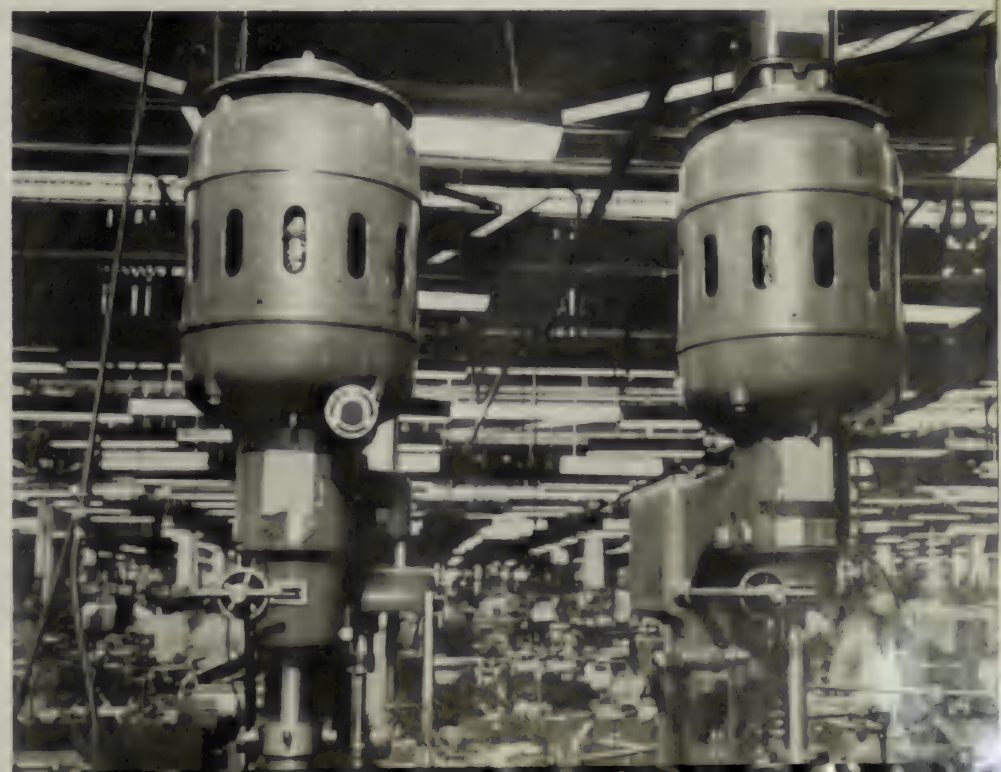
li ts of Capitol Hill are low. e nd there a lonesome glow ov a window in the House and of e buildings, but life has fled. s, nce almighty, once full of d portent, sits waiting like a if t the gates of a vast muni- an Presently the call to move th machinery, will sound. Con- u bling like industrial workers pe -ups, seniorities, money and ic will barge in, fill orders. r t the foot of The Hill, blaz- sk s with its roaring light, lies in OPM—the Office of Pro- M nagement—and its new ma- A —the Supply, Priorities and on Board. And at the feet of r cous little carnival of blaze y l its own, squats its mow- n at OPA—the Office of Price tr ion. Remember the days of y eal's youth with its AAA's C' and the rest of its brawling rb s? Al Smith called them ic soup and people laughed th n it was easy to laugh. The d een nothing. Those weak, ay were but thin, insipid con- co pared with these.

t seething city, shadowed by t House, stands OEM—the Of mergency Management. It pe simulating a calm it doesn't OE is the President's eyes and ww ches SPAB, OPM and OPA. Pa sident's hand on them all, c their work, his tongue in if ences. OEM is the Presi-

ir—OEM, SPAB, OPM, e our emergency government. e od is half evangelism and wn. They have fifty-six bil- ar to spend but not a penny for e. That alone is a miracle, but on. Slowly at first, but swifter w k, American industry is re- t their call to arms. Maybe t ink the picture pretty, but t dmit it's a heroic one. Big h s hit the trail. Little Busi- r ll for its life, crowds into co begging for machines, tools, ubcontracts. Plants, facto- ps nd village forges have be- e oon to become or hope to A erican Krupps, Schneider- kodas, Vickerses and Bo- ic if you wish—but wait. a prairie cornfield twelve g is a thundering tank plant or what was a woods a little k -a woods beloved for fam- s thousands of aircraft mo- r before Christmas. Where e made, detonators will grow. owing where gadgets were G out of your office and look Y ll see the major miracle. it on't make you happy. Per- n't rejoice. We've seen it, s ne idiotic reason laughed. " esent rate of increasing mo- ty'll make Mars and all his h look like kindergartners r ear. You who look on with your chest, you who must pay the bill, may have to struggle along without rubber heels, costume jewelry, galvanized water pails, aluminum pots and pans, new refrigerators, motorcars, new cameras, oil burners, saxophones, copper screens and an ever-lengthening list of what they call consumer goods—but you'll be a sight to behold with ships and guns, tanks and planes, bombs and shells. You're asked to stop receiving and to give.

### Back to the Simple Life

In spite of what office seekers and flag-waving sobsters tell you, that standard political mousetrap, the American Standard of Living, is due to lose its snap. SPAB's executive director, Mr. Donald M. Nelson, warns you and bids you be ready. You'll probably benefit thereby. You'll walk more. Already they've reduced the production of private motorcars by half, and don't be shocked if the cut goes much deeper next year. Even if you have a car you'll have trouble getting tires and perhaps spare parts. Walking's good for you. You may have to eat fewer extras—the extras that put that belly on you.



During this thing they call emergency, you'll struggle along somehow with fewer laborsaving gadgets in your office and kitchen. You may have to hire somebody who can add columns of figures in the old-fashioned way because if this goes on the man who sells you computing machines will be out of stock. Similarly your wife, poor soul, may have to beat eggs, whip cream and mix her batters by hand because the metal that went into gadgets will be blowing up Nazis. Maybe you paid no attention, you with your stomachs packed to the burp stage, but three or four years ago the dietitians and doctors discovered that as a whole the hundreds of thousands fed by relief thrived on the simple fare whilst the fat cats made the liver-pill rollers richer and richer. Now is the time for a hundred and thirty million people to find out how simply they can live, how few frills and furbelows they need for happiness, how many pretty things they can do without, how much trimming they can cut off living. Find out for yourself or, what with ships, wings and guns to pay for, it will be found out for you. OEM, SPAB and OPA are not the old political alphabeticals. Very few lame ducks

**Pistons for the new Wright Cyclone aircraft engine are turned out in mass production by the Aircraft Division of the Hudson Motor Car Company of Detroit, Mich. This plant also produces rocker arms in mass quantities**

**An Army truck comes off the assembly line at the Studebaker plant in South Bend. This truck has three axles, with a drive on each of the six wheels**

**The Packard Rolls-Royce machining plant, Detroit, contains $18,000,000 worth of new defense machinery. Two thirds of it belongs to Great Britain, one third to the United States government. Of the two great drill presses in the foreground one is British-owned, one American. They merely drill and tap a temporary hole in the hub of a reduction driving gear**

loll within their doors, political pensioners. These agencies are getting tough. By this time you've probably read the names of several proud corporations who have learned the awful truth. As we left Washington OPM was preparing to crack down on two or three big boys who refused to read the signs, who were using the scarce raw materials they'd get with priority permits for nondefense goods. OPM was getting ready to cut off all their supplies—to put them out of business for a term. Maybe you don't like what's going on in the capital of your country, but you had better get used to it.

### The Realities of War

Nobody in Washington or elsewhere completely realizes the latent possibilities of American industry. A year ago OPM, trying to swing the job alone, was wallowing badly, down at the head, getting nowhere even on paper. Individually its offices were sturdily manned. Gallantly enough, they tried to break through political jealousies and precedent, industrial fear and suspicion, civilian distrust and ignorance—an ignorance that nobody from the White House down made any effort to dispel. From great General Electric and mighty United States Steel down to Joe Kumoninski's two-man welding shop, no one believed it possible that today we'd be turning out approximately 4,500 airplane engines a month, that by next July we should be producing more than 8,000 a month. And if anyone had told you a year ago what Detroit would look like today you'd have called a cop, or at least have advised a doctor. We've just got back from that Chrysler tank plant—started at the rough castings and left the gigantic place in the fifth twenty-eight-ton battler they'd turned out that day. A year ago that plant was a cornfield. These are mere samples that we toss off as we speed the tale along.

Like it or not, this is the path we're taking. We're too far along and the wheels are turning too fast to do anything about it now. You may as well know. Hitler does. You'd better get used to it; we've a long way to go. A year ago America talked with shudders of bottlenecks. Today it's an almost forgotten word. A year ago big industrialists were telling OPM to go to hell. There was a household-utility manufacturer who told OPM that he'd quit making them and turn to munitions when General Motors, Ford, Chrysler and the rest of the big motor fellows quit making automobiles. And not before, he added. Today he's making bombs. We hope he's liking it too. He'd better.

We'll waste no time with bygones. Why OPM didn't crash through under its own steam, its internal bickerings, interdepartmental jealousies, bad guesses and the distrust of industries not represented within its personnel is old stuff. OPA (originally OPACS because it was supposed to look after Consumer Supply too), appeared. OPM and OPA battled each other for the President's smile. Not much except considerable spitting on hands, fussing with shirt sleeves and an assortment of attention-calling noises ensued until the President made it quite clear that he had abandoned all hope of preserving all the benefits of peace and at the same time fighting Germany.

It wasn't until then (and there's no specific date to mark the day) that skeptical industry began to set aside its distrust of the White House. As long as the distrust lasted, as long as industry feared that it was going to be taxed out of its last cent of profit and as long as the belief flourished that in labor disputes the White House was going to align itself blindly with labor, management was halfhearted. Nothing suggestive of the present speed was noticeable until the government took over the strike-paralyzed North American Aviation Company. Not until then were the manufacturers convinced that the President had sacrificed most of his political romanticism to the realities of war.

The temper of the country has changed, not that there is any perceptible increase in the desire to shoot or get shot; but much of 1940's pessimism is gone. A year ago the consensus was that when stocks of essential raw materials which we import were exhausted, plants would close—defense and civilian contracts would be broken by mutual consent. A few unquenchable optimists assured us that our scientists had seen to all that—that government and private chemists and metallurgists had been working for years on substitutes for imported stuff. If no rubber, tin or manganese came out of the Far East, they said, we'd have *ersatz* to take their place. Well, they were partly correct. The chemists and metallurgists did lots of commendable thinking and mixing. Many times they produced substitutes superior in strength and lighter in weight and altogether more desirable than the original. The only trouble is that most of the materials which went into those substitutes are now on the scarcity and priority lists along with the stuff they were to replace.

Of course if we get into a real brawl with Japan and have to lick her before we can get rubber, tin and manganese, we may be in a nasty spot. But what we're getting at is that neither labor nor management seems to be worrying much about that. A year ago the prospect, remote as it might be, would have found them weeping into each other's beer and willing to cry quits. All the country needed was a little leadership. We have two statements about the airplane industry that separately or together give you a pretty graphic picture of what's happened. They're not so very dissimilar, either, although the figures we got in Washington are slightly larger than the ones we have from the industry itself. Let's get a little perspective on it first.

### The Assembly Line Speeds Up

You'll remember, perhaps, the early statistics on Hitler's plane productivity. We won't try to cite them all, contenting ourselves with saying that it was generally agreed a few months ago that we had about as much chance of producing planes at Hitler's rate as Mahatma Gandhi would have of going six brisk rounds with Joe Louis. It's entirely possible that the figures from Germany were accurate. These present figures we have from the airplane industry have it that our two largest manufacturers of military engines—the Wright Aeronautical Corporation and Pratt & Whitney—alone are on the verge of a monthly output equal to the total production of all of Germany's huge plants. It took Germany seven years to reach her present rate. Two years ago we were manufacturing only about one tenth of her production. Of course you're going to have to get along somehow without a lot of things you had before, but a year hence we should be making Hitler's producers look juvenile. When Ford, Buick, and Chevrolet too begin turning out Pratt & Whitney engines and Nash gets tooled up to produce engine parts—oh, well, say it yourself. Before we have a look at the government estimates, we'll give you the latest advices from England. Britain's aircraft engine production today is about 1,800,000 horsepower monthly. What that means in plane numbers we don't

**BOMBS AT BARKSDALE.** At the only U. S. Bombardier School, near Shreveport, La., Army and co-operating Navy fliers a few weeks ago showed top-ranking generals and 4,000 officers of the 2d and 3d Armies what the highly publicized but still secret bomb sight can do. With incredible accuracy 45 airplanes dropped 360 demolition bombs, each weighing 100 to 1,100 pounds, onto a 1,000-by-2,000-foot range only 1,500 yards from Barksdale's hangar line. Thirty tons of explosives chewed thirty-foot craters in the Louisiana loam, sprayed the surface with lethal bomb fragments and blasted orderly rows of six-ton, World War I tanks hauled from Rock Island (Ill.) storage

**An 1,100-pound demolition bomb in the Barksdale target range left). Captains Daniel Todd and Fleming examine the resultant**

# OUR NEW ARMY

PARTICIPANTS in large-scale mock wars give you a funny look when you refer to maneuvers as games. Unfortunate, too, was the choice of the word umpire for judges and co-ordinators, because "game" and "umpire" connote pop bottles and Bronx cheers—and the Louisiana war was no ball game. Nothing was missing but live bombs and bullets. Fatigue, mud, dust, heat, rain and bugs in difficult terrain added up to field conditions only toughened soldiers could take. The Second and Third Armies took it last month and the First Army is taking it now, in the Carolinas.

A man, exhausted and sweat-caked with grime. doesn't smile when he tells you the bridge on which you stand was destroyed last night; an infantry colonel looks almost grim as he describes the effects of yesterday's attack by a squadron of A-20's. (Secretly amused by this is your correspondent, who, strapped securely in the broiling, screaming, glass-enclosed nose of one of those very bombers, helped "mow down" the colonel's men.) Realism is the watchword of maneuvers, and realism is what the men get. In one phase of the Louisiana battle dive bombers blitzed an armored force encircling the town of Zwolle while "enemy" airplanes dropped propaganda leaflets into the streets of the town choked with men, horses, guns, tanks and every type of military vehicle. "Your commanders," the leaflets read in part, "are withholding from you the terrible fact of your impending defeat. . . . Rout, disaster, hunger, sleepless nights in the forest and the swamps are ahead of you—unless you surrender . . ."

The spectacle was unique in U. S. military history. Seldom during the previous week had the men slept, shaved, or eaten. The action had been a grueling maneuver milestone. But the weary officers and men were still willing and able, and an observer might well boast that what this country now has is the nucleus of as fine an army as men and *matériel* can contrive. The spirit will continue to be high as long as the service is endowed with the type of individual, who, told by a general to "Put down that gun, sentry! I'm General Snafu," slaps down the general's ears with, "Nuts; I don't recognize you—keep your shirt on until I call the sergeant."

INCIDENTALLY, there has been a lot of loose talk lately about Army morale. Brass hats who know their jobs will tell you that good morale stems from good discipline. Nobody likes the idea of selective service and the Army has tried to soften the measure by handling the boys with suède spats. Result: A "Will-you-do-right-face-please?" command from too many officers and an "Oh-well-I-suppose-so" response from too many men. If, as a lot of experts believe, this country is to police the world for the next ten or fifteen years, selective service will come to be a natural experience for lads not at this moment old enough even to join the Boy Scouts, and there'll be an uncompromising maintenance of strict discipline by officers trained to enforce it. There will be some changes made when the 1941 maneuvers are post-mortemed. The Army of 1942 will be a humdinger—and the streamlined job of 19 be something for the critics t quiet about.

MEANWHILE, Congress migh a few bills designed to give t and file a better break in the m this and that. A bill now und sideration would present ever with a ribbon for his year of servi cluding field maneuvers) and hig feel it should be given to him a or two before he's discharged, months later. Three other ite being advocated in some quarte Free franking privileges, (2) a r differential, and (3) extra subs for men with dependents. (1 postage for men in the service is planatory; (2) the flat-rate railro for the soldier on leave would eli the justified gripe of Pvt. John M who has to pay three times as m get home from his distant post his brother, Pvt. Joe Messkit, w assigned to a post within yelli tance of Ma's cooking; and (3) t with dependents wonders why h get at least an extra forty-two day to send home to his family. would cost plenty, of course. have a mulling machine hand these thoughts into it and se gives.

**ts of the church's money n v in the hands of Modom -Bar. It happened because hodoo lady is so good at ne evil and B'r Charlie is d of bad at being good**

W S during the season on Little ee Bend when crops are "laid by," ul in the pasture, and everybody it g for the cotton bolls to open so ng an start.

r harlie, the one-legged black- h- eacher, sat in his homemade ni chair under the big china-ball a ruminated. It was past the h r but he had not eaten a mid- m l. He had not forgotten to eat; ad udied his mind and weighed the iv ience of rising to prepare din- ag nst the probable discomfort he d pect by missing it, and he had en he latter.

n kin always eat," B'r Charlie on l, "but you can't always jest

ck g would start in three or four s e knew, and the boys would be- or king up the cotton wagons, and fe ould be full of labor again.

o where he sat, by turning his s htly to right and left B'r Charlie d e a thousand acres of growing n It looked good to him. "Out j t a-growin' and goin' on!" he n ted. "And hit ain't got to have s din' up and down, fussin' and n and all de time."

ne weather, too, was about right. d s and hot nights, with enough ir dew to keep the fields steamy r morrow's July sun.

v de Widow Duck ain't got de k o pray for better weather," he g with satisfaction. B'r Charlie it the way his senior usher took g f spiritual matters which rightly n d to him.

D TURBED him a little when he r d his gaze toward the ram- c cabin of Modom Aw-bear, the o woman. Modom Aw-bear was a n a shame, and a constant source n rrassment to the pastor of Old c Zion Church. More than once he p ached himself into a state of ex- th, trying to bring light into the d souls of some of his parish- s They would listen politely, drop k or a penny in the plate, and then w ur bits to the hoodoo woman to a usband-stay-at-home charm.

inned when he remembered the o "De mens and de ladies got t ime to 'tend to all er dat stuff," e thought, "and dey don't need o Aw-bear's tobies." His mouth e d. "I hope she don't make a p cent all summer."

e was another small speck of gall i soul. It was Uncle Henry, the l tman. With the mules in the u , there would be no feeding to n o and B'r Charlie resented Uncle r having a rest. "Ole devil," he grunted. "Efn I was Giles I'd run him off."

All things considered, however, the world was treating B'r Charlie pretty well. "I b'lieve," he told himself, "I'll go fishin' and git me a bait er fish for my supper. Hot as dis weather is, I bet dem catfish is bitin' like a hongry dog."

The Widow Duck would lend him a pole, he knew, but it was a far piece from his house to that of his senior usher's, and the heat devils were dancing up and down the path. "I'd have to dig me some worms, too, and den dem no-good fishes might not bite, nohow."

Before he realized he had reasoned himself out of a fish supper, a spring-born swamp rabbit—now almost grown—came hopping along the path within easy throwing distance. B'r Charlie had knocked over many a rabbit at greater distance, but he made no move to heave his crutch at this one. Instead, he spoke: "Go 'haid, rabbit. You ain't big enough to take de trouble."

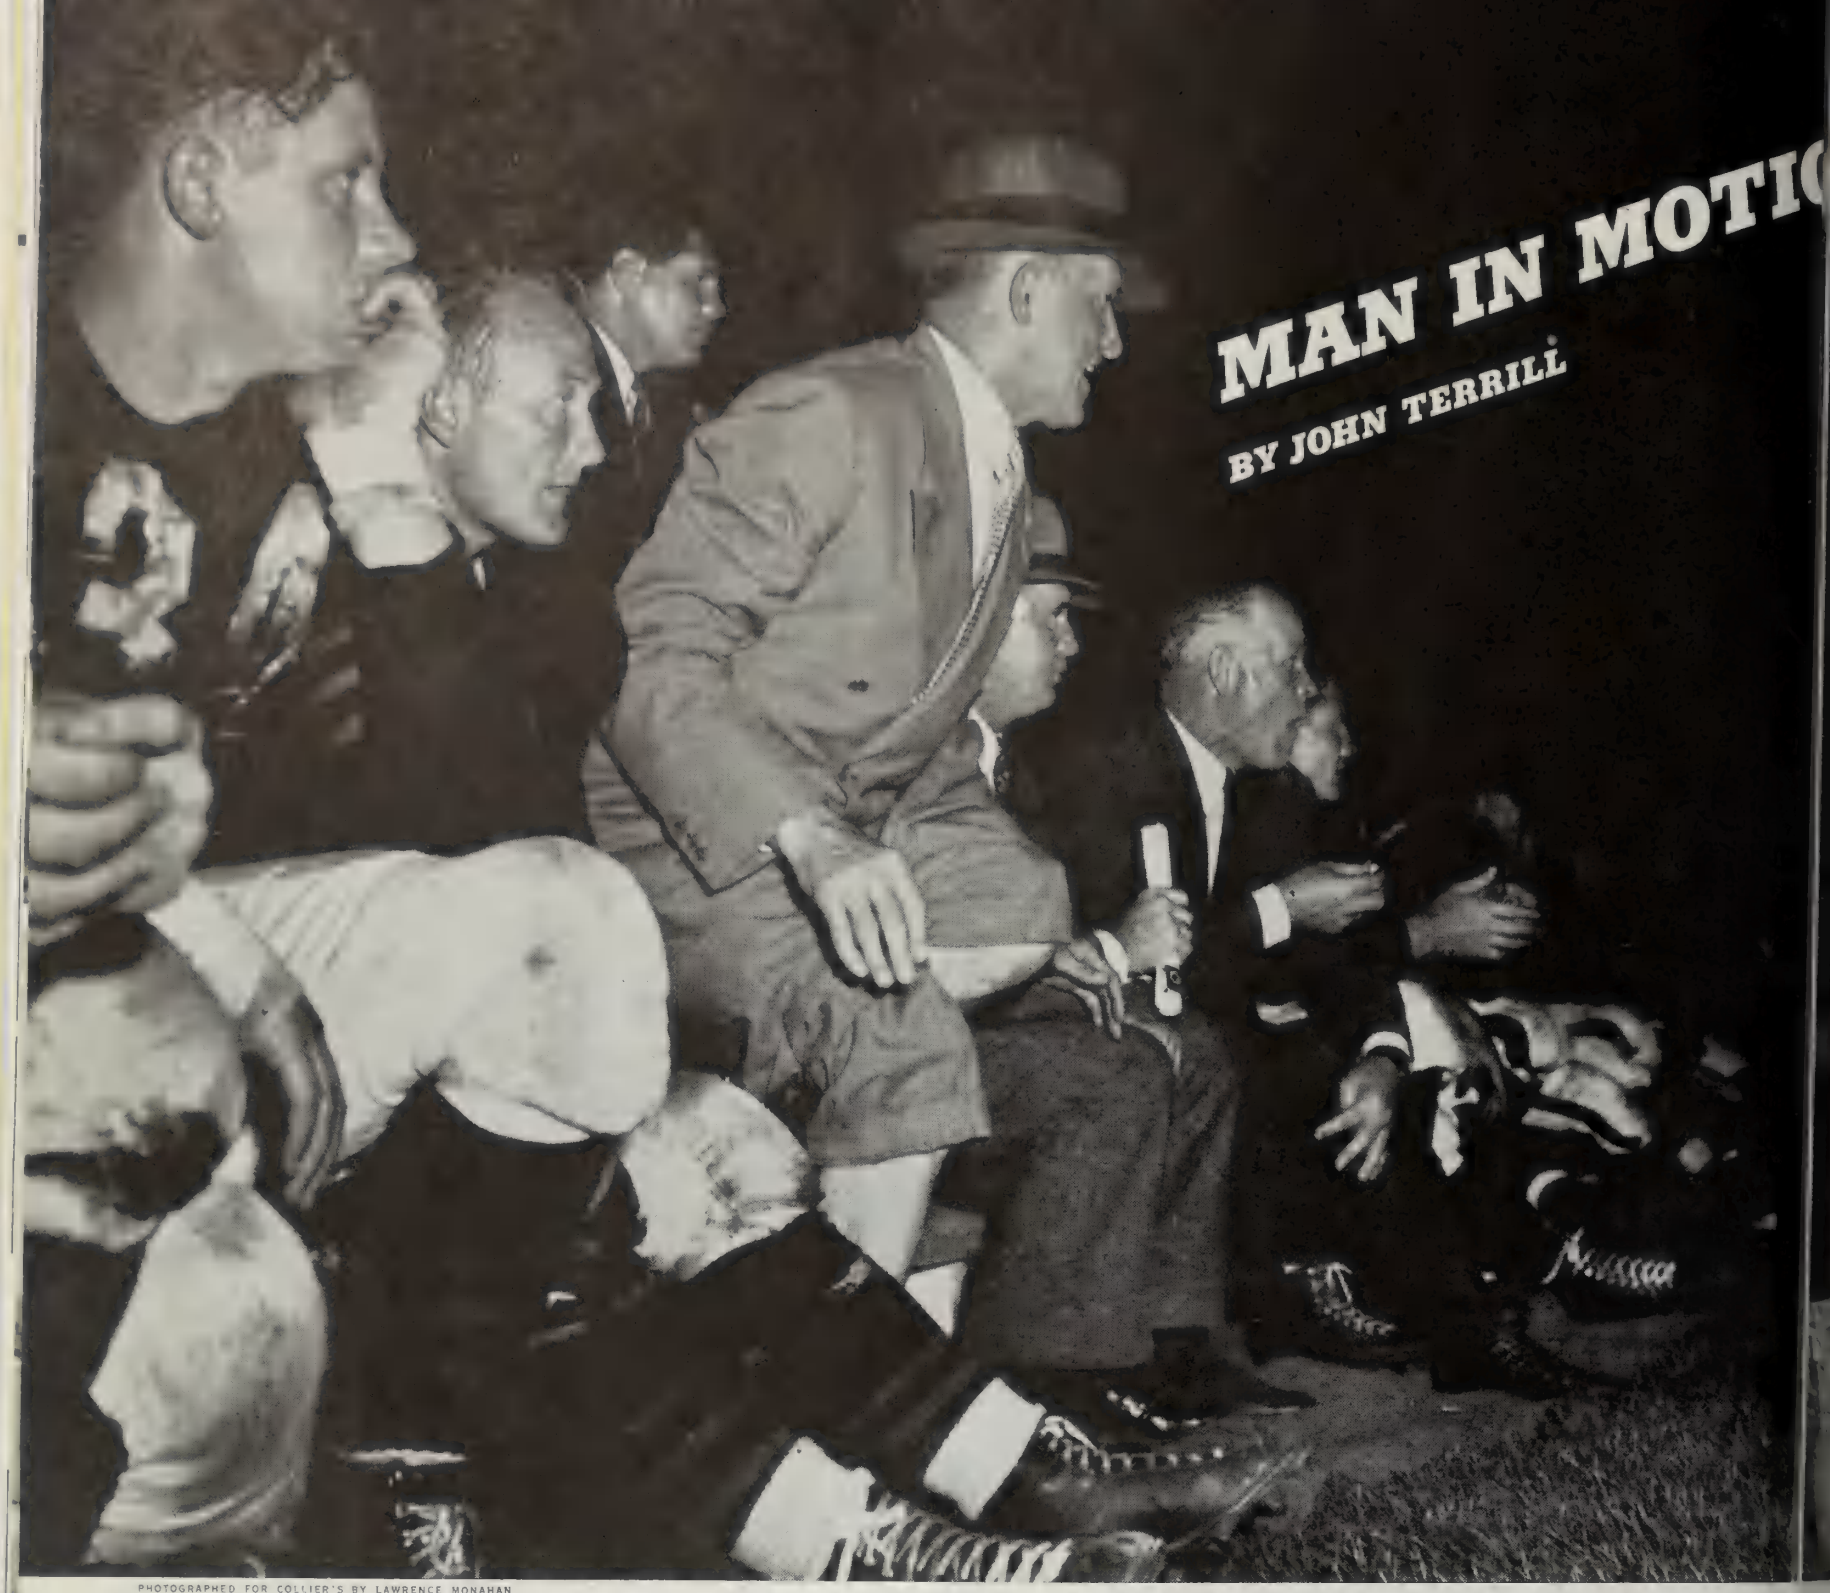
A HUNDRED yards away, Uncle Henry retrieved the rabbit. B'r Charlie watched with growing interest as the lotman picked up his game and brought it directly to where B'r Charlie was sitting.

"Huntin' rabbits, Uncle Henry?" B'r Charlie asked politely.

"Nawp. Dis scound'el was fixin' to run smack over me. So I chunked at him and hyar he is."

"Well, skin him and clean him and drap him on de po'ch," B'r Charlie instructed. "I'll stew him for my supper."

"Not dis rabbit," Uncle Henry said emphatically. "Dis hyar rabbit is fixin' to git stewed but not for no preacher's supper." He chuckled. "Hit's a certain lady down de path a little ways dat's fixin' to stew dis rabbit for *my* supper."



B'r Charlie snorted. "You and dat certain lady! Why, you's so old hit ain't a lady on de place'd give you a pleasant 'howdy,' let alone cook yo' supper."

**"I'll bat off yo' haid," he told her. "Don't make no ju-ju tawk on me!"**

# MAN IN MOTIO

BY JOHN TERRILL

PHOTOGRAPHED FOR COLLIER'S BY LAWRENCE MONAHAN

**George Halas works almost as hard on the bench as he did during his playing days when his champion Bears were in the making**

**With blood, sweat and hard practical honesty, George Halas built the Staley Starchworks Terriers into the Chicago Bears. It took twenty years, but today he is rated the nation's best judge of football material on the hoof**

THE Chicago Bears, most powerful football team in the land, are famous for their man-in-motion attack. There can be no doubt concerning the origin of this devastating offensive. The Bears got it from their own founder, father-confessor, president and coach —George Stanley Halas.

George, forty-six-year-old son of a Bohemian tailor from Chicago's West Side, has been using a man-in-motion attack all of his life. His Bears, you recall, gave the Washington Redskins that 73-0 walloping in last season's championship game, but the players were no busier on that memorable day than Halas is any day in the week, in football season or out.

You walk into his snug little office in a Loop skyscraper and George springs out of his swivel chair, grabs your hand and gives you a resounding whack between the shoulder blades.

"Hello, fella! How's it going?" he asks, immediately lunging at the nearest telephone. "Be with you just in a minute, got to make a call." Just as he finishes it, the phone rings and the chase begins. Stick around for half an hour and you might get in a dozen words or so. Without a telephone he would be miserable and helpless. Maybe it is one of his football players needing a little cash against next week's salary. Or the call might have to do with any one of George's various enterprises—a jewelry and sporting-goods mail-order house, one of Chicago's largest laundries or his professional basketball team.

George directs all of his business interests from this cubicle. He works from twelve to sixteen hours a day. All of these enterprises of which George is president and treasurer take up his time, but his main source of happiness is the work with the Bears.

"George would be miserable out of football," his wife says. "He is forever devising new plays, studying formations and looking for new stuff. Football makes the world go around for him."

But it isn't exactly a labor of love, even if George is completely devoted to the game. Halas draws a handsome salary in addition to his stock dividends in the Bears. But there were times when George and his Bears hardly knew where their next touchdown, not to mention pay check, was coming from.

With blood, sweat and hard practical honesty, Halas built the Bears to their present high status. He is dynamic, shrewd, tough as they come when necessity forces, but his integrity has never been questioned. The best guide to that is the respect of the players, ranging from the boys who played football for him back in the early struggling days to the modern, well-paid Bears.

Worshipers at the shrine ism considered George and players nothing better than fians in 1921, when the team from Decatur, Illinois, to C fessional football was not then, but the sport had n the confidence of the put people realized that finall had in Halas one of a sma termined to see the thing clothe it eventually in re He did this by making the match his own fire and spirit Halas is scornful of anyth best. The Bears were the hold daily practices, first a big-league park for their first to hire a college coach have a knothole gang—al moves designed to instill the customers. But the p public had to be shown a to the young promoter b days of flappers and batht

# Murder in Retrospect

## By Agatha Christie

ILLUSTRATED BY MARIO COOPER

**Mrs. Crale's husband deliberately flouted her and introduced Elsa Greer into her home. He goaded Mrs. Crale beyond endurance**

*The Story Thus Far:*

AMYAS CRALE, ■ well-known English artist, is found dead in the garden of his country estate: Alderbury. Investigation reveals that his wife, Caroline, had given him a glass of beer, shortly before his death; and the beer had contained coniine, a poison.

Caroline Crale is arrested, charged with murder, tried, convicted. One year later, she dies in prison, leaving a letter in which she protests her innocence. The letter—addressed to her young daughter, "Carla"—is to be read by the girl when she reaches the age of twenty-one.

Sixteen years later, Carla (*Carla Lemarchant* to the public) reads the letter. Then, certain that her mother had not been guilty, she induces Hercule Poirot, brilliant Belgian criminal investigator, to dig up the facts in the case and, if possible, *learn the truth.*

Poirot begins by making a list of everyone who had figured, in one way or another, in the celebrated affair. Then he interviews those who are still alive.

Amyas Crale (he soon learns) had been infatuated with a beautiful young girl: Elsa Greer, at the time of his death. He had been painting her portrait, in his garden, when his wife had given him the beer. When he died, he had been alone. On the previous day, some coniine had been stolen from the laboratory of ■ neighbor, Meredith Blake, an amateur chemist. Any one of these persons might have had ■ chance to filch the poison: Blake's brother, Philip; Mrs. Crale; Elsa Greer; and Angela Warren, Mrs. Crale's half sister. All had been guests of Blake when the coniine had disappeared.

Fortunately, the Blake brothers are still living. Both of them promise Poirot to set down in writing all they can remember of the tragedy; and Meredith escorts the Belgian to Alderbury, shows him everything he wishes to see.

Elsa Greer is also alive; she is now Lady Dittisham. Poirot pays her ■ visit. He finds her still astonishingly beautiful. She tells him quite frankly that she had hated Amyas Crale's wife—and that she had loved Amyas. She insists that Amyas had loved her.

But Miss Cecilia Williams (Angela Warren's governess, on whom Poirot presently calls) does not agree with her—Miss Williams tells the detective that the Crales had been ■ happy couple, had loved each other! "You liked Mrs. Crale?" Poirot queries. "I was very fond of her," the woman replies: "*And your pupil—Angela Warren?*" Poirot leans forward, his eyes fixed hard on Miss Williams', as he asks the question.

### VI

SHE was ■ most interesting girl—one of the most interesting pupils I have had," Miss Williams said. "A really good brain. Undisciplined, quick-tempered, most difficult to manage in many ways, but really a very fine character."

She paused and then went on:

"I always hoped that she would accomplish something worth while. And she has! You have read her book—on the Sahara? And she excavated those very interesting tombs in the Fayum! Yes, I am proud of Angela. I was not at Alderbury very long—two years and ■ half—but I always cherish the belief that I helped to stimulate her mind and encourage her taste for archaeology."

"I understand," Poirot murmured, "that it was decided to continue her education by sending her to school. You must have resented that decision."

"Not at all, M. Poirot. I thoroughly concurred in it."

She paused and went on: "Let me make the matter clear to you: Angela was a dear girl, really ■ very dear girl—warm-hearted and impulsive—but she was also what I call a difficult girl. That is, she was at a difficult age. There is always a moment where a girl feels unsure of herself—neither child nor woman. At one minute Angela would be sensible and mature—quite grown-up, in fact—but ■ minute later she would relapse into being ■ hoydenish child—playing mischievous tricks and being rude and losing her temper.

"Girls, you know, *feel* difficult at that age—they are terribly sensitive. Everything that is said to them they resent. They are annoyed at being treated like children and then they suddenly feel shy at being t adults. Angela was in that had fits of temper, would s sent teasing and flare out, a would be sulky for days at ting about and frowning; the would be in wild spirits, clin rushing about with the ga refusing to submit to any thority.

"When a girl gets to that s is very helpful. She needs t tion of other minds—tha wholesome discipline of a help her to become a reaso ber of society. Angela's h tions were not what I would ideal. Mrs. Crale spoiled thing. Angela had only to a and Mrs. Crale always bac The result was that Angela she had first claim upon time and attention, and it moods of hers that she us with Mr. Crale.

"Mr. Crale naturally thou should come first and he He was really very fond —they were good companio to spar together quite a

# What happened to the fourth Manhattan?

BURLINGAME PUBLIC LIBRARY
Burlingame, Cal.

I RECENTLY ASKED a famous photographer to take a picture that ould really do justice to the magnificence of Manhattan Cocktails made h day's Four Roses Whiskey.

He rought us the photograph you see above. We were tremendously pleased with it. But, knowing that, in the past, his Four Roses photographs have usually shown *four* cocktails, we asked, "What happened to the fourth Manhattan?"

His answer amused us—and pleased us. So we asked him to re-enact just what did happen to it—for your benefit . . .

**ith infinite pains** (for our friend is a true n sseur), he mixed the four Manhattans . . . ne-sixth *dry* Vermouth . . . one-sixth *sweet* uth . . . a dash of Bitters . . . and for the re- g two-thirds, Four Roses. Stirring well acked ice, he poured the ruby-gold libation e four glasses. So far, so good.

**Next, he worked out** the composition of the picture, being careful to give the Manhattans and the Four Roses bottle the patrician surroundings they deserve. For this Four Roses, he'd heard, was the very finest whiskey we'd ever made or known in the past 76 years. And that, he knew, meant it was finer than any whiskey *anybody* ever made!

**In fact, (he confided),** this Four Roses made such downright gorgeous-looking Manhattans, with such ambrosial aroma, that . . . well, *he drank that fourth Manhattan!* And now we wish that *you*, too, would discover the satin-smooth perfection, the softly exquisite flavor, of today's Four Roses. Just try this matchless whiskey—won't you?

*r Roses is a blend of straight whiskies—90 proof. The straight whiskies in Four Roses are 5 years or more old. Frankfort Distilleries, Inc., Louisville & Baltimore*

ould foot the bill as an advertis-
ture. Halas, already well known
thlete, toured all the prominent
stern schools and corralled senior
for the 1920 season. George
now it but his first Bears' eleven
the making.

ecruits included Jimmy Conzel-
, ow coach of the Chicago Cardi-
urt Ingwersen, now line coach at
estern; Hugh Blacklock, Mich-
ate tackle; George Trafton, Notre
star who was a mainstay of the Bear line for a decade; and Edward (Dutch) Sternaman, Zuppke pupil like Halas and Ingwersen. The quarterback on that Staley eleven was Charley Dressen, Decatur native and the same cocky little guy who became Leo Durocher's right hand with the baseball Brooklyn Dodgers.

Halas coached and captained this squad to the championship of the Middle West. The players cut up a chunk of cash, amounting to $1,700 each, at the season's end—not bad for kids who had been playing four years in college for nothing.

The company, feeling the effect of a general industrial recession, told George to forget about football in 1921. He didn't. He resigned as athletic director and took the club to Chicago. The club won the professional championship that season, the title game drawing 12,000 at Wrigley Field. Any doubts Halas may have had about the sport's future were erased once and for all by this outpouring of customers.

The league was formed that fall of 1921, but it was a long time before the organization had anything resembling unity and compactness. No less than 38 teams held membership at one time or another—the teams ranging from Los Angeles, California, to Providence, Rhode Island; Duluth, Minnesota; Pottsville, Pennsylvania; and Kenosha, Wisconsin. The league had a hodgepodge of twenty-two teams as late as 1927. Many promoters who thought that they had the "Midas" touch tried their hands, but soon became discouraged and dropped out.

But none of these ups and downs ever affected Halas' faith in the game.

After a victorious season in 1921 the Bears, although prospering financially, went for ten years without a championship. The club netted $1,476.92 in 1922, lost $71.63 in 1923 and cleaned up $20,000 in 1924, when George and Dutch Sternaman, his partner, rejected an offer of $35,000 for the club. Other clubs foundered, died, were reorganized and crawled through the league's first decade, but the Bears had little need of red ink. The public liked the fire and spirit of the pioneering Bears, many of whom played through every game. Back in those early days the young co-owners paid themselves $100 each per game.

Halas himself once suffered a broken jaw in a game at Rockford, but was in there at right end for the full sixty minutes the next Sunday. It is easy to see why young Halas got such a quick and firm hold on the Chicago public. He works harder now than in his playing days, dying a thousand deaths on the bench when the Bears play. He often rushes out to the side lines to give the officials a verbal blasting. Of course, this sort of thing is becoming less frequent nowadays, but George still rants and raves when the Bears lose; especially if, in his eyes, the club really has outplayed the rival. On these occasions he is inconsolable. But he always takes the blame himself if the Bears are outplayed or outsmarted.

In 1924 in Cleveland, Halas became enraged at an official who was spending a good part of the time "walking"—ripping off offside and holding penalties on the Bears. Finally, he rushed out and directed a choice bit of invective at the man in white.

"That'll cost you fifteen more," yelled the official.

Halas cut loose with another blast.

"Fifteen more," bellowed the arbiter.

"Go on, walk your fool head through that brick wall," fumed Halas. The official didn't walk through a brick wall, but he did keep going until he had penalized the Bears back to the one-yard line.

### He Plays—on the Bench

You have to see George in action only once to know that this is not an act. Halas suffers intensely every minute of a close game. Several years ago the Bears were being pushed around by the Philadelphia Eagles. The Eagles marched down the field and set the stage for an important field goal. Halas, completely oblivious to all around him, kicked vigorously with the place kicker. His foot struck a 240-pound lineman on the chin and knocked him off the bench. It is nothing unusual at all for George to push his associates off the bench as he shoves and heaves up and down the boards.

Halas and Sternaman had the Bears moving along smoothly by 1925, but the pro game, in general, was just crawling. It needed a shot in the arm. The Bears and the late C. C. (Cash and Carry) Pyle provided the stimulant in the person of Red Grange, most publicized star football ever has known.

Grange joined the Bears less than a week after completing his gridiron career at Illinois, creating a terrific furor. The collegians cried bitter tears at Grange's action, but his step was praised by many others. Grange played anyway and collected more than $100,000 for his first two weeks of play. Thousands who had never given pro football a thought saw the famous redhead play in all sections of the country and consequently pro football as a national sport received a terrific impetus.

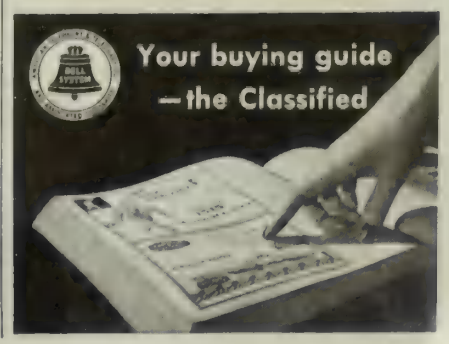
The Grange tour, although it brought the game into focus for thousands, also backfired. The Bears and Grange played too often. The famous star naturally could not live up to advance notices under such circumstances.

But worse times were ahead. In 1926 Pyle, realizing he had the biggest name in football, tried to organize a circuit in opposition to the National League. His league was a dismal flop but it lasted long enough to cut into the patronage of the National League.

The late Joe Carr, president of the league until his death in 1939, summed up the situation in 1926 when he said, "Nobody has made much money in this pro game yet—but a lot of us have gone broke thinking we would."

When the Pyle circuit folded, Halas signed the still great Grange and used him for eight years as a valuable all-

"Now try it once more without aiming" PERRY BARLOW



**The sergeant is right!** Take the case of Mrs. M's family. They wanted to go to Maine, so Mrs. M. turned to the Classified Section of her Telephone Directory. In the advertisement of a certain bus line, she saw a statement that they connected with points in Maine. She used that line. There's a moral for you, too!

**Whether you want** to travel by bus, boat or limousine . . . whether you want to buy a refrigerator, a clock, or to have an appliance repaired . . . look in the Classified.

round back and box-office attraction. But even with a talented cast the Bears were something less than sensational in 1928-29. Halas' club lost four games in 1928 and sank to the second division in 1929, winning only four of 14 games.

"I'll tell you why we were so terrible in 1929," said one of the Bears of that period. "Halas and Dutch Sternaman were not getting along. We had two offenses, one designed by Dutch and one by George. Nobody knew what to expect on any play. One day, in practice, two linemen smacked head-on into each other and one was cut up badly. The team had no precision or timing. You've never seen such a mess."

Halas and Sternaman stepped out as coaches at the end of the season, and turned the job over to Ralph Jones. Jones rebuilt the club in 1930 and 1931, experimenting a great deal with the man-in-motion running off the now famous T formation, and then produced a championship eleven in 1932, Grange scoring the decisive touchdown on a pass.

But six dismal tie games and weather even more dismal left the Bears with a season's deficit of $18,000. Apparently convinced pro football was on a dead-end street, Sternaman sold out to George and his associates for $38,000. Jones stepped out as coach to return to college coaching, so Halas took over the reins again himself. This was the old Halas, back in the driver's seat and ready to put on a show—and a show it was and has been ever since.

George was smart enough to know that the public would never swarm the turnstiles to see a tug of war. He whipped his league satellites into line that winter and pushed through the important rule change legalizing a forward pass anywhere behind the line of scrimmage. College coaches sneered at such goings-on and prattled of "glorified basketball" but Halas said:

"We've got an offensive system that is going to revolutionize football systems. No college team and no coach uses it now—but they'll be using it some day. And when they do the forward pass will become a real weapon, instead of a haphazard threat. Colleges now have one chance in ten to complete a pass, we have seven chances in ten."

### The Best for the Bears

George knew what he was talking about and soon proved it. The Bears, paced by the incomparable Bronko Nagurski and Jack Manders and Bill Hewitt, captured the Western division title and then smacked the New York Giants for the championship in the play-off battle, 23 to 21. Never satiated with victory, Halas added new blood in 1934 with spectacular freshmen like All-America Beattie Feathers of Tennessee and the Bears rolled up 13 straight victories.

The good old days of catch-as-catch-can and survival-of-the-fittest are over in the money game, but George still is the same aggressive battler, although in a smoother, more dignified manner. Only last winter the league directors changed the rules to put a curb on Halas' devious methods of obtaining highly publicized college stars. Halas had been in the habit of swapping players to the weaker clubs in exchange for that team's first choice in the draft for the following year. Consequently, he would come up to each draft meeting each year with the first choice for two or three clubs in addition to the choice entitled to the Bears.

Last winter the Bears turned up with Tom Harmon, Michigan's superstar, and Norman Standlee, the Stanford ace. He also has contacts all over the country and gets hundreds of letters every year recommending little-known players as future pro materia rivals were astonished in the 19 meeting to hear Halas take Clyde dog) Turner of Hardin-Simmo lege as his first choice in the Turner was the Bears' num center last season and has no the league.

Some coaches who have see in action say he is at least fiv ahead of his rivals; others descr as the smartest football techn the country. His old coach, Zu Illinois, once said Halas was the try's best judge of football mat the hoof." Observers marvel ability to teach a squad of thir players a multitude of detail sary to efficient operation of th offense. The team has more tl hundred plays.

### Luckman Learns How

Late in the 1939 season ne men were chiding Halas about ure of Sid Luckman, Columbia was drawing big dough, to bur league. Halas just sat there gabbing scribes had subsided.

"No, no, you're all wrong," "Sid is all right. He's been com great. Watch what I tell you. a great quarterback next seas

Those who saw the 73-0 d Washington last December w what Halas was talking abou man, who had needed a full acquaint himself thoroughly Halas encyclopedia of plays a egy, called a "dream" game field general did.

In fact, Luckman was flab when he first saw the Bears' of plays shortly after he had si the pros. evening, as soon as the Germans e, the Restaurant Aux Gourmets gne became the scene of sub- ut savage rejoicing. It was al- though a victory had been won. len bottles appeared from un- d places; the health of the hero nk, while his frequent melodra- e-enactments of his supposititi- ploit earned him cognac, armag- ntreau and benedictine in large es. Before long, he was pro- g himself the avenger and savior ce. By closing time, he was so uddled that Lambert and one us boys were delegated to take ne. It was only with the greatest y that they restrained him from the Marseillaise in the Rue and assaulting the German pa- the corner. His wife called him old goat and put him to bed s clothes on.

MUSTACHE was awakened by a tering from the kitchen as his pared the bitter brew of burned usts and chicory which nowadays for coffee. His head ached, so d his eyes and reviewed as much uld recall of the previous night's ings. His memory was not only it was full of holes. Of course d remember the German colonel long-planned trick he had set lay on him, but he was reason- rtain that he hadn't played it. ing—something had intervened; at, he didn't know. Still, the Monsieur Joly and the staff had great fuss over him; they had ed him as a hero; they had even im drunk; obviously, therefore, st have pulled off something special. But what? For the life he couldn't remember.
rudently decided to hold his until he could find a clue in the of others. Let them tell him— en he'd tell them! Thus, when e Guichard brought in his break- fast and said, "Well, you animal! A fine mess you made of yourself, last night!" he frowned, looked mysterious and answered, "Gently, my dear! You are talking to a man who deserves well of France!"

"Rot!" cried Madame Guichard, failing to rise to the bait. "How dare you try to give me that kind of eyewash, you shameless old rip?" She placed her hands on her hips, a sure sign that she was settling down to a long, loud session. Old Mustache groaned, got up hurriedly, found his hat and made for the door.

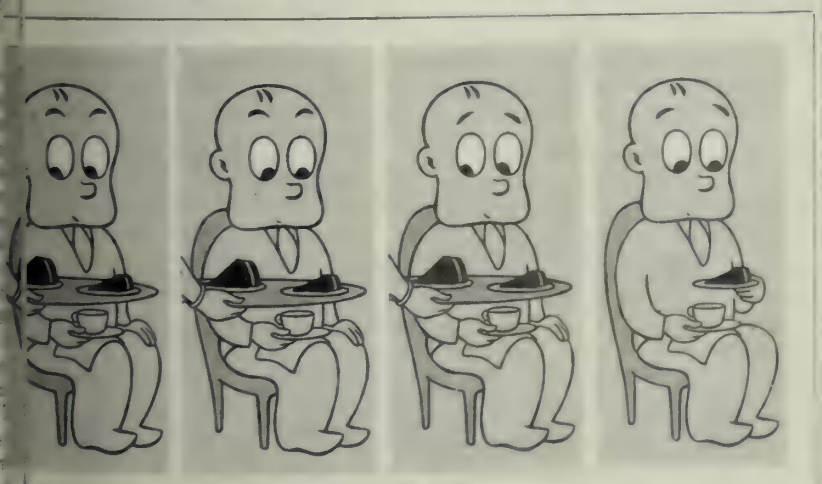
AS HE emerged from the courtyard, he was stopped by Madame Lebihan, the concierge, who was sweeping the sidewalk.

"Ha! Monsieur Guichard!" she greeted him; then, lowering her voice: "Tell me! Is it—true?"

"Is what true, Madame?"

"What you—what you did last night!"

He shrugged his shoulders. "Perhaps—and again, perhaps not," he answered cryptically, thinking to draw her out. "Just what leads you to believe that I did anything at all last night, Madame?"



"Well," she said, "I couldn't help hearing what you were saying to those friends of yours who brought you home squiffy and lugged you up the stairs. And now, this morning, Madame Lefauchaux, who delivers the milk, she said—she said, well, she said everybody in the neighborhood is talking about what you did to that German in your restaurant. What I want to know is, is it true?"

Old Mustache bowed. "Madame," he said, with great dignity, "I can only remind you that a real Frenchman cannot lie—and will not boast!"

Madame Lebihan dropped her broom, grasped his hand and kissed it impetuously. "Then you did do it! Oh, bravo!" she cried. "Oh, that's the way to serve those filthy Boches!"

Old Mustache disengaged his hand, raised his hat politely and moved on, still wishing that he knew what act of derring-do had merited this adulation. Certainly—certainly it wasn't the trick he had planned. Well, almost certainly! He went over the whole thing again. He remembered getting the soup in the kitchen. He remembered resting his tray on the service shelf beside the door. He remembered standing behind the screen. He remembered a terrific surge of emotion sweeping over him. But all the rest of it was lost in a complete mental black-out. Strange!

As he turned the corner into the Rue Gouarches, Roger, the postman, came

**Smallest Piece**

## How's your "Pep Appeal"? —by Williamson

**Playwright:** He says the play hasn't any "whoosh." Now what does *that* mean?

**Wife:** No "oomph," my crestfallen celebrity. No zip. No pep appeal. And neither has its author! *Now* maybe you'll listen to me about neglecting your *vitamins!* You've got to have them all, you know, and we're making a start right now.

**Wife:** Lesson number one is crisp, delicious KELLOGG'S PEP. It's extra-rich in the two vitamins that are least abundant in ordinary diets—vitamins $B_1$ and D.

**Playwright:** Say! Why didn't you tell me PEP *tastes* so good? You've been holding out on me! Why, it's marvelous!

**Playwright:** (sometime later) And now, my dear, that I've discovered vitamins and KELLOGG'S PEP, just watch me become the world's "pep appeal" playwright. Why, Shakespeare himself would be green with envy to read the masterpiece I've started here.

**Wife:** You know what they say: "Where there's pep, there's hope."

## Vitamins for pep! *Kellogg's Pep* for vitamins!

*Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin $B_1$, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.*

*ARROW SHIRTS*

Made by Cluett, Peabody & Co., Inc., Troy, New York

out of ■ doorway and fell in step beside him. "That was ■ great stunt, Monsieur Guichard! Felicitations!"

"Stunt, *Monsieur le facteur?*"

Roger nudged him in the ribs, knowingly. "Oh, I've heard all about it, but you can trust me! The only thing is—are you sure he didn't suspect anything?"

"Who?"

"I mean the bloody, dirty, damned German!" Roger said, speaking from the corner of his mouth. "When you brought him the soup, didn't he—notice anything?"

The soup! The soup! So it had been the soup, after all! Now, Old Mustache knew where he stood! "Monsieur Roger," he said, "a true Frenchman acts not only with courage but with foresight, intelligence and skill!"

"Yes, yes, of course!" the postman agreed. "God knows, a man shouldn't take any chances, on a job like that!"

AS HE passed through the streets, a number of people whom he scarcely knew went out of their way to bid him good morning, their greetings accompanied by little nods or gestures of approval.

His stroll became a triumphal progress; even the policeman bade him good morning. It occurred to him that he might do worse than present himself as candidate for some minor office at the next municipal election, for surely, with this numerous personal following, he could carry the 14th *Arrondissement* in a landslide! The thought was so heartening that presently, whenever a friend or acquaintance approached him and whispered, "Look, Monsieur—is it really true about the soup?" he would draw himself up, cast caution to the winds and cry, "True? Of course it's true! If it's soup these pigs of Germans want—well, here's one Frenchman who's brave enough to give 'em the kind they deserve!" With brows beetling and mustache bristling, he would stalk grandly away, the effect somewhat marred by his fallen arches.

At the restaurant, as elsewhere, he was the man of the hour. Although several of the clients were afraid to speak to him, his tips at lunch and at dinner were far above the average. But every time he came out of the kitchen and passed behind the screen, he was prey to a most peculiar sensation. It was as though part of his brain were asleep. He had to tell himself what he had done, there—and he was able to tell himself only because others had told him.

All in all, it was a grand day. On the way home, he stopped at a bistro to treat himself to a split of mineral water. The evening paper was lying on the wet marble counter and he fell to scanning it idly. He saw ■ headline, GERMAN OFFICER POISONED, and as he read the item beneath, he went slowly cold with horror. For it said:

"The German *Hauptquartier* announces that an officer of the Occupation Forces died early this morning of poison administered to him in a restaurant last night. He passed away in coma and so was unable to reveal the name of the restaurant, although it is believed to be somewhere in the 14th *Arrondissement*. An autopsy revealed the toxic substance to be rat poison."

Rat poison! Rat poison! So that was what he had done—and what he hadn't been able to remember! But—yes—he remembered it now! He could see the little red bottle on the serving shelf by the kitchen door, where he had paused to steady his tray! He could see himself picking it up—could feel the bottle in his hand, hear the squeak of the cork and the tinkly gurgling sound as he poured the liquid into the soup!

He got out of the bistro somehow and staggered down the black street.

Throughout the dreadful n lay listening for the sound c cars bringing the thugs and to the Gestapo. That corporal w them where the colonel had c they'd hunt him down in no ti all those people in the street asked, "Is it true about the so to whom he had answered a affirmative—why, they hadn what he'd thought they mea Unwittingly, he had confessed der to the entire neighborhood as good as dead already!

The thought of death, whil was not as bad as the vision of ings and torture which would precede it. He envied the Ge onel, who had died in coma. I that he, too, could die in cor and why couldn't he? There the bottle of rat poison!

Yes, that was the way—th cheat the Boches—the quick, less way out! He lay there about it until the sky lighten last it was day. Without w wife, he stole out of the flat. ' mets would not open for hou knew that he would be in le of arrest roaming the streets stayed at home.

He walked for miles, blindly, into parts of the city had never been before. He sort of trance, his single luci being to avoid arrest until he to that little red bottle. At le out knowing how he arrived found himself at the head o Brienne.

He slid into the service through the pantry and to th He made for the shelf beside ing doors. The little red bot its usual place. He took it up the cork. As he raised it to trembled so violently that a of the liquid spilled on his h the bottle was full—full to But how could it be full, he'd . . . ? As he stood there he became aware that his as dry as ashes. Dry as ashe ashes?

IN a flash, it all came ba He remembered what he' rather, what he hadn't done hadn't done anything! He cent! But somebody had p German! Who?

He closed his eyes and lea the wall, thinking. It must Lambert! That was it- Should he denounce him? He heard the vacuum cleane in the dining room and the cl verware as the tables were chanically, he removed his his apron from the hook through the swinging doors.

Lambert, in his shirt sleev ting at the cashier's desk, paper. "Hello, Mustache! looking up. "You're early, ing! Did your wife go on again and kick you out of

Old Mustache could only head.

"Well, you'd better watch same!" Lambert chuckled. women!" He slapped the spread open before him. "W out that that German lieu died after eating at the C the other night, was poisone friend he'd brought with him zig!"

"Eh? What's that? He it's a damned good job!" Mustache, with all his accu vor. "If I only had the chanc 'em all!"

"Yes, yes, but go easy wit said Lambert. "Do you wa lot of us pinched?"

MEADE. There's name trou- e, too. The subject is Fay B. mbone player in the Fourth band (of all outfits!). First company clerk gave in to the nd listed the man as Private s Bay Horse. It didn't amuse e officer, who had to issue ntal list to get Pfc. Horse's hay. A sentry, though, topped the whole business one night when our trombone player came back to camp. "Who's there?" challenged the guard. "Private Horse," was the answer. "Advance," said the sentry, "and be mechanized."

### MICHIGAN

FORT CUSTER, Battle Creek. When they put the pinch on Corp. Hank Greenberg (Detroit 5TH DIV. Tigers—remember?) for whiffing his convertible through the fort's main stem at forty-two, Custer M.P.'s brought the public attention to speed laws and how they operate. Army personnel are "grounded" for stated periods, depending upon how far down the accelerator is pushed. Corp. Greenberg was given a housekeeper (clean-up) job for thirty days, with two others of the 2d Inf. Antitank Co., and was thus kept out of the 2d and 3d Army maneuvers. He must have cried his eyes out!

Civilian motorists are punished by being forced to sit it out at M.P. headquarters. For speeding up to thirty-five they sit for an hour; up to forty-five, for two hours; up to fifty, for three hours. If they're caught doing more than fifty they just sit until the C.O. arrives in the morning. It's a long time to sit; and whatever it was they were rushing fifty miles an hour to see or do has to be seen and done later on.

WHEN Fort Custer set up its clothing and shoe-repair depot it began to keep score on the wear-and-tear factor. The average soldier gets three pairs of heavy-duty shoes ■ year, and each pair is half-soled twice before it hits the junk heap. An infantryman on maneuvers can go through a pair in two weeks. Mechanized personnel are easy on shoes, but you shouldn't see what it does to the seats of pants.

### VIRGINIA

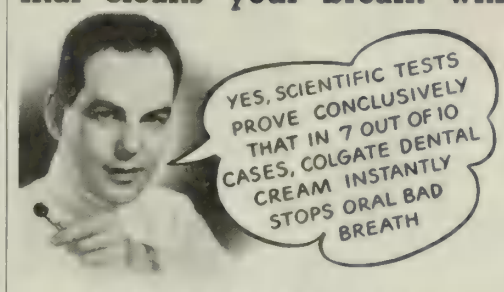
CAMP LEE. Members of the 9th Quartermaster Regiment, a colored outfit, got their girls' pictures together the other day and held ■ beauty contest. Names of the judges were kept secret "to avoid complications and pressure." No one was hurt.

SGT. HARRY SWARTZ, attached to the camp G-2, knows from experience about that fundamental rule (innocent remarks can be deadly) of Intelligence work. His lesson started the day he was assigned to fingerprint nurses at the post hospitals, continued when he made a crack about how enjoyable it was to hold the nurses' hands, snowballed when a story based on his remark appeared in his home-town paper, and ended when sympathetic officers gave him a week-end pass so he could straighten things out with you-know-who.

### GENERAL

IF THIS G-1, G-2, G-3 and G-4 business has you biting your hair and scratching your nails, remember the key word "PITS." G-1 is Personnel. G-2 is Intelligence. G-3 is Training and Plans. G-4 is Supply.

THE Army postal service, bowed down by tons of additional mail during maneuvers, doesn't attempt special-delivery service. Spend your special-delivery dimes on Defense Stamps.



THEY pay off better.

G. W.

**. . . it's time to look to your breath! For Bad Breath is a menace to married love—and even YOU may have it. So play safe! Use Colgate Dental Cream—the toothpaste that cleans your breath while it cleans your teeth!**

**HERE'S WHY:** Colgate's has an active *penetrating* foam that gets into the hidden crevices between teeth—helps clean out decaying food particles—stop stagnant saliva odors—remove the cause of much bad breath.

**BESIDES,** Colgate's has a soft, safe polishing agent that cleans enamel thoroughly, yet gently . . . makes teeth naturally bright, sparkling! No wonder people everywhere are quitting liquids, powders and other pastes for Colgate Dental Cream!

**By Horatio Winslow**

ILLUSTRATED BY GILBERT DARLING

A SHORT SHORT STORY COMPLETE ON THIS PAGE

IN THE parked car Mr. Peters' face grew poppy-red while his right hand doubled into a fist. He turned to his wife at the steering wheel and spoke with the severity of an outraged Roman father:

"I know doggoned well why you're taking me out here. Knew it last night. But Rita's made her bed; let her lie on it."

The placid, middle-aged expression on Mrs. Peters' face did not change. "What's that got to do with this, Norvin?"

"You know doggoned well. When Rita got that money from her grandma and went two thousand miles away and married a man she hardly knew, I told her she was making a fool of herself; but she wouldn't believe her own father. Now that this slicker has got her money and she's quit him, she wants to live with us and have me pay for the divorce. And your idea is it won't be so humiliating for Rita if we leave Wisconsin and buy this property and settle here in California."

"You're the head of the house, Norvin," said Mrs. Peters gently. "You know I always let you decide everything."

"And I'm deciding right now. Rita don't live with us any more or anywhere."

"That's your affair, Norvin. But I promised the young man standing there that I'd bring you to look over the property. You won't be obligating yourself and there can't be any follow-up because I told him our name was Smith."

Her husband frowned with a dark brooding that almost dimmed the California sun. "If you've made a fool of yourself by promising, I suppose I'll have to make good. Been doing it all my life. But I buy nothing and I'm through with Rita." He banged the car door behind him. "All right, young man."

The star salesman of Solid Comfort Acres was on the sunny side of thirty. His blond, permanently waved hair shone like an aureole. He had two clear blue eyes that looked squarely at the person to whom he addressed himself; indeed his whole face and demeanor radiated honesty. His duck pants and the white shirt open at the neck contrasted pleasantly with the green tent which was the field headquarters of the corporation.

"Your wife was telling me about you, Mr. Smith. It's certainly a pleasure for me to show our layout to intelligent people because for us this isn't a simple business matter: we like to talk about Solid Comfort Acres because—well, we love the place. I own an acre here myself and expect to start building next month. By the way, what do you think of our Community Clubhouse?"

MR. PETERS stared at the iron rods with fluttering green markers, pricked in the earth to outline a huge rectangle. No clubhouse was visible. Except for the green tent and a half-dozen scrubby oaks the withered fields rolled out in aching monotony. There was no view of the sea and, to the east, the mountains were cut off by a desolate hillside.

"This is the main veranda, sixty-four feet long. You'll certainly enjoy sitting here with that old breeze coming off the sea, and on the table a long, cool drink—" he looked closely at Mr. Peters' face—"you know, lemonade or iced tea or something like that. And, of course, you can always go inside where there's the big auditorium for dances and picture shows; and the music room, card rooms, dining room, library, and, down in the basement, bowling alleys. All air-conditioned."

Mr. Peters said, "Humph."

"And remember this is the sweetest soil in the United States." He scooped up a handful of grayish dust. "It isn't a case here of forcing things to grow; with this soil you have to work to keep 'em from growing. Your avocado trees—"

"I'm not interested in growing anything," announced Mr. Peters decisively. "I've never farmed and I'm not starting now. My working days are over."

The young man's face brightened like the hills under an Easter sunrise. "That's what we like to hear. Solid Comfort Acres was built for folks just like you. We don't want our people to work themselves into their graves. We want 'em to enjoy life; and that's where our Community Service Plan comes in. We plant your lawn, plant your shade trees, plant your avocado grove; and after that we take care of everything without extra cost or charge. When the trees bear, we pick the crop and it's marketed by our Co-operative Sales Agency. All you have to do is to cash the checks. Now let's look at a typical home acre."

As they walked along the burned soil he discoursed, from time to time, fixing Mr. Peters with his honest blue eyes: "Here we are on Prospect Boulevard. Cement with four auto lanes. There's the golf club right across the road, sportiest nine-hole course in the West. And back there's the bridle path. Here's the swimming pool, fifty feet long with an average depth of six. Behind, yonder, is the patio and outdoor barbecue."

Mr. Peters put in an objection: "Isn't all this a pretty expensive proposition? Somebody's got to pay and keep on paying."

The young man became as enthusiastic as a cheerleader: "I'm shaking you by the hand for saying that. It's a good practical question and I'm glad you asked it. Now let's suppose our avocado crop is blighted and a financial

***A word about the calibre of the distinguished new automobiles that Buick now brings to market for 1942***

TWO thoughts stood solemn sentinel throughout all the planning of our 1942 cars.

The first was:—*in their materials these cars must* not *trespass on the current needs of national defense.*

The second was:—*in their quality and performance they must* not *be an "ersatz" product.*

If you think this leaves only a cramped and stifling byway for engineering to advance in, remember that difficulties are sometimes the spur that real ability needs.

Our new cars, it seems to us, superbly prove this. But we neither expect nor ask you to take our word for it.

Indeed, we hope instead that you're skeptical—that you will require these sleek and powerful Buicks to demonstrate their merit under your own hands.

The real way to know what they are, and how marvelously they perform, is to breeze them down a country road or tool them through clotted traffic.

The sure way to gauge their mettle and their inmost goodness is to plump them squ rely the stiffest task your imagination can app

out," said Mr. Kingman, "any- —if you can make it."

" Mrs. Kingman began, and she

"It's no good speaking about it, my dear," Mr. Kingman said. "You know as well as I do that the—the party must break up now. A little more coffee, Bob?"

"No, thanks," Bob Bolles answered.

"Mac," Mrs. Kingman began again, "I can't sit here—"

"My dear," said Mr. Kingman, "you don't have to. You can walk outside for a while. The wind is rising, isn't it?"

Mr. Kingman looked up through the gaping roof. The wind was sighing about the walls and all the light was out of the sky by then and the stars were coming out. The darkness was closing around them, except for the circle of light from the little fire where Oscar had boiled the coffee, so that all their faces were in shadow.

"Oscar," said Mr. Kingman, "did you bring candles?"

"Ja," Oscar said, "I have light."

Oscar pulled a folding candle lantern from the picnic hamper and lighted it and set it on the stone around which they were sitting.

"Very pretty," Mr. Moto said. "The wind does not blow it. Candlelight is so very interesting."

"Do you know," Mr. Kingman said, "we've all had quite—quite a day? Oscar, have you any cards?"

"Ja," Oscar said, from the shadows near the fire, "I have brought a pack."

"How about a hand of bridge?" Mr. Kingman said. "Bob's an—an A-1 player."

"That would be very nice," Mr. Moto said. "There should be time for one hand, I think." Oscar handed Mr. Kingman the cards.

"As long as there are four of us," Mr. Kingman said, "the stone is a little rough, but it will do. Shall we cut for deal?"

Suddenly Mrs. Kingman's voice was harsh and broken. "You coward," she cried.

"Why, my dear," Mr. Kingman said, "this isn't like you!"

"Making him play bridge!" Mrs. Kingman said.

"Helen," Mr. Kingman said, "please sit down and pick up your cards. It isn't like you."

Mr. Moto picked up his cards. "I should like to say, please," Mr. Moto said, "that Mr. Bolles is very nice."

"He is," Mr. Kingman said heartily, "a—a jolly good fellow."

Bob Bolles looked across at him. Mr. Kingman was his partner. Mr. Kingman still kept one hand on his rifle.

"One diamond, please," Mr. Moto said.

WHEN the bidding came to Bob Bolles he made it a spade. Then he looked up and saw that Oscar had gone. They passed when Bob Bolles bid four spades. Mr. Kingman laid down the dummy and Bob Bolles began to play the hand. It was difficult to keep his mind on the cards, but he played them. He made four spades and one over.

"Well," he said, "that's that," and he stood up and everyone else stood up. Mr. Moto had dropped his right hand into his pocket.

"Bob," Mr. Kingman said, "your sense of cards is excellent."

"Such a nice hand," Mr. Moto said, "and to make the three of diamonds good—so very nice."

"Helen," Mr. Kingman said, "you must be tired. Perhaps a little walk in the air—"

She did not look at any of them. She brushed by Bob Bolles without looking at him and half walked, half ran out into the darkness.

"Well, Bob," Mr. Kingman said after a moment, but his eyes never left Mr. Moto. "Well, the party's over. I guess you'd better be going."

"You mean, you're going to let me out of here?" Bob Bolles asked. "Why?"

"Never mind why," Mr. Kingman answered. "You're free to go anywhere now."

"And what are you two boys going to do?" Bob Bolles asked.

"Oh, Mr. Bolles," said Mr. Moto, "we will talk. I am happy to have met you, Mr. Bolles."

"All right," Bob Bolles answered. "Well, so long." That old desire came over him, that they must not think he was afraid. "Maybe I'll be seeing you."

THE tall window that opened out on the terrace was just in front of them. It framed the blackness of the world outside, a darkness that was accentuated by the candle lantern and the flickering little fire in the space where Mr. Moto and Mr. Kingman were standing. When he stepped through that window out to the terrace, whether he moved fast or slow, his whole figure would be outlined by the light behind him, and Oscar was out there on the terrace. Mr. Kingman had said that he was free to go anywhere, but Bob Bolles did not believe it. He knew too much to be permitted to walk away. Yet he had to move, and the prospect of the black night outside was worse than anything he had imagined, because for a certain space of time he would be absolutely helpless.

As he stepped slowly toward the window, he must have been weighing all the facts and his perceptions were very

clear. If he could get out of the circumference of light he might have a chance. He might be able to dart around a corner, but Oscar would not be such a fool as to let him have that chance—he would get him while he was in the light.

Bob Bolles took another step. One more and he would be outside. His instinct was to bend double and to make a dash for it and it was all he could do to control that instinct. He did so, because his common sense told him that the only difference would be that he would be killed running instead of walking. He felt a cold spasm of unadulterated fear but if he was to be finished anyway, there was no use having them realize that he had been afraid. He did not even want to hesitate. He shrugged his shoulders and stepped from the light into the dark. His whole body was braced and waiting. His eyes were unaccustomed to the dark, so for a second everything seemed pitch-black, but nothing happened.

MECHANICALLY he took another step, and nothing happened. He could feel himself breathing in sharp, hard breaths. The sea breeze struck his face and he could hear the wind in the treetops on the slope below the clearing. He could see the outline of the stone railing of the terrace. All the shapes and shadows were illuminated by the stars—a fantastic, monotonous world of light and shade. He had stepped out of the light of the house and he was in the shadow and free from it.

His first sensation was an utter incredulity and then his knees were shaking and then he was filled with a panic-stricken desire—to get out of there, to get as far away as possible. The terrace railing was not thirty feet in front of him, dimly white in the starlight. His one desire was to get to the railing and to leap over it and go. He must have covered half the distance to it in that sort of cloudy progress which one connects with a bad dream, with all his thought focused on reaching the railing, when he saw Mrs. Kingman. She must have stepped from the shadow of the house, but he was not sure. At any rate, she was in front of him, diagonally to his left. She was waving her arm at him, gesturing to him to turn. He had half turned his head when he heard a soft thudding footfall behind him and saw Oscar, a whitish crouching shape. He even had time to see that Oscar was holding a rope in his hands, but he did not have time to turn.

He hardly had time to brace himself before Oscar had sprung at him and had landed with all his force upon his back. Yet even in that instant he understood—he was to be garroted, strangled with the rope. He would have been done for, if he had not turned his head. As it was, his body was thrown forward beneath the impact of Oscar's momentum, but he kept on his feet. He had raised his hand, he had grasped Oscar by the arm. His right hand was holding the back of Oscar's neck, and then with a spasmodic lunge he had thrown Oscar from him. Oscar was catapulting through space, and then he landed headfirst, crash, against the stone railing.

When he analyzed it afterward, he could see that some hideous coincidence had made every factor right—Oscar's momentum, his own forward lunge, the instinctive backward grasping of his arms—everything had fitted into that result, but Bob Bolles did not think of it then. All he saw was Oscar's bulk, crumpled against the railing. He heard Oscar breathing in long, snoring gasps, and then he heard Mr. Kingman's voice from the house behind him.

"There it goes," he heard Mr. Kingman say. "Oscar's very handy. Goodby, Mr. Bolles."

At least he thought that he Mr. Kingman say it, but he wholly sure, for Mrs. Kin snatched his hand. She was p after her across the terrace broad stone steps. They we and he saw that she was hol knife in her other hand.

"Hurry," she gasped, "ov trees!" And she ran beside the clearing from the house.

He seemed to feel no react reality until they were be shadow of the trees. He sto and she leaned against him, him, fighting for her breath.

"His head—" she gasped.

"Yes," Bob said, "I kn pulses in his ears and th pounding, but he could still crash of Oscar's head against and the snoring sound of Osc ing.

"I was going to help you, her say. "The knife—I did help."

He stared dully at the k hand. He could see the blac the dark.

"Thank God," she said. " love you so."

It still was like a dream, bu seem strange when he kissed she drew away from him back at the house. He co black walls against the sky a of the candle lantern, and a he heard Mr. Kingman's vo

"Oscar," he heard Mr. Ki "Oscar!"

ice calling to him:

"Come toward us, Mr. Bolles. No fear of anything any longer, please."

Then as he came nearer, he saw that Mrs. Kingman was coming down the steps, carrying the lantern, and that Mr. Moto was beside her. His Panama hat was pulled over his eyes and his left arm was in a sling, made from one of the picnic napkins, and his right hand was in his pocket.

"It's all right," Mrs. Kingman said. "You don't have to hide any longer."

She looked ill and very tired, but she was smiling at him and there was no trace of resentment in her voice. Instead there was ■ definite ring to it, as though she wanted to make something clear to him, and he understood it. She was telling him as plainly as though she had spoken that she did not want Mr. Moto to know where he had been. He saw Mr. Moto's eyes beneath the shadow of his hatbrim, fixed upon him steadily.

"You were hiding, Mr. Bolles?" Mr. Moto asked.

"What else do you think I'd have been doing?" Bob asked back. "Running around in the woods for exercise? All I wanted was to get out from under."

"Get out from under," Mr. Moto said. "So nice the way you say things, Mr. Bolles."

"Where is Kingman?" Bob Bolles asked.

THERE was a second's silence and Bob Bolles heard the wind sigh past the corners of the house and he heard Mr. Moto clear his throat.

"So sorry," Mr. Moto said. "Mr. Kingman is not with us any more."

Mr. Moto's delicacy made it sound more gruesome, and when Bob Bolles did not answer Mr. Moto continued still more delicately:

"So sorry that it was of course so necessary. He was so nice and so much quicker with his rifle than I thought. So quick, my first—ah—shot I am sorry was ■ little wild. He felt nothing after the second, I am so very, very sure. Yes, for what he was, he was very, very nice. So nice the way he laughed, did you not think so, Mrs. Kingman?"

"No," Mrs. Kingman said, and her voice sounded harsh and strained. "I hated it."

Bob Bolles started to speak and stopped. "Oscar," he began, "is Oscar—"

Mr. Moto's voice cut his own voice off, as he hesitated. It sounded serene and final, devoid of passion or regret:

"He is not with us any more."

"You mean," Bob said, and it made him feel sick, "you mean I killed him?"

"Yes," said Mr. Moto gently. "His

skull was broken, Mr. Bolles. It saved me so much trouble."

"What about Jameson?" Bob asked. "He isn't—"

Mr. Moto shook his head. "No, the Englishman is well. Still at the house. We have tried to make him comfortable. He has sent you his regards. He says it will be all right for you in Kingston. His people will find him tomorrow. This is no pleasure for any of us, please. Mrs. Kingman and I have reached an understanding and arrangement. I am so very glad. We began to understand each other down on the beach this morning."

"How did you do that?" Bob asked. "You never spoke to her." Mr. Moto's gold teeth glistened in the candlelight.

"So very simple," he said. "A gesture and a glance. This morning when I appeared the look was so plain on Mrs. Kingman's face. She hoped so very much that I would eliminate Mr. Kingman. It was more simple after that."

MRS. KINGMAN stood holding the lantern and Bob saw that she was looking at him, half defiantly, half beseechingly.

"Of course it's hard for you to understand, my dear," she said, "because you will never be like any of us. So much of this must have seemed to you aimless and you could never see behind the curtain. We can be truthful now because there is nothing left to hide. I could not get away from Mac—not from the moment he met me in New York. I could not trust him. I always thought that he would turn on me when he found out what I knew and use it for himself, and I was right, you know."

"Then, why did you work with him?" Bob asked.

"Because he was completely logical," she answered. "Even Charles Durant in New York, and he was one of our best men, went over Mac's credentials and advised that it was all right. But something must have turned up later. Charles must have suspected something. I knew that Mac was out for himself when I heard that Charles had come to Kingston. You told me—you remember."

She stopped, but her eyes were telling him that she was speaking the truth. Both she and Mr. Moto seemed anxious to explain. He could imagine them at some later time sitting together composedly and talking it all over.

"Poor Charles," she said. "All of us must go sometime, but Charles was very kind to me. He was one of our best men."

"Oh, a very nice man," Mr. Moto said helpfully. "We once exchanged shots in Saigon in the dark, but he was very nice. It was so careless of Mr. Kingman not to make it look surely like suicide. And, please, Mr. Bolles, I wish that you would like us. Mrs. Kingman has been very brave. I have so very much respect."

"Yes," Bob said, "I know she's brave."

"This evening at sunset I gave her the knife," Mr. Moto went on. "When Oscar attacked you it was the opportunity we both were looking for. She was to—ah—deal with Oscar when he was dealing with you, Mr. Bolles, and Mr. Kingman—that was my responsibility."

"Bob," Mrs. Kingman said, "I wouldn't have let him kill you."

Mr. Moto laughed in that polite, nervous way of his. There was no humor in it, but it was his way of making matters easier.

"And now it is all arranged. No more little unpleasantness. Mrs. Kingman has been sensible enough to surrender the piece of machinery to me. It still lies by the house, but will be collected in the morning. No need to stand here longer. I am going with you and Mrs. Kingman to the beach. We fire and I shall be so happ you and Mrs. Kingman t schooner will be in by da Just you and Mrs. Kingma shall not go with you."

"You're not going wit asked. "What are you goi

# ɐar Ma:
# 'This is ME –
# ɹ PULLMAN!

l, Ia . . . here I am taking my first trip in ul ıan. And every time I take one of my -f ɹt stretches I sure am glad I'm riding m ı. Riding most ways is just riding. But y 'ullman is *living!* And the service, Ma o at all I get on a Pullman . . .

**e a porter . . .** He calls me "sir" and treats me like a king. (I bet he thinks n ch older than 19.) He takes my bags and shows me my berth. He makes . E shines my shoes. He brushes my clothes. He brings extra blankets, llo s, even a drink of water at the press of a button! And, last thing at e ts what time I want to be called in the morning! (Gosh!)

**3. And the bed, Ma!** With *two* pillows, and fresh, snuggly sheets, and a nice soft, comfortable mattress, like the kind we have at home. All mine, Ma! Plenty of room to stretch and turn. Class, Ma? Listen! Two bed lamps, coat hangers, a little hammock to put my clothes in. And even a private air cooler *in my berth!* (What won't they think of next!)

**aw big league pitcher in the lounge!** We got qu ated, talked baseball to bedtime. (Gee, you nic people in a lounge car.) The lounge car, ow is just like a private club for everybody P lman ticket. It's a friendly place, with y airs, free magazines to read, and a porter o mp the minute you clap your hands!

**5. A washroom you can swing a cat in!** You might think, Ma, that a washroom in a Pullman is a hole-in-the-wall affair. But it isn't. It's big and roomy, with hot and cold running water, and a special bowl with a goose-neck faucet for cleaning my teeth. It even has an outlet for my electric razor. And Ma, you can use a million towels if you want! (It's wonderful!)

**6. And what do you think it cost?** Only $2.65 to ride *Pullman* the whole 300 miles; plus my first class railroad ticket. And this'll please *you*, Ma. It's the *safest* way to travel there is. So it's Pullman for my money. For you, too, Ma. From now on we travel in *style!*

COPR. 1941, THE PULLMAN CO.

black and deserted in the moonlight. The people must have run into the bush again when they had heard their steps and voices; and they walked past the huts without speaking and down to the beach. The water was silvery in the moonlight and by the breakers there was a fiery phosphorescent glow.

"So very nice, the moon and water," Mr. Moto said. "Now we will build a fire, please. Here are some matches, Mr. Bolles."

There was enough small wood on the beach to build a fire. In five minutes it was burning brightly and all their faces were clear in the firelight.

"If Tom's out there," Bob said, "he won't be able to get through the reef until morning."

"I have a suggestion, please," Mr. Moto said. "I should like so much to be able to close my eyes. It will be so nice if you and Mrs. Kingman will give me your word not to leave the beach. I trust you, Mr. Bolles. Please, I treat you like one of us."

"Don't say that," said Mrs. Kingman. "He isn't one of us."

MR. MOTO sat down and placed his arms across his knees and rested his head upon them. Bob Bolles wanted to ask him if his shoulder hurt, but he did not. Instead he walked with Mrs. Kingman a little distance from the fire.

"Do you think he's all right?" Bob Bolles asked her.

"Yes," Mrs. Kingman answered. "It was in the shoulder. I helped him fix it. It hurts of course, but it's all right. Why, what are you laughing at?"

"I was just thinking," Bob said.

"What were you thinking about?"

"I was just thinking," Bob told her, "what I'm going to tell the boys on the Smedley if I see them."

"Don't," she whispered, and she looked at Mr. Moto sitting near the fire. "Don't talk about it now."

Then they sat down on the sand with their faces toward the sea. They just sat there not speaking for a long while.

"You're not angry with me," she asked, "because I—" She stopped. "The knife—I had to do it," and he knew what she meant.

"No," he said, "you had to. I can see a lot of things more clearly than I ever did before. I never realized before that there are some things more important than any two people or the way they feel. I've always been pretty egotistical, I guess. It's knowing you that's changed me."

"Why!" Her whole face lighted up. Her eyes were sparkling in the moonlight. "I was so afraid you wouldn't see. Why, it's been worth while if I've done that. No matter what happens, it's something to remember."

"I thought you never liked remembering," he told her.

"Not often," she answered slowly, "but there'll be a sort of a past with you. No one can stop that. I can always think how it would be if you were there and how it would have been if I were not just what I am. Yes, I'll love to think about it always."

"I'm sorry," he said, "about what I did—spoiling everything for you. It was just the same with me—I had to."

Her hand closed over his and her grasp was strong and steady.

"Of course," she said. "It's just the same. And no matter where you are, it's something to be proud of, something to remember. If things go bad with you, you must always think—promise me you will—that you did something splendid once. Why, you beat us all, my dear, some very dangerous people. I'm sorry for myself, but not as sorry as I'm proud of you. I'm all mixed up in my mind, because I'm a woman. Women ought to be at home looking after men."

Mr. Moto shook his head at her and his voice sounded less polite. "Mrs. Kingman, please," he said, "I kept it for the last. I hope so very much you know what I mean."

"Why, no," said Mrs. Kingman. "What do you mean?"

Mr. Moto looked down at his pistol and back at her. "Excuse me, please," he said. "I think you have been so very nice and clever, Mrs. Kingman, through it all. I should be so sorry if you should leave thinking I was so stupid, please."

"But, Mr. Moto, I don't think you're stupid," Mrs. Kingman said.

"Oh," said Mr. Moto and he laughed, "so sorry I must be so impolite as to disagree when everyone has been so nice. You and Mr. Kingman both thought I didn't know."

"Why, Mr. Moto," Mrs. Kingman said, "know what?"

The gold in Mr. Moto's teeth glistened and he laughed, but not politely.

"It was so clever about the turbo supercharger, Mrs. Kingman," he said. "I know so very well it was not the turbo. Please do not bother to come back to get the rest of what is in the plane. I only want to say my friends and I shall get it, please. The Nipponese Intelligence is not as bad as that. It is Beam 21 Night Combat please, Mrs. Kingman."

"Oh—" Mrs. Kingman began, but Mr. Moto stopped her.

"So sorry to distress you," Mr. Moto said, and he took a short step toward them. "That is all, I think, please. Into the boat at once. You too, Mr. Bolles. Boy san, push it off. Goodby."

The bottom of the dinghy grated on the sand as Tom pushed off, wading beside it. Then he stepped in and picked up the oars and began to row. From the center thwart where he was sitting Bob Bolles could see Mr. Moto still standing close to the water. Mrs. Kingman sat in the stern with her back turned toward the beach. She did not speak, but her face was lighted by a faint, malicious smile and Bob could see that she was very happy.

"Goodby," Mr. Moto called. "So sorry for you, but good luck."

"Tom," Bob whispered, "put your back in it! Row like hell!"

"No," Mrs. Kingman said softly, "don't hurry. It's better he shouldn't know." Then she smiled at Bob and she seemed to have forgotten all about the island.

"Look at the color of the sea," she said.

THE END

**"Now we'll give you a brief resumé of the two touchdowns that were scored during that last commercial"**

THURSTON GENTRY

# "I'm the skeleton in the Greene family closet"

"Uh! Huh! That's what Dad called me, up until a few months ago."

"Hm! Pretty good-looking skeleton, Anne. But what's the horror story?"

"Ah! You should have known me, Bobby. I was scrawny and bony, and my nerves were . . . Ugh!"

"Were *what*, for goodness sake?"

"*Bristly as thorns* — like this! And then I was told I had a Vitamin B Complex deficiency."

"Jiminy crickets, what's that?"

"A shortage of those amazing vitamins you find in their natural form in fresh yeast. So I took two cakes of FLEISCHMANN'S a day in nice cool tomato juice, and before very long . . . "

"Before very long—the girl I see before me now! But what's this about tomato juice?"

"That's the new way to take yeast. Look! Mash a cake of FLEISCHMANN'S in a dry glass with a fork, add a little tomato juice, stir till blended, fill up the glass, and drink. Delicious!"

Read the label. FLEISCHMANN'S is the only yeast with all these vitamins. And the only sources of the important Vitamin B Complex are *natural* sources, such as yeast and raw liver. Remember, if you bake at home, that three of the vitamins in FLEISCHMANN'S, B1, D, and G, are not appreciably lost in the oven; they go right into the bread.

**Fleischmann's Fresh Yeast**
**For Natural Vitamin B Complex**

**Abbott and Costello started in burlesqu and they're still in burlesque—in the movie The corn is the same but the coin—ah, the**

PHOTOGRAPHED FOR COLLIER'S BY WALL

**Skinny Bud Abbott an Costello are the hot edy team in the mo year both in point box-office gross and pers**

IT WAS ten o'clock at night and the boys were still whooping it up on stage eight at Universal. They had been there since six in the morning and still had four scenes to shoot but the gags were flying fast. Another Abbott and Costello comedy, this one Ride 'Em, Cowboy, and it would be like all the others—funny and full of old memories.

"All right, boys, let's go!" yells Arthur Lubin, the director.

"What's this one about?" asks Abbott.

"Haven't you read the script?" demands Lubin.

"To hell with the script," squeaks Costello. "What's it about?"

"You're in a jallopy and the Indians are chasing you. You lose your hat."

They get set in the car and stagehands begin jiggling the old crate to give the illusion of a wild ride. Costello nods at one of the stagehands and speaks out of the corner of his mouth to Abbott.

"Fame. Think of going home and telling the kids . . . I jiggle the car for Costello and Abbott."

"*Abbott* and Costello," Abbott corrects him sternly.

"An error in printin'," says Costello.

"Never mind. You lose your hat. Don't forget that."

"I lose my hat," admits Costello, getting adjusted in the seat. "Why?"

"Just because you're dumb."

"Smart guys don't lose hats?"

"No."

"You're a smart guy?" says Costello.

"Yes."

"So you're expectin' me to knock your hat off?"

"Yes. Why don't you?"—threateningly.

"I'm not so dumb."

"Come on, boys; let's go," says Lubin easily.

"He wants me to knock his hat off," says Costello, nodding at Abbott.

"I do not."

"You said you was expectin' it."

"I said you were dumb."

"That's different," says Costello, relieved.

"All right, boys; we're turning," says Lubin. "Just that one line . . . 'Where's my hat?' "

They bounced up and down on the seat of the jallopy, the wind machine blows furiously, the Indians appear on another projection screen behind them and gallop madly in pursuit. Lou grasps the wheel with desperation and tries to hold his hat. He loses it. The dialogue starts. Instead of one line, the loss of the hat now becomes an epic event.

"Where's my hat? Who stole my hat? Who's got that hat? Gimme the hat!" squeaks Costello endlessly, grabbing at the wheel, grabbing for his hat.

Abbott is just as steadily howling: "What hat? Where'd you lose it? I ain't got no hat! What hat?"

Lubin looks on complacently. In the early days of association with the wacks he never learned to yell "cut!" never to worry about the script, never to worry about the dialogue, never to worry about the picture.

In the excitement Costello loses control of the wheel and Abbott grabs it. Costello grabs it right back, yelling:

"Who the hell's drivin' this crib!"

That breaks it up.

"The movies," moans Abbott, breathlessly. "Just like a blood transfusion in reverse. They draw it out of you in quarts."

Nothing in the film industry is as hot as these ex-burlesque comics. They started in burlesque and they've never left burlesque; they aren't doing a thing now that they didn't do at Minsky's for $75 a week. Pavlov, the Russian scientist, spent years experimenting with dogs to prove that a certain sensation will produce a definite reaction. He could have done it much easier with Abbott and Costello. Mention in the English language and immediately turn on eight routines covering the subject.

"Corn, gentlemen, corn," sa the straight man. "Every gag to be seven hundred years ol

"Myself," interrupts Cos little fat one, proudly. "I'm

"An artist?" demands Abb at him menacingly.

"I'm in pitchas," explains a pitcha artist."

"Like Barrymore?" pre threateningly.

"More like Boyer," amend

"You wouldn't like a nice teeth, would you?" asks Buc

"Who's astin'?"

"Me."

"I will take your offer sideration," says Lou.

Burlingame, Calif.

**YOU EVER FLOATED ON AIR?** The closest you'll come on earth to that sensation of complete and utter rest and relaxation—*luxury* comfort—is when you sink gently down into a Beautyrest.

# *So you're going to buy a mattress . . .*

### 1. Let a glass of milk guide you

You can't tell a thing about the comfort of a mattress by just looking at it. For comfort comes from the "heart" of a mattress: The coils inside. And there are two main types of mattress "insides"—the usual type and the Beautyrest.

So let's open up both kinds of mattresses. And see what this glass of milk can tell us about the difference between *common* comfort and *luxury* comfort.

### 2. Springs in an ordinary mattress are joined together

Whoops—over she goes! That's what happens to a glass of milk on any *ordinary* innerspring construction when a near-by spring is pushed down. The coils in such a mattress are all joined together. When you push one down, others around it must go down, too.

Like sinking your fist into a hammock, your body causes this kind of mattress to *sag* toward the spot where your greatest weight lies.

### 3. But Beautyrest's 837 coils act independently

Rest a glass of milk on one of Beautyrest's 837 muslin-pocketed coils—push down any or all individual coils around it—and what happens? The glass stands as erect and steady as before, because Beautyrest coils are *independent* coils.

Because of those *separate* coils, your body is evenly cradled . . . *buoyantly* supported . . . however you lie or turn. That's why only Beautyrest gives you that blissful feeling of *luxury* comfort!

### 4. A 10-year guarantee that's conservative!

If any structural defect occurs within ten full years, your Beautyrest will be rebuilt free of charge. However, it will probably outlast that staunch guarantee.

For, consider this fact: the United States Testing Company tested 17 leading makes on their Mattress Endurance Machines (Cert. Test No. 11760). The Beautyrest lasted three times longer than even the next best make tested!

### 5. Why Beautyrest keeps "fresh" and fresh looking

The Beautyrest has *working* ventilators that keep the insides fresh and clean and sanitary. Hold your hand over one as you sit on a Beautyrest. You'll feel air come breathing out—fresh air being drawn back in, as you rise.

And, thanks to a patented "sag-proof" border, the edges stay firm and even, always. Lumps and hollows won't form, either. So, you need turn your Beautyrest only 4 or 5 times a year!

*This is the Beautyrest label.*

### 6. Is a penny a night too much for luxury comfort?

When you consider that, of the 17 makes tested, none lasted even *one-third* as long as Beautyrest—you begin to realize what a *bargain* it is at $39.50 (slightly more in Canada).

Then, when you figure its cost over the years, on our conservative 10-year guarantee alone, you *know* it's a bargain! *Only a penny a night.* And, no other mattress offers you the thrill of *luxury* comfort!

Beautyrest Box Spring, for use with Beautyrest Mattress, $39.50. Or get the Ace Coil Spring, $19.75.

# "Every time I go Greyhound . . .

## I save gas and oil for National Defense* . . and dollars for myself"

"Swell of you to meet the bus, Kate. Notice we pulled in right on the dot? nd say . . . I've learned something pretty important; this trip! All this national de ıse talk got me to asking questions, and here's what I've discovered:

"Every time I go Greyhound, *I save 2 gallons of gasoline out of 3,* as compared ith driving our own auto. You see, a Greyhound bus burns about 3 times as ıch fuel, per mile, as our car—*but carries 9 times as many people* on an average. ıce I'm on the road nearly half the time, that makes a tidy tank-full of gas I'm s ing for defense. The same saving applies to oil, metals, fabrics and rubber.

"And you should have seen the men in uniform on that bus. They p ped up the whole trip—and don't let anyone fool you about army morale! ose boys were tanned and healthy—kept telling about how good their fits looked in the last maneuvers—tickled to get home for a few days be with families and friends. I guess the old top sergeant was right wh he said about Greyhound, *'It's service made to measure for men in the Ser e'."*

### "We're In The Army Now"—(Two Ways)

*Greyhound and the motor bus industry have been chosen to carry thousands of selected men between their homes and military centers. That means prompt, comfortable transportation, along scenic highways, direct from home-town to camp gates—a service quite in keeping with modern Army efficiency.*

*At the same time, Greyhound carries thousands of soldiers, sailors and marines on frequent leaves and furloughs—at fares that fit easily within a buck-private's pay.*

*Each gallon of gasoline goes 3 times as far in a Greyhound bus (per passenger carried) as it does in a private car*

no opinion of her at all. A ly unprincipled young woman." was very young."
nough to know better. I can xcuse for her—none at all."
ell in love with him, I sup-

Williams interrupted with a snort: "Fell in love with him, indeed. I should hope, M. Poirot, that whatever our feelings, we can keep them in decent control. And we can certainly control our actions. That girl had absolutely no morals of any kind. It meant nothing to her that Mr. Crale was a married man. She was absolutely shameless about it all—cool and determined. Possibly she may have been badly brought up, but that's the only excuse I can find for her."

"MR. CRALE'S death must have been a terrible shock to her," said Poirot.

"Oh, it was. And she herself was entirely to blame for it. I don't go as far as condoning murder, but all the same, M. Poirot, if ever a woman was driven to the breaking point that woman was Caroline Crale. I tell you frankly, there were moments when I would have liked to murder them both myself. Flaunting the girl in his wife's face, listening to her having to put up with the girl's insolence—and she *was* insolent, M. Poirot. Oh, no, Amyas Crale deserved what he got. No man should treat his wife as he did and not be punished for it. His death was a just retribution."

Hercule Poirot said, "You feel strongly . . ."

The small woman looked at him with those indomitable gray eyes. She said: "I feel *very strongly* about the marriage tie. Unless it is respected and upheld, a country degenerates. Mrs. Crale was a devoted and faithful wife. Her husband deliberately flouted her and introduced Elsa Greer into her home. As I say, he deserved what he got. He goaded her past endurance and I, for one, do not blame her for what she did."

Poirot said slowly: "He acted very badly—that I admit. But he was a great artist, remember."

Miss Williams gave a terrific snort. "Oh, yes, I know. That's always the excuse nowadays. An artist! An excuse for every kind of loose living, for drunkenness, for brawling, for infidelity. And what kind of an artist was Mr. Crale, when all is said and done? It may be the fashion to admire his pictures for a few years. But they won't last. Why, he couldn't even draw! His perspective was terrible! Even his anatomy was quite incorrect. I know something of what I am talking about, M. Poirot. I studied painting for a time, as a girl, in Florence, and to anyone who knows and appreciates the great masters these daubs of Mr. Crale's are really ludicrous. Just splashing a few colors about on the canvas—no construction, no careful drawing. No," she shook her head, "don't ask me to admire Mr. Crale's painting."

"Two of them are in the Tate Gallery," Poirot reminded her.

Miss Williams sniffed. "Possibly. So is one of Mr. Epstein's statues, I believe."

Poirot perceived that, according to Miss Williams, the last word had been said. He abandoned the subject of art. He said, "You were with Mrs. Crale when she found the body?"

"Yes. She and I went down from the house together after lunch. Angela had left her pull-over on the beach after bathing, or else in the boat. She was always very careless about her things. I parted from Mrs. Crale at the door of the Battery Garden, but she called me back almost at once. I believe Mr. Crale had been dead over an hour. He was sprawled on the bench near his easel."

"Was she terribly upset at the discovery?"

"What exactly do you mean by that, M. Poirot?"

"I am asking you what your impressions were at the time."

"Oh, I see. Yes, she seemed to me quite dazed. She sent me off to telephone for the doctor. After all, we couldn't be absolutely sure he was dead—it might have been a cataleptic seizure."

"Did she suggest such a possibility?"

"I don't remember."

"And you went and telephoned?"

MISS WILLIAMS' tone was dry and brusque: "I had gone half up the path when I met Mr. Meredith Blake. I entrusted my errand to him and returned to Mrs. Crale. I thought, you see, she might have collapsed—and men are no good in a matter of that kind."

"And had she collapsed?"

Miss Williams said dryly: "Mrs. Crale was quite in command of herself. She was quite different from Miss Greer, who made a hysterical and very unpleasant scene."

"What kind of a scene?"

"She tried to attack Mrs. Crale."

"You mean she realized that Mrs. Crale was responsible for Mr. Crale's death?"

Miss Williams considered for a moment or two.

"No, she could hardly be sure of that. That—er—terrible suspicion had not yet arisen. Miss Greer just screamed out: 'It's all your doing, Caroline. You killed him. It's all your fault.' She did not actually say, 'You've poisoned him,' but I think there is no doubt that she thought so."

"And Mrs. Crale?"

Miss Williams moved restlessly. "Must we be hypocritical, M. Poirot? I cannot tell you what Mrs. Crale really felt or thought at that moment. Whether it was horror at what she had done—"

"Did it seem like that?"

"N-no, n-no. I can't say it did. Stunned, yes—and, I think, frightened. Yes, I am sure, frightened. But that is natural enough."

Hercule Poirot said in a dissatisfied tone: "Yes, perhaps that is natural enough. . . . What view did she adopt officially as to her husband's death?"

"Suicide. She said, very definitely

"We'll be up for the rest of the stuff right after this half"

**Here's Warmth without weight or itch**

Duofold offers you the *comfortable* way to protect yourself against colds and serious illness caused by dangerous wintry weather. Duofold's fabric in two thin layers retains bodily heat *more efficiently* than single layer fabrics of equal weight or thickness°. Duofold's *outer* layer contains wool and other fibers for snug warmth and protection. The inner layer is all cotton. The wool *can't touch you*. You get the warmth of wool, but not the itch. *Try* Duofold this season. *Feel* the difference. Styles in two-piece garments and union suits to meet all preferences or requirements. New longs with Action-Support front.*

from the first, that it must be suicide."

"Did she say the same when she was talking to you privately, or did she put forward any other theory."

"No. She—she—took pains to impress upon me that it must be suicide."

Miss Williams sounded embarrassed.

"And what did you say to that?"

"Really, M. Poirot, does it matter *what* I said?"

"Yes, I think it does."

"I don't see why—"

But as though his expectant silence hypnotized her, she said reluctantly: "I think I said: 'Certainly, Mrs. Crale. It must have been suicide.' "

"Did you believe your own words?"

Miss Williams raised her head. "No, I did not," she said firmly. "But please understand, M. Poirot, that I was entirely on Mrs. Crale's side, if you like to put it that way. My sympathies were with her, not with the police."

"You would have liked to have seen her acquitted?"

Miss Williams said defiantly, "Yes, I would."

"Then you are in sympathy with her daughter's feelings?"

"I have every sympathy with Carla."

"Would you have any objection to writing out for me a detailed account of the tragedy?"

"You mean for her to read?"

"Yes."

Miss Williams said slowly: "No, I have no objection. She is quite determined to go into the matter, is she?"

"Yes. I dare say it would have been preferable if the truth had been kept from her—"

Miss Williams interrupted him:

"No. It is always better to face the truth. It is no use evading unhappiness by tampering with facts. Carla has had a shock, learning the truth—now she wants to know exactly how the tragedy came about. That seems to me the right attitude for a brave young woman to take. Once she knows all about it she will be able to forget it again and go on with the business of living her own life."

"Perhaps you are right," said Poirot.

"I'm quite sure I'm right."

"But, you see, there is more to it than that. She not only wants to know—she wants to prove her mother innocent."

Miss Williams said, "Poor child."

"That is what you say, is it?"

MISS WILLIAMS said: "I see now why you said that it might be better if she had never known. All the same, I think it is best as it is. To wish to find her mother innocent is a natural hope—and, hard though the actual revelation may be, I think, from what you say of her, that Carla is brave enough to learn the truth and not flinch from it."

"You are sure it *is* the truth?" Poirot asked.

"I don't understand you."

"You see no loophole for believing that Mrs. Crale was innocent?"

"I don't think that possibility has ever been seriously considered."

"And yet she herself clung to the theory of suicide?"

Miss Williams said dryly, "The poor woman had to say *something*."

"Do you know that when Mrs. Crale was dying she left a letter for her daughter in which she solemnly swears that she is innocent?"

Miss Williams stared. "That was very wrong of her," she said sharply.

"You think so?"

"Yes, I do. Oh, I dare say you are a sentimentalist like most men—"

Poirot interrupted indignantly, "I am *not* a sentimentalist."

"But there is such a thing as false sentiment. Why write that—a lie—at such a solemn moment? To spare your child pain? Yes, many women would do that. But I should not have it of Mrs. Crale. She was woman and a truthful woman. have thought it far more li have told her daughter not t

Poirot said with slight exa "You will not even consider, possibility that what Caroli wrote was the truth?"

"Certainly not!"

Miss Williams looked at P very odd way. "It doesn't n saying this now—so long after see, I happen to *know* that Crale was guilty!"

"*What?*"

"It's true. Whether I dic withholding what I knew at I cannot be sure, but I *did* w But you must take it from definitely, that I *know* Caro was guilty. . . ."

y as much as I should have was a schoolgirl at the time to Canada, and I realized, of at in a year or two she would gotten me. Of late years an l present at Christmas has only link between us. I im- at she would, by now, be completely immersed in the Canadian atmosphere and that her future would lie over there. Better so, under the circumstances."

Poirot said: "One might think so, certainly. A change of name—a change of scene. A new life. But it was not to be so easy as that." And he then told of Carla's engagement, the discovery she had made upon coming of age and her motives in coming to England.

Angela Warren listened quietly, her disfigured cheek resting on one hand. She betrayed no emotion during the recital, but as Poirot finished, she said quietly, "Good for Carla."

Hercule Poirot was startled. It was the first time that he had met with this reaction. He said, "You approve, Miss Warren?"

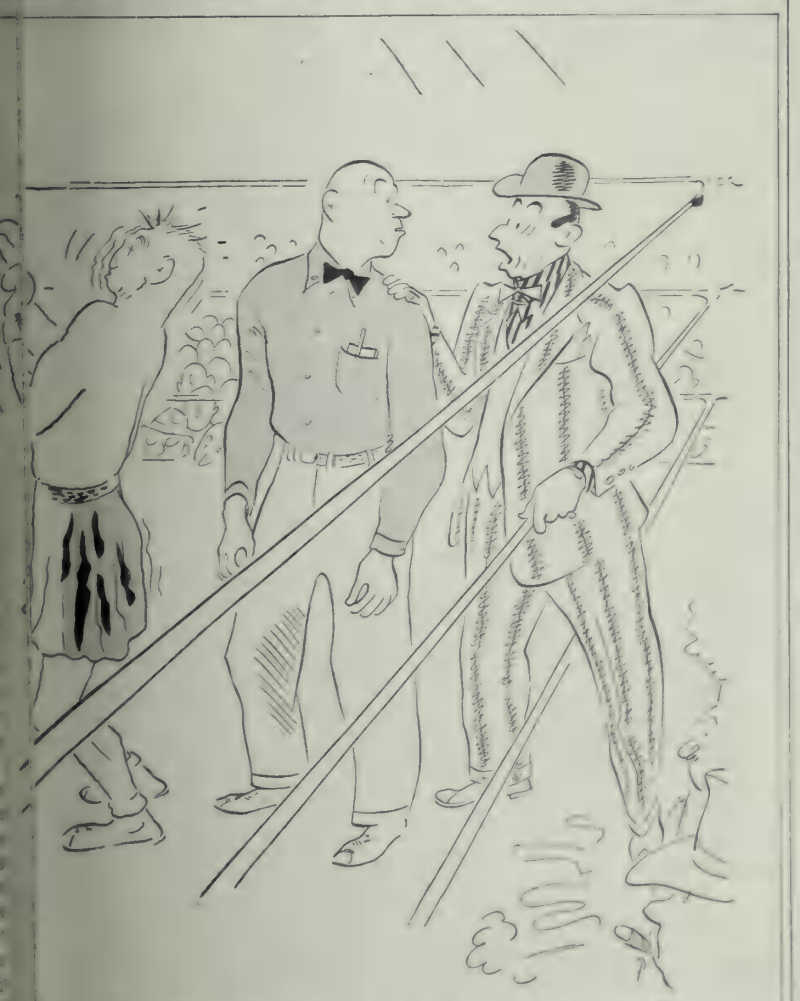
"Certainly. I wish her every success. Anything I can do to help, I will. I feel guilty, you know, that I haven't attempted anything myself."

"Then you think that there is a possibility that she is right in her views."

Angela Warren said sharply: "Of course she's right. Caroline didn't do it. I've always known that."

"You surprise me very much indeed, mademoiselle," Poirot murmured. "Everybody else I have spoken to—"

She cut in sharply:

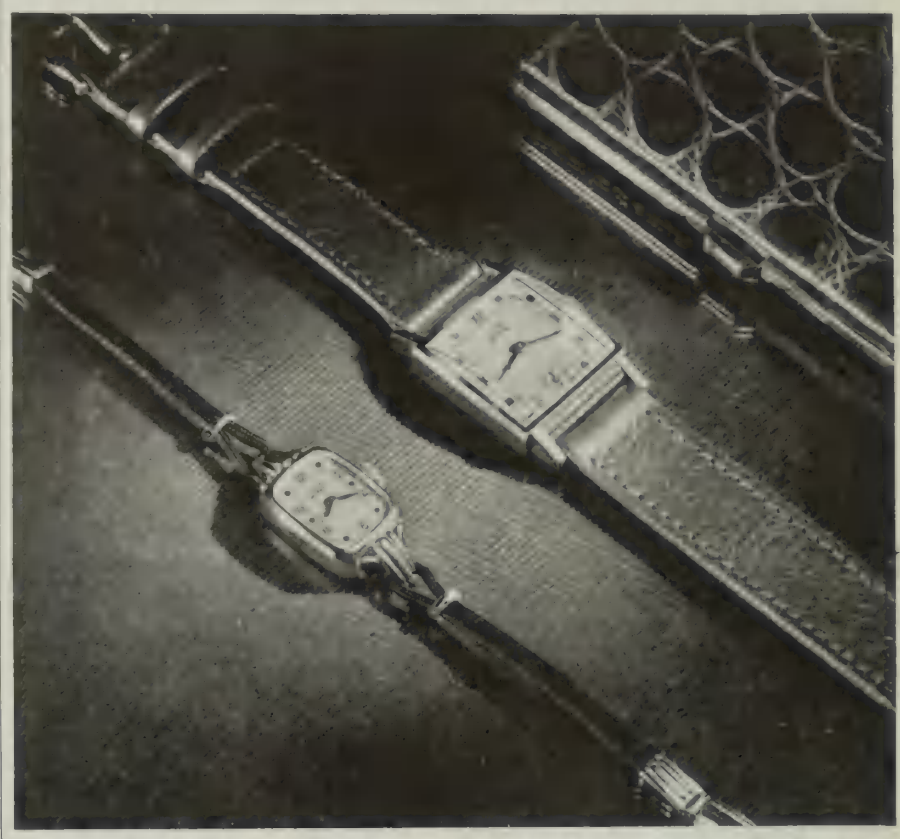


"You mustn't go by that. I've no doubt that the circumstantial evidence is overwhelming. My own conviction is based on knowledge—knowledge of my sister. I just know quite simply and definitely that Caro *couldn't* have killed anyone."

"Can one say that with certainty of any human creature?"

"Probably not in most cases. I agree that the human animal is full of curious surprises. But in Caroline's case there were special reasons—reasons which I have a better chance of appreciating than anyone else could."

She touched her damaged cheek.



"You see this? You've probably heard about it?" Poirot nodded. "Caroline did that. That's why I'm sure—I

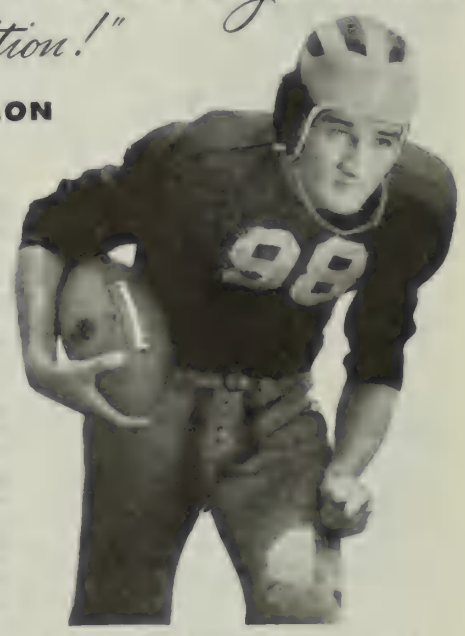
Brilliant new heirs



TO 77 YEARS OF AMERICAN TRADITION!

*Lovely petal-end model. No. 5014A. $37.50* *Rosé model. Two-tone dial. No. 5510E. $45.00*

"My new Elgin DeLuxe carries on 3 generations of family tradition!"

says TOM HARMON

DO YOU TAKE pride in possessions others openly admire? Then the new Elgin De Luxe watches were created for you!

They come in a stimulating variety of new styles. Cases are natural, rosé or white gold filled—many with brilliant mirror finish. Crystals are high-curved or plain. And a number of models offer two-tone dials.

Each Elgin De Luxe has a carefully adjusted, 17-jewel movement of star-timed accuracy. It embodies Elgin's latest advances: the Elginium hairspring* and Beryl-X balance. Both are rustproof, non-magnetic.

*Thoroughly American!* Elgin is the world's largest-selling fine watch made in America. And today Elgin's skilled craftsmen are doing their part for defense, too. In answer to the government's call, Elgin is making precision instruments for army, navy and aviation use.

Select a beautiful Elgin De Luxe at your jeweler's. $37.50 and up. Higher in Canada. Prices subject to change without notice.

TWICE ALL-AMERICAN . . . one of the all-time "greats" of the game! Michigan's fast, versatile halfback, Tom Harmon, broke the Big Ten's scoring record which had stood for 15 years. Tom majored in English, plans to be a radio announcer. His father and grandmother have also owned Elgins.

*Patent Nos. 1,974,695 and 2,072,489.

*know*—that she did not do murder."

"It would not be a convincing argument to most people."

"No, it would be the opposite. It was actually used in that way, I believe. As evidence that Caroline had a violent and ungovernable temper! Because she had injured me as a baby, learned men argued that she would be equally capable of poisoning an unfaithful husband."

Poirot said: "I, at least, appreciated the difference. A sudden fit of ungovernable rage does not lead you to abstract a poison first and then use it deliberately on the following day."

Angela Warren waved an impatient hand.

"That's not what I mean at all. I must try and make it plain to you. Supposing that you are a person of normally affectionate and kindly disposition, but that you are also liable to intense jealousy. And supposing that during the years of your life, when control is most difficult, you do, in a fit of rage, come near to committing what is, in effect, murder. Think of the awful shock, the horror, the remorse that seizes upon you.

"If you are a sensitive person like Caroline that horror and remorse will never quite leave you. It never left her. I don't suppose I was consciously aware of it at the time, but looking back I recognize it perfectly. Caro was haunted, continually haunted, by the fact that she had injured me. That knowledge never left her in peace. It colored all her actions. It explained her attitude to me. Nothing was too good for me. In her eyes, I must always come first. Half the quarrels she had with Amyas were on my account."

Miss Warren paused, then went on:

"It was very bad for me, of course. I got horribly spoiled. But that's neither here nor there. We're discussing the effect on Caroline. The result of that impulse to violence was a lifelong abhorrence of any further act of the same kind. Caro was always watching herself, always in fear that something of that kind might happen again. And she took her own ways of guarding against it. One of those ways was a great extravagance of language. She felt (and I think, psychologically quite truly) that if she were violent enough in speech she would have no temptation to violence in action. She found by experience that the method worked.

"That's why I've heard Caro say things like, 'I'd like to cut so and so in pieces and boil him slowly in oil.' And she'd say to me, or to Amyas, 'If you go on annoying me I shall murder you.' In the same way she quarreled easily and violently. She recognized, I think, the impulse to violence that there was in her nature, and she deliberately gave it an outlet that way. She and Amyas used to have the most fantastic and lurid quarrels."

HERCULE POIROT nodded. "Yes, there was evidence of that. They quarreled like cat and dog, it was said."

Angela Warren said:

"Exactly. That's what is so stupid and misleading about evidence. Of course, Caro and Amyas quarreled! Of course, they said bitter and outrageous and cruel things to each other! What nobody appreciates is that they *enjoyed* quarreling. But they did! Amyas enjoyed it too. They were that kind of couple. They both of them liked drama and emotional scenes. Most men don't. They like peace. But Amyas was an artist. He liked shouting and threatening and generally being outrageous. It was like letting off steam to him. He was the kind of man who when he loses his collar stud bellows the house down. It sounds very odd, I know, but living that way with continual rows and makings up was Amyas' and Caroline's idea of fun!"

She made an impatient gesture.

"If they'd only not hustled me away and let me give evidence, I'd have told them that." Then she shrugged her shoulders. "But I don't suppose they would have believed me. And, anyway, then it wouldn't have been as clear in my mind as it is now. It was the kind of thing I knew but hadn't thought about and certainly had never dreamed of putting into words."

She looked across at Poirot.

"You do see what I mean?"

He nodded vigorously. "I see perfectly, and I realize the absolute rightness of what you have said. There are people to whom agreement is monotony. They require the stimulant of dissension to create drama in their lives."

"Exactly."

"MAY I ask you, Miss Warren, what were your own feelings at the time?"

Angela Warren sighed.

"Mostly bewilderment and helplessness, I think. It seemed a fantastic nightmare. Caroline was arrested very soon—about three days afterward, I think. I can still remember my indignation, my dumb fury—and, of course, my childish faith that it was just a silly mistake, that it would be all right. Caro was chiefly perturbed about *me*—she wanted me kept right away from it all as far as possible. She got Miss Williams to take me away to some relations almost at once. The police had no objection. And then, when it was decided that my evidence would not be needed, arrangements were made for me to go to school abroad.

"I hated going, of course. But it was explained to me that Caro had me terribly on her mind and that the only way I could help her was by going."

She paused. Then she said: "So I went to Munich. I was there when—when the verdict was given. They never let me go to see Caro. Caro wouldn't have it. That's the only time, I think, when she failed in understanding."

"You cannot be sure of that, Miss Warren. To visit someone dearly loved in a prison might make a terrible impression on a young, sensitive girl."

"Possibly."

Angela Warren got up. She said: "After the verdict, when she had been condemned, my sister wrote me a letter. I have never shown it to anyone. I think I ought to show it t It may help you to understa of person Caroline was. If yo may take it to show to Carl

She went to the door, th back she said: "Come with is a portrait of Caroline in

For the second time, P gazing up at a portrait.

As a painting, Caroline trait was mediocre. But Po at it with interest—it was tistic value that interested

He saw a long, oval face line of jaw and a sweet, sli expression. It was a face itself, emotional, with a witl den beauty. It lacked the and vitality of her daughter' energy and joy of life Carla had doubtless inherited fron This was a less positive cre looking at the painted fa Poirot understood why an man, like Quentin Fogg ha able to forget her.

Angela Warren stood at h —a letter in her hand. She "Now that you have seen w like, read her letter."

He unfolded it carefull what Caroline Crale had teen years ago:

"My darling little Angela

"You will hear bad ne will grieve, but what I war upon you is that it is all, have never told you lies now when I say that I happy—that I feel an ess ness and a peace that I known before. It's all ri it's all right. Don't look gret and grieve for me— your life and succeed. You It's all, all right, darling, a to Amyas. it that this letter indicates innocence?"

"Of course it does!"

"It does not say so explicitly."

"Because Caro would know that I'd never dream of her being guilty!"

"Perhaps—perhaps. . . . But it might be taken another way. In the sense that she was guilty and that in expiating her crime she will find peace."

It fitted in, he thought, with the description of her in court. And he experienced in this moment the strongest doubts he had yet felt of the course to which he had committed himself. Everything so far had pointed unswervingly to Caroline Crale's guilt. Now even her own words testified against her.

On the other side was only the unshaken conviction of Angela Warren. Angela had known her well, undoubtedly, but might not her certainty be the fanatical loyalty of an adolescent girl, up in arms for a dearly loved sister?

AS THOUGH she had read his thoughts Angela said, "No, M. Poirot—I *know* Caroline wasn't guilty."

Poirot said briskly: "The *bon Dieu* knows I do not want to shake you on that point. But let us be practical. You say your sister was not guilty. Very well, then, *what really happened?*"

Angela nodded thoughtfully. "That is difficult, I agree," she said. "I suppose that, as Caroline said, Amyas committed suicide."

"Is that likely from what you know of his character?"

"Very unlikely."

"But you do not say, as in the first case, that you *know* it is impossible?"

"No, because, as I said just now, most people *do* do impossible things—that is, to say things that seem out of character. But I presume, if you know them intimately, it wouldn't be out of character."

"You knew your brother-in-law well?"

"Yes, but not like I knew Caro. It seems to me quite fantastic that Amyas should have killed himself, but I suppose he *could* have done so. In fact, he *must* have done so."

"You cannot see any other explanation?"

Angela accepted the suggestion calmly, but not without a certain stirring of interest.

"Oh, I see what you mean. . . . I've never really considered that You mean one of the other p him? That it was a delib blooded murder? . . ."

"It might have been, migh

"Yes, it might have been. certainly seems very unlikel

"More unlikely than suici

"That's difficult to say. . face of it, there was no reas pecting anybody else. Ther when I look back. . . ."

"All the same, let us c possibility. Who of those concerned would you say wa say the most likely person

"Let me think. Well, I him. And the Elsa creatu didn't. She was mad with ra died. Who else was there Blake? He was always ve to Caroline, quite a tame ca house. I suppose that *migh* a motive in a way. In a boo have wanted to get Amyas way so that he himself c Caroline. But he could ha that just as well by letting off with Elsa and then ir consoling Caroline. Beside can't *see* Meredith as a mu mild and too cautious. Wh there?"

"Miss Williams? Phili Poirot suggested.

Angela's grave face rela smile. "Miss Williams? really make oneself believe governess could commit Miss Williams was always ing and so full of rectitude."

She paused a minute and on: "She was devoted to course. Would have done a her. And she hated Amyas. great feminist and disliked m enough for murder? Surely

"It would hardly seem Poirot.

Angela went on: "Philip I was silent for some few mon she said quietly, "I think, y we're just talking of *likel* the most likely person."

Poirot said, "You intere much, Miss Warren. May you say that?"

"Nothing at all definite.

*"And I knew then the meaning of the expression I had once seen on Caroline's face when at Alderbury she came out of Philip Blake's room one night."*

She leaned forward, stopping Poirot's words.

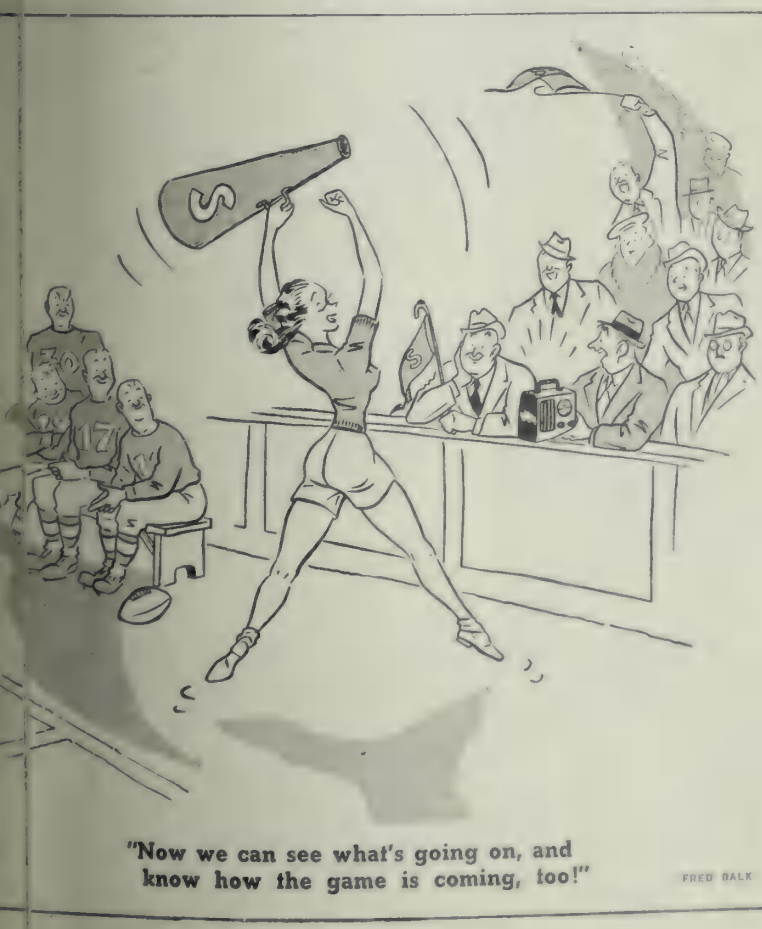
"I had no idea at the *time*, you understand. I *knew* things—girls of the age I was usually do—but I didn't connect them with reality. Caroline coming out of Philip Blake's bedroom was just Caroline coming out of Philip Blake's bedroom to me. It might have been Miss Williams' room or my room. But what I *did* notice was the expression on her face—a queer expression that I didn't know and couldn't understand. I didn't understand it until, as I have told you, the night in Paris when I saw that same expression on another woman's face."

Poirot said slowly: "But what you tell me, Miss Warren, is sufficiently astonishing. From Philip Blake himself I got the impression that he disliked your sister and always had."

"I know," Angela said. "I can't explain it, but there it is."

POIROT nodded slowly. Already, in his interview with Philip Blake, he had felt vaguely that something did not ring true. That overdone animosity against Caroline; it had not, somehow, been natural.

And words and phrases from his conversation with Meredith Blake came back to him: "Very upset when Amyas married—did not go near them for over a year. . . ."



Had Philip, then, always been in love with Caroline? And had his love, when she chose Amyas, turned to bitterness and hate?

Yes, Philip had been too vehement, too biased. Poirot visualized him thoughtfully—the cheerful, prosperous man with his golf and his comfortable house. What had Philip Blake really felt sixteen years ago?

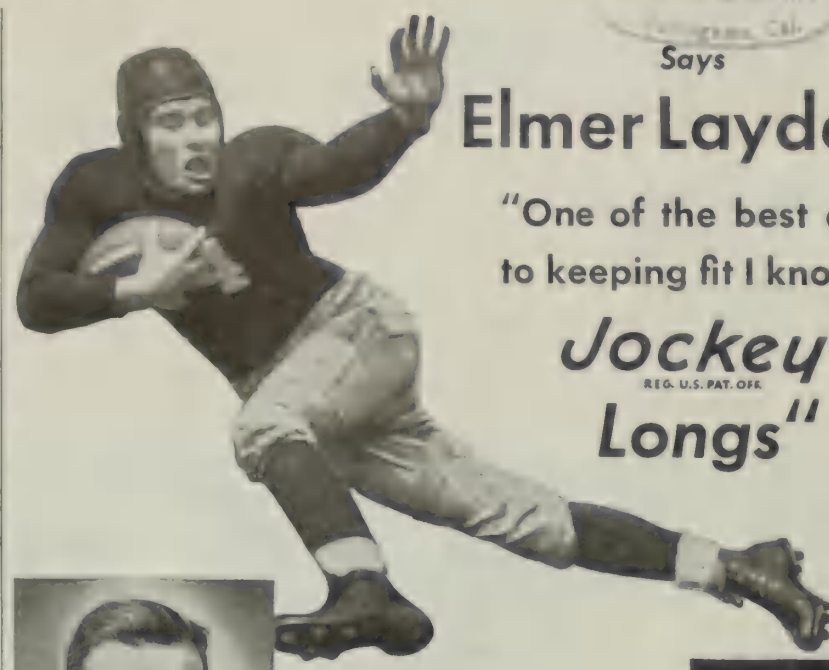
Angela Warren was speaking:

"I don't understand it. You see, I've no experience in love affairs—they haven't come my way. I've told you this for what it's worth in case—in case it might have a bearing on what happened."

*(To be continued next week)*

**"Now we can see what's going on, and know how the game is coming, too!"**

FRED BALK



Says

# Elmer Layden

"One of the best aids to keeping fit I know—

Jockey® Longs"

REG. U.S. PAT. OFF.

Elmer Layden

Recently we asked Elmer Layden, who has probably conditioned more All-Americans than any other coach of the decade, what he considered the key to physical fitness. He said, "Among the commonest mistakes the average fellow makes is to think he's tough because he wears the same length underwear the year 'round. Nine times out of ten he's either weakening himself by putting a strain on his leg muscles when they're cold or else letting himself turn mushy from inactivity and lack of proper exercise!"

Two piece Jockey Longs

## "Lengthen your shorts and you'll lengthen your years—of activity"

Bellin

"Up there at Coopers, you've got one of the best aids to keeping fit I know in Jockey Longs. They really give a man the protection he needs against leg chill without hampering his freedom of movement . . . or making him look like a sketch from an 1890 mail order catalogue. If even more men would wear them when the weather turns chilly, then maybe fewer would limit their normal exercise to a point where they would break out in cold sweats every time they ran 50 feet for a bus."

Midway

Photographed above are the streamlined Jockey Longs Mr. Layden favors. You'll like them, too. They offer the same comfort features as Jockey Shorts. Buttonless two-piece design . . . a fabric knitted so your skin can breathe . . . and tailored to eliminate bunch, bind and creep. The famous inverted *Y-front provides squirm-free, masculine support and an angled no-gap opening. Matching shirts are contoured—shorter in front to avoid bunching, longer in back to keep them in place. Sizes down to four years for children. Buy them where you see the Jockey statue displayed and for your own protection, make sure the name Jockey is on the label.

Over-Knee

**"Quality Corner"**

Better stores offer Jockey in Rayon, mercerized cotton, linen and cotton, wool and cotton mixtures and the new elastic super-textile, Coopreme.

# The Witness Wouldn't Look

## By William MacHarg

**The Homicide Bureau took a good look at this mystery and came up with an easy solution. Elementary. Hand the case to O'Malley**

ILLUSTRATED BY HARRY L. TIMMINS

A GIRL got killed at ■ dinner party," O'Malley said. "Miss Daker her name was. It happened in an apartment building, in her sister's apartment. Six people was there for dinner, and a guy and his wife come in afterward. They was all starting to go home and this one kid got shot. She was twenty years old."

"What more?" I inquired.

"No more. The sister and her husband are named Mr. and Mrs. Suder. A bachelor guy named Mr. Davin was there and a Mr. and Mrs. Alvers. That was the dinner party. The people that come in later are named Mr. and Mrs. Victery."

"At least," I said, "there were plenty of witnesses."

"That's it," he declared. "The whole place was full of people and we can't find nobody that seen the girl knocked off. It had to be done by one of them people, but we can't find out who."

"What's being done in the case?"

"Cops are going to get all them p the apartment and make 'em do over ag claim to have been doing and see if w thing. I got told to go out there."

We went to the apartment. The pol there. Mr. and Mrs. Suder were ther nice-looking people and they had a sm The child was named Doris. She wasn't place had five rooms and was a "railroa all the rooms opening off a long hall. T was a living room and in the rear wa and, next it, the dining room. Betwe bedrooms and, between the bedrooms girl had been shot in the front bedroo Doris' nursery. O'Malley played with

"How was this?" he asked Suder.

"I wish we knew. We'd had dinner and Mrs. Victery came in. We all wer ing room and danced to the radio a drinks. Then they decided it was tim Alvers and I were in the kitchen mixin suggested that we have one more dr parted. Anne—"

"That's the dead kid," O'Malley re

"Anne had left her things in the she'd gone in there to get them and the light. Then we heard the shot. Al out into the hall and everybody else w of us. We looked into the nursery a dead on the floor and Doris was sitt crib and the gun was on the floor."

"Your gun," O'Malley stated.

"Yes. I have ■ permit for it, bec lot of money for my company sometin not carrying it, I keep it in the bureau bedroom. It was there that night."

"Yeah? What ones of them people the gun there?"

"Everybody at the dinner table mu it. My wife doesn't like me to carry a it out of my overcoat and put it in t she spoke about it during dinner."

"NO FINGERPRINTS on that gun, marked to me.

He kept on playing with the little gi to enjoy it.

"You don't know no reason why s want to kill your sister?" he asked M

"I don't."

"No trouble during the evening?"

"No."

"Where was you when it happene

"Mrs. Alvers and I were in the bed putting on her things and we heard the ran out into the hall. Mr. and Mrs coming out of the living room and M out of the bathroom. The colored ma in to serve dinner, was straightening room. She came out into the hall to any more than that, because I ran i up Doris and carried her into the bed badly frightened."

When we started to look through the little girl hung onto O'Malley's t picked her up and carried her.

"They scare you, honey, doing here?" he remarked to her.

There was a picture of the dead g room. She had been very pretty.

"Not much doubt about this case stated. "We don't know the motive how it was done. One of these peop woman who had reason for killing th at the dinner table where the gun w went secretly and got it and conceal her, clothing and waited to get the gi

"You're good."

"The point of the case is to pick o To begin with, we can eliminate the weren't at the dinner but came in af cannot have known the gun was in think we can assume that Mrs. Suder sister or Suder his sister-in-law; that and Mrs. Alvers, because when the sh Alvers was with Suder and Mrs. Al Suder. That leaves us Davin, who w body. Mrs. Suder says, when she ca bedroom Davin was coming out of door. The bathroom door *(Continue*

# Satan's Blacksmith Shop

**Continued from page 19**

"Dat's what all de mens thinks," Uncle Henry laughed, "but hit's a heap er ladies on de place'll tell you diff'unt."

He walked on, well pleased with his smart repartee, while B'r Charlie watched the prospect of rabbit stew fade from view.

"Dat ole devil," he grumbled. "He could 'a' gi'ed his pastor dat rabbit. But naw. He got to make a fuss about a lady. And him a ole broke-down deacon in my church! Ain't got nothin' to do but hunt rabbits and gi' 'em to his womens. Idle tongues sho is de devil's blacksmith shop."

As the afternoon wore on, twice B'r Charlie was forced to get up and shift his chair from sun to shade. He thought some about preaching a sermon on idleness, in which he would have a chance to cite Uncle Henry as an example.

FURTHER consideration of the subject revealed two flaws. He would have to denounce idleness, and that would be so unpopular his collection would fall off to practically nothing. And undoubtedly the word would get back to Giles. The foreman was just contrary enough to agree with B'r Charlie for once, and then launch that long-cherished plan to make folks chop their winter's wood while waiting for the cotton to open. The mere thought of chopping firewood when it was almost too hot to breathe filled B'r Charlie's soul with acute pain.

"Maybe efn I jest sets," he concluded, "somebody might come along and invite dey pastor out to supper. I bet might' nigh all de sisters is down at de bayou, fishing, right dis minute."

Toward sunset, when the evening breeze fanned his face and no invita had been forthcoming, B'r Charlie up and stretched. The heat devils stopped dancing on the path; and yc men and women strolled by separa and in couples. They went leisurely definitely toward the bayou banks. plantation truck came in from Shr port and the men at the commissary loaded it.

The sun suddenly went down ar was dark—black dark.

"I could," B'r Charlie told hin judiciously, "heat me up a bait er black-eye peas and whup me up a er cawn-bread."

Instead, he went to the porch an until moonup.

By the time the moon was tre high, B'r Charlie's empty stomach gan to plague him.

"Dat ole devil Henry!" he gro "He could 'a' give me dat rabbit." in a minute he was convinced that his discomfort was due to the lotma

"I'll fix dat ole scound'el," B'r Ch vowed. "Hyppercrittin' up and do bayou wid womens, givin' em ra and all, when his pastor is hongry!

Although the desire to "fix" the man had long smoldered in B'r Cha bosom, he had never found a wa accomplish his purpose. Now, wi even thinking about it, a plan pres itself.

"I'll hoodoo him!" B'r Charli clared. "I'll break him out in bile like ole Job in de Bible. And de chunk ashes in his face!"

Hoodooing was not one of Charlie's personal accomplishment he knew somebody who could do i ner though she was. Without a

house, hunh? Den why you come to my house, you one-laig fool?"

Uncle Henry slapped his leg and roared with laughter. "I bet de answer to dat one ain't in yo' Bible, Charlie," he said. "But maybe de Widow Duck got de answer."

B'r Charlie was more than embarrassed. He was confused. "What Mis' Duck got to do wid hit?" he demanded.

"Nothin'," Uncle Henry said blandly. "Only I'm fixin' to ax her. I'm fixin' to say, 'Mis' Duck, what you reckon our pastor was doin' down at de hoodoo lady's house last night?' "

"You ain't got de cheeks," B'r Charlie said. He knew the lotman not only "had de cheeks" but that he would delight in spreading the scandal.

"I kin dry up yo' yuther laig," Modom Aw-bear was mumbling. "I kin make de hands dry up and drap off. I kin make de tongue swivel up and go 'way—"

B'r Charlie suddenly realized the hoodoo woman's curses were directed toward himself. He leaped back and held his crutch threateningly.

"I'll bat off yo' haid," he told her. "Don't make no ju-ju tawk on me!"

The old crone glared at him and continued to mumble: "De strenk, she quit yo' body, and you dry up like de leaf."

B'r Charlie grew faint. Spots came before his eyes and an uneasy feeling in his stomach made him want to sit down. He sat and looked helplessly around.

Uncle Henry was amused. "Mis' Modom sho put dat thaing on you dat time, Charlie," he said happily. "Dat was a fo'-bit ju-ju efn I ever seed one. And you's gittin' hit for nothin'!"

Now really frightened, B'r Charlie swallowed hard and made clacking noises. Old Satan himself had B'r Charlie by the soul and B'r Charlie knew it

Uncle Henry cackled, "You reckon, Mis' Modom, us had ought to charge B'r Charlie for dat ju-ju?"

The hoodoo woman, still holding the evil eye on the preacher, managed a twinkle for the lotman. "Sho," she said. "Make heem pay de fo' bits."

Uncle Henry extended a hand to B'r Charlie. "Mis' Modom is chargin' fo' bits fo' de ju-ju and I's handlin' de collection plate. Gimme."

B'R CHARLIE trembled. He tried to look toward the open door. In his mind, he knew there was not a thing the matter with him. He was a perfectly healthy man. All he would have to do to escape the taunts of Uncle Henry and the wicked eye of the hoodoo woman would be to rise, place his crutch under his arm and walk out. In his mind he knew it was a fact.

When he tried it, all he could do was sit and tremble. His leg seemed made of rubber and his hands too weak to grasp the crutch shank. He sat and made funny sounds in his dry throat.

"In de pocket, take fo' bits wid de hand," Modom Aw-bear ordered.

Like a sleepwalker, B'r Charlie's hand reached into his pocket and drew out the coin.

Uncle Henry, beaming approvingly, took the money. "I swear, B'r Charlie," he laughed, "for a dark-skin man, you look mo' like ashes den any ash-hopper I seed lately. Mis' Modom sho got you hoodooed outn de books!" He turned to the witch woman. "You reckon us hadn't ought to charge him 'bout six bits for dat job? Fo' bits don't seem hardly enough to me."

"Naw—naw—naw!" the preacher found tongue to protest. "I didn't bring but fo' bits. Please, Modom Aw-bear—"

"Fo' bits," the hoodoo woman said. "For fo' bits I put heem on. For fo' bits I take heem off."

"I ain't got no mo' fo' bitses," B'r

AERONCA'S

MINUTE-MEN OF THE AIR

Low Cost Wings FOR EVERY AMERICAN

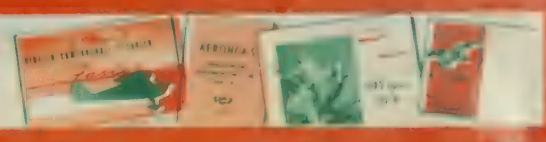
AERONCA GIVES WINGS TO THE WORLD

LET'S GO! U.S.A. KEEP 'EM FLYING!

Here they come, a-winging! . . . Aeronca's flashing new Minute-Men of the air—from the same Aeronca engineering laboratories that gave America its first low cost light plane, and helped lay the groundwork for American supremacy in the air.

FOR AMERICAN DEFENSE

*The Aeronca "Defender" Trainer* . . . Used extensively by scores of Civilian Pilot Training Program operators all over the United States, and many South American Governments.



*The New Aeronca YO-58* . . . Now being service tested by the United States Army Air Corps.

*The Aeronca Super Chief* . . . Used in advanced cross-country training by Civilian Pilot Training Program operators.

*The Aeronca "Defender" Trainer and Super Chief* . . . Are also available to private fliers.

Discover for yourself how safe, how easy, how economical, and how much fun it is to fly an Aeronca. See your nearest Aeronca dealer today. He will be glad to give you a free demonstration flight and outline his *FREE* flight instruction plan. Aeronca Aircraft Corporation, 5-10 Municipal Airport, Middletown, Ohio.

# FANS . . . BE BRIGHT, TOO!

**PAULETTE GODDARD,** co-starred in Paramount's **"HOLD BACK THE DAWN"** says: **"Fans expect a movie star to have teeth that are always beautifully bright — and fans are right!" Calox Tooth Powder is praised by many of Hollywood's most meticulous stars.**

**IT'S EXQUISITE GROOMING** that keeps beauty alive and sparkling. Teeth need daily brushings with a high-polish dentifrice for that radiant, movie-star look. A tip to fans—try Calox!

**BE AS EFFICIENT** as Hollywood is, when you plan your glamour regime. Demand an efficient dentifrice. Calox contains — not one or two — but *five* cleansing and polishing agents!

## Helps your teeth shine like the stars'

*BY BRINGING OUT NATURAL LUSTRE*

**1. CALOX CONTAINS 5 CLEANSING AND POLISHING AGENTS.** That's why Calox is a real *beauty* tooth powder . . . it promotes a brilliant gloss!

**2. EXTRA SOFT AND SMOOTH** because it's double-sifted through 100 mesh silk screens.

**3. FRESH-TASTING**—no strong medical taste. Your whole family will like its clean, tangy flavor. Children love Calox.

McKesson & Robbins, Inc., Bridgeport, Conn.

Charlie howled. "I done tole you so—"

He was amazed to discover he was waving his hands and moving about and words were coming out of his mouth. His confidence returned.

"Gimme back my fo' bits, befo' I drags dis crutch acrost yo' haid, fool!" he shouted to Uncle Henry. "What I'm got to give anybody my fo' bitses for?" He moved menacingly toward the lotman.

"Mind out, now," Uncle Henry warned him. "De Modom'll hit you wid dat thaing agin. She jest laid hit on you, dat time. Next time, she'll chunk hit at you."

B'r Charlie was no longer afraid, but still he decided to play safe. He stopped threatening Uncle Henry and changed his tactics.

"Ain't no use in us fightin' and quar'lin' and goin' on," he offered. "Us ain't chilluns. De Lawd love us all." He glanced doubtfully at Modom Aw-bear and then nodded. "De Lawd love you, too, Sister," he told her. "Dat is, I reckon de Lawd'd love you efn you repent, believe and be baptized, and stop all 'er dat ju-ju."

Modom Aw-bear stepped close to B'r Charlie, glared into his eyes and once more sucked her teeth at him. "I dry up de tongue, I dry up de hand and de laig—"

B'r Charlie shuddered, and appealed to Uncle Henry. "Make her stop wid dat tawk," he begged. "Hit bothers me. Hyar I'm tryin' to pour de sperrit on a sinner and she come up wid dat kind er tawk."

"Modom is gittin' 'long mo' better wid her sperrit-pourin' den you is, Charlie," Uncle Henry pointed out.

"But hit's evil sperrits," the preacher argued. "I can't git in a lick nowhars."

"She jest got mo' stuff on hit den you got," the lotman said reasonably. "Maybe dat's on account er she so good at bein' evil, and you is kind er bad at bein' good."

B'R CHARLIE could not follow Uncle Henry's logic and his patience was short with anything that he could not understand.

"Aw, she ain't evil," he snorted. "She jest crazy."

Uncle Henry shrugged. "Well, all right," he agreed. "She crazy, you's skeered half to death, and I'm got yo' fo' bits."

At that moment, the cabin shook and shivered.

"Who got fo' bits?"

The Widow Duck pushed her huge bulk into the room. She was barefooted and bareheaded and carried an arm basket.

Modom Aw-bear retired to the shadows and sucked through her tee

...the business end of your spark plugs at ...amples on the "PLUG-CHEK" Indica- ...give Auto-Lite Service Men the "inside" ... your engine. Get a "PLUG-CHEK" today.

...ceaseless tests and experiments, which were ...ch on Spark Plugs under actual operat- ...itions, Auto-Lite engineers developed ...GCHEK"—a new service for motorists.

# How Auto-Lite "Plug-Chek" Helps Discover Engine Ills..!

HERE is an opportunity for every motorist to check engine performance, and save money. A new service called "Plug-Chek," developed by Auto-Lite engineers and offered exclusively by Auto-Lite Spark Plug Dealers, gives vital facts on engine performance—checks spark plug performance quickly. Here's how.

Your service man simply matches the business end of your spark plugs with the examples shown on the "Plug-Chek" Indicator, checks this reading in his Data Book. It's an easier, surer way to spot plugs not up to par, or that have burned or fouled because of some engine irregularity.

### *Thousands Replace With Wrong Type Spark Plugs*

A "Plug-Chek" shows your Auto-Lite Service Man the exact type of spark plug to use for best results. And when worn plugs indicate replacement, be sure to get new Auto-Lites—the spark plug ignition engineered by ignition engineers. You'll be amazed at the difference in engine performance.

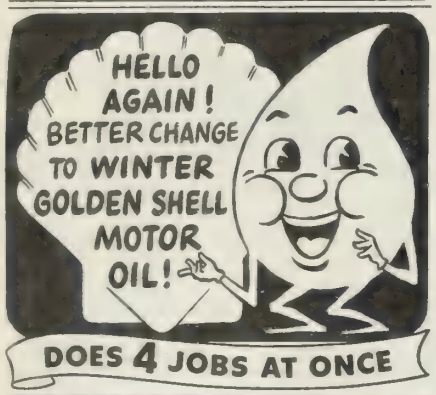
# HOW TO FIGHT HEADACHES

*3 ways at same time!*

**Break Headache's Vicious Circle this proved, sensible way**

• A splitting headache disturbs your nervous system; with jumpy nerves often goes an upset stomach—all tending to aggravate the pain in your head. *That's headache's "vicious circle!"*



And that's why a mere single-acting pain-reliever may prove so unsatisfactory. It may relieve only the pain in your head and still leave you feeling dull, sickish.

Millions break headache's "vicious circle" with a product that acts *3 ways at the same time*—Bromo-Seltzer. Because Bromo-Seltzer not only helps STOP THE PAIN, but also CALM THE NERVES and SETTLE THE STOMACH.

Next time you get a headache, fight it 3 ways at the same time. Take 60 seconds out for a Bromo-Seltzer.* See if it doesn't leave you feeling refreshed; more alert both mentally and physically. Get Bromo-Seltzer today!

**Just use as directed on the label. For persistent or recurring headaches, see your doctor.*

**BROMO-SELTZER**

*For more letters from your dear ones . . . give*

**INKOGRAPH**

**PENCIL POINTED FOUNTAIN PEN**

No sooner thought than written with this amazing pen that glides with the smoothness of a soft lead pencil.

Inkograph does everything that regular fountain pens do—and much more. The secret is in the smooth, ball-like 14-kt. solid gold point.

Inkograph has the workmanship and good looks of a high-priced fountain pen, but is priced at only . . . $1.00

*Try it at your dealers! Fully guaranteed*
*De Luxe Models $1.50 & $2.00*

"Mark! Wake up! Did you forget to tip the boy?" GENE STANLEY

and de Lawd think she is, so hit comes out about de same. 'What be's in yo' mind, be hit tharfo' likewise in my kingdom.' So say de sperrit. God will change conditions."

"Amen," said Uncle Henry.

"'And ye shall abide tharin ontwell seven times seven—'" B'r Charlie added.

"Shet up, Charlie," the Widow Duck said, breaking in on what the preacher hoped would prove overwhelming Scripture. "And so, jest to make hit double, I got all er de fried fish I couldn't eat for my supper and brang hit along for Cissie."

B'r Charlie's stomach leaped hopefully. "Is hit fried fish in dat basket?" he pleaded. "I knowed I smelled fish." He reached.

The Widow Duck drew back and cuffed the preacher away. "Mind out," she told him. "I ain't feedin' me no preachers dis day. I'm out to do sin and feedin' preachers ain't no sin. I'm fixin' to feed a hoodoo woman. And you, too, Uncle Henry, efn you ain't too holy."

Uncle Henry grinned. "I'm sort er full er rabbit stew," he apologized, "but I ain't never been so full er nothin' dat I couldn't whup off a little fried fish. And you, Mis' Modom?"

"Feesh, he good after rabbit stew," the witch woman said. "You like some rabbit stew, Duckie?"

"Sho, I like some rabbit stew," the Widow Duck accepted. "I ain't had me a bait er rabbit stew in a month er Sundays."

"Hit's been rabbit stew hyar all dis time?" B'r Charlie demanded. "And me so hongry I'm droolin' at de mouf?"

The Widow Duck glared. "Did anybody ax you to come down hyar?"

"No'm," B'r Charlie admitted.

"Well, you git out and start figgerin' up some ole rusty lie to tell me how come you's down hyar. Givin' fo' bits er de church money to de hoodoo lady! Now, you git."

B'r Charlie walked back to his house, feeling very hungry, tired and dejected. The Widow Duck had caught him at the hoodoo woman's house and more, she had learned in some way that he had spent four bits of the church's money. Uncle Henry, the least respectful head deacon a preacher could have, had taunted him cruelly before a sinner woman. And Modom Aw-bear had caught him off guard and scared him nearly to death.

It was a completely bad world and everybody in it was against him.

He found Giles on the porch, impatiently waiting.

"Efn you'd stay home at nights 'stid er rampin' 'bout wid de womens," the foreman said crossly, "I wouldn't have to set up all night long to tell you de news."

"But Mist' Giles," B'r Charlie protested weakly, "I ain't been rampin' 'bout—"

"I don't keer whar you ain't been or whar you is been," Giles snapped. "I'm fixin' to tell you whar you fixin' to be in de mawnin' at sunup."

"Yassuh."

"De Bossman," the foreman informed B'r Charlie, "is fixin' to pull all de cotton to de gin next fall, wid de tractors, 'stid er wid de mules. And dat means hit's got to be rubber-tire wheels on all de wagons. And dat'll take new axles and a heap er yuther fixin'. Onderstand?"

B'r Charlie grunted.

"De fust load come out tonight 'bout sundown," Giles went on, "and you gonter be at de shop at sunup in de mawnin'. Efn I and you hustles f'm now ontwell pickin' starts, us kin jest about git all er dem wagons fixed."

"Yassuh."

"Den lemme see you at sunup. And be in high gears!"

WHEN Giles had left, B'r Charlie went inside, lighted a lamp and built up a fire in his cookstove. He set the black-eyed peas on to heat, while he mixed cornmeal, water and salt to make a pone.

As he ate his lonely, meager supper, B'r Charlie pondered the evils of idleness. His pleasant afternoon of "jest setting" had turned to gall and wormwood.

"Yassuh," he nodded to himself; "a idle tongue is de devil's blacksmith shop."

Then he remembered the bad news Giles had brought.

"And efn I wa'n't so busy fixin' dem wagons up," he said virtuously, "I'd git down in de woods and cut my next winter firewood, whilst I wa'n't doin' nothin' else. I'm gonter preach about dat, next Sunday, and den I'm gonter speak to Giles about hit."

He reviewed the decision in his mind and nodded his head sagely.

"Yassuh," he repeated. "I'm gonter speak to Giles about hit. Hit's a sin and a shame de way people lay around hyar doin' nothin'. Even ole man Henry, ole enough to die, gits about de ladies wid a rabbit in his hand. I'm gonter name dat ole devil out in my sermon, come Sunday, sho!"

erce," explains Costello. "I the verce. Used to be a boy

no, you mean," prompts Ab-

ne," persists Costello. "Hadda to get me in the first grade." Francis Cristillo eventually from P. S. 11, Paterson, New The Costello came later when love with the screen version of Costello. What burned him up terson was that he could never e amateur shows. His brother a dance orchestra and put up h when Lou and his pal, Joe started hitchhiking to the ast. It took them weeks and ght for a time they'd have to settle permanently in Oskaloosa, Iowa.

"Pat swears he sent the dough but it never came," says Lou. "Probably a Republican administration."

If you have time and Lou can get away from the studio, he'll take you around Los Angeles now and show you where he lived in those sad days. He'll point at a dump on a side street and say:

"That's where the coroner came to hold the inquest. I was dead. Starvation."

Nobody wanted him as an actor and he finally became a stunt man. That was strictly from desperation. He heard that King Vidor needed a derring-do to jump off a thirty-foot roof, and rushed over for the job. Mr. Vidor was apologetic: it was a big hop, they'd have to put sand instead of gravel on the roadway for landing and there was doubt that Lou could manage the descent with the proper grace.

"How do you mean?" cried Lou, racing up to the roof and leaping off, landing on the back of his neck. "Like this?"

Mr. Vidor thought that was about it and Lou was a stunt man for several years, being halted finally by a football picture in which he was to be crushed by the entire U.C.L.A. eleven. He was. He started back east, got stranded in St. Joe, Missouri, and was only saved by the news that a burlesque company currently playing there needed a German-dialect comedian. He became a German-dialect comedian.

It was when Lou was traveling with this outfit that he met Bud, who was cashier of a burleycue house in Brooklyn. All visiting showmen were crazy about Bud because he is a maniac at

games of chance and has never won a nickel in his life. Lou had him in a rummy game, trying to add to his thirty-five a week stipend when it occurred to both of them that they might make a good team. Lou needed a straight man and broached the idea. Bud considered it.

"You're dumb and funny-looking and I'm smart," he said finally, "maybe it wouldn't be so bad."

"That's right," agreed Lou magnanimously. "Give me the $3.28 you owe me."

That rummy game has never stopped. They put down the cards carefully when they have work to do but they come right back to them. In the course of ten years it is estimated that Bud has lost approximately $3,000 to Lou. When they came out to Hollywood as stars and got into the large folding money, Abbott looked for new worlds to astonish. He got into a big poker game and lost $2,500 the first night. Friends suggested to Costello that his pal might be playing with crooks.

"You could give that guy the deck and play him with his own discards and still you'd beat him," said Lou.

Abbott comes of theatrical stock. His father was advance man for Ringling's for years and his mother, Rae Abbott, was a famous bareback rider for the circus. They wintered at Coney Island, where Bud would manage to get in a few months of school, but his life belonged among the grifters and barkers. He was an auto racer around 1900; he sold orangeade for a concession owned by Marie Dressler at a period when the star was down on her luck; he wanted to be a lion tamer but was cured by the sight of his teacher being chewed industriously by a tiger; he was shanghaied when he was seventeen and spent eight months in Norway before he could work his way back. He ran "tab" until the movies came along and smacked him; he operated a circuit of burlesque shows with his brother Harry until the 1929 tidal wave swept them away. He was glad enough to have a job when Lou came along. Lou barely had a job.

### "I'm a Ba-a-a-d Boy"

By the time they got into big-time burlesque it had reached the depths. Smut had replaced comedy; the strip tease had replaced everything. Jean Bedini saved them from a terrible fate; he told them they were funny enough without off-color stuff. Managers didn't like that very much and complained. Bud always let Lou handle those raps. They would demand more sex in the skits, more blue stuff. Lou would protest that he didn't know any, couldn't think of any. Finally, being pressed, he would declare flatly that he *wouldn't* do it. Why won't you? the managers would bellow in wrath.

"Because I'm a ba-a-a-d boy," Lou would cry, holding his thumb in his mouth. That became the tag line of their act and eventually of their radio and theater work.

They kept trying to escape from burlesque, but the best they could get were one-shot vaudeville dates for as little as ten bucks a throw. Their biggest luck was a summer season each year at Steel Pier, Atlantic City.

"Never got in the water because we were doing eight hundred and twelve shows a day," says Bud, "but we could see it occasionally."

When they went back to Steel Pier this summer the boys were being booked at a mere $7,500 a week, keeping the price low for sentimental reasons. It seems that in the old days the management used to stake them to a new suit at the end of summer to get them started back in burlesque again. Since the regular A. & C. fee now is $10,000 a week that slight gesture returned dividends.

But their real break came when they got into Streets of Paris on Broadway, where they were sensations.

They will take in around $250,000 this year. Buck Privates, which cost around $200,000, has already grossed over $1,500,000. In the Navy will pass $2,000,000. As a token of their affection Universal, straining slightly at the seams, came across with a bonus of $25,000 each for the gentlemen early this summer. Comedy moves in cycles and often in mysterious ways, for Laurel and Hardy, also slapstick comedians, had just been dropped in Hollywood when Abbott and Costello came along with the same sort of material and became sensational. So sensational, in fact, that Laurel and Hardy are now back.

Both gentlemen married chorus girls and are still wed after ten years. The boys are friendly but the families agreed long ago to keep their lives separate. When Costello bought a house, Abbott bought a house. When Costello put in a swimming pool, Abbott put in a swimming pool; they cost the same almost to the penny.

Both are intensely loyal to their old pals. Joe La Cava, who hitchhiked with Lou, now plays in all Abbott and Costello pictures. Frank Penny, who helped Abbott with loans and solace when his burlesque circuit blew up, not only works in all Abbott and Costello pictures but shares Abbott's house in the Valley. Costello has bought a ranch for his parents, who are coming out to Hollywood in January. Pat Costello is also working for the boys.

Another steady member with the outfit is John Grant, the writer, who has been with them for years and now writes their screen plays. Some observers consider this the softest job in the world since the boys never follow the script anyhow. When they came to that portion of In the Navy where Grant, in a sheerly inspired bit of writing, set down the words: "Lou climbs in the hammock," Lou fixed that by yelling:

"Don't tell me; don't say that camera going."

That became a scene o proportions. Lubin, the di well back to keep from getti Costello did the rest. He to the ship hammock and fel other side with a thud. Whe it again, the hammock tur and he landed on his head. it by his toes, he rode it lik bronco, he had it swingin forth like a jumping rope, to it, he patted it. He finall it, after about five minutes niest screen fare of the yea

# With Editorial Corrections

Glance at the menu below. It looks like just another dinner, doesn't it? You don't see any fancy foods there—*yet this menu is different.*

No one food contains all the important vitamins—so our menu has been carefully selected, each dish with its measured quota of needed nutrients.

Behind this simple menu—typical instance of the Companion's menu planning—science has worked for decades in its laboratories. You will find in the November issue of Woman's Home Companion menus for 28 days. Broad base of all these is the featured double spread chart showing the *indispensable foods*, in their natural colors. Here is all you need to know—the 7 "musts"—for sound nutrition.

*Dinner*

Tomato bouillon Whole wheat croutons
Roast stuffed veal
Parsley potatoes Yellow turnips
Orange and onion salad
Floating island Coffee

This is the opening engagement in what we believe will be the ranking nutrition program of the nation. The Companion has spent thousands of hours and thousands of dollars in experiment, travel and consultation, keeping on top of developments on the nutrition front—tying in with the national defense need to tell women about food *values*, not merely food. *Potatoes—with editorial corrections!*

Knowledge of nutrition is still in infancy; only a small part of what will be known is known today. But women can rest assured that *that* part, that present part, is in every Companion menu, every recipe, every suggestion on buying, preparing, cooking and serving food.

# NATIONAL DEFENSE

## *AND THE*

# "PRESTONE" ANTI-FREEZE SHORTAGE

THE RAW MATERIALS used in making "Prestone" anti-freeze are first-line defense necessities. Thousands of tons of these raw materials which, under normal conditions, would go into "Prestone" anti-freeze for the public's use, are now being diverted to manufacture vital defense equipment of many different kinds. In fact, some of the uses to which these materials are being put were born in the laboratory but a short time ago.

IN ADDITION, great demands are being made on the finished product, "Prestone" anti-freeze. Liquid-cooled tanks and reconnaissance cars . . . fighter planes and gun tractors . . . trucks and staff cars . . . must be protected. The cooling systems of our speedy patrol torpedo boats must be safe from freeze-up and *lay-up.*

THE ARMY and the Navy . . . for years large users of "Prestone" anti-freeze . . . now need unprecedented quantities of this dependable winter protection. *Their orders must be filled.*

ALTHOUGH MILLIONS of gallons of "Prestone" anti-freeze will be available to American motorists . . . although production facilities have been increased to the utmost . . . your dealer may not be able to supply you in this emergency.

TO THE MILLIONS of motorists who every year rely on "Prestone" anti-freeze, we say:—*See your dealer early.* Late comers who wait for cold snaps may be disappointed.

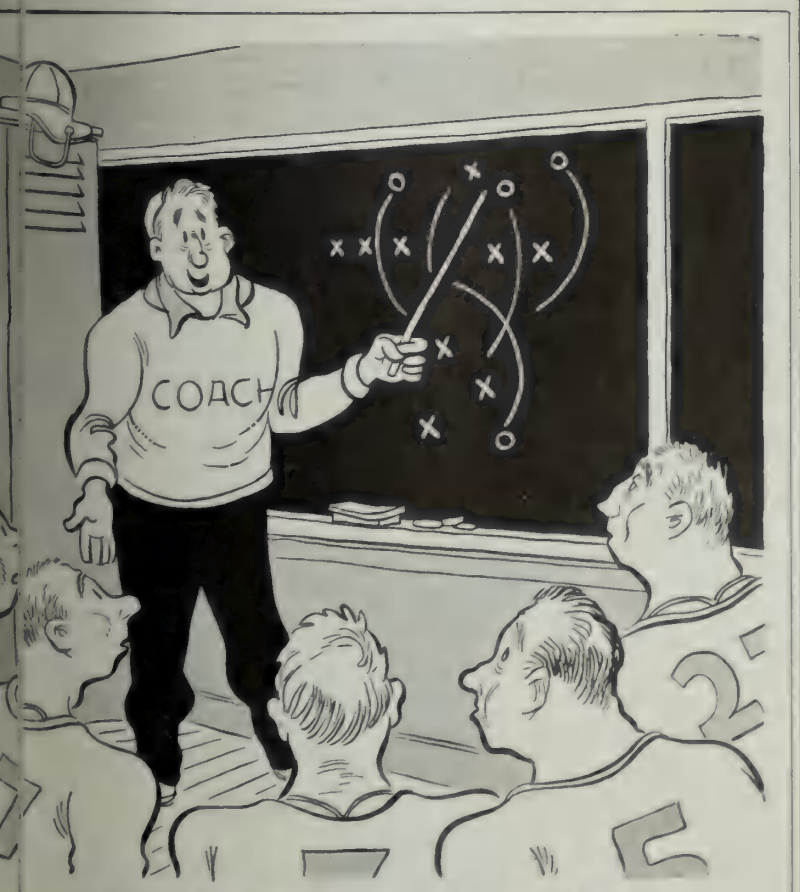
"Doris seen it," he said.

I laughed. "Yes; Doris saw it," I agreed, "and Doris makes four or five sounds which her parents think may be words, but she can't speak a sentence, and if she accused anybody no one would believe her."

DAVIN'S arrest was in next morning's papers. I found O'Malley at headquarters. I was feeling triumphant.

"That's the case, then, O'Malley," I declared. "What you lacked was the motive, and that's all been discovered. Davin had been in love with the girl for years and many times asked her to marry him. He was crazy about her. Recently she promised to marry him and he's been very happy. The night of the dinner she informed him that she'd changed her mind and they'd never be married."



"Yeah? I don't read the papers. The first thing the cops done when they got called to that apartment after the murder was to get laboratory cops there to see if one of them people had fired a revolver. You know how they do that? A revolver kicks powder into the hand of whoever shoots it. They put paraffin on the hand, making a mold of it, then they put acid into the mold and if blue spots from powder show in the paraffin, that guy fired a gun. They done that to Davin along with the rest of 'em and it didn't show anything."

"It didn't show that any of the others had fired a gun, either," I told O'Malley.

He phoned me next evening.

"We're making a move," he informed me. "Do you want to be in on it?"

I was just starting out to dinner but I met him instead. He had a police car and we drove to the West Side. There was a big apartment building. We drove across the front of it and then down the side till we found the service entrance, then we went a little way up the street and parked. We waited a

WAKE UP YOUR LIVER BILE—
WITHOUT CALOMEL

—And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out two pints of liquid bile onto the food you swallow every day. If this bile is not flowing freely, your food may not digest. You get constipated. You feel sour, sunk and the world looks punk.

It takes those good, old Carter's Little Liver Pills to get these 2 pints of bile flowing freely to make you feel "up and up." Get a package today. Take as directed. Effective in making bile flow freely. Ask for Carter's Little Liver Pills. 10¢ and 25¢.

long while. I was hungry and it was dark, and a woman came out of the service entrance, and we followed behind her and pulled up beside her.

"Get in," O'Malley commanded her.

When she got into the car, I saw it was the colored maid.

"Let's have it," O'Malley said to her.

She gave him something but I couldn't see what, and we took her to the station house, and O'Malley took out the money she'd given him and put it in an envelope and sealed it and wrote his name across the flap of the envelope and gave it to the desk lieutenant.

"O'Malley," I said, "it can't have been the maid!"

"We'll eat," he replied.

WE WENT to a restaurant; then we went to headquarters. They had the maid there and Mr. and Mrs. Suder and Mr. and Mrs. Victery, and it was plain they'd been questioning them. They didn't have Davin. They had the envelope and two pairs of women's gloves which were exactly alike even to the cleaner's marks in them.

"How about it?" O'Malley asked a cop.

"Say, it all worked out just the way you had said," the cop said.

O'Malley talked with the cops and then he rejoined me. I was amazed when they arrested Mrs. Victery.

"So Mrs. Victery killed her," I observed. "What was the motive?"

"Well, Victery and that girl Anne had been meeting each other for quite a long time. It started when Anne was eighteen. Suder and his wife didn't never suspect it, and Mrs. Victery didn't know about it either. According to what Victery says, him and Anne fought against this infatuation for each other, and quite a few times they resolved never to see each other again. But all them people was friends and they didn't have no excuse for not meeting each other; so it turned out they always come together again."

"An unhappy situation," I said.

"Sure. Victery is the kind of guy that could be in love with the girl and still not want to get rid of his wife and break up his home; but this Anne wasn't the kind of girl he could do that with. So lately it come to a showdown. Davin was in love with that Anne and wanted to marry her; so Anne broke off with Victery and got herself engaged to Davin to be sure she wouldn't go out with Victery no more. . . . Well, Victery couldn't stand that. He told Anne, if she'd break off with Davin he'd tell his wife how all this business was, then his wife would get a divorce and him and Anne would get married afterward."

"A solution," I said.

"It didn't solve nothing. Anne broke with Davin the night of that dinner party, and the same night Victery started telling his wife. He didn't get very far with it, because she'd had suspicions and she guessed all the rest. Mrs. Suder was Mrs. Victery's friend and Anne was Mrs. Suder's sister, and Mrs. Victery didn't have no idea of giving up her husband; so her first idea was to go and see Mrs. Suder. She demanded Victery go with her. They went there, and here was a dinner party going on. They hadn't known nothing about the dinner party. Anne was there and Davin, and here was the Alvers too, so they couldn't say nothing."

"A queer happening," I commented.

"Sure. Except for that there mightn't have been no murder. They danced and had drinks, and Victery danced with Anne, and Mrs. Victery went into the bedroom to fix her hair, and she opened the bureau drawer, looking for face powder, and there was Suder's gun; so she put it inside her dress."

"Mere chance," I declared.

"Right. I figure there wasn't no murder in Mrs. Victery's heart till she got hold of the gun. Then she went out and watched Victery and Anne. She was waiting to see Anne alone and that chance come when Anne went into the nursery to get her things. I don't know what them two women said to each other there in the nursery; how it ended was Mrs. Victery shot the girl, and dropped the gun, and backed out into the hall just as Victery come out of the living room; then all them people run out in the hall and none of 'em could tell which one come from the nursery."

"Of course Victery knew," I said.

"He claims not right away, because he was sure his wife didn't have no gun, and he seen Davin there and knew Davin might have reason to kill the girl. The first chance she got, Victery's wife says to him, 'Say I was with you.' Well, the guy was this way: To get his wife electrocuted wouldn't bring Anne back to life, and he'd had trouble deciding whether to go to Anne or stick to his wife. So the guy said it."

"All right," I said. "You seem to have figured this out in a very remarkable fashion. How did you do it?"

"Well, I had luck. When this killing occurred Suder called the cops. The first cops that got there called the laboratory cops, who come there and used the paraffin test to see which of them people had fired a gun and they couldn't find nobody. No readable fingerprints on the gun; you don't often find 'em on a gun anyway; they're usually smudged. They figured the same way you did: Everybody had somebody to say where they was except Davin and the maid—but they crossed off the maid, and Victery couldn't go back on his story without accusing his wife. Cops thought it was Davin, and when I and you went out there, I was thinking that too, till Doris told me different!"

"Doris!" I exclaimed.

"Sure. You seen how it was. We had everybody in the dining room. It was just luck I was carrying Doris and took her in there with us, and put her in the high chair. The captain was ing everybody and I'd forgo her. All at once I seen the frightened. Then I noticed one part of the room w wouldn't look."

"I don't get it," I said.

"No; nor I didn't neither at once I did. That little awake when the gun was f nursery and her aunt got k The kid had been scared. she wouldn't look where sh person that had scared her

"Good Lord!" I exclaimed

"Yeah. Well, which perso A couple of times I changed ple around till I found wouldn't look at no part o where she'd see Mrs. Vic Cops had tried out that te Victery's hand like all of t to see if she'd fired a gun out negative. Of course, a sometimes. Still, cops had f too, and like most all revo enough powder into the co the laboratory could find it. thinking. It didn't look to n Victery would know enough things to put on a glove h the gun. But remember stances: Them people was go home. Mrs. Victery ha chance to speak to Anne Anne went into the nurse hadn't known Anne was that. So maybe Mrs. Vict on her gloves expecting t Anne outside."

"SMART reasoning!" I d "Why, it turned out tha Suder called the police, M took off her gloves and rc and put 'em in her handbag so smart as to think about on the gun, or she didn't k about powder tests; she naturally like a woman them cops that went there w to find the gloves. So I Victery maybe still had

and didn't realize they could be dangerous."

"I see."

"Sure. So now another thing come into it: That colored maid Emerald come in and done work for all them people. She went mornings and fixed up Victerys' place. I talked with her and found out she had been fond of Anne and was ready to help us; so I told her, when she went to the Victerys' would she find out what gloves Mrs. Victery wore that night and get 'em for us without Mrs. Victery knowing. She done that, and brought us three pairs of gloves and said it had to be one of 'em. Meanwhile, cops going around with pictures of Victery and Anne found places where they'd been seen together. Then the laboratory tested Mrs. Victery's gloves and found powder grains on one right-hand one."

"Clever work!" I exclaimed.

"Yeah? We had a witness, Doris, who we couldn't bring into court and a glove a maid claimed she had stole from Mrs. Victery, but we had to have more than that. We had to break the

"So what?" I inquired.

"Why, I had that maid blackmail Mrs. Victery. I h Mrs. Victery that, from the d she'd seen her go into the n tell her she'd took the gloves the first time Mrs. Victery g the gloves could make troul Tonight she give Emerald tv dollars to get the gloves b could destroy 'em. Of cours give her back the right glov other gloves exactly like 'er 'em up with the same ma cops waiting outside Victe ment pinched her before chance to destroy 'em. Wh her and Victery to headqu showed 'em the two pairs of the money and the laboratc the two of 'em broke and ta

away because twenty years ago he was testing one in flight and it caught fire. Seems certain that this deficiency has been overcome in two decades.

PILOTS run out of gas too, because of head winds, leaks, increased fuel consumption, or just because they forgot to fill the tank at the last stop. The big ships seldom do, though, unless they get pinched off by weather and have to fly hundreds of miles in search of a landing place. The airliners and big military and naval craft have checks and cross checks on the rate of consumption per engine per hour, but at the most it is still an estimate as to how many gallons still remain in the tanks.

That is why Congress gave the C.A.A. $5,000 to assist in bringing about the development of a simplified fuel-flow gauge. An ideal one would be a neat little dial on the instrument board (if there's any room left on those already overloaded panels) which would register the amount of gasoline taken aboard. As the fuel begins to flow into the engines, this figure would, of course, be reduced and the totalizer would then show how many gallons should be in the tanks. Comparison by the pilot with his existing quantity gauge wou figures closely together or proof of a leak.

INFILTRATION note: Th navy aviation training Brazil are equipped with ing planes, 70 of which man make and are from years old. The other 76 a can design and constructic been in service for from s three years.

TIME to remind you tha a thorough analysis of al ing accidents still shows th two thirds, or 68.66 per ce able to one source alone—f up. The C.A.A. safety exp isticians have just gone in of the 3,446 accidents tha 1940 private flying, in whic 4,418 persons escaped unl were killed. # The boy whose family gave him a Royal Portable

## But seriously

...o that the Royal Portable you ...n as a steppingstone to higher ...e prove invaluable to the whole

...find it immensely helpful in his ...siness—Mother, in her social ...nce and club work.

...easy to learn to type. (An in-...lf Teacher" comes with every ...ugh whose use even a 10-year ...rn in a matter of hours!) The ...of typing so gained will be not ... of job-insurance for the young-...a door-opener to the *kind* of job ...o the *top!*

...yal Portable is *one* gift that will ...every member of the family.

---

...with thousands of school children ...se who do their work on typewriters ... to 30% higher grades in many sub-...centrate better . . . do 17% more ...ework . . . think faster and more ...? Because the greater speed and ...g free a youngster's mind for *think-*...wings to his imagination—instead ...his thoughts to the slow, tedious ...pencil!

**Typing teachers recommend Royal** as the Portable for home use, because it's the make with a keyboard just like that on a regular office machine. Nothing to *unlearn!* Consider all these "big-machine" features of the Royal:

***Greatest typing timesaver in years!***

**MAGIC* Margin** . . . no more fussing with mechanism to change and set the margin. Just flick the handy lever —*click* . . . and it's set! Only Royal has MAGIC Margin!

**Segment Shift**—Less noise . . . less eyestrain when you shift on a Royal. The carriage doesn't clatter and pop up!

**"Big-machine" Keyboard**—One reason typing teachers recommend the Royal for home use—it has a keyboard just like that on a standard office machine.

**Touch Control***—Simply move this lever to adjust key tension exactly to your touch. This is one reason Cortez Peters won the World's Portable Typing Championship on a Royal!

**No Type-bar Blur!** Type bars flash unseen on a Royal. This, and the over-all "no glare" finish of the machine mean less eyestrain.

**Automobile-type Shock Absorbers**—Rubber-cushion feet and jar-proof construction give the Royal Portable the sturdy, "weighty" touch of the full-sized machine.

**Handsome Case and "Self Teacher"** included with every Royal Portable at no extra cost.

***FOR JUST ABOUT $1 A WEEK,*** you can *own* a Royal Portable! Your local dealer is authorized to sell you any Royal on an easy-payment plan which includes the small carrying charge.

Royal Arrow Model—$54.50. Other Royal Portables—$49.50 to $64.50.

**One of Las Vegas' annual crop of 20,000 marriage-bent co Hitching Post, typical quick-service roadside chapel south way 91. Las Vegas collects $400,000 annually from imp**

# To 'Vegas, Darli g

## By Jim Marshall

**You furnish the gal, the ring and twelve bucks— The Hitching Post (or any of Las Vegas' marriage chapels) will do the rest**

IT WAS a blustery evening in Hollywood and Mr. Stan Laurel, the comedian, was dining alone upon tripe and onions. It brought back recollections, not only of his English boyhood, but of his married life with a very nice girl named Ruth. It had been their favorite dish. Now, alas, he and Ruth were divorced. As he ate amid his memories, tears filled Mr. Laurel's eyes—and not from the onions either.

Leaving the t. and o. half demolished, Mr. Laurel went to the telephone and called Ruth. The cook put the dinner on the back of the range to keep warm. Mr. Laurel kept saying: "Tripe and onions, Ruth . . ." over and over again. Pretty soon, who should show up but Ruth herself? The cook brought back the dinner.

It was only a few minutes later that Mr. Laurel laid down his knife and fork and said, inspiredly: "Ruth, honey, let us go to Las Vegas!"

Now, that may mean nothing to you —but to any girl in the Mountain or Coast states it means just one thing: "Let's get married right away!"

That's what it meant to Ruth—and she and Stan were remarried in the frontier town a few hours later. So, in 1940, were 26,600 folks. In 1941 it'll be nearly 40,000. And this, remember, is a town of around 11,000, Chamber of Commerce count.

Building Boulder Dam, thirty miles away over the desert, used to be Las Vegas' main industry. Today, high-speed hitchin' with a lot of showmanship is bringing in the money. Most people associate Nevada with divorce. In 'Vegas there are eleven marriages to every separation.

All over California and in Utah and Arizona, airlines advertise "Honeymoon Fliers" with the slogan: "Only one and three-quarter hours load the ships with can't wait another n married in 'Vegas after you arrive, d have the gal and th includes the licens music and a nice, h in any one of the to chapels," some of to motor courts, an

# The American Miracle

Continued from page 16

know—and only a few men in England know. We have excellent authority for the estimate that Germany's factories are producing something between 3,000,000 and 4,000,000 horsepower monthly. We drag in these figures that anyone desirous of so amusing himself may reckon how soon it will be before the United States catches up with Germany. Pratt & Whitney alone produces almost as many engines as England. When the Ford, Buick and Chevrolet companies get into mass production of these engines (and it won't be long now) the answer will be slightly obvious. Mr. Edsel Ford predicts that his company will be producing 300 a month by January first. Moreover, Studebaker is almost ready to begin turning out Wright engines.

### 14,000 Airplane Engines a Month

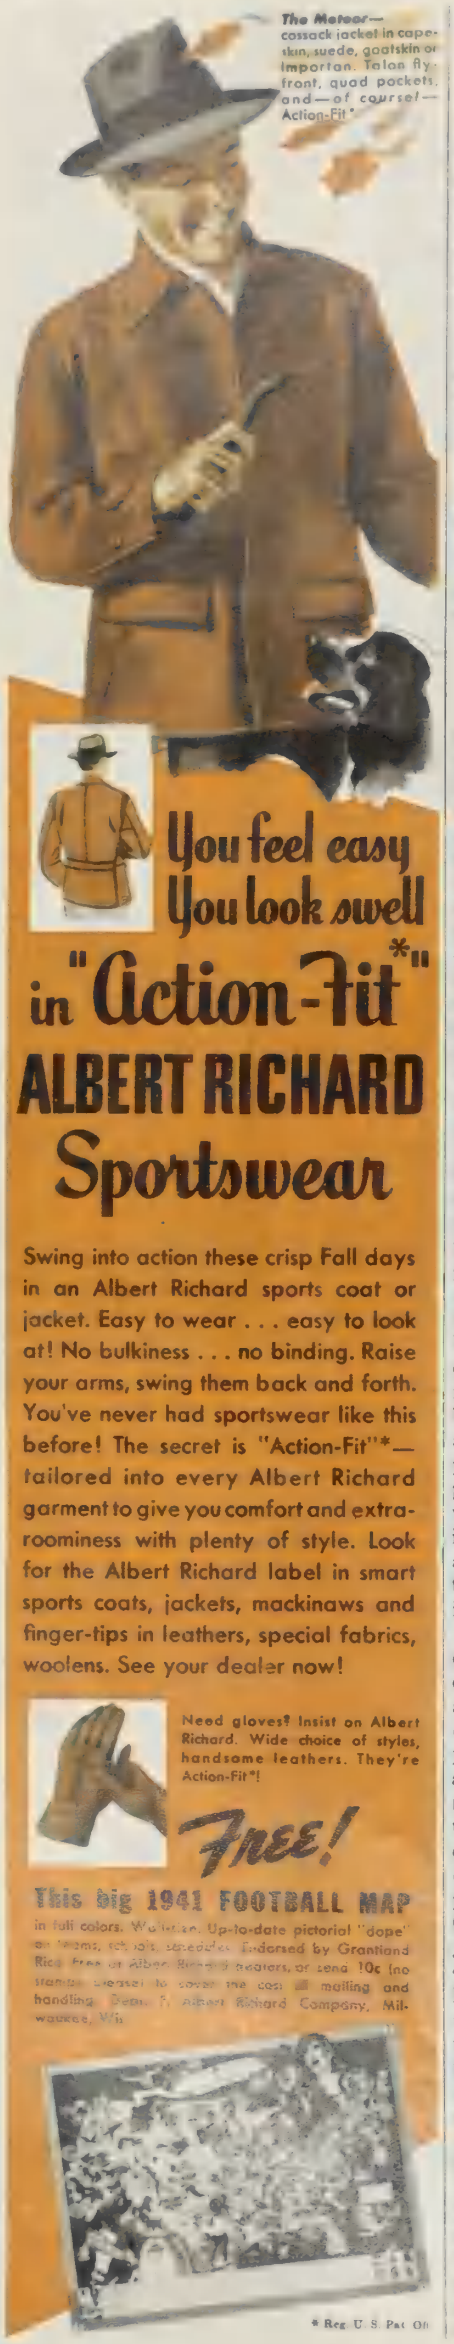
The Allison Division of General Motors is now grinding out aviation engines at the rate of something like 500,000 horsepower a month. All told, there are ten companies in America producing aircraft engines. Five others—automobile makers—will be producing them soon. These five, masters of the science of mass production, should be at capacity production in eighteen months—not that they'll be anything like unproductive in the meantime. When running full blast they'll be capable of producing upward of half of the country's output of aircraft engines. But when they reach their peak, it will be silly for any foreign government to compete.

The roaring result of all this, by the fall of 1943, is that we'll be able to hurl about 4,000 new planes into the air every thirty days. And we haven't taken into account the new aircraft engines now being designed by Chrysler and Ford. Nor the 9,000 Rolls-Royce Merlins being turned out by Packard. We've devoted all this space to the aircraft outlook because the accent of war is on planes and because the job that's being done by American industry in the air is pretty typical of the effort it is putting into tank, gun, shell and bomb production. Whether you're in favor of war and war economy is none of our immediate concern. What we're getting at is the amazing job American industry, finally aroused and at last confident, is doing.

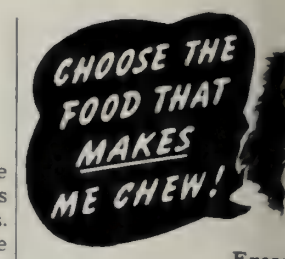
The answer to all this is that if our current acceleration is an honest forecast we'll be pounding out about 14,000 airplane engines a month by the middle of 1943. Maybe by February of that year. At present we are producing about 2,200 planes (not merely engines) a month. To be sure, half of them are training planes and what the air service calls tacticals, but unless there is a decided change in the administration's policy, or unless the war collapses, OPM predicts that this means that by June, 1943, we'll be making more than 4,000 planes a month and heaven knows how many engines. There are go-getter minds in OPM and in industry, too, who'll tell you with all outward indication of calm that the United States will be producing at the rate of 50,000 planes a year before mid-1943. But you needn't be disappointed if it doesn't happen that soon.

This is a 12½-billion-dollar aircraft program. It will be up to the motorcar manufacturers to take care of about a third of it. In other words, when we're producing 14,000 airplane engines a month, the automobile companies will be making 5,000 of them or thereabout.

But it's a lopsided thing, this boom. The faster we build war materials, the less we're going to have for consumer goods. And inasmuch as there is nothing we can do about that, the government's latest concern is for so-called Little Business. We'll have to dive into a few statistics again, but not too deeply. According to OPM, fifty-six corporations have three fourths of the total dollar volume of War and Navy Department contracts. The other twenty-five per cent is divided among several thousand contractors. At least that was the situation the first of September. The fifty-six are big fellows—Bethlehem Steel, New York Shipbuilding Corporation, General Motors, Curtiss-Wright, Newport News Shipbuilding and Dry Dock Company and E. I. duPont leading the list. These six alone hold contracts for more than thirty per cent of all the work being done by the fifty-six. After them came the Glenn L. Martin Co., Consolidated Aircraft Corporation, United Aircraft, Douglas Aircraft, Ford, General Electric, North American Aviation, Baldwin Locomotive Works and so on through an expensive list.



If the question were left to the Army and Navy, both of which have clung tenaciously to ancient precedent, these big corporations would continue to get the great bulk of all contracts and would be given a free hand to fill them as they saw fit, utilizing such subcontractors as they desired when and if they desired. Such contracts would relieve the conventional minds of the Army and the Navy of additional worry. Experience has taught the military that the work would be done on time and there'd be no need for wear and tear on the military nerves about the quality.



But it just happens, alas, that this country does not live by big corporations alone. As we've mentioned above, a considerable number of industrialists as well as the White House are concerned with the aftermath of war—where we're going to be and how long it's going to take us to regain a normal economic balance. One could write a dull but fat volume on this subject alone—not that he'd have the answer therein.

### What is Small Business?

Very soon SPAB—headed by Mr. Roosevelt's truest echo, Vice-President Wallace, and guided in actual workings by Mr. Donald M. Nelson—will have completed a survey of small business. Defining Small Business is difficult. Until a better definition comes along—from SPAB perhaps—let's assume that it is that numerous group of manufacturers doing an annual volume of $500,000 or less. On the average these outfits employ less than a hundred people each or fewer. As far as we're able to count, there are about 148,000 of these small manufacturers employing approximately 3,415,000 workers. We're dealing with manufacturers, of course, ignoring dealers and retailers whose problem is a headache all by itself.

However, these small manufacturers and their three million and a half dependents have to be taken care of. All of them won't be. Some of the shops are going to close and the employees will either take to the roads leading to the larger industrial centers seeking jobs in already congested localities, or create a boom in the relief rolls. If you talk long enough to the federal and local authorities they'll admit that the problem of keeping all small manufacturers alive and all their peacetime forces employed with defense subcontracts is not going

nse Okie is not yet com- oduct of materials shortages lant shutdown. He is out tter wages than his small can pay. He is englamored ited stories of the sudden will be his by moving to . He is not only deserting mmunity but the farm. He a first-class mechanic, he able even to operate an achine. It is our own opin- w of the radio spellbinders ivilian Defense Office is rn loose upon the public ess themselves particularly to him.

### -town Enterprise Problem

PAB is able to spread de- acts into the small com- hich are not now in the areas of big business, unless Veiner's Civilian Allocation OPA does something mas- it, this problem may become . At present it threatens to logical situation of a small- ssion within the mightiest oom in our history.

SPAB, OPM and OPA will ke all contracts contingent idder's ability to share the tting anywhere from twen- fty per cent of the operation rms. Many large corpora- een doing just this for years Electric, General Motors, se and the like. Such sub- are well established in such Some of them have fattened out of the small-business e themselves subletting con- nsiderable number of them ted contracts straight from no Big Boy intermediary, g it necessary for the large to break in new subcon-

a great many of the little going to be crowded away avy boat. It's nice to hear about the "unconquerable f the small businessman, half tive capital is his native wit, d courage." But there are f these small manufacturers ither machine nor tool them- take subcontracts because, eir native wit and ingenuity, be the raw materials neces- ild the machines and tools l the new buildings they'll of these perplexed men have ing away in factories and would have to be rebuilt to carry the heavy machinery o the acceptance of subcon-

ore SPAB launched its sur- ington was worrying about oing to happen to such towns le, Pennsylvania (slide fas- nsfield, Ohio (electrical ap- d stoves), Quincy, Illinois l household equipment), and owa (washing machines). ns are merely symptoms of . There are others in a much rious position—smaller com- holly or nearly wholly de- on one industry, and that r removed from imminent n in defense profits. In ev- d in most of the larger cities subcontract clinics at work veys of small business—what e to drag them into the boom. t much doubt that most of them could be worked in—in time. But England, Russia, China and our own Army and Navy are crying for speed. Representatives of all of these are fearful that saving the threatened small-town enterprise by subcontracts is going to delay deliveries of war materials for weeks and perhaps months. Therefore they're urging that whole towns and hundreds of small industries be permitted to collapse, even go on relief, and that the problem of saving them be abandoned in favor of rehabilitating them—after the war.

Of course there's the Buffalo Plan—a scheme to train workers for defense jobs while the plants they worked in at peaceful pursuits are being rebuilt or reconditioned for armament manufacture. In many instances this means a layoff of six months. But the Buffalo Plan isn't very specific about who is going to pay the workers while they're being trained. The federal government doesn't want that responsibility—a responsibility entailing the expenditure of an unspecified number of millions of dollars. The dwindling number of advocates of the Buffalo Plan in Washington insist that the states pay these workers unemployment relief while in training. We need scarcely remark that this does not enthuse anybody concerned, particularly the worker and the state governments.

But we'll have to hurry on. Maybe SPAB will have the answer. Maybe Yankee ingenuity will find a way out. The President insists that small business be rescued now; and he does not admit that a second of the speed he demands of the armament makers need be sacrificed. Who knows? We may get away with this problem too. When you consider what doubt big industry wallowed in a year ago, you're prepared for all sorts of miracles. And while Congress itself comes near to being small business these days (in influence, anyway) it is looking toward next year's elections with deep apprehension. It is not, therefore, going to permit the rush-order lads in the Army, the Navy and the British mission to shut down the village smithy.

All right, let's wait and see. In the meantime we might as well pay our respects to the spots that float before the eyes of Secretary Morgenthau, Paul V. McNutt, Co-ordinator of the Federal Security Agency and others—chiefly government economists. The economists in particular are devoting much more than ninety-nine per cent of their time to viewing the future with alarm. We're not speaking of taxes nor of national indebtedness. Neither are we going to try to make something out of bond flotations or interest payments. Further, these gentlemen are not losing sleep about the possible plight of one-industry communities and Defense Okies. They're worrying about the employed—in particular about the millions who are and will be employed in defense projects at high wages.

### Investing the Workers' Wages

And their immediate worry is about what the big-pay worker is going to do with his money, what he may have to be compelled to do to cushion the post-war drop from riches to rags. They aren't stating it as simply as this. They insist upon rolling it all up in one parcel with the steadily increasing cost of living, the decrease in the number of places the defense worker may spend his money in and, ultimately, the danger of inflation. We're not foolhardy enough to try to lead you through the whole maze but are content to show you briefly what they hope to do about the worker's wage.

As consumer goods decrease he won't be able to buy washing machines, silk shirts, big radios, grand pianos and oil

PIPE PENALIZED FOR "ROUGHING"

*—but Harry's out of the dog house now!*

**ANOTHER TOUCHDOWN!** Yep—Harry's team looks good today. But his pipe smells *bad*—very bad—especially to the pretty young stranger next to him. Hey, look! She's fainting

**HURRY UP, DOC!** That stinko smoke knocked her over like a tackle from behind! You'd think a college grad would know better than to ruin a good pipe with such rank tobacco.

**IF SHE'S OKAY,** how about some first aid for that *pipe*, too? Good. The doctor recommends Sir Walter—the mildest, best-smelling blend of burleys ever sniffed in a stadium.

**WHO WON THE GAME?** Well, *she* looks happy. And *he* does, too. So the winner must be: Sir Walter! Try this fragrant tobacco. Your friends will compliment you on the choice.

burners. If the present trend keeps on it's possible that Midas himself wouldn't be able to make such purchases. With such building materials as there are at the prices there are, there'll be less and less private dwelling construction. Therefore the big-pay industrial worker won't find it easy to buy a home. For a while he'll be able to buy motorcars—used cars particularly. Incidentally, the outlook in the motorcar industry is that we're headed toward a medium and low-price car era. Even so, you can find gentlemen in OPM and OPA and even almighty SPAB who'll assure you that it is not impossible that fewer than a million automobiles will be made in 1943. And Washington doesn't lack for forecasters who wouldn't be surprised if no new cars at all were made. This shouldn't shock nor even mildly surprise you. And it certainly wouldn't were you to poke around the capital, from office to office, for a week or two.

Of course the worker (and his boss, too, for that matter) will be able to go to all the movies, theaters, ball games and other amusements he can find. It has been decided that, Senator Clark notwithstanding, Hollywood is a very important part of the defense picture—the morale part. He who profits in wages and dividends from defense spending may buy all the clothing his closets will hold and go about his affairs wearing several pairs of pants if he insists upon showing off. Ultimately clothes, shoes, hats, shirts, ties and topcoats may become more or less standardized in cut, pattern and texture although we're not inclined to go that far with those making the gloomy prediction. There is no sign now that there will be a shortage of wearing apparel—particularly if it's made chiefly or wholly of cotton.

### Scheme Would Be Unpopular

But you get the idea. The burning question is what to do about the excess moneys of the beneficiaries of the defense boom. Mr. Morgenthau has several ideas. One is a forced savings plan somewhat timidly imitating the English. It would separate the worker from a part of his weekly wage for "a certain period." This accumulation would be paid back to the worker if and when he lost his job. With Mr. McNutt, the Secretary looks with considerable tolerance upon another plan which would increase both the worker's and the employer's contribution to Mr. McNutt's social security funds "so as to increase the flow of funds to the Treasury from current income during the emergency and increase the outflow of funds when needed in the post-defense period."

This latter scheme would not be popular with the two contributors—the employer and the employee. Let's say that Mr. Jones and Mr. Brown work side by side in an airplane factory. Both would pay fifty per cent more or even twice as much into Social Security as they are paying now. Naturally their employer's contribution would match theirs. But suppose presently Jones should lose his job. Jones would then be paid so much a week during his idleness from the excess contributions that both he and Brown made. Moreover, Brown would still be paying the increase—to keep Jones in groceries. In brief, the increased contribution a worker would make under this plan would not make larger his old-age pension. It would merely make him and not the government the almoner of his unemployed brother.

There doesn't seem to be much prospect of this plan being adopted. We're not at all sure who sired it. The likelihood is that it is a synthesis of many ideas which are daily being showered by social-worker ladies and gentlemen upon Mr. McNutt's offices. Prominent in the crowd that is making Washington a mob town these days are the regiments of social economists, who for a time were completely submerged in the passing of the old New Deal. Politically, all known plans to manage the worker's wage are anathema. Mention the Bond-Wage scheme on Capitol Hill and you're asking for trouble. This scheme would oblige employers to pay from ten to twenty-five per cent of the employee's wage with bonds. The plan is not perfected—probably never will be. Whether the bonds would be of the present character, payable in ten years and nontransferable, or whether they'd be cashable when the holder falls into evil economic days and negotiable is still being pondered by those advocating the idea. Maybe something will come of it, but not in the immediate future.

One of Mr. Roosevelt's major advisers asked us to urge upon all who may read these lines "a good, healthy pessimism." He spoiled it by explaining that the White House would like to do something lastingly drastic (for the duration anyway) about the "unthinking optimists who tell you that we're doing fine and that American industry is now forging Hitler's doom." The administration believes that by the first of January the United States must be producing munitions at the rate of $30,000,000,000 dollars annually. We are now romping along at half that gait. SPAB and all her associated agencies look soberly toward the day when, shooting war or no, we'll be paying twice and three times as much in taxes as levied by the new bill. They add that consumer goods will continue to be curtailed right down to the eraser and metal band on your lead pencil. And to add to the troubles of those who insist upon worrying about the industrial worker's wage, it is possible—even likely—that railroad tourist traffic may be rigidly rationed. The demands that will soon be made upon railroads by industry and our troops, and the difficulty the railroads will have in getting new rolling stock will bring this to pass.

It seems to be generally conceded that of all Big Business, the automobile makers will have the least trouble getting back to a peace basis—not that anybody is giving peace much thought. Industry in general seems to have become convinced that, much as it wasn't overenthusiastic about Mr. Roosevelt's New Deal, it would prefer Mr. Roosevelt's to Mr. Hitler's. The motorcar industry is still prepared to turn out automobiles by the millions—if the materials were available. The market for passenger cars, although almost exclusively domestic, is vibrant and is prepared to expand as billio

# Hellfire Pass

Continued from page 13

The sand grinds tires, enters the engines, scores cylinders, gnaws metal wherever it revolves on metal. It works between spring leaves and breaks occur so frequently it is commonplace for a repair unit to furnish as many as thirty complete sets of front and rear springs in a single day. The lifetime of an average one-ton truck is four months in the desert. Trucks, thousands of trucks, from gargantuan six-wheelers down to pudgy-nosed half-tonners, move to and from the advanced positions where the tanks are like parallel convoys of purposeful ants carrying petrol, water, food, ammunition, spare parts.

You would have thought all the trucks in the world moved growling and whumping over the bad spots on the road from Matruh toward Salum. But the general said he hadn't enough trucks. He said that if he had two thousand more trucks that very moment he knew where he could use every one of them. He said he could use more tanks, too, and more planes. And he wanted time. Given time, he might acquire the tanks, trucks and planes he needed with which to run the Germans and Italians off the map of North Africa, out of the oil-rich Arab world.

### A Strike for Time

So the general said his first problem was to gain time. You can't manufacture that evanescent stuff called time, but in warfare, as in boxing, you can do things that produce the same effect. In boxing it's called stalling. The general knew the enemy was preparing a large-sized wallop in the western desert. The Germans had collected at least eighty large tanks and 120 armored vehicles of other categories in Libya. The general decided to break up this concentration, inflict losses upon the enemy and force him also to lose some of that valuable commodity called time which the enemy would need for reorganization. Meanwhile, the British could bring in tanks and other equipment for the vital battle of North Africa.

"This morning," the general said, "we hit them hard. Our forces were inferior in numbers but we struck so hard and so often and in so many places that the Jerry didn't know either how strong or how weak we were. Actually, although we struck with inferior forces, we had reserves in sufficient quantity to enable us to hold any gains we might make.

"We want to drive the enemy back toward the west. This will oblige him to keep his air bases at a long distance from the Nile and Suez and make it more difficult for him to bomb these objectives. Also we shall probably do him great damage to material and take many prisoners. Most important of all, however, we will disorganize him and oblige him to stay close to his bases. We have a large and well-armed force in Tobruk which constantly harasses the enemy's rear and which has probably prevented the Jerry from trying to push on into Egypt along the coast."

The general seemed to be in the position of the boxer who knows he's outweighed and must keep jabbing with his left until either his opponent weakens or he himself is sufficiently strong in the late rounds to land a kayo punch. I said so to the general and he said, "I believe you've got it, old boy."

To stall as long as possible while tanks and planes continue to arrive from the United States and England, seemed to be the principal objective of the British when the entire Middle Eastern and Mediterranean situation looked black indeed. For the general air of gloom which prevailed in Cairo—a gloom by the way not shared by men and officers engaged in the actual business of fighting in the desert, on the sea and in the air—there was substantial reason. Greece was gone, Crete was now German. The German military machine had rolled down to the Balkan bridge to the oil of Mosul, and the propaganda music of Berlin lured the vipers of treachery in the Arab world. And yet, despite the gloom and the substantial reasons that rated it, there were some very definite factors in favor of the British.

Least of these but important in a special kind of way was the *khamsin*. That's a Coptic word for "hot wind"

"Oh, I almost forgot to tell you! I was driving downtown this afternoon, and you know how dangerous that corner is at Sixth and Main—"

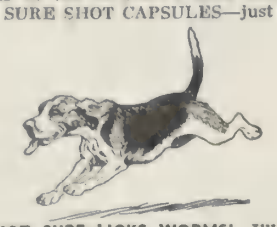
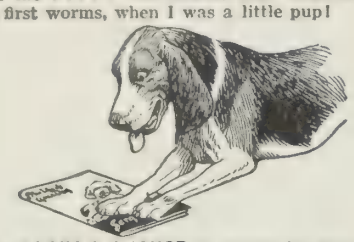
SOOTHE it with GLYCO-THYMOLINE

Give your throat the soothing benefit of effective, Glyco-Thymoline. It helps soothe and helps heal the delicate membranes of the nose and throat which are so often irritated when common colds and ordinary sore throats — one of the most common winter ailments — affect you. Glyco-Thymoline helps relieve discomfort.

Glyco-Thymoline has been the favorite of thousands for 50 years. Many physicians and druggists use and recommend it highly. Be prepared...keep a bottle of Glyco-Thymoline handy...use it frequently.



GLYCO-THYMOLINE



TRY GLYCO-THYMOLINE AS A DAILY MOUTH WASH

**IT'S THE EARLY PILL THAT GETS THE WORMS!** I learned from experience. Let 'em go too far —and it's just too bad! My Boss looked up my symptoms in the Sergeant's DOG BOOK, and gave me SURE SHOT CAPSULES—just in time.

**SURE SHOT SURE LICKS WORMS!** I'll give it credit for my health and good condition. That and the PUPPY CAPSULES that cleaned out my first worms, when I was a little pup!

**DON'T TAKE A CHANCE** on worms in *your* dog. They're always serious—sometimes fatal. Get SURE SHOT or PUPPY CAPSULES to clean them out! At any drug or pet store.

which is an understatement if there ever was one. The khamsin is a wind-whirled fog of burning sand. It produces temperatures of 127 degrees on the desert and makes the insides of the tanks the nearest thing to hell this side of the Styx. When it blows you can't see ahead of you for more than ten yards and it blows three and four days at a time. You sweat and it cakes on you like mud-bath clay.

It finds all the areas between clothing and body and it sifts powderlike under tent walls and through tent flaps into food, water and bedding. Up forward you live on a pint of water a day and so you never wash off the khamsin. But I've talked with hundreds of German and Italian prisoners and I've lived with Tommies and their officers up forward. I'll put my money on the British. They've trained for generations on London fogs and the khamsin is to them "annoying, don'tcha know, but hardly unbearable, old boy."

The British have another advantage. They know themselves to be, man for man, better than the Germans. You don't have to take the word of the British themselves for this although they're willing to talk about it, which means their morale is incomparable. You need only to look at the bronzed, sturdy-legged men at the front or who come to Cairo and Alexandria on leave. They're tough as Texans and plentiful as pine in Oregon. The overwhelming superiority complex of the Briton, which halts just this side of overconfidence, is a tremendous factor in his favor.

### They Look to America

But the British generals know that none of these factors is even worth considering as an advantage unless they have the weapons with which to translate them into enemy defeats. And for these weapons they look to America. Everywhere in the western desert I heard the same old refrain, from generals down to Tommies. We want tanks, tanks and more tanks, they said. And we want planes, planes and more planes. And don't forget the trucks. They were polite about it and they were firm. The Tommies were polite, too, and very blunt. From passing trucks they yelled, "Hey, Yank, how about those tanks?"

Some planes and tanks have arrived from America. Martin bombers went into action against the Germans in the western desert. I saw them bomb Fort Capuzzo at sunset one evening. I saw ten tall columns of black smoke and dust rise against the flat orange sky and then I saw the planes return looking very cocky about it all. While Syria was still Vichy-controlled, Tomahawks ground-strafed and bombed German planes which "accidentally" landed on its airports. Syria is just next door to Palestine and Suez.

The obvious lack of material with which to outshoot the superiorly armed German tanks galled the British command. With adequate material the British could inflict upon the enemy its first major defeat since the war started. The results of such a blow would be of enormous importance. Combined with large-scale air bombing of Germany from England, a crushing defeat of the Germans in the desert might begin the breaking up of German morale and military organization. Moreover, the British Middle Eastern command was charged with the responsibility of maintaining military prestige in the Arab kingdom. This was essential to prevent German inroads into Arabia. But the British command here has been treated as a sort of military stepchild. I found it puzzling that so much attention should have been paid to pouring planes, tanks and guns into Britain while a few were so obviously needed here. I asked the general about it. The general is boss of operations on the western desert front but GHQ didn't want the Germans to know who he is so we'll skip the general's name and save the censor a headache. I asked the general why planes and other weapons weren't being diverted in greater numbers to the Middle East and he replied, "We can't lose the war here. We can always give the Jerry hell with very little. But let's assume the worst. Let's assume that we are obliged to withdraw completely from the southern Mediterranean. That doesn't lose the war with the Germans. It prolongs it. We fight on from Aden, from India, from the interior of Africa. I'm not saying this will happen, mind you. I'm merely pointing out the possibility that might arise if we were suddenly overwhelmed by unpredictable superiority in materials, machines and men.

"But England must stand. We couldn't lose the war here in years but in England it could be technically lost in five minutes. We must make the island safe."

But it also occurred to the general that although England couldn't lose the war here in Egypt she could go a long way toward winning it.

Egyptians don't believe Hitler's propaganda that he doesn't want Egypt. They know very well he wants Egypt, for Egypt is the Nile and there is cotton and tobacco and grain in that river's valley that winds like a green vine northward through the Sudan and the Egyptian desert to flower in many tendrils at the Delta. Egypt is the breadbasket of northeast Africa and Hitler wants it. All but some 200,000 of Egypt's seventeen million people are born, live and die in that valley and they love their land and the measure of freedom they enjoy and they don't want to give up either land or freedom. That's why they've leased their Egypt to Britain for a battlefield.

We left the general and pushed on on the scabby road toward Salum. We found the colonel who commands a battery of 25-pounders just this side of the escarpment under Hellfire Pass, relaxing after a tough day. He sat on a folding chair in front of some planks set on sawhorses in his "drawing room." This was a flat space dug out of the ruins of what might have been an ancient Roman villa buried in the sand in the dunes at the sea's ed cleared space between walls was stretched a from which fluttered st and green rag.

The net was hung fron the whole gave the effec of a Mediterranean sum

The colonel hadn't sha three days. Nobody sh up front. There isn't tim tions. Field glasses hun about his neck. His shir buttoned most of the wa was strictly a utilitaria rose and was as glad t man would be who had anybody but his junior and hadn't talked or tho thing but killing Germ

# "Lest We Forget"

(A WORD TO THE BUYERS OF AMERICA)

*Ours is a brand-built economy.*

*Brands motivate industry; make possible our much vaunted mass production; sustain high living standards, and provide the wealth out of which both our peace-time and war-time needs are supplied.*

*Destroy our Brands, and you dislocate our whole economy.*

Brands aren't just identifying names on sacks, bottles and boxes—they are priceless covenants of Faith between man and man, representing the concern of management and the toil of men, down through the years.

Battleships? Tanks? Airplanes? Battalions? These we must have! But we must also have our Brands—for they, too, are a part of National Defense!

★ ★ ★

We face many perils these days, but few greater than that the Brands we live by may be forgot.

This must not happen!

American Industry has heard the call and put on the uniform of its country. This is just as true of the man in the plant as it is of the man in the front office. Real Americans, on both sides of the pay-window, have enlisted in this crusade against time—they are giving their all.

Some of our factories have switched 100% from peace-time to war-time production. Others have done so only partially. A few, so far as their equipment is concerned, haven't as yet been touched—but even these are feeling the pinch on basic materials.

Meaning that for the duration of this emergency you are going to experience greater and still greater difficulty in obtaining the Brands which you and your family have been accustomed to buy.

★ ★ ★

All right—what are you going to do about it? Are you going to remain loyal to these familiar Brands while they are, so to speak, in uniform—Brands which have faithfully served you for years as guide-posts to value? Or—are you going to forget them?

★ ★ ★

If your boy gave up his job to serve his country, it would be a mighty poor boss who wouldn't say to him: "Don't you worry, Son—your old job will be waiting for you when you get back!"

Well then—is the factory which gives up its job to serve its country entitled to any less consideration?

You are a mighty poor patriot if you don't say, "More power to you! Your old market will be right here waiting for you when you get back!"

Let it never be said that the consumers of America forgot their absent friends in 1941!

**This advertisement is published nation-wide by Collier's**
**in behalf of the factories now engaged in National Defense**

## You Got to Use Diplomacy

Continued from page 64

Grapevine way and see the wild flowers?" she asked. "They say it's awful pretty. The valley's just blue with lupine. I'd like to—"

"Uh-hmm," said Skip absently. He swung the ship's nose northward. His mind was functioning at its terminal velocity. He was due up for a hearing on his application for commission just two days hence; and now Henrietta had told him Tony was going to block his appointment. Tony was a stubborn old mule; but without Tony's okay, the board would hold him exempt, and turn him down. Craftily, he looked at Henrietta. The girl, he reflected, was a one-man intelligence service. Perhaps, if Tony thought—

"Well, anyway," he said carefully, "I can always go to Canada and fly. *They* need pilots."

Henrietta appeared not to have heard him. She loosened her safety belt, drew her graceful limbs up beneath her, and laid her blond head on his shoulder. "I think it would be nice if you'd kiss me," she murmured. She snuggled closer, and looked up persuasively.

He kissed her. And felt a pang of regret that the Air Corps frowned on officers below the grade of first lieutenant being married.

"It's awfully cold in Canada, Skippy," said Henrietta drowsily.

"Huh?" said Skip. Then, "Yes, it is!" And so much for that! he thought triumphantly. She'll tell Tony; and Tony won't write the letter. He'd a lot rather have me in our Army than with the Limies! Needless to say, Skip had not the slightest intention at that time, of joining the R.C.A.F. He was running a bluff. The only factor he failed to take into consideration was that running a bluff on Tony Marlin is like trying to stop a Panzer division with a peashooter. As anyone who has played poker with Tony will tell you.

THE next day was Monday, and Western's vast plant was buzzing with grief.

Skip—who had recently been promoted to the post of assistant production manager—came in at seven-fifteen to find the usual accumulation of foremen's gripe notes stacked in the wire basket on his desk. He sorted them. Kelly, in the machine shop, was short seventeen hundred aluminum alloy "bathtub" castings for the WB-31. "Swell!" muttered Skip, with sarcasm. "Just ducky! . . ." He picked up the phone and called McGee, in Material Procurement.

"Where in hell are those W.A. Five-dash-thirty-three-forty-fives?" he asked. "Kelly's screaming his head off."

"They haven't been shipped," McGee told him. "Foley Casting's got a strike on. I think it's a fine situation when a country like this lets—"

"What've you got in excess stock?"

"Not a thing."

Skip threw one long leg over his chair arm, and eased his lean hips into thinking position. "Got any five-eighths bar?"

"Hell, no. We've had it on order for three months, but I don't know *when* it'll be in."

"That's right. Alum Products have got a strike, too. All God's chillun got strikes." Skip pondered a moment. Then: "Look! That static-test model of the B-61 that's lying out in the north yard. There's a lot of big extrusions in it. Get Pulforth to write me a stock substitution authorizing S.S. 650-24 ST extrusions, and I'll get an order to pull the test job to pieces. We'll let the machine shop hog us out enough fittings to last until Alum gets its strike settled."

McGee sounded dubiou: Gee I don't know. What woul he they caught us using sec lha terial?"

"What they don't kno wor 'em!" said Skip impati ly. stuff's all right. I'll hav t al welled, and then throw it l k in

"But—" protested McC

"Look," said Skip. "T par me. It isn't as if the ma ial okay. It's just a moth-eat old tion that doesn't mean a thing sides, I don't care if they can be in the Army in anoth wee paused. "As a matter of ct speculatively, "I'd just s so canned. Then Tony M in hold up my Air Corps co assig

"How are you making it on asked McGee.

"Not so good," said Sk "To he won't let me go."

"So you're going to et y canned to fool him?"

"It mightn't be a bad i a," sa reflectively.

"HAR-umph!" said a ice fr doorway behind Skip. H lidn to turn. He knew who was you later," he told McG has hung up.

TONY MARLIN was nding doorway. He was abo forty small and stout, had s ha wicked gleam in his eye, a I was a cigar. Tony had been w West craft since the boss set in bu and had come up from t bench exalted position of prod ion m He was tough and irascil ; bu a good man when he sa one. promoted Skip from th pushi material truck to his fir assista in the short period of e teen

The kid was a redhe ed sc and could get into m mess square minute than any dy el plant. But he was good nd he priceless quality—in a emplo doing everything he c as co tiously and thoroughly if he were the boss and the b ness to him. e phone rang. Tony answered it, assed the hand set to Skip. "It's ou," he growled. Skip took it.

ah?" he said. It was Stubby n, down on the control desk in ge subassembly. Stubby was fat, and anxious. Six months before, been a junior clerk in the test de- ent. Now, defense had promoted ut of all proportion to his experi- and he needed help. "Skip," he plaintively. "We just *gotta* have spot-weld assemblies for the ma- -gun shell ejection chutes today. e only got two left; and Remerge we're going to be tied up by to- . Ain't there *nothing* you can do?"

P gave the matter about three sec- ds' thought. The solution came au- tically. "Go see Crying Joe," he "Tell him what you've just told Crying Joe is the foreman of Spot . He comes by his name honestly. has a persecution complex, and s the world is against him. "Go see g Joe," he repeated.

ut, Skip," said Stubby poignantly, w him this morning. He said he's ix times as much work down there can do; and we had a kind of ar- nt. I—"

kay," said Skip. "I'll fix it. Go there after lunch and get your es." He picked up the phone and d Spot Weld.

What's the matter?" asked Tony in.

h, nothing," said Skip. "Stubby n can't get some parts out of Cry- oe."

mph!" said Tony. "I get sick of temperamental foremen. If I had way—"

hey're all temperamental," said , hastily covering the mouthpiece his palm. Into the transmitter, he "Joe? This is Skip Smith. I just d up to find out how your fishing came out last week end. Swell! Halibut, eh? Where did you go? Coronado Island! Gee, that must have been a fine trip. No, I didn't go out this week end. Flew my girl up to the valley instead. Say, Joe, a man of mine named Brown in fuselage-sub needs some of those shell-ejection chutes right away. You know—the fat kid. *Sure*, he needs them. He's not like a lot of the guys. When he says he needs something, he needs it. . . .

"He called you a *bottleneck?* Well, he's just a kid, Joe. Probably a little excited. You've got one of the most efficient units in the plant, Joe. We know that. Look, I'd certainly appreciate it if you'd have a few of those chutes ready right after lunch. Consider it a personal favor. And, by the way, have you any halibut to spare? Swell! I'll drop by and get them after work. My girl will cook them for us. And thanks. I'd like to go out with you next time. You always get the fish. . . . Don't give me that! We take all the tackle in California and nothing happens. You use that old pole of yours and an ungeared reel and catch eight halibut. Say, Joe, you won't forget Brown's chutes, will you? Swell! Be seeing you!" Skip hung up the phone.

"You bubonic rat!" said Tony admiringly. "You could talk an organ-grinder out of his monkey!"

Skip shrugged expansively. He was going great guns. "You have to use tact in these things, sir," he said. "My father always used to say that diplomacy was two thirds of business, and—"

"That still don't settle this Army thing!" said Tony abruptly. "Listen. I've always played ball with you, haven't I?"

Skip nodded. "Sure. Sure you've always played ball with me; but this Army thing isn't just some fool idea I cooked up in a beer joint. I know I'm valuable here; but I think they need me worse."

Tony waved an exasperated hand. "But, kid," he said, "who do you know around here could handle your job? The ones who are smart enough haven't the experience. Or they can't handle men. *Somebody*'s got to get these ships built. It's important. It's the most important thing in the world. And—"

The phone rang again; and Skip picked it up. "Hello?" he said absently.

"You're out of luck on those B-61 test wing-beam extrusions," said McGee's voice. "They hauled them away for scrap."

"Damn!" said Skip.

"Now what?" McGee demanded.

Skip sighed. "Okay," he said. "Send

a man up here with a wooden box. I've got about forty pieces of 24 ST bar stock ditched out in my lower desk drawer. I've been saving it for an emergency; and I guess this is it."

"You know," said McGee, relievedly, "sometimes I'd like to cut your throat. I could have used that stock last week. But thanks. I'll send somebody up right away." He hung up.

"What's the matter?" asked Tony.

Skip told him.

"You see?" said Tony plaintively. "Who else but you would have thought of using those B-61 extrusions? And who else would have ditched out that bar stock? I *can't* let you go, kid."

Skip said, "You've got to. There's nothing anyone can do to stop me."

Tony didn't answer for a moment. There was a sudden hostility in his eyes, and his dead cigar was almost bitten in two. "Kid," he said at last, "when you come up before that board tomorrow, there's going to be a letter there from me, saying that I don't think it's in the best interests of the national defense for you to leave this factory. Which I don't." He leaned forward and pressed the audiphone buzzer. He settled himself in his chair and stared at Skip with smoldering eyes. "So you see your Canada bluff didn't work, my boy. Oh, Henrietta told me about it, all right. You meant her to, didn't you?"

Skip didn't answer, immediately. A slow, stubborn anger was rising in him; and he'd forgotten, for the moment, that this man was probably the best friend he had in the world.

"I'm not bluffing," he said finally. "If you write that letter, and they turn me down, I'll go."

SKIP spent the rest of the day straightening out one mess after another.

Monday, of course, was worse than usual. The departments that had worked over Sunday were screaming for parts they hadn't been able to get. On top of that, the Army had rejected the bomber pilot-seat assembly, Engineering had thrown a stop-work order on Rib Stations 10, 30 and 126 of the new bomber, Estimating was yelling its collective head off about overtime in the Foundry, and Service wanted a replacement transport wing shipped out not later than the following Monday for a ship that had cracked up in Mexico.

Skip plowed steadily into the avalanche. It was all ticklish work—work that required a thorough knowledge of the business, and entailed jollying, bullying or flattering complex and suspicious personalities. To do it well, a man needed a well-developed sense of humor, the quality of leadership, personality, and the ability to make men like him, even while he was bedeviling them. Skip had all these—and in that short day, he did—easily and well—work it would have taken most other men a week to accomplish.

The day ended, at last; but the whistle had blown a good hour before Skip finally got up from his desk, sighed, filed a welter of the day's unfinished grief in the row of neat pigeonholes he carried in the back of his mind and went home.

When he got to his one-cylinder apartment, he showered, shaved, and called Henrietta Marlin.

"This is Skip," he said, somewhat unnecessarily.

Henrietta's voice was cool: "Yes, Skip. What is it?"

"A friend of mine's given me a couple of nice, fresh halibut. Suppose I fillet them and bring them over for you to fry?"

"I—I don't think you'd better, Skip. Not tonight."

"Why not? Got another date?"

"No. I haven't another date!" Henrietta was indignant . . . "Skip, what on earth did you say to Tony, this afternoon?"

Skip told her. "And," he added, "I meant it, too."

"I think you're acting like a couple of children, Skip. Both of you. But he's absolutely right. You've no business to leave the plant at a time like this."

"He's *not* right!" flared Skip.

"He is, too," said Henrietta. "I think this whole thing's as silly as it can be. What do you want to do? Go away where we can't ever see each other? . . ." Her voice took on an acid tinge: "That's it! You want to go somewhere and swagger around impressing women with your nasty old uniform, instead of staying home and tending to your business."

"Oh, for gosh sakes!" said Skip, in exasperation. "Can't you understand, either? I'm just trying to do what I think is right."

"Men are all the same," said Henrietta, icily.

Skip sighed. "Well, if I can't come over there, will you meet me for a show?"

"No, I won't!" said Henrietta, and hung up.

Skip scratched his head. "Now what in hell brought that on?" he said.

AT NINE-THIRTY next morning, Skip put in his appearance at the Air Corps office in Long Beach. At nine-forty he left the building with his face red and his fists clenched; and thirty minutes later—record time for the distance he had covered—he swirled his roadster into Western's parking lot, clamped on his brakes, got out and stalked through the main entrance of the plant to Tony's office.

Tony looked up from his desk. Then he smiled around his cigar. "So they turned you down?"

"You ought to know," said Skip, through his teeth.

Tony nodded. "And now," he said jovially, "I suppose you'll be leaving for Canada. Or was that just a bluff?"

Skip was churning inside like a cream separator. "It wasn't a bluff," he said quietly. "I'm leaving the end of the week."

Tony laughed. Unpleasantly. "You may be leaving, but you ain't going to do any flying for the Canadians. I've fixed that, too. The boss has a lot of English stuff in the shop. Do you think they'd hire you if he told them not to?"

Skip gave him a thin smile. "They don't ask pilots many questions up there. So long as I can fly, they won't care whether my name is Smith, or—Franklin D. Roosevelt."

Tony's face turned purple. "You can't do that!" he shouted.

"Why not?" asked Skip. "I'll stick around until the end of the week, of course. There're a few things I want to clean up, and you'll want me to break in a new man. After that, I'm leaving."

Skip waited for the explosion, but it didn't come. Tony sat back in his chair and examined him thoughtfully with his shrewd, shrewd eyes. And he continued thus to examine him, for the better part of a minute.

Skip was uneasy. He wondered suddenly if Tony had thought of some new way of keeping him from going.

Therefore, it was with some degree of relief that he heard Tony say—rather mildly, "Okay, kid. You win. I'll fix it for you to get your pay check. At noon today."

"Noon today?" said Skip. "Oh, no. I want to stay until the end of the week, to clear things up."

Tony shook his head. "No, kid. You're leaving now. Right now."

"But Tony," said Skip. "I don't want to—"

Tony's calm departed. His face flaming, he leaned across the desk and shook a stumpy index finger directly under Skip's nose. "I've been holding back," he roared. "But I won't much longer. Get out of here before I do murder! Get out! . . ."

aded north. Just short of Petaluma, he snapped his fingers, said, "Damn!" and set about composing another telegram to Tony. Later, he sent it. It said: "Be sure chief draftsman's office keeps constant overtime on bomber wing rib changes. Advise. H. S. Smith."

He stopped for the night in Port Orford, Oregon. He was trying desperately to enjoy himself but the ruck of unfinished business at the Western Aircraft Corporation continued to haunt him. . . . After he had eaten his dinner, he went down to the telegraph office. He was entirely certain that there would be some kind of message waiting for him, but there wasn't. By this time, he had thought of half a hundred things that Tony should know; and, in addition, of one thing that he, Skip, *had* to know.

DOWN in Metal Fittings was a jig that had been used to bore landing-gear forks on the "A" series model of the bomber. Skip had arranged with Tooling to have the jig corrected for the "B" series fork as soon as that overworked department could get around to it; and in the meantime, he had marked all the fork work orders, "Drill to 'A' Series Jig as per Instructions H. S. Smith." The jig hadn't been used in over a month, and had passed temporarily out of his mind. Now, suddenly, he remembered that there was an order for 200 "B" series forks working in Metal Fittings; and the thought made his hair rise. For, if the jig had been corrected to the "B" series change and was used as an "A" jig "as per Instructions H. S. Smith" there were going to be 200 "B" series forks that wouldn't be worth throwing on the junk heap.

Skip sent Tony the following wire: "Please wire Port Angeles exact present vertical dimension between center line lower holes and center upper hole Bomber' LG fork drill jig now metal fittings crib. Urgent. Important."

Whereafter, he drove on to Port Angeles, where he was to board the ferry that would take him across Juan de Fuca Strait to Victoria. . . .

He had been certain that there would be a message in Port Angeles, and when the operator told him there wasn't, he didn't at first believe her. When he was convinced, he did a little figurative hair tearing, and sent Tony another wire: "Did you get wire re LG fork jig? Must have answer. Vital."

And waited three hours for a reply that didn't come. He sent another one,

**"Next time you want bridgework identified don't come through my waiting room!"**

★ YOU'LL FIND HIM EVERYWHERE

He's in the Army . . . in the Navy . . . in the Air Force

You'll find him rolling across the countryside in speedy new tanks. Or helping direct field maneuvers from Signal Corps' communication trailers. Or racing through the water in trim, swift fighting craft.

You'll find him in camps and shipyards, trucks and factory production lines and munitions plants . . . in fact, wherever democracy's great line of defense extends. For "he" is the familiar little Masonite* Man—symbol of Presdwood* products, "The Wonder Woods of a Thousand Uses."

•

**Trade-mark registered U. S. Pat. Office. "Masonite" identifies all products marketed by Masonite Corporation. Copyright 1941, Masonite Corporation, Chicago.*

Presdwoods are the wood-fibre hardboards that have captured defense-minded America by storm. Masonite Corporation places the needs of national defense first. In some cases, consequently, normal consumer requirements cannot be met as readily as before.

Strong, durable and light in weight, Presdwoods resist moisture, take extremes of temperature, and will not split, chip, splinter or crack when properly applied.

That's why they are used in floors and walls of barracks. In airplane dies. In shell cartons. In army trucks. As concrete forms at naval bases. For cantonments in Canada and Australia, and for reconstruction work in England. And in countless other ways.

**"Now, Mr. Weatherby—or would you prefer that I, too, call you 'Boopsy'?"**

later, that said: "Must have answer fork jig. Answer immediately."

After which he repaired to a hotel and spent the night tossing and turning on a rather hard bed, with ruined landing-gear forks, in nightmare quantities, floating before his eyes. . . . There was still no message in the morning; and Skip stood in the middle of the telegraph office and frightened a rather pretty message clerk half out of her wits with highly vocal and imprecatory ravings anent a certain Tony Marlin.

HE HAD plenty of time to cool off on his twelve-hundred-mile drive back to Western City. He made it in a little over three days, after first wiring Jenkins, the boss of Metal Fittings, under no circumstances to drill any bomber landing-gear forks. When he left Port Angeles, he was firmly of the conviction that he would stay at Western—Tony or no Tony—only long enough to clean things up; but by the time he got home, he was thoroughly chastened by the realization that it was within Tony's power to forbid him the plant entirely. Moreover, he was beginning to realize that Tony'd been right; and that his place was not in the cockpit of a fighter plane, but behind his desk.

So, on the third morning at seven when he showed the watchman his identification badge—which he had not turned in—and walked up to his desk, he was mainly concerned with how to get Tony to give him his job back—thinking, meanwhile, that the chances of Tony's doing that were rather remote. He was managing a rather sad sort of whistle; but he felt like a man walking to the gallows.

Miss Wayne was already in; and she turned pale when she saw him. "Why, Mr. Smith—" She glanced apprehensively at the door.

"Hello," said Skip. "Is the boss still sore?"

"Yes, indeed," said Miss Wayne, anxiously. "You'd better leave before he gets in. I don't know what—"

"Who's got my job?" asked Skip.

"Why, nobody. He's been doing the work himself. He tried out Mr. Kelton, and Mr. Kraus, but they couldn't—Oh, Mr. Smith, he's been terrible these last few days."

There was a crash behind him, as the door flew violently open, and Tony strode savagely into the office. His face was the color of the glowing tip of his cigar, and he was breathing smoke like a volcano. When he saw Sk

### M ionaires and Moochers

ewarts, who really put show- into marriage, were their own mers not many months back. an R.A.F. flier in the last war. Hollywood afterward and a lyrics writer for film musi- s. Stewart was Miss Mildred singer who played in many ey tired of Hollywood, and one ley said to Mildred: "Let's go s!" They staged their own and liked it so much they de- re was a demand for pleasant, weddings among people who, couldn't afford the usual ex- who disliked the formality of own marriage.

then," says Stewart, "we have eddings for about fifteen hundred couples. Sometimes they drive in alone; sometimes in big parties. We've had a millionaire, scores of wealthy people, lots of film stars, of course—and lots of in-love kids who hardly had enough money to get a license and pay the minister. We got them married, anyway. Sometimes we scoop the nickels and dimes out of the Wishing Well and give them to hard-up youngsters."

Mr. and Mrs. Stewart could eat and drink for next to nothing, if they wished, most of the newlyweds inviting them around to the wedding banquet. About half the people who get married write letters of thanks and often send photographs of themselves. Mrs. Robert Preston, wife of the movie actor, who was married at The Hitching Post, liked it so well she wrote that she had decided to celebrate a wedding anniversary every week. The Stewarts thought this quite a tribute.

### And the Money Rolls In

Most to-be-marrieds are nervous, and nearly all take it seriously, the Stewarts say. When a big, strong man, weighing two hundred pounds and standing six feet two, comes along they always get out the smelling salts, because it's two to one he's going to faint in the middle of the ceremony. The kids in overalls and slacks are usually the most sincere; the folks who turn up in Tuxedos and evening gowns are sometimes pretty nonchalant.

When the wedding parlors—the Blue Bird, the Wee Kirk o' the Heather, The Hitching Post and the rest—first started many of the local 'Vegans looked down their noses and talked about commercialization. But now it's quite the thing for home-town folks to drive out on Route 91 and be married. . . . Besides, twenty thousand couples a year, spending around $20 apiece, adds up to $400,000 a year.

Just as your correspondent and his bride, clutching their second marriage certificate, walked down the Bridal Path, a car roared up the highway and stopped outside The Hitching Post. A boy and a pretty girl got out, grinning: "Well, we're back, Mr. Stewart, to be married all over again."

"Swell," said Mr. Stewart. "Let's see—is this the second time?"

"No," they chorused. "Don't you remember—it's the third. And it won't be the last, either!"

Over in Scotland, Gretna Green hung its head in shame. After all, Gretna just married them once.

**VAR breeds great stories. Here is one—the adventures of an Englishman who tried to shepherd ix children, waifs of the blitzkrieg, through the ength of fallen France to the free soil of England**

## PIED PIPER

**BY NEVIL SHUTE**

EGINS IN NEXT WEEK'S COLLIER'S

"I'd like to shake hands with the guy who invented this!"

"I sure would!

"Because the man who invented the Comptometer did me a personal favor, and I'd like to say 'Thanks!'

"You see, I *operate* a Model M Comptometer, on a lot of different kinds of adding and calculating, and whoever invented it had *me* in mind — because he built *operator-protection* right into the mechanism!

"For example, the Controlled-Key safeguard. This morning, I was getting out some statistical work. It was rush stuff, and I was batting it out faster than usual (which is some fast, on a Comptometer!), and naturally, being human, I 'fumbled' a key stroke. Right away, that Controlled-Key business locked the keyboard — and before you could say 'Felt & Tarrant' I'd corrected the error and resumed the work at the point of error!

"That's just one of the ways the Comptometer protects me against operating errors — not to mention the no-glare answer dials, and the elimination of answer-dial zeros unless they're part of the actual answer, which makes it easier to *read* answers correctly!

"What I chiefly like about that Comptometer, though, is this: IT'S SO DOGGONE EASY TO OPERATE! There's no crank to slow me down — it's *key-operated*. There's no distracting tape to mess with. The key stroke's light and silent. It's a *pleasure* to breeze through a stack of figure work with that machine — and I can't help it if the Boss gives the credit for speed and accuracy to *me* instead of to the Comptometer!

"Of course, I don't expect to be operating a Comptometer all my life. There's plenty of opportunity, in a job like this, to learn the business and make real progress. But even if I get an executive position and a bay window, I won't forget what it says in those Comptometer advertisements:

"'*For practical information on proved ways to reduce figure-work time and cost, telephone your local Comptometer Co. office . . . or write direct to Felt & Tarrant Mfg. Co., 1714 N. Paulina St., Chicago, Ill.*'"

THOMAS H. BECK — Editorial Director

## Certificate of Character

STRANGELY enough, Gerald P. Nye's attempted arraignment of the motion-picture industry is not without its benefits. It has produced a healthy reaction against racial and religious intolerance. Hollywood's real offense was not prowar propaganda but anti-Hitler films. Even though freedom of speech, freedom of religion and freedom of the arts might be junked in the process, the motion-picture industry was to be blackjacked into an attitude more favorable to the Fuehrer. The Land of Liberty, a stirring presentation of America's own epic struggle, and without a reference to the second World War, was actually included in the indictment.

In all of which Senator Nye is running true to form. Although five years have passed since he served as chairman of a committee to investigate the munitions industry, his report still stands as an all-time low for unfairness and distortion. Even German writers, in all their bitterness of defeat, did not go as far in justifying their country's war practices or in full-throated denunciation of the United States as base and perjured. Our entrance into the war, according to the gentleman from North Dakota, was due entirely to the insensate greed of munitions makers and international bankers. Self-defense, freedom of the seas and idealism had nothing to do with it. At every point America's motives were mean and sordid.

"The growth of a vested interest in Allied success on the part of great commercial and financial interests," declared the report, "eliminated any such thing as neutrality on the part of the United States—and led Wilson to follow a course from which he dared not deviate—a course which spelled, inevitably, ruthless submarine warfare."

England's blockade of Germany was branded as "illegal," and we took no measures to relax it because Wilson discovered that he could not use them "without endangering this country's financial and commercial interests which were dependent upon Allied success." Having shown America up as utterly ignoble, Senator Nye then went on to plead the Kaiser's entire justification.

"In desperation and *as her only chance of success,* Germany did, on January 31, 1917, what this government knew all through the fall of 1916 that she would be driven to do. She announced unrestricted submarine warfare. For its resumption, America's complete lack of neutrality was largely responsible." If that warfare was ruthless, he argued, it was because "materials of murder were being supplied in unlimited quantities" to the Allies by the United States.

Over and over with infinite relish he stressed the "selfish and materialistic ambitions of the Allies," slyly implying the unselfishness and idealism of the Germans. "The Treaty of Versailles, the victors' treaty of revenge," shouted the report, "disclosed boldly to the world that the Allies had been fighting an imperialistic war." Never a word about Pan-Germanism or the treaty of Brest-Litovsk. By way of climaxing his incredible performance in Germany's behalf, Senator Nye denounced Woodrow Wilson as a convicted liar.

Many eminent men replied to Senator Nye at the time, but two in particular answered irrefutably. "When we began the actual mobilization of material for our participation in the World War," testified Newton D. Baker, "there simply were no American munitions makers. General Bliss went to England in January, 1918, and continued an agreement made in June, 1917, whereby the British and French supplied us with cannon out of their surpluses in exchange for raw materials . . . We bought in Canada a large supply of Ross rifles, an obsolete arm, and used leftovers of the Spanish war, but still gave some of our recruits initial training with broomsticks . . . We bought revolvers and pistols of every sort, and ransacked the museums of city police departments for confiscated "concealed weapons," but at the end of the war we were still short of required supply."

Count Bernstorff, Germany's ambassador, also bore this significant testimony in his memoirs: "The definite decision to declare unrestricted U-boat warfare was taken January 9 . . . After all that had passed, I could only regard this news as a declaration of war against the United States, and, moreover, such as put us in the wrong, since it stultified Wilson's efforts in the direction of peace, which had been made without concurrence. . . . I did all I could to get the Berlin decision withdrawn or at least postponed, but I received the reply that any postponement was impossible on technical grounds."

As for the attack on Woodrow Wilson, aged Carter Glass, beating the desk until his hand spurted blood, raged against men "insensible to every consideration of decency."

Ignoring these answers, Senator Nye leaped upon the lecture platform, and repeated his charges throughout the length a the country. Asked later on the if he received pay for his speech stiffly. "Yes, I do accept *honora* sidering everything, the motion-p try, instead of anger, is entitled t the Nye indictment as a certificat

## Comeback in North Dak

FIVE years ago, the impressio that a wide swath of the U Wheat Belt was on its way to jo the Dust Bowl. "The plow th plains" was thought to have do rable job of work, with drought r the mopping up. There seemed for it but to rush plans for mov tling hundreds of thousands of N Dakota, Nebraska, Kansas a farmers elsewhere.

It is now a supreme pleasure these stories of the decline and area of the United States were mature report of Mark Twain' gerated. From Governor John Dakota we received the followin

Beginning with 1937, and throu succeeding years, there was a slow provement. . . . # GRAND STYLE...GREAT POWER... NEW DRIVING ECONOMY!

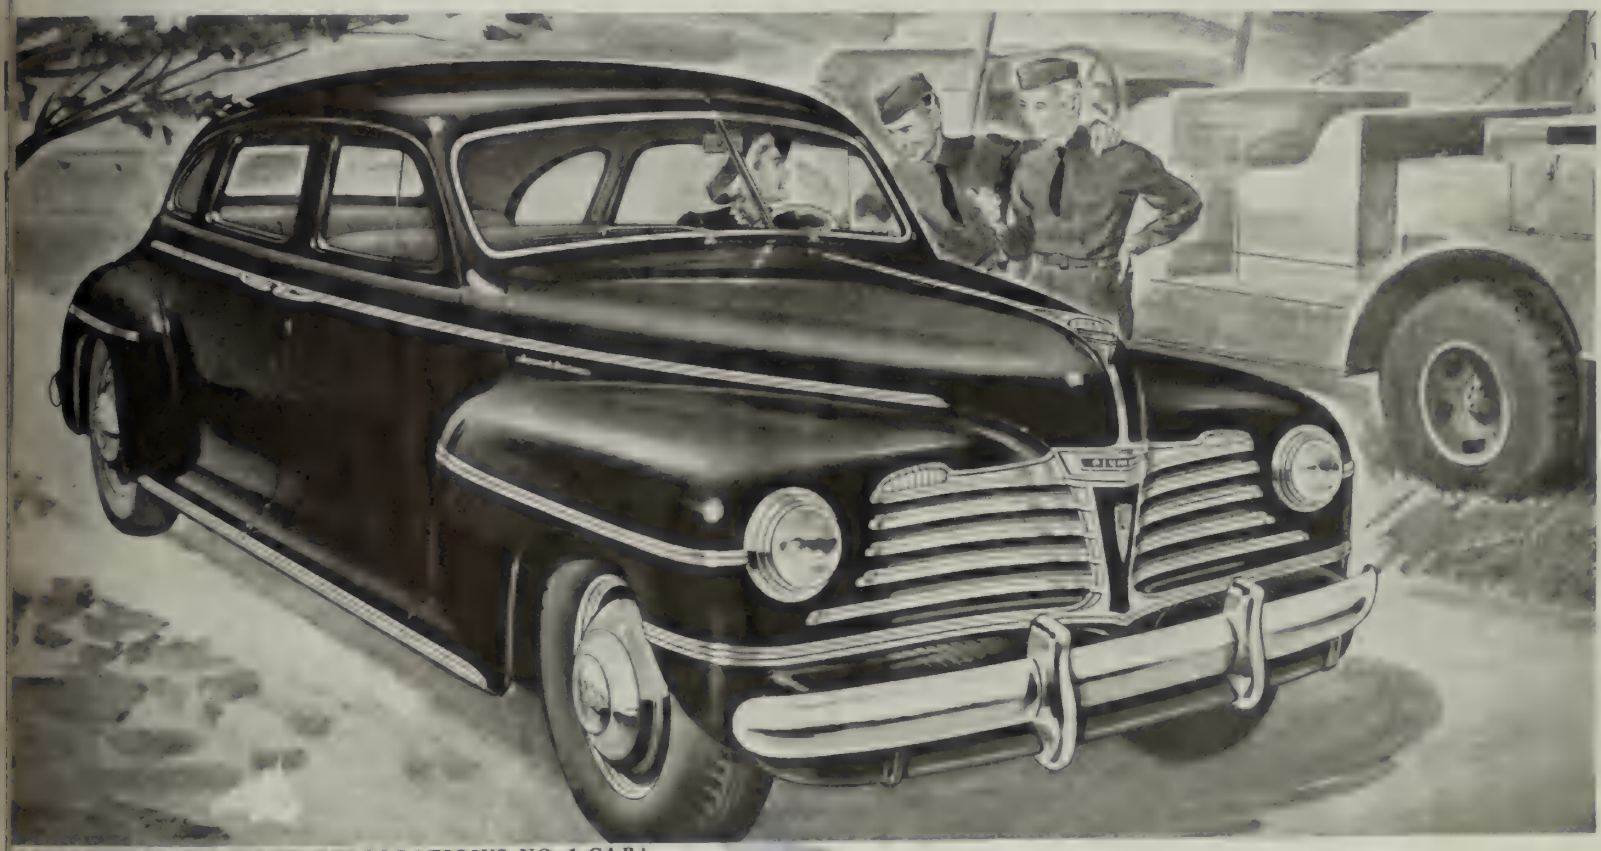
## Plymouth's Finest is low-slung, long, wide. The engine is a full 95 horsepower, with new economy. It's your Wise Buy!

HERE IS A CAR with a great future built right into it. It's a long-time investment in style, power, economy and all-around driving satisfaction—*Plymouth's Finest!*

This Plymouth is exceptionally wide and roomy...brilliant in style and in performance. Its new lowness contributes to a smooth, gentle ride and road-hugging stability. You enjoy a fine new driving "feel"...new safety and handling ease.

Plymouth's Finest gives you great added power—now a full 95 H.P. It is smooth, quiet power at all speeds and in all gears. And you enjoy new economy: Plymouth's big engine breezes along with fewer revolutions per mile ...saves gas...adds to engine life. In all normal driving, you use but a fraction of its power.

This is definitely Plymouth's Finest. It is outstanding in quality...exceptional in economy...with all the great features that have made Plymouth famous as the best-engineered low-priced car. See and drive this brilliant car at your Plymouth dealer's. All prices and specifications subject to change without notice. Plymouth Division of Chrysler Corporation.



HEAR MAJOR BOWES, THURSDAYS, C.B.S. NETWORK

### [ WHY THIS PLYMOUTH IS YOUR WISE INVESTMENT ]

ADVANCED ENGINEERING and precision manufacturing have earned for Plymouth a world-wide reputation as the low-priced car most like high-priced cars... the car that stands up best!

YOU GET THE BENEFIT of many important money-saving features... an Oil Bath Air Cleaner, Oil Filter, Coil Springs, Floating Power engine mountings, self-lubricating Oilite Bearings, Superfinished engine parts...and many more!

PLYMOUTH'S FINEST protects your motoring investment. It is styled to stay beautiful...engineered to stay new! It is a car designed to give you long-time driving satisfaction with lasting economy.

PLYMOUTH IS CHRYSLER CORPORATION'S NO. 1 CAR!

# ANY WEEK

UNLESS we're more mistaken than usual, quite a number of us are using this war as an alibi for unstable characters that would be on emotional, breast-beating benders in the Garden of Eden. Being in a philosophic mood one afternoon we discussed this theory pretty exhaustively with one of our political heroes, the Honorable Pat V. James of Hot Coffee, Mississippi. Mr. James became practical as usual, saying that a great deal of benefit might come of observing the Negro of the deep South. And to illustrate he called to an old man named Jasper Tilghman Tucker or, in short, Uncle Jazz. Uncle Jazz is, or was, a hundred and one years old and a hundred and one descendants acknowledged him. "Jazz," roared Mr. James, "tell this Yankee gentleman how you come to live to this powerful ripe old age." Uncle Jazz put down his bag of groceries, hitched up his pants and said: "Well, suh, Mr. James and gentlemen, when I works I works hard. When I sits, I sits loose. When I thinks, I goes to sleep."

WE ARE receiving almost daily reports from Mr. Gurney Williams, conductor of that deservedly popular department of this magazine, Our New Army. Mr. Williams has been in Arkansas and thereabouts inspecting Army maneuvers. His guide, interpreter and tactical adviser is the widely celebrated Colonel Dudley Virginius Haddock, late of the Louisiana Tigers. Actually, Colonel Haddock is a native of Noah's, Arkansas, a hamlet properly proud of the colonel and which prefers to be known as Noah's Ark. Mr. Williams reports that he was met by Colonel Haddock in Little Rock. The colonel was in full regimentals, equipped down to the last detail including a four-foot collapsible telescope and a homemade parachute. He was drinking a bottle of Squirt ("It's in the Public Eye") and denying to an admiring audience that there was an atom of similarity between the Charge of the Light Brigade, Pickett's charge at Gettysburg and Colonel Theodore Roosevelt's gallop up San Juan Hill. The colonel (Haddock) was sitting loose. After an exchange of greetings with Mr. Williams, Colonel Haddock assured Mr. Williams that he was in capable hands. "Sir," said the colonel, "in Cuba, I had the honor of totin' General William Rufus Shafter, net weight three hundred and seventy-two pounds, to some of his most convincin' victories."

IN SPITE of the proverbial vigilance of the editors of this magazine, errors manage somehow to creep into these pages occasionally. We've just been notified of one by Mr. Roger Conant, Curator at the Philadelphia Zoological Garden. Recently Kyle Crichton wrote, in his article Monkeyshines, that there were but two Indian rhinoceroses in the United States. Actually there are four. We don't know how you feel about this but it bucks us up no end. One of the playful creatures overlooked by Mr. Crichton in his survey is in Mr. Conant's zoo—"a particularly fine female." The other, says Mr. Conant, is in the National Zoo in Washington, D. C. This one was probably out when Mr. Crichton called, doubtless attending one of Mayor LaGuardia's Civilian Defense-Public Morale committee meetings.

AMONG surprising things we have learned lately is that the wily Mr. Moto, our favorite Jap rascal who has done so well by his creator, John P. Marquand, is now doing his rascalling for the benefit of the United China Relief Fund. Mr. Marquand has told us that he is donating the book royalties of his Mr. Moto stories, including Mercator Island, which you finished in last week's Collier's, to that worthy cause. Mr. Marquand is chairman of the United China Relief writers' committee.

AT THE present moment we are greatly pleased to read letters from a number of British soldiers who are unanimously pleased with Collier's, and, frankly, we are not at all surprised. Sergeant J. Baldwin-Seales, Sergeants' Mess, R.A.F., Leeming, Northallerton, Yorks, England, and Gunner Chignall, 58 Castellan Avenue, Gildea Park, Essex, both of whom are good-looking and intelligent and would be glad to receive letters from good-looking and intelligent American young women, are rather general in their comments. Sergeant Baldwin-Seales in particular, speaks of the national popularity of our Quentin Reynolds. We gather that were a popularity poll to be taken in England, the King, the Queen, Mr. Churchill and Mr. Reynolds would furnish a photograph finish with Mr. Reynolds the favorite with the bookies. Corporal Cyril William St. Brave, Tillsbury Service Flats, Hyacinth Gardens, East Fleury, Herts (try that on your new stationery), rebukes us in a gentlemanly manner for wondering why the Tommy is so anxious to correspond with American girls and what's happened to Vi, Gwen, Pam, Jill and Sibyl. There are really two reasons, says Corporal St. Brave. First "there's the natural desire of many of us, who naturally have had little occasion to think much about America, to learn something more about the American Way of Life. The second," he goes on, ' appreciated. There ar in the WAAF, ATS, W and so many more wor tories that they have and oomph. When yo side with a girl all da much left by nightfal girls to be a little dep men but there is noth dent than a girl in a moment a girl gets i there's no holding her.'

RECENTLY we pause Connecticut, to listen low who wasn't satisfi things are going. It w esting. He was just at responsibility for the guys make war but us to fight 'em") when a our sleeve. "Listen," outfit's moving south day and I'm a day ove Do you know anybo whether my outfit w here so's I can pick 'em but volunteered to hel ain't that I'm afraid t ing for being AWOL "but the Army's treat I don't want them to t preciate it." We said being sure everythin right. "No, sir," he s about this and hope through here so's I ca don't want anybody t President Roosevelt."

HE DIDN'T. Anyw trucks filled with sold He got in one of the should have told you of these letters we' English soldiers beg about our new Army— of training material, officers, threats of English went through through yet. And E at war, with Jerry on l and the chow occasi banquetish. Frank Ge covering the Near E and India for us, is says that he can give quite a few British s glad to swap places lads who think that States is a little mo bear.

# Wing Talk

OUR bright young men in training for Army and Navy wings are usually regarded as high-spirited, fearless and courageous youngsters who typify the spirit of America when the country needs defenders. Because we see so little of it, we have come to feel that they are entirely void of sentiment. That is why the following few confiding lines from an Army flying cadet are passed on as significant:

"Flying at night receives my vote for the biggest thrill yet. I wish you could have been up with me. It was so beautiful. It was like being in the center of a huge ball with the stars scattered about the surface. You get a kind of godlike feeling."

COMMERCIAL aircraft repair bases, flight training schools and mechanic training schools operate upon authority of the C.A.A. and hold an "air agency certificate." This certificate constitutes the government's stamp of approval of the courses and methods used by the operators and is regarded by the holders as their most valuable asset. The only purpose of such government certification is in the interest of safety, and when an "air agency" oversteps the bounds it is through. Since this is so seldom, it's really news when the C.A.A. revokes such certificate as it has in the case of a California primary flying school operator "for permitting operation of an aircraft while said aircraft was not in condition for safe operation." The government has put him out of business at a time when his business is at its best and thereby contributed to the saving of lives not only at this particular "agency" but at others where, under pressure of the times, the management might become a wee bit careless.

LONG the symbol of safe harbor, the lowly wind sock has been the subject of repeated attacks by people seeking a better wind-direction indicator for airports. At some places these new devices have won out over the cl mounted on a mast which te coming pilot the way the w But the sock still flies defi the administration building o est and most modern of air the Washington National Ai

*Simplest rule for helping America save rubber*

# WHEN YOU BUY A NEW TIRE, GET A GOOD ONE

DAY the nation must save ubber for defense—and people must save money efense taxes.

s why you best serve your try and your own interests uying the longest-wearing you can get—*because they rubber more slowly and cost ss per mile!*

The tire equipment that affords the most mileage and safety per dollar today is the world standard Goodyear first-line "G-3" All-Weather tire, in combination with the Goodyear LifeGuard—the reserve tire within a tube that takes the danger out of blowouts.

Tests prove the present "G-3" All-Weather averages THOUSANDS of miles longer tread wear than previous models of this famed long-distance tire—thanks to tougher *new* rubber compounds.

And that's only your first plus. Its new improved Supertwist cord body is so much stronger, so much more resistant to abuse, many are now retreading "G-3" All-Weathers and nearly doubling their mileage life.

You can do this safely with LifeGuards inside your tires,

because no matter how thin you wear them, the LifeGuard eliminates any hazard from blowouts.

Experience proves you can't buy better tire equipment to save rubber, to save money, or to save your life. The "G-3" All-Weather and the LifeGuard are the super-mileage quality combination for those who want to aid defense—at lowest cost per mile.

All-Weather, LifeGuard, Supertwist—T.M.'s The Goodyear Tire & Rubber Company

MORE PEOPLE RIDE ON GOODYEAR TIRES THAN ON ANY OTHER KIND

# The breaks are all against you when you've got the double O

YOUR common sense tells you that, ability being the same, any smart employer will choose a girl with a pleasant, agreeable breath and a bright, arresting smile rather than one who has the "Double O" (Offensive-looking teeth: Offensive breath.)

Perhaps you've grown careless about this double offense. If you're guilty, better wake up and do something about it if you want others to like you and if you want to improve your chance of getting ahead in business.

Begin now with this wonderfully easy and simply delightful double precaution against "Double O" and use it every night and morning.

For the teeth, the new Listerine Tooth Paste. Here's a dentifrice made specially to help bring out the natural sparkle, the clean, flashing brilliance of your smile.

***New Tooth Paste . . . New Formula***

The new Listerine Tooth Paste is an entirely new formula that attacks cloudy, loose deposits, goes to work on dull, dingy teeth. Many say they can actually see its beautifying effects in a surprisingly short time.

And for the breath—Listerine, of course. It halts food fermentation in the mouth, a frequent cause of halitosis.

***Delightful Daily Double***

If you want to get ahead, don't neglect the "Double O." Start in today with the delightful Listerine Daily Double: the new Listerine Tooth Paste for a clean, attractive smile, and Listerine Antiseptic for a more appealing breath.

# The Canary and White Damp

OF THE MANY HAZARDS men face in mining coal, one of the greatest is a deadly gas known among miners as White Damp: odorless and tasteless and invisible.

Always, after mine fires and explosions, some quantity of this gas is sure to be present. The quantity might be negligible, or it might be fatal.

But before the invention of modern, mechanical detectors, the miner, by himself, could never tell.

So against the threat of that unpredictable time when a fatal quantity of the gas was present, wise miners used to return to those dangerous tunnels carrying a canary in a cage.

They knew that the canary, reacting far more rapidly than man, would be first to feel the drowsiness that marks the beginning of White Damp's grip on its victims. And for these men that drowsing fluff of yellow feathers was an urgent flag of danger, a signal to go quickly, taking their little lookout (which quickly recuperated) with them.

Those of us who work above the ground are apt to figure, without thinking, that we have no need for any friendly signaller to warn us of danger at hand.

Quite carelessly, we figure that danger doesn't strike often enough for that.

Actually, statistics show that on the basis of present averages, one of us in every ten will suffer a serious injury before the year is out. And while it is impossible to know when or where misfortune will strike, there is still a way of defending ourselves from the full weight of the blow.

Thousands of careful men and wo this defense in having adequate ance in The Travelers. Such insu pensive, yet if you are hurt, acc will pay your doctor's and hospi take care of the butcher, the ba stick maker, and the landlord wh up. Otherwise these bills might l that they could keep you in debt f

# The Pied Piper

## By Nevil Shute

**Beginning a prophetic novel of World War II. The story of a gallant general whose army, too young to carry arms, raced Hitler's panzers to the English Channel**

e is John Sidney Howard, d is a member of my club in on. I came in for dinner that at eight o'clock, tired after ay f conferences about my as- th war. He was just entering a ad of me, a tall and rather ed an of about seventy, a lit- ee on his feet. He tripped or mat as he went in and d orward; the hall porter ot and caught him by the el-

er down at the mat and poked hi umbrella. "Damned thing my oe," he said. "Thank you, G ing old, I suppose."
ms smiled. "Several of the en ave caught their foot there ," he said. "I was speaking te rd about it only the other

The old man said, "Well, speak to him again and go on speaking till he has it put right. One of these days you'll have me falling dead at your feet. You wouldn't like that to happen—eh?" He smiled quizzically.

The porter said, "No, sir. We shouldn't like that to happen."

The old man moved away. I had been waiting behind him while this was going on because the porter had my letters. He gave them to me at the wicket, and I looked them through. "Who was that?" I asked idly.

He said, "That was Mr. Howard, sir. He has been a member here for a great many years."

"Has he?" I said. "I don't remember seeing him about."

The man said, "He has been abroad for the last few months, I think, sir. But he seems to have aged a great deal since he came back. Getting rather frail now, I'm afraid."

I went into the club, slung my gas mask onto a peg, unbuckled my revolver belt and hung it up, and crowned the lot with my cap. I strolled over to the tape and studied the latest news. It was neither good nor bad. Our air force was still knocking hell out of the Ruhr; Rumania was still desperately bickering with her neighbors. The news was as it had been for three months, since France was overrun.

I went and had my dinner. Then I went upstairs to the smoking room and stopped before a table littered with periodicals. With idle interest I turned over a printed list of members. Howard, I saw, had joined the club in 1896. Master and man, then, had been rubbing shoulders all their lives.

I took a couple of illustrated weeklies, and ordered coffee. Then I crossed the room to where the two most comfortable chairs in my club stand side by side, and prepared to spend an hour of idleness before returning to my flat. In a few minutes there was a step beside me and Howard lowered his long body into the other chair. A boy, unasked, brought him coffee and brandy.

Presently he spoke. He said quietly, "It really is a most extraordinary thing that you can't get a decent cup of coffee in this country. Even in a club like this they can't make coffee."

I laid down my paper. If the old man wanted to talk to me, I had no great objection. All day I had been working with my eyes in my old-fashioned office, reading reports and writing dockets. It would be good to take off my spectacles for a little time and unfocus my eyes. I was very tired.

**Some of the people you will meet in this fascinating story . . .**

**Major Diessen, of the Gestapo**

**Willem, from Holland**

**Rose and Pierre, from France**

I felt in my pocket for my spectacle case. I said, "A chap who deals in coffee once told me that ground coffee won't keep in our climate. It's the humidity, or something."

"Ground coffee goes off in any climate," he said dogmatically. "You never get a proper cup of coffee if you buy it like that. You have to buy the beans and grind it just before you make it. But that's what they won't do."

We went on talking about coffee and chicory and things like that for a time; and I lay quietly in my chair, with the fatigue soaking out of me. It was a perfect godsend to find somebody who could talk of other things besides the war. The war seemed to have passed by this lean old man. He turned for his interests to milder topics.

PRESENTLY we were talking about fishing. He was an ardent fisherman, and I have fished a little.

When he spoke of fishing and of France, it put me in mind of an experience of my own. "I saw some chaps in France doing a damn' funny sort of fly fishing," I said. "They had a great bamboo pole about twenty-five feet long with the line tied on the end of it—no reel. They used wet flies, and trailed them about in rough waters."

He smiled. "That's right," he said. "That's how they do it. Where did you see them fishing like that?"

"Near Gex," I said. "Practically in Switzerland."

He smiled reflectively. "I know that country very well—very well indeed," he said. "Saint-Claude. Do you know Saint-Claude?"

I shook my head. "I don't know the Jura. That's somewhere over by Morez, isn't it?"

"Yes—not very far from Morez." He was silent for a few moments; we rested together in that quiet room. Presently he said, "I wanted to try that wet-fly fishing in those streams this summer. It's not bad fun, you know. You have to know where the fish go for their food. It's not just a matter of dabbing the flies about anywhere. You've got to place them just as carefully as a dry fly."

"Strategy," I said.

"That's the word. The strategy is really just the same."

There was another of those comfortable pauses. Presently I said, "It'll be some time before we can go fishing out there again." So it was I who turned the conversation to the war. It's difficult to keep off the subject.

He said, "Yes—it's a very great pity. I had to come away before the water was fit to fish. It's not much good out there before the very end of May. Before then the water is all muddy and the rivers are running very full—the thawing snows, you know. Later than that, in August, there's apt to be very little water to fish in, and it gets too hot. The middle of June is the best time."

I turned my head. "You went out there this year?" Because the end of May that he had spoken of so casually was the time when the Germans had been pouring into France through Holland and Belgium, when we had been retreating on Dunkirk and when the French were being driven back to Paris and beyond. It didn't seem to be a terribly good time for an old man to have gone fishing in the middle of France.

He said, "I went out there in April. I meant to stay for the whole of the summer, but I had to come away."

I stared at him, smiling a little. "Have any difficulty in getting home?"

"No," he said. "Not really."

As he spoke, there was a measured *crump . . . crump . . . crump . . . crump* as a stick of four fell, possibly a mile away. The very solid building swayed a little, and the floors and windows creaked. We waited, tense and still. Then came the undulating wail of the sirens, and the sharp crack of gunfire from the park. The raid was on again.

"Damn and blast," I said. "What do we do now?"

The old man smiled patiently. "I'm going to stay where I am."

There was good sense in that. It's silly to be a hero to evade discomfort, but there were three very solid floors above us. We talked about it, as one does, studying the ceiling and wondering whether it would support the weight of the roof. Our reflections did not stir us from our chairs.

A young waiter came into the room, carrying a torch and with a tin hat in his hand.

He said, "The shelter is in the basement, through the buttery door, sir."

Howard said, "Do we have to go there?"

"Not unless you wish to."

I said, "Are you going down there, Andrews?"

"No, sir. I'm on duty, in case of incendiary bombs, and that."

"Well," I said, "get on and do whatever you've got to do. Then, when you've got a minute to spare, bring me a glass of Marsala. But go and do your job first."

Howard said, "I think that's a very good idea. You can bring me a glass of Marsala, too—between the incendiary bombs. You'll find me sitting here."

"Very good, sir."

HE WENT away, and we relaxed again. It was half past ten. The waiter had turned out all the lights except for the one reading lamp behind our heads, so that we sat there in a little pool of soft yellow light in the great shadowy room. Outside, the traffic noises, little enough in London at that time, were practically stilled. A few police whistles shrilled in the distance and a car went by at a high speed; then silence closed down upon the long length of Pall Mall, but for some gunfire in the distance.

Presently Andrews brought the Marsala. When he had gone away, Howard lifted up his glass and held it to the light. Then he remarked, "Well, there are less comfortable ways of passing a raid."

I smiled. "That's true enough." And then I turned my head. "You said you were in France when all this started up. Did you come in for many air raids there?"

He put his glass down, seven-eighths full. "Not real raids. There was some bombing and machine gunning of the roads, but nothing very terrible."

He spoke so quietly about it that it took a little time for me to realize what he had said. But then I ventured:

"It was a bit optimistic to go to France for a quiet fishing holiday, in April of this year."

"Well, I suppose it was," he replied thoughtfully. "But I wanted to go."

He said he had been very restless, that he had suffered from an urge, an imperious need to get aw and do something differe little hesitant about his wanting to get away so b he told me that he hadn't get a job to do in the war

They wouldn't have hir I imagine because he wa seventy years old.

Carl Swalzsman and Frank Rodecker go down 30 feet and wrestle a bull lobster to the surface to demonstrate the technique of skin diving

WALL-KERLEE PUBLIC LIBRARY

**Not only fun but it also
gives a swell fish din-
ner if you're good. Skin
diving means going down
to get the big tough
ones in their own element
and bringing them back
to you the hard way**

WE ARE eating chop suey and drinking tea in Mr. Champagne's joint, The Tropics, in Hermosa [Beach], California, when who should walk in but these four sons of Neptune, Frank Rodecker, Captain Hal Messenger, "Whisky" Swalzsman, and Carl "Beer" Swalzsman. The latter, Mrs. Swalzsman's boys are brothers who once had given names, but nobody remembers what they were, although Mother Swalzsman herself thinks she called her big boys Ralph and Carl when they were little polliwogs.

It seems, also, that any time you get four skin divers together in a joint, you are in for an evening of it, skin diving being a brand-new sport that lends itself not only to thrilling undersea adventure, but to tall tales of watery battles with octopuses, bull lobsters, stingarees, sharks, sheepsheads and what not.

A skin diver, as Mr. Rodecker explains, is a fellow who pulls on a pair of fancy swimming trunks, some rubber fins, a diving mask and canvas gloves, then fills his lungs with air and noses down into the ocean looking for two-fisted trouble. Four years ago, he says, the only genuine skin divers in the land were the forty-odd members of the Watermen's Association, composed of beachcombers and lifeguards. Now there are 5,000 skin divers in southern California alone, and Captain Hal Messenger chimes in to add that adventurous swimmers are forming skin divers' clubs on the Gulf and Atlantic coasts and inland waters, too.

About this time Mr. Chaser Swalzsman comes to life behind that fuzz of kinky whiskers he grew to delight some movie director. The watermen, he explains, beachcomb and life-save from one sea motion picture to another. When a big sea shooting is on, they all have jobs as extras. Chaser's specialty is firing the oil-soaked schooner at the windup of the sea battle, or falling off a 50-foot cliff as he did in God's Country and the Woman. Watermen are handy to have around when you're shooting a marine movie. Once in Northwest Passage, Chaser and another waterman pulled 160 extras from the icy Payette River in Idaho in a bit of drama not in the script. But what Mr. Chaser Swalzsman likes most about living is skin diving.

"How would you like to come down to the Hot Spot or the Ghost Pier or Portuguese Bend in the morning and we'll dive for a few lobsters?" he asks. "Then you can see how skin diving is done."

Up and down the coast line each skin diver has his favorite spots, like the ol' swimmin' hole of yore, where the abalones are thickest on the ocean floor or the lobsters most plentiful. The Hot Spot, explains Chaser, is one so named because there is a bluff behind it where game wardens can watch to see that you don't take undersized lobsters, or oversize either, by mistake. The Ghost Pier is another hunting ground named for the stubs of an old pier wrecked by surging tides, and Portuguese Bend is pretty hot stuff, too, because there are dark undersea caves into which you can swim thirty feet or so, taking care meantime not to forget your way out. The caves are full of crusty old lobsters, scrappy eels, and now and then an octopus.

"An octopus is all right, only I don't like the way he stares at you,"

# Our New Army

### TEXAS

TO FIND an Army flying school, take a pin, aim it at a map of Texas, and jab. Chances are you won't miss. Blessed with favorable flying weather and plenty of wide-open spaces, the Lone Star State is playing a lead role in the 30,000-pilots-a-year program. Prior to July 1, 1939, the Army's 500-a-year pilots were trained within a twenty-mile radius of San Antonio. Cadets got their primary and basic instruction at Randolph Field (the West Point of the Air) and finished with advanced training at Kelly Field, the Army's oldest flying school. It took a man a year to cover the complete works.

Today there are ten primary, five basic and five advanced schools in Texas alone. Three of the basic, two advanced and most primary schools have been going full blast for months. Recently opened were Ellington Field and Victoria, both advanced schools. Others are building. In addition, Brooks Field has a special observers course, Kelly instructs Air Corps navigators, Randolph teaches aviation medicine, and a flexible gunnery school at Harlingen, in the Rio Grande Valley, will get under way any day now.

Aside from the expansion, the Air Corps has put over its defense speed-up by cutting training periods to ten weeks for each stage and turning primary instruction over to approved civilian schools. This stage, in which nearly forty-five per cent of all cadets washed out, has been the bottleneck of the training program.

With everything whizzing, the map makers and Air Corps public-relations men are going quietly bats trying to keep hep to the number and current status of the mushrooming fields. Also, flying cadets stationed near San Antonio have acquired a new social problem. Time was when it was no trick at all for a cadet—whose eight months at Randolph and four at Kelly gave him plenty of time to get acquainted—to woo and win a San Antonio mouse. Now, since he spends only twenty weeks as a cadet in the Alamo city territory, the cadet has to be a fast worker to grab himself a wife. Not vital to defense but sort of interesting.

### OKLAHOMA

FORT SILL, Lawton. It's strictly an unofficial version, but they tell us that reveille whistles here have been blowing at 5:30, instead of at 5:00, ever since a Replacement Center C.O. decided to get up with the boys every morning and grab himself a brisk horseback ride before chow. Seems the C.O. regarded the practically predawn hour of 5:00 as a pretty unholy time for a man to have to bestir himself, and orders were issued granting Sill recruits an extra half-hour of shut-eye. The boys don't care whether or not the story is official; all they know is, the reveille whistles don't sound quite so horrible as they used to.

THE latest example of soldier ingenuity has cropped out at Sill: A shirt-collar holder-upper made out of two paper clips. What you do is break a paper clip in two and straighten out the long half so that you have a piece of wire two-and-a-half inches long with a little hook at one end. Slip this gadget, hook first, into the seam of the G-I collar. The hook holds the stiffener in place and keeps the collar neat but not gaudy. No Patent Applied For.

WILL ROGERS AIR BASE, Oklahoma City. Attired in shorts, five very pretty Oklahoma City girls showed up here with a commercial photographer to make a series of pictures commemorating the official dedication of the field. While the photographer made arrangements to shoot the pictures, the girls stood around outside the press office and, well, sir, you can imagine what a shambles might have ensued were it not for the fact that soldier discipline is good. Example: Down the road toward the girls marched members of the 48th Bombardment Group, in charge of a young sergeant. Eyes bulged and strained but not a man turned his head. The sergeant, though, was only human. Just as the group pulled abreast of the pulchritude the N.C.O. barked, "Eyes left!" More vim, more vigor went into the execution of that order than has been reported since the Battle of Bull Run.

**A group of the Marines' potent new amphibian tractors roll onto an Atlantic Ocean beach in a ship-to-shore demonstration of their seawort**

**The driver's cab of a Roebling Alligator. This one is an earlier model. When traveling in water the tractor is propelled by the duralumin treads**

**With a party of Marine officers aboard, the amphibian and plows through a Florida mangrove thicket during a**

THE Navy has come a long way since last February's maneuvers in the Caribbean, when it successfully "defended" the sea-air approaches to the Panama Canal by rooting the "enemy" out of the bases in which he had established himself on the islands of Vieques and Culebra, in the Lesser Antilles.

The Marine Brigade that stormed the islands' beaches was landed in cutters and the Higgins-Eureka boats, equipped with shielded propellers. When the Navy and the Marines tackle the next problem somewhere in the Caribbean this winter, landing parties will come ashore in the Navy's new Roebling "Alligator," the amazing amphibian tractor invented by Donald Roebling, one of the fourth generation of New Jersey's bridge-building dynasty. In fact, there are whispers in the sacrosanct cloisters of the American High Command that Mr. Roebling's amphibians may be potent weapons when the democracies launch their all-out offensive to drive Axis legions from occupied Europe.

Strangely enough, the Roebling Alligator was conceived as a sinew in the arm of mercy. The thirty-three-year-old son of John Augustus Roebling and grandson of the builder of the Brooklyn Bridge is a year-round resident of Clearwater on Florida's west coast. He turned his inventive genius to amphibians when a hurricane swept the Everglades in the fall of 1933. Hundreds were marooned. Roebling *pere* ordered the staff of his Florida estate to assist in rescue work.

Unless you've seen the Everglades after a Grade-A hurricane has swept the swamps, you can't imagine the difficulties that confronted the Roebling rescue squad. Terrific winds and torrential rains had strewn the area with toppled trees, tangled undergrowth and vast lakes, with water depths up to six and eight feet. So the workmen asked the boss to send them a vehicle capable of operating on land or water, preferably something with a caterpillar tractor tread. The elder Roebling shopped around but couldn't find anything approaching these specifications. Donald happened to be in New Jersey at the time and father asked son to build a practical amphibian, just in case some future hurricane might tear up the Everglades.

Young Roebling went back to Florida and began experimenting with toy models. He designed and tested hulls and tractor treads, power plants and gear ratios. After six tedious years of ceaseless experimentation, trial and error, the first of a long line of Roebling Alligators rolled out of the machine shop on the inventor's Clearwater estate.

The weird contraption measured twenty feet in length by eight feet in width. Caterpillar tractors, with the treads fitted with six-inch duralumin blades, were rotated along the longitudinal sides by a stock model Mercury V-8 automobile motor. Afloat, the Alligator developed a speed of ten miles an hour. But the astounding ease with which the amphibian waddled out of the water, crossed beaches and me

Going und assumption that it was s of a President to *form* and opinion, he approached the iftly, and directly. On April ays after America's declara- , he created the Committee nformation. Naming me as n, he took a full two hours crowded day to specify my l duties and define the ob- hoped to have attained. s the Wilson way. Deter- mined not to let the White House become a bottleneck, his delegations of authority were complete. No man was ever more patient or precise in explaining the nature of the job, but after that the appointee was expected to stand on his own two feet. If there were blunders or failure, you heard from Woodrow Wilson; if things went well, he did not want to hear from you.

The President assured me that I would have absolute control of everything that related to public information. Division of authority, in his judgment, made for confusion, conflict and failure. Cluttering up the landscape with boards and commissions, he admitted, was an almost inescapable part of the democratic process, but under his war powers he hoped to simplify things. There was to be one boss for each job, given full power and held to equally full responsibility.

This made clear, the President said that no national emergency could be met successfully without national unity. Public opinion, regardless of what admirals and generals might say to the contrary, was a major force, and as much a part of national defense as guns, planes and man power. The morale of the civilian population was a nation's second line, and unless the people stood shoulder to shoulder, ready for every service and every sacrifice, the courage of the front line was bound to be weakened. My job, therefore, was to "mobilize the *mind* of America."

### Faith That Begot Faith

Mr. Wilson explained that national unity came only with national understanding. Before a sound, steadfast public opinion could be formed, it had to be *informed*. Not manipulated, not tricked and not wheedled, but given all the facts in the case. A free people were not children to be humored, cajoled or lollipopped with half-truths for fear that whole truths might frighten them. The way to get faith was to have faith.

The war was not the war of the Administration, nor the private enterprise of the General Staff, but the grim business of a whole people, and every man, woman and child must be given a feeling of *partnership*. There were, of course, military matters that needed to be kept secret, but in the great majority of cases concealments proceeded from bureaucratic distrust of democratic common sense. He urged a free and uninterrupted flow of news on construction and production, the good along with the bad!

Certain phrases I wrote down verbatim and used afterward in my own official statements with his permission: "We do not need less criticism in time of war, but more. . . . It is to be hoped that criticism will be constructive, but

# Child Prodigy

## By Leon Ware

**It's wonderful what a fast and willing horse can do to speed the course of true love**

THERE is something about being in love and sitting beside the girl at a counter that lifts a chocolate soda out of the minors and right smack into the major leagues. Happy Jim Marlowe, whose previous big moment had been at 4:44 P.M., March 1, 1941, when he found himself with a ten-dollar win ticket on Bay View in the Santa Anita Handicap, twirled his spoon, sucked on his straw and sighed. Beside him, Sweet Marjorie turned her head and lifted her long, silken eyelashes until her blue eyes glowed up at him like tiny Bermuda pools. His heart did nip-ups in his throat—and his ears, delicately tuned to catch the faintest of hoofbeats on the tanbark, heard the distant tinkling of silver wedding bells.

For a man who was known to argue with his city editor at the drop of a hat, secure in the knowledge that if he did lose his job there was no little woman to demand explanations, Happy Jim's open-minded attitude toward assuming responsibilities was astonishing. To his colleagues on the Pasadena Call, the development had come as little less than a shock.

There were times when his co-workers, men with wives, children and mortgages, looked on Happy Jim Marlowe with a furtive envy. Handsome and genial, his casual manner of living gave them a sly, vicarious pleasure. To see him now, in this dazed and mumbling state; to watch him breaking up on the rocks of love—it was demoralizing.

The affair had slipped into high gear practically unnoticed. She worked in the bank and he on the newspaper and between their respective buildings was the Sweet Shop. Dozens of times they had downed their sodas, sitting side by side at the counter. Only once, however, had they been the sole customers and Benny, the soda jerk, had introduced them:

"Marjorie Curtis—Happy Jim Marlowe."

And the next night they happened to meet in the lobby of the United Artists and went in together. They groaned together over the picture and walked out on it together and had a sandwich together and—well, there you were. It was something like a thunderbolt: rolling, gathering, until WHAM! you're back on your heels and the earth is shaking.

The next day he denied himself a hat he didn't need and she set down an item as a credit instead of the debit it should have been. It was as bad as that.

It was along about the third week of the Santa Anita meeting when Marjorie admitted, over her chocolate soda, that this wonderful thing might have come about sooner, except that she had heard stories.

Air rattled up Happy Jim's straw.

"It was strictly self-defense," he maintained. "He was coming at me with a knife and I . . ."

"Silly." She squeezed his arm. "I'm talking about horses."

"Oh."

The racing form in his side pocket burned like a hot coal.

He grasped her slender fingers. "Why, it's a perfectly harmless pastime, Sweet Marjorie. Standing in all that fresh air —helping to improve the breed . . ." His voice trailed off and he cocked one eye at her. "You don't care for it?"

She shook her head. You could see she was going to be nice about it, but firm. "It costs a lot of money, doesn't it?"

He beamed. "Why, Marjorie—I'm the guy who had ten bucks on Bay View in the big handicap last year!"

"How did you come out on the season?"

By no stretch of imagination could a profit be made of a three-hundred-and-ten-dollar loss. "Well," he admitted, "I was behind, a little."

"A hundred dollars?"

He nodded quickly. He would settle for that, any day.

"Don't you see, dear," she explained gently, "a hundred dollars would buy . . ." she blushed beautifully, ". . . a davenport!"

He looked into her eyes and was lost. He lifted the slender fingers to his eager lips. "I'll give it up," he said.

Love is the only way you could possibly explain it.

WITH the major decisions made, the only thing left was to meet her family.

"Not that it will make any difference," Marjorie said, "but you should know them. They'll love you, too. And I know you'll understand *them*."

They were driving down Los Robles toward her home in South Pasadena. Jim cocked his head.

"What's the matter with them?"

"Nothing's the *matter* with them," she retorted. "It's just that my young brother Roger is a so-called child prodigy, and people seem to think the family's a little queer just because of that."

"*Roger* Curtis!" Happy Jim's photographic mind reviewed back issues of the Call. He remembered a high, bulging forehead, thick, dark-rimmed glasses—a little squirt with bright, piercing eyes. "We ran a column on him a couple of months ago. Fourteen years old and made a laughingstock of the mathematics department at Harvard. Taking advanced work at Cal Tech now, right?"

"There wasn't any call for the tongue-in-the-cheek attitude," Marjorie said. "Roger's a genius."

"I didn't write it," Happy Jim said. "I ducked that one. Child prodigies give me—" he caught himself. "Well, I'm not very good at that sort of thing."

"You will try to understand them, dear?"

"Sweet Marjorie," he said fervently, "I love them already."

TO LEARN to love Mrs. Curtis would be easy, he decided at once. She was a plump little woman who moved fussily about the house, straightening things up, clucking to herself like a contented Plymouth Rock hen. She was genuinely disappointed when Happy Jim wouldn't stay to dinner but made him promise to come the next night. Then Marjorie led him upstairs to meet Roger. She paused before a closed door, hesitated, then rapped gently.

"Roger?" There was no immediate answer and she smiled at Jim. "Sometimes he works so hard he doesn't hear very well." She knocked again.

"Coming . . . coming . . ." The treble voice was brittle with irritation. The door opened and Roger, his hair on end, blinked at them through his glasses. "What is it?" he piped.

"It's Mr. Marlowe," Marjorie said. "I want you to meet him."

Happy Jim found himself shaking hands with a dead fish. "Solved the fourth dimension yet?" he asked pleasantly.

"No, but I'm—" Roger broke off and peered at Jim. "You're trying to kid me," he decided.

"Marjorie!" Mrs. Curtis called. "Telephone!"

Marjorie patted Jim's arm. "I'll be right back."

"Sure thing," Jim said. He was interested in an elaborate apparatus of rods and wheels he could see in Roger's room. "What's that?"

"That's my current project," Roger explained, following Jim across the room. "It's a model of the structure of the atom. It's about half done. Have you got any gum with you?"

"Probably." Jim began to remove things from his pockets. "You know, kid," he said, "that gadget somehow doesn't seem quite healthy. Why aren't you out playing football?"

"I don't like football." Roger's bright eyes hungered for gum. Like a spectator at a tennis match his head followed the articles Happy Jim removed from his pockets. There was a bad moment. "What's that?"

Figures on the racing form had aroused his concentrated interest. Happy Jim slipped the sheet back into his pocket and glanced quickly toward the hall door.

"Don' be snoopy," he said.

A LIMP stick of gum came up with his key chain. When he handed it to Roger he discovered that the miracle boy had somehow managed to retrieve the racing form.

"Figures fascinate me," Roger piped. "Explain it."

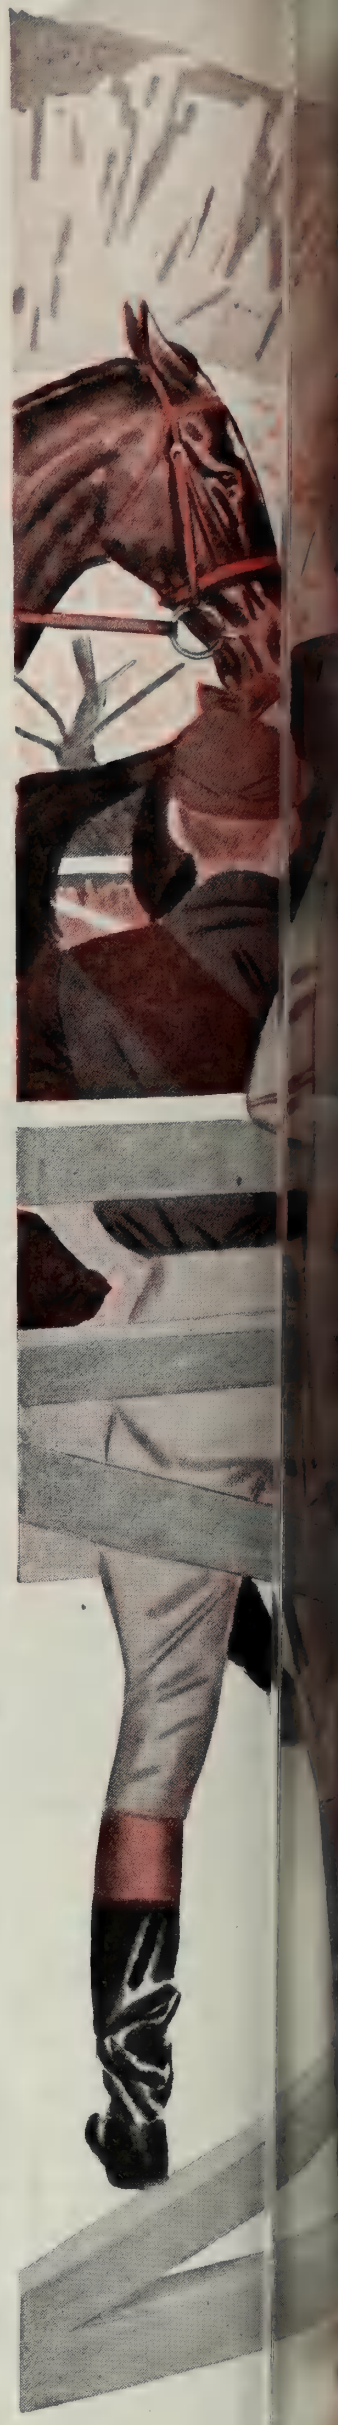
After a brisk little struggle, Happy Jim gave up. Roger had put a death grip on the paper.

"Theoretically," said Jim, keeping one eye on the hall door, "it tells which horse will win which race tomorrow at Santa Anita." He smiled at Roger. "Give it back. That's a good boy."

"Really?" Roger snapped on the desk light and put his forehead close to the printed page.

"That's the theory," Jim said. "It's not quite an exact science, yet."

"It isn't?" A new fire burned behind the horn-rimmed glasses. "But with data like this, it *should* be exact!"



"You can't squeeze a horse into a formula," Jim retorted.

Roger's look was reproachful. "You can do anything with mathematics. I'll keep this. All right?"

Sweet Marjorie's light step sounded on the stairs.

"Okay—but for Pete's sakes—get it out of sight. Quick!"

Roger hesitated and then, as Marjorie appeared in the doorway, dropped

**Happy Jim felt a wild surge of excitement. "Marjorie," he cried, "we've been wasting time. We've been small potatoes. Let's put all on the next race and get the house"**

the form sheet into an opened drawer. Happy Jim sighed and wiped his brow.

"Warm, for January," he said with a phony smile.

HAPPY JIM'S typewriter was rattling cheerfully the next afternoon, when the phone rang.

He grabbed up the receiver.

"Marlowe up," he grunted.

"Say, you know this form sheet?" There was no mistaking the squeak at the other end of the wire. It was the wonder boy.

"Yeah?" Jim's heart stopped. "Nobody caught . . . I mean you didn't leave it around, did you?"

"Why, it's wonderful!" Roger's scientific mind ignored Jim's question. "I've had splendid fun figuring out who would win the races. It's great sport."

"People have been starving to death with those things for years now," Happy Jim mentioned caustically.

"Strange," observed Roger. "All you have to do is to interpret the figures correctly. What I called about was this: can I get these papers, every day?"

"Any newsstand. Any time."

"Good," said Roger. "It will be a fine exercise every morning. The mind is a muscle, you know."

Happy Jim held the receiver off and leered at it. Then he glanced up at the clock. It was three-thirty. The third race had been run and it was almost time to meet Sweet Marjorie for their customary mid-afternoon snack. "Who'd you pick in the first three races?" he asked indulgently.

"Lakfire, Bill's Baby and Honky Tonk," Roger replied.

"Honky Tonk," Jim explained gently, "has the heart of a rabbit and the speed of a snail. He's as cheap as his name. Stick to differential calculus, Roger; it'll make your mother happier."

He hung up, ripped his copy from the roller and headed toward the city desk, pausing to scratch the tanned bald head of the sports editor.

"Fluffy," he asked, "how do the ponies run?"

THE sports editor moved his head from under the offensive fingers, found a scribbled report and squinted at it.

"Lakfire in the first paid $4.20; Bill's Baby won the second—$7.60, and a goat named Honky Tonk took the third to the tune of $136.80."

Happy Jim paled. "Gee!" He raced back to his phone and dialed a number frantically.

"Roger? Roger, tell me: did you say Honky Tonk?"

"Why, yes," Roger piped. "I don't see how he could fail. According to my figures he's bound to . . ."

"You may be right. Who else did you pick today?"

"Well, Sunshine Lady will win the sixth race."

"Sunshine Lady, the sixth." Jim jotted it down on the face of his copy. "What about the fourth, fifth, seventh and eighth?"

"I don't know," Roger said. "I didn't work them out."

"Look . . ." Perspiration stood out on Jim's brow. "Sometime tonight I want a talk with you, Roger—alone."

He hung up. He looked at the clock, thought again of Marjorie waiting for him in the Sweet Shop, went through a brisk, momentary skirmish with his

# The Case for Innocence

## By Frederick Nebel

ILLUSTRATED BY ELMORE BROWN

**Young Doctor Wayne plays a dangerous game, and learns much about his wife that he had never thought of before**

I WAS sitting at a table on the Avenida Rio Branca in Rio drinking the thick black coffee of the country and waiting for Gil Luiz Ribeiro to return. You know how it is when someone says he'll be back in five or ten minutes and you have waited forty and no sign of him. Gil Luiz Ribeiro had gone with Jorge Pinto to an office around the corner somewhere, and all I knew about this Pinto was that he was one of those aquamarine salesmen who haunt all the steamship piers and the big hotels.

You never know when something is going wrong. The brief case I was holding on my knees beneath the table belonged to Gil. When he had risen to go with Jorge Pinto he had picked it up from the table, as if to take it with him; but on second thought he had turned and handed it to me, saying, "No reason why I should drag this around. Keep it, will you, Henry?"

But nothing of the casualness with which he spoke was anywhere in his face. The long, thin scar on his jaw, which he had picked up a few years before chasing the Italians at Guadalajara, flashed in the sunlight as he swung around and went off with Jorge Pinto. I didn't know what they had whispered about, and I had no idea where the office around the corner was located or who owned it.

The Avenida Rio Branca is a very wide and handsome and busy thoroughfare paved in a pattern of dark and light stones, with fine trees ranged down the center where the taxicabs park. The man in the good-looking brown gabardine suit leaning against one of the cabs had passed by on the sidewalk, looked in my direction, walked to the next block and crossed the avenue, to reappear a couple of minutes later beside the cab. He had engaged it, but was waiting. And if he hadn't looked at me the way he did, his eyes straying among the tables, lighting on me, then sweeping away, I shouldn't have thought anything of it.

You decide on a thing, finally; if you believe it, it's so. I was certain that Gil Luiz Ribeiro would not come back to drink coffee with me that afternoon. His brief case was unlocked, for he had been on the point of showing me some interesting documents, which he had brought from São Paulo, when Jorge Pinto came up to the table. I was able, without removing the brief case from my knees, to get the contents out and these I placed on top of the brief case.

THERE were railway and airplane timetables, a dozen or so travel brochures—Gil was ostensibly a tourist agent—and a heavy, fat manila envelope with a rubber band around it. I slipped this into the waistband of my trousers and tightened my belt a notch to hold it there. Then I pushed the timetables and the brochures back into the brief case, snapped it shut and stood up and beckoned to the waiter. The man in the brown gabardine suit opened the taxicab door but did not get in directly.

"My friend," I said to the waiter, "has been detained apparently, and I have an appointment. When he returns give him this brief case and ask him to telephone me."

I walked several blocks, entered a cab and drove back up the

THE NARRATIVE OF PHILIP BLAKE
(Covering letter received with manuscript)

"Dear M. Poirot:

"I am fulfilling my promise and herewith find enclosed an account of the events relating to the death of Amyas Crale. After such a lapse of time I am bound to point out that my memories may not be strictly accurate, but I have put down what occurred to the best of my recollection.

"Yours truly,
"PHILIP BLAKE."

NOTES ON PROGRESS OF EVENTS LEADING UP TO MURDER OF AMYAS CRALE ON 18TH SEPT. 19——

My friendship with deceased dates back to a very early period. His home and mine were next door to each other in the country and our families were friends. Amyas Crale was a little over two years older than I was. We played together as boys, in the holidays, though we were not at the same school.

From the point of view of my long knowledge of the man I feel myself particularly qualified to testify as to his character and general outlook on life. And I will say this straightaway—to anyone who knew Amyas Crale well, the notion of his committing suicide is quite ridiculous. Crale would *never* have taken his own life. He was far too fond of living! The contention of the defense at the trial that Crale was obsessed by conscience, and took poison in a fit of remorse is utterly absurd.

Crale, I should say, had very little conscience, and certainly not a morbid one. Moreover, he and his wife were on bad terms and I don't think he would have had any undue scruples about breaking up what was, to him, a very unsatisfactory married life. He was prepared to look after her financial welfare and that of the child of the marriage, and I am sure would have done so generously. He was a very generous man, and altogether a warmhearted and lovable person. Not only was he a great painter, but he was also a man whose friends were devoted to him. As far as I know he had no enemies.

I had also known Caroline Crale for many years. I knew her before her marriage, when she used to come and stay at Alderbury. She was then a somewhat neurotic girl, subject to uncontrollable outbursts of temper, not without attraction, but unquestionably a difficult person to live with.

She showed her devotion to Amyas almost immediately. He, I think, was not really very much in love with her. But they were frequently thrown together. She was, as I say, attractive, and they eventually became engaged. Crale's friends were apprehensive about the marriage, as they felt that Caroline was quite unsuited to him.

This caused a certain amount of strain in the first few years between Crale's wife and Crale's friends, but Amyas was a loyal friend and was not disposed to give up his old friends at the bidding of his wife. After a few years he and I were on the same old terms and I was a frequent visitor at Alderbury. I may add that I stood godfather to the little girl, Carla. This proves, I think, that Amyas considered me his best friend, and it gives me authority to speak for a man who can no longer speak for himself.

TO COME to the actual events of which I have been asked to write, I arrived down at Alderbury (so I see by an old diary) five days before the crime. That is, on September 13th. I was conscious at once of a certain tension in the atmosphere. There was also staying in the house Miss Elsa Greer, whom Amyas was painting at the time.

It was the first time I had seen Miss Greer in the flesh, but I had been aware of her existence for some time. Amyas had raved about her to me a month previously. He had met, he said, a marvelous girl. He talked about her so enthusiastically that I said to him jokingly, "Be careful, old boy, or you'll be losing your head again." He told me not to be a bloody fool. He was painting the girl; he'd no personal interest in her. I said, "Tell that to the marines! I've heard you say that before." He

# One-Night Tour

## By Joe Bookman

**Play and ride on—no sleep, no girls, no fun. That's all there is on a tour of one-night stands, except the music. But that's sweet and hot and always good**

BOBBY BYRNE, a youthful trombonist and band leader, pointed to a huge red National Trailways bus. "That," he said, "is where we will eat, dress, live and amuse ourselves for six weeks. We'll also try to sleep. I can't sleep in busses." He shrugged his shoulders. "If a swing band could make out playing location jobs in hotels or theaters all the time it would be swell. It's hitting the road, five or six months every year, that beats you down to the socks."

The bus, a mastodon of automobiles, was parked by the back entrance of the Saylor's Lake Pavilion, near Stroudsburg, Pennsylvania, in the Pocono Mountains. "Of course," continued Maestro Byrne, smiling sadly, "we have to make time on this job. The reason we will have to stick pretty close to the bus is that we're booked for one long jump after another. I guess we can consider ourselves lucky we have no really inhuman jumps on the program. The union recently passed a law saying no band can travel more than 400 miles a day between engagements. Too many accidents on the road."

He didn't go into details, but I remembered that Hal Kemp had been killed in California a year ago while racing to a ballroom. In recent months serious accidents had happened to the bands of Tommy Dorsey, Charlie Barnet, Jack Teagarden, Sammy Kaye. In 1939 there were 61 accidents to musicians on the road; in 1940 there were 78; in 1941 over 100. I had joined Byrne and his orchestra at Saylor's Lake to see exactly why the one-night tour is considered about the most dangerously unpleasant job in the entertainment industry today. I traveled with the band about a week, and we covered 1,491 miles, through Pennsylvania, Maryland, Virginia, North Carolina, New York, Connecticut and Massachusetts.

The pattern of a musician's life on the road is simple: play, and ride on. No time for leisurely eating or sleeping, no shower baths. In and out of a town before you can have suits pressed or shirts laundered. You don't stop long enough to date a girl. You have to make time on this job. You have to stick pretty close to the bus. This is the pattern of your days and nights: you sit on a narrow, wobbly bandstand *(this isn't the Hotel Pennsylvania in New York, brother)* and you blow into a trumpet or pound a drum for five hours and after that you stick pretty close to the bus for maybe ten hours and then you sit on another narrow, wobbly bandstand and blow into a trumpet or pound a drum for another five hours. And you don't get tired. You smile all the time and play hot. You must never forget you're making rhythms for the kids. You're entertainment, the only flesh-and-blood entertainment thousands of rural communities experience since minstrel shows and vaudeville disappeared. You have to be young and strong and bursting with rhythm and very much in love with the freedom and independence that comes with being a good jazz musician to be able to stand this life, and to enjoy this pattern.

The Byrne band began its tour at Saylor's Lake, and when the bus pulled in it found another orchestra bus parked near the pavilion. Inside, arguing with the promoter, Andy Perry, was another well-known maestro named Russ Morgan. (A chap who hires traveling "name" bands is always called a promoter in the trade even if he owns six ballrooms.) Morgan was red-faced and angry.

"Listen," he cried, "it says here in my contract that I'm due to play here, Wednesday, tonight. What gives here, anyhow?"

Promoter Perry swallowed and stammered. "We expected you Saturday, Russ. I spent two hundred bucks advertising you for Saturday, Russ. I got posters in Allentown, Stroudsburg, Bethlehem, Easton. You think I like this mix-up?"

"My contract says I'm supposed to play here Wednesday," said Perry.

"They can't do this to me," moaned Perry. "I got no band for Saturday."

"On Saturday I will hit Cincinnati," said Morgan.

Byrne took me aside. "You see," he whispered, "everything happens on the one-nighters. Hotel jobs—fine. Theater jobs—great. One-nighters—trouble. I got a contract calling for *me* to play here tonight. Anyway, they have my band advertised." Byrne stealthily signaled to his musicians, who had already donned their gray flannel uniforms in the bus en route from Atlantic City, and, while Morgan was arguing with Perry, Byrne's men took the stand and started playing. Eventually, Morgan took himself and contract off, calling curses down on his booking office. Morgan has good cause to dislike one-night tours. He has been on the road for fourteen months, and during this time his first child was born, and the father has never been in New York and still doesn't know what his 11-month-old offspring looks like. . . .

From 8 till 2 A.M., Byrne and his fifteen musicians were on the stand playing hot and fast and loud. At 11:30 they got a thirty-minute rest period. During the intermission I asked Les Reis, whose father was one of the founders of the Reis underwear empire, why top-notch musicians run all the nervous and physical risks of a barnstorming expedition. Reis, the road manager of the band, explained it this way: "A location job is like a storekeeper buying merchandise, and a one-night tour is selling it. We just finished 12 weeks at the Hotel Pennsylvania, but we didn't make a nickel. Actually, it *cost* us about $400 a week to play the Pennsylvania. We received $1,750 a week from the hotel. We paid out $1,550 in salaries to the sidemen and vocalists. We spent another $600 every week—commissions to our booking agent, arranger's and copyist's salaries, office rent, press agent and so forth. We know it's a good investment, however. At the Pennsylvania, we had an NBC wire—we did four nation-wide broadcasts a week, we built up a demand for Bobby Byrne. Now, we're going out to cash in on this demand. On this tour we will receive as much as $1,200 for a single night—almost as much as we received in New York for a whole week!"

Promptly at 2 in the morning, the band played its closing theme, a fragment of Danny Boy, and Joe Slater, a husky Negro who has been playing nursemaid to bands since he was with the Mills brothers, awoke from where he had been sleeping beside the bandstand on a drum case. The musicians deftly folded their instruments and plodded downstairs. Joe started "breaking down." The music stands were pressed flat. The $20,000 worth of arrangements gently placed in small valises, no bigger than overnight bags. Soon, there was nobody left on the stand but Slater, smashing baggage, and Maestro Byrne, playing a chord progression on the piano, while Dick Skinner, guitarist and arranger, wearily listened. Bobby wanted Skinner to incorporate the progression into a new arrangement. Slater noisily wedged the music stands into boxes, the bass drum and snare drums and cymbals and the other traps into their cases. In less than an hour, the band was packed, and Slater, without any other help, began to lug the boxes downstairs and place them in the bus.

Downstairs, the musicians were impatiently waiting by the door of the bus. The bus was closed and the shades drawn. Dorothy Claire, the girl vocalist, was changing out of her evening gown, a glittering costume of yellow and brown, with lace and rhinestones. On a one-night tour the bus is everybody's dressing room. Miss Claire changed in ten minutes. Then, while she went outside, the musicians clambered up and changed out of their uniforms.

Dorothy is a tiny, blond girl, whose face is lively and whose voice tingles. Off duty, she wore blue slacks and a blue striped sweatshirt. She told me she had left the hospital only a week before. An appendicitis operation. "My doctor would kill me," she chuckled, "if he knew I was jumping around the country on an ol' bus. I'm supposed to be in bed, con-va-lesc-ing." She wrinkled her uptilted button nose. "I can't sit still, not when the music plays my song and I should be singing it. I can't be resting and listening to somebody else sing my song on the radio. I can't sit still." She didn't. She sang every night, slept on the bus, ate with the boys, never complained once.

A little after 3:30, the band was ready to roll. Reis was the last to enter the bus and he carefully counted off, to make sure nobody had been left behind. It was a ritual he never omitted. Then he told the driver to push off. Driver Cliff Hamilton, forty-eight, who has been driving chartered busses for musicians for 20 years, shifted the gears into first and we rolled off through the Poconos.

Defensive quarterbacking at its best: Murphy of Cornell is back in punt formation; Frick of Penn (lower left) remembers that Murphy is not a punter

Frick has decided the impending play will be a pass and ense. The ball has been snapped, above, and Murphy is

# Rational Defense

## By Benny Friedman as told to Bill Davidson

**When you see a team on defense call signals and shift to meet the impending play, you're seeing football's newest wrinkle—defensive quarterbacking. It's the thing that will account for some of the season's best upsets**

THERE is nothing more pathetic than a football coach on a Saturday night. As he tosses about in bed, huge tackles make terrifying faces at him from all corners of the room; ponderous guards pounce on him with unrestrained, sadistic glee; strange, ferocious football teams run an endless succession of end-around plays over his prostrate body; and grinning fullbacks pick up his head and casually boot it down the field.

But all this cannot compare with the nightmares the same football coach is now forced to undergo on Saturday *afternoons*. These nightmares will generally fall into the following category:

The coach's team lines up for what should be the infallible touchdown play under the circumstances. Each man has his block assignment. The play is worked out to the minutest detail. It is pigskin perfection.

But what happens?

Just as the quarterback is calling the signals for this play, the defensive quarterback stands up, and *he* begins to call signals too. Immediately there is a startling series of movements on the part of the defense. Then all is still.

The play begins, and the offensive left end goes down to take out the defensive right halfback. But alas, there is no defensive right halfback to take out! The offensive left tackle lunges at the defensive right tackle. But he encounters nothingness! The offensive left guard crashes over to take out the defensive right guard. But the defensive right guard, too, has departed for parts unknown! In fact, the entire play is a horrible succession of little men who weren't there. That is, in all except one place! For the offensive wing back comes crashing into the hole off guard and finds his way violently contested by several ferocious gentlemen, who were supposed to be yards away or blocked out of the picture.

How did the aforesaid ferocious gentlemen get where they were?

The answer is an amazing new wrinkle in football—quarterbacking on the defense!

For years the offense ran rampant with innovations like the forward pass and the quick-opening Warner and Rockne systems. Always the defense had to devise new means of neutralizing the offense. First came the six-man line, then the five-man

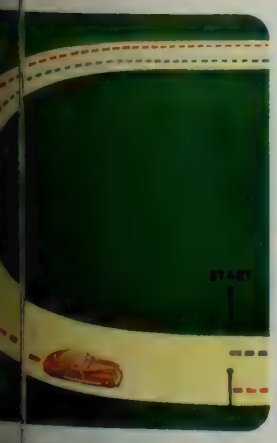
One of two distinguished new versions of Clipper styling for 1942 — the smart Packard Clipper Touring Sedan. Both Clipper Six and Eight *(only $55 difference)* are available as either Special or Custom models.

# *How Clipper beauty pays off...* in more miles per gallon!

**THOSE LONG, LOW, RACY LINES** you admire so much do more than delight your eye.

They're also there because (among other benefits) they enable the Clipper to cut through the wind with phenomenally low resistance — *hence save you gas.*



Proving Ground tests provide exact figures on this new economy. For example: last year's Packard was a marvel of thrift (an economy fact). Yet, tested against the new Clipper, it lost out. The ...ot only better—but 12% to 18% better on gasoline mileage!

Yet the Clipper offers something even more important to the car buyer of today. *It is built to meet the times!*

These are times that put a new high premium on *quality*. Quality that pays out in *extra miles, extra years, extra value.*

So, if you want a car that's a "long haul" husky — combined with the fuel economy so important today — Skipper the Clipper! There's one waiting for you at your Packard dealer's. **ASK THE MAN WHO OWNS ONE**

## 1942 PACKARD CLIPPER

**...HAMPION!** — 1941 Packard ...t actual test shows how ... steps up economy. Same ... was put into both cars. ...am shows Clipper's margin.

**FLIGHT-LINED FOR ECONOMY**—Precision meters prove that Clipper streamlining cuts wind resistance; results in important gasoline economies! The 1942 Clipper delivers up to *18% more miles* per gallon!

**BRINGING SENSATIONAL CLIPPER STYLING** to every Packard line permits lower Clipper prices. Even the 1942 Clipper 8 is substantially lower priced than '41 Clipper 8 —same power—same room—same comfort.

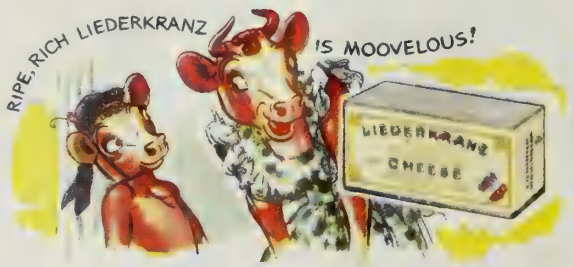
**SLICE YOUR GAS BILL FURTHER** . . . and enjoy automatic driving at its best . . . with Packard Electromatic Drive! Lets engine run slower . . . saves gas, oil, and engine wear. More than repays its extra cost.

# "You'll learn a lot, my dear, that isn't in the books!"

LITTLE BEULAH was a bit nervous about her first day in school.

"Do you mean, Mommy," she anxiously asked Elsie, the Borden Cow, "that I've got to worry about passing examinations *outside* of school?"

"Indeed you have, my dear," smiled Elsie. "We Borden cows also must be able to pass the strict examinations of Borden's eagle-eyed experts. They'll flunk you like *that*, the minute the milk you'll some day produce for Borden's is anything less than tip-top."



"Then what's the use of going to school at all?" Beulah demanded, discouraged.

Elsie explained: "So you'll learn many other important things. Like the total population of all the communities that depend upon us for pure, wholesome *Borden's Milk*—and the host of grand products made from that milk. On the other hand, you should learn some Arithmetic."

"I can count up to ten already," interrupted Beulah.

"You must do better than that," Elsie replied; "there are more than twenty delightful varieties in the distinguished family of *Borden's Fine Cheeses*. One of the most popular examples is creamy-hearted, golden-crusted *Liederkranz*—as 100% American as canvasback duck."

"Cousin Millie says we have to study something called Art," said Beulah.

"Yes," agreed Elsie. "And you'll be glad to know that in *Borden's Irradiated Evaporated Milk* we Borden cows contribute handsomely to another kind of Art—the fine Art of Cookery. Through it, we help to make wonderful cream soups and fluffy mashed potatoes."

"Later on," said Beulah, rather worried, "we get something else called jog—jogger—"

"Geography," prompted Elsie. "You know—everything about the map. You'll learn, for instance, that all over the map mouths water at the sight of *Borden's Ice Cream*. It's pure, smooth, luscious as can be made from the grandest milk and cream."

"Do most folks know all the marvels are made from Borden's milk?" Beulah wanted to know.

"I doubt it," Elsie answered. "I don't think many realize that *casein* extracted from milk makes *Casco Glue*—a glue with a bull-dog grip for jobs like mending furniture or for delicate model ship modeling."

"That should make folks want to *stick* to that's Borden's!" said Beulah slyly.

"It certainly should, darling!" laughed Elsie to the Borden products that don't come from milk. Like *Borden's None Such* Mince Meat—the heart and soul of the spiciest, juiciest fruits in which Borden care makes sure that None Such is just as pure and wholesome as everything else bearing the Borden name."

Beulah was so pleased with her lines that she decided to try another. "Gee, Mommy, you've given me a whole Borden of Education!"

"That's about enough out of you, young lady," Elsie. "Off to school with you. And remember this one lesson: *'if it's Borden's, it's GOT to be good!'* "

. Mr. Wilson insisted, had de throughout the entire iod. From the very first, quite frankly, it had been America would be drawn lation was a myth and had a myth. Freedom of the 's right to sail the ocean eful errands without let or as vital to our existence, ad been. Before George remarks about our "dis- ched position" had ceased ngaged in three wars with peoples. Jefferson, who st "entangling alliances," the day when he was will- the British fleet and na-

fear of America's involve- re, he had tried to "build one that would stand for all time as proof of America's devotion to peace. Overruling the tremors of the State Department, he had insisted on the immediate publication of every diplomatic note. In nothing had he been sly or secret, and if there was a man, woman or child in the United States who did not know what he had done, and exactly why, it was because he did not choose to read.

In this connection, there was a point that he thought worthy of emphasis. All of the belligerents, insolently and repeatedly, had ridden roughshod over international law as related to America's rights, although British violations concerned property only, while German aggressions were against human life. The war was to be stated plainly as our war, waged in defense of vital rights, and not any chivalrous rush to England's rescue or the repayment of an ancient debt to France.

There was no doubt in his mind that America was engaged in a war of self-defense. But what he meant to do was to go far beyond that assertion, striking a high note that would differentiate the struggle from all other struggles. He declared that even a war of self-defense fell short of full justification unless waged with high resolve to change the evil conditions that made war inevitable. Taking a copy of the war message from his desk, he read the paragraph about "the universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free." A "war to end war," in his opinion, was a battle cry that would go straight to the hearts of our own people and all other peoples, even if laughed at by old-school statesmen still thinking in terms of "balances of power."

"Making the world safe for democracy" was something to be preached as a great truth, and not regarded as any empty phrase. In every speech, every public paper, he intended to make plain his belief that there was not room on the same earth for autocratic, militaristic governments, dedicated to conquest, and free, representative governments based on the consent of the governed.

Why wouldn't it be a good idea to preach the "religion of democracy?" Was it not a mistake to assume that the representative form of government was self-justifying, and something that needed no argument? Was it not a blunder of magnitude to believe that the twenty-first birthday brought an instant and full understanding of democracy to young men and women? He himself had always deplored the manner in which our schools skipped over the essentials of American history, ignoring fundamentals in favor of dates. But it was that way with everything. So little in our education was related to life. Children were taught how many inches there were in a foot, and how many feet in a yard, but when asked to tell how high a table stood above the floor, the guesses ranged all the way from one inch to one mile.

### A Campaign of Education

My propaganda, he trusted, would always be based on the original meaning of the word: "the propagation of faith." And that faith, of course, must be a "war to end war." As the President visioned the things to be done, his face lighted until it fairly shone. Our own people given a clearer understanding of what America really meant, particularly citizens of foreign birth or descent. Few things, he said, stood more plainly than that the melting pot was not melting, and had not melted for a good many years. Looking on democracy as an automatic device was not the least of our tragic blunders.

And there were the neutral nations to be fired with enthusiasm for a new and nobler world order. And the Central Powers too, for he did not believe, and could not bring himself to believe, that the peoples of Germany and Austria-Hungary were infatuated with the Kaiser's dream of world-wide dominion. Surely I could find ways and means of getting our war aims and peace terms into the enemy countries.

Above all, he stressed the importance of intensive campaigns in England, France, Italy and Russia. It was necessary, of course, to convince these war-weary peoples that American aid was on the way, but, confidentially, he wanted more than that. Although not a fact to be broadcast, the war was not a war for democracy when it started in 1914, and it was up to the United States to make it one.

As I rose to leave, the President put his hand on my shoulder and gave several parting admonitions. I was to emphasize the committee as an *information service*, for the Germans had grimed propaganda until the word stood for corruption and deceit. I was to send no dollar on a secret errand or try to camouflage a single activity. Above all, I must guard against appeals to hate, for while a wave of national fury might whip a people on, froth and dregs were bound to be the ultimate result.

I was to watch out at all times against arousing false hopes, and in this connection he mentioned smilingly that there were many high-powered salesmen among the great industrialists brought to Washington for war work. He himself had to be continually on guard against overheated optimists. Not bearing this caution in mind plunged me into sore trouble at a later date, for like a fool I took the word of an effervescent official on plane-production figures.

Following out the President's suggestions, the Committee on Public In-

**IN SOUTH AMERICA** Longines Watches are known and esteemed in all the capitals of our 10 sister republics. Leading jewelers there, as here, have sold Longines Watches for upwards of 50 years. Longines Watches enjoy leadership, as well, in the six countries of the Isthmus, in Mexico, and in the island republics of the Caribbean. Truly, throughout the world, no other name on a watch means so much as . . . *Longines*.

Longines
THE WORLD'S MOST HONORED WATCH

Wherever there is an appreciation of things fine and beautiful, you will find Longines Watches held in the highest esteem. Over the years, they have proven themselves uniformly dependable, accurate, and long-lasting. Their excellence and elegance have been recognized by 10 world's fair grand prizes, 28 gold medals, and more honors for accuracy than any other timepiece.

Longines jewelers now show the 75th Anniversary Longines Watches priced $40 upward; also a companion watch of distinctive merit in the medium price field, the Wittnauer Watch, priced from $24.75;—products of

formation, as a first step, put trained reporters in the War Department, the Navy and every other agency connected with the war machine, and every day saw an honest, unvarnished report of progress given to the people.

Today, by way of contrast with 1917, the Army and the Navy each runs its own press bureau, each with its own policy, and every other agency even remotely connected with the war machine has its own high-powered, heavily staffed publicity division. The public-relations branch of the Office of Emergency Management, according to the Congressional Record, employs 249 persons, and is requesting an appropriation of $750,000 for the fiscal year 1942. The Office of Government Reports has a working force of 527, and asks $1,444,333 for 1942. Government press agents, as a matter of fact, already outnumber the nation's readers, and each new agency adds to the locust swarm. The Committee on Public Information's news division, covering every war-making branch, cost $76,000 for the two years of its existence.

When it came to the real battle—the battle against ignorance, apathy and disaffection at home—Woodrow Wilson was the commander in chief, as the President always must be. Cabinet officers and bureau heads may thunder until they are blue in the face, but the man in the White House is the one great voice. Going about the country today, one finds public opinion confused and bewildered. If freedom of the seas is again a great American tradition for which we are ready to fight and die, then why not repeal the Neutrality Act that specifically surrendered all of our rights in the ocean lanes? Hitlerism is to be cast down and out, and there must be no talk of a negotiated peace, but people are asked to believe that this does not necessarily mean war.

### Control from the Top

Woodrow Wilson permitted no such confusions and bewilderments. True to his promise, he made every speech, every state paper, an explanation and an argument rather than a collection of flat statements. What he did, in fact, was to brief the case for us. It was this case—the clearest exposition ever made of America's aims and ideals—that the committee took to the people through the medium of the spoken word, the written word, motion pictures, lantern slides, posters, billboards, expositions, donated advertising space in newspapers and magazines, etc., etc. Here again there was unification and one central control, backed up by the President. Some of the sharpest letters written by him went to bureaus and boards that attempted to set up "shows" of their own.

Going into detail with respect to one committee activity, exactly thirty-three foreign-language groups were organized. Through national councils, broken down to states and cities, we could reach every individual in every group in twenty-four hours, and a continuous educational program burned away much of the bitterness bred by years of neglect. Aside from their contribution to national unity, all thirty-three constituted a valuable approach to neutral and enemy countries. Our German bureau, under the direction of Franz Sigel, son of that famous exile who offered his sword to Lincoln, prepared the literature that played no small part in smashing German morale. It was also our Roman Legion that enabled Italy to make a "comeback" after the Caporetto disaster. Had this great work been continued after the war, we would not be faced with the necessity of doing it all over again.

In the fight for national unity, Woodrow Wilson was our t

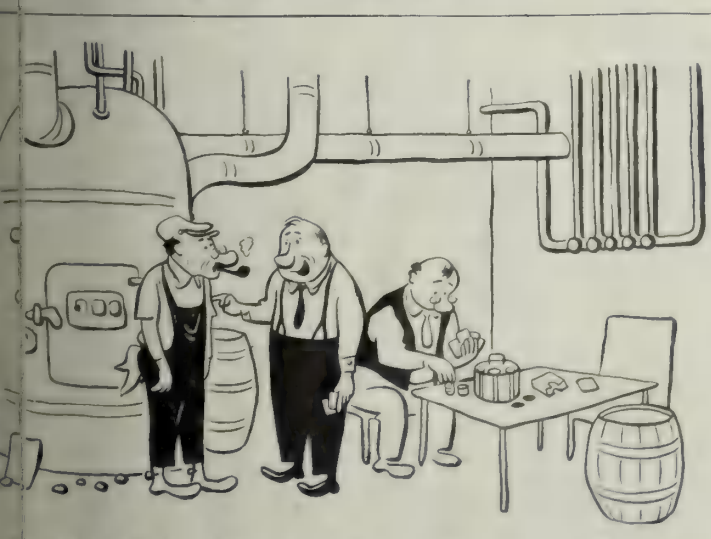
ade to appear that trees
no other purpose. Many
d either been bought out-

right or subsidized; German publications ran from pamphlets to expensive books and albums, and German agents thought nothing of paying thousands for a hole-in-the-wall motion-picture house.



We made no attempt to enter into any such competition, but went about our business as though the Germans did not exist. First and foremost, for Latins are *realists*, we stressed America's enormous resources, both in men and money, and gave our war progress in detail, making it clear that the United States would not and could not lose. In addition, however, we tried to paint a true picture of the United States so that Latin Americans might know us and understand us: Our schools, homes, hospitals and playgrounds; election days with baby buggies in front of the polls; our industry and our agriculture; our free press, free speech and free assembly; how our government functions, and stories of ideals as well as material achievement. And what happened? We won hands down.

### It Can Happen Again

Hitler, in Mein Kampf, warns against "pitching propaganda on any idealistic note," insisting that "the caution in avoiding too high spiritual assumptions cannot be too great." That is why our information service beat German propaganda, for, from first to last, we obeyed Woodrow Wilson's injunction to stress *ideals*. Just as the United States was unified into one great triumphant whole, so did we win the active support or the friendship of every neutral nation, stiffen the resistance of the Allies, and shatter the foundations of German morale.

From the moment that the guns ceased firing on Armistice Day, a whole world stood eager and waiting for rebirth. The train that bore President Wilson from Brest to Paris passed through a lane of men, women and children, cheering through their tears; in Italy, mothers lifted their babies for his blessing, and throughout Europe, even in the Central Powers, there was the dawn of hope for a new and better world. True, it was a hope that blacked-out in betrayal and despair, but it blazed for two full years.

What was done then can be done again, but only if there is the same honesty and courage; the honesty that will give people a sense of partnership, and the courage to declare high determinations that hold the promise of a finer, fairer tomorrow. Nor is it something that needs to wait on a war message, for it can start right now, both here at home and everywhere else in the Western Hemisphere.

Continued from page 12

three years previously and had been very short of breath. But the spring flowers in the French Jura were as beautiful as anything in Switzerland, and from the high ground up above Les Rousses you can see Mont Blanc. He wanted passionately to get where he could see mountains. "I will lift up mine eyes unto the hills," he said, "from whence cometh my help." That's how he felt about it.

And that's why he went to France.

He left London on the morning of April the 10th, the very morning that the news came through that Germany had invaded Denmark and Norway. He read the news in his paper in the train on the way to Dover, and it left him cold. A month previously he would have been frantic over it, jumping from wireless bulletin to newspaper and back to the wireless again. Now it passed him by as something that hardly concerned him any more.

He spent a day and a night in Paris.

HE WENT on next day toward the Jura. He was still feeling a little shaky after the fatigue of the crossing, so that day he only went as far as Dijon.

Normally that journey takes about three hours, but the railways were in a bad state of disorganization. They told him that it was because of troop movements. The *Rapide* was an hour late in leaving Paris, and it lost another two hours on the way. It was nearly dinner-time when he reached Dijon, and he was very thankful that he had decided to stop there. He had his bags carried to a little hotel just opposite the station, and they gave him a very good dinner in the restaurant. Then he took a cup of coffee and a Cointreau in the café and went up to bed at about half past nine, not too tired to sleep well.

He was really feeling very well next day, better than he had felt for a long time past. He walked up through the town to the Hôtel de Ville and found Dijon just as he remembered it from his last visit, about eighteen months before. There was the shop where they had bought their berets, and he smiled again to see the name: *Au Pauvre Diable*. And there was the shop where John had bought himself a pair of skis, but he didn't linger there for very long.

He had his lunch at the hotel and took the afternoon train on into the Jura; he found that the local trains were running better than the main-line ones. He changed at Andelot and took the branch line up into the hills.

The train stopped for half an hour at Morez, and then went on to Saint-Claude. It got there just at dusk. He had sent a telegram from Dijon to the Hôtel de la Haute Montagne at Cidoton asking them to send a car down for him, because it's eleven miles and you can't always get a car in Saint-Claude. The hotel car was there to meet him, a ten-year-old one driven by the concierge, who was a diamond cutter when he wasn't working at the hotel. But Howard only found that out afterward; the man had come to the hotel since his last visit.

He took the old man's bags and put them in the back of the car, and they drove to Cidoton.

The Hôtel de la Haute Montagne is an old coaching house. It has about fifteen bedrooms, and in the season it's a skiing center. Cidoton is a tiny hamlet—fifteen or twenty cottages, no more. The hotel is the only house of any size in the place; the hills sweep down to it all around, fine slopes of pasture dotted here and there with pinewoods. It's very quiet and peac

# What an Agency System looks like

**olitan Life Insurance Company** has nearly 0,000 policyholders in the United nd Canada. To serve these policy- in their own localities requires a ficient system. The one which ex- has shown to be the most effective nomical is known as the Agency

**2. This is the** Tower of Metropolitan's Home Office building in New York City. The headquarters for Metropolitan's Agency System are located in this building. In addition, there are two Head Offices, one in Ottawa, Canada, and the other in San Francisco.

**3. To facilitate** its field activities, Metropolitan has divided the United States and Canada into 10 geographical Territories. Each is headed by a Superintendent of Agencies who has supervision over field service to policyholders, the conservation of existing life insurance and the production of new business in his territory.

**4. This shows a typical District Office,** often called the hub of the Agency System. Territories are divided into Districts, each in charge of a manager who, in addition to his other duties, supervises the work of the agents. The District Office, with its manager, assistant managers, agents and office clerks, might be called a "service station" for policyholders in their own localities.

**ces such as this** educational meeting or Metropolitan field-men are common ict Offices. Field Training Instruc- vo assist in this educational work mp ve Metropolitan's service, operate t Home and Head Offices, but in the t v work under the Superintendent g ies of the Territory to which they ss ned.

**The assistant managers** in each District, ses their office work, help to train ag ts to serve existing policyholders, yz nsurance needs and sell insurance ll ose needs. They are almost con- tly the Field and try to visit, with the ts, many policyholders as possible in Di ict at least once a year.

**7. Districts are divided** into smaller areas known as Debits, each in charge of an agent. He is responsible for service to the policyholders living in his Debit. The size of a Debit, as well as of a District, is the result of what experience has shown to be the most efficient operating unit in the light of local conditions.

**8. Metropolitan** has, in the United States and Canada, about 19,000 agents, 2,500 assistant managers and 850 managers, as well as 5,700 office clerks. Through them the Company maintains direct and constant contact with policyholders . . . one of the chief means of seeing that Metropolitan policyholders are served faithfully and well.

# HEAD-WORK WINS GAME

"FUZZY" scored on the field, but he couldn't "score" with Betty. Constant water-soaking had washed the natural oils out of his hair, left it dry, wild, unruly. KREML could keep his hair *neatly* groomed, remove loose dandruff scales, relieve that itchy scalp.

"SLICKER" completed three passes, yet Betty completely passed him up. The unsightly goo he plasters on his hair clogs vital scalp pores, gives him a "gigolo" look. KREML would leave his hair lustrous, soft, *and* greaseless.

"CURLY" shines in the backfield... but so does the top of his head. Too much water and grease "threw his hair for a loss." KREML—when used in time—checks excessive falling hair, helps maintain a proper oil balance.

THE WINNER! He doesn't make many touchdowns, but his KREML-groomed hair "goes over" big with Betty. The daily use of KREML and massage brings out the *natural* best in hair. Let KREML put *your* hair on the "winning side."

*Ladies!* Kreml keeps coiffures lovely, lustrous. Conditions your hair both *before* and *after* permanents.

*Hair-care Combination:* Kreml Hair Tonic *and* gentle Kreml Shampoo (made from an 80% olive oil base) that cleanses thoroughly, leaves your hair more manageable. *Get BOTH at your favorite drug counter.*

spent upon the League one tenth of what they have spent in armaments, there would have been no war."

After half an hour of this, old Howard came to the conclusion that Mr. Cavanagh was a tedious fellow. He bore with him from a natural politeness, and because the man was evidently genuine, but he made his escape as soon as he decently could. The extent of his sincerity was not made plain to Howard till the day he met Mrs. Cavanagh in the woods, and walked a mile back to the hotel with her.

He found her a devoted echo of her man. "Eustace would never leave the League," she said. "Even if the Germans were to enter Switzerland, he'd never leave Geneva. There's still such great work to be done."

The old man looked at her over his spectacles. "But would the Germans let him go on doing it if they got into Switzerland?"

"Why, of course they would," she said. "The League is international. I know, of course, that Germany is no longer a member of the League. But she appreciates our nonpolitical activities. The League prides itself that it could function equally well in any country, or under any government. If it could not do that, it couldn't be said to be truly international, could it?"

"No," said Howard, "I suppose it couldn't."

THEY walked on for a few steps in silence. "But if Geneva really were invaded by the Germans," he said at last, "would your husband stay there?"

"Of course. It would be very disloyal if he didn't." She paused, and then she said, "That's why he sent me out here with the children, into France."

She explained to him that they had no ties in England. For ten years they had lived in Geneva; both children had been born there. In that time they had seldom returned to England, even on holiday.

He left her at the entrance to the hotel, but next day at luncheon she smiled at him when he came into the room, and asked him if he had enjoyed his walk.

"I went as far as the Pointe des Neiges," he said courteously. "It was delightful up there this morning, quite delightful."

After that they often passed a word or two together, and he fell into the habit of sitting with her for a quarter of an hour each evening after dinner in the salon, drinking a cup of coffee. He got to know the children too.

There were two of them. Ronald was a dark-haired little boy of eight, whose toy train littered the floor of the salon with its tin lines. He was mechanical, and would stand fascinated at the garage door while the concierge labored to induce ten-year-old spark plugs to fire the mixture in the ten-year-old car. Old Howard came up behind him once.

"Could you drive a car like that?" he asked gently.

"*Mais oui—c'est facile, ça.*" French came more easily to this little boy than English. "You climb up in the seat and steer with the wheel."

"But could you start it?"

"You just push the button, *et elle va.* That's the 'lectric starter." He pointed to the knob.

"That's right. But it would be a very big car for you to manage."

The child said, "Big cars are easier to drive than little ones. Have you got a car?"

Howard shook his head. "Not now. I used to have one."

"What sort was it?"

The old man looked down helplessly. "I really forget," he said.

Ronald looked up at him, incredulous. "Don't you *remember?*"

But Howard couldn't.

The other child was She years old. Her drawings floor of the salon; for the life was filled with a pass ored chalks. Once as H downstairs he found her heap upon the landing at staircase, drawing industri flyleaf of a book. The fi the flight served as a desk

# ...u serve the Wine ...and a grand visit is under way

## ...ople find there's a friendly, ...te kind of relaxation that most everyone wants today

...E THAN EVER before, folks like their friends to come ...ing of an evening. All over the country, today, ...t so.

...liscovering it's a time to gather together in our ... seek the companionship of people we care for. ...ou share good wine with friends you're in line ...et, relaxing evening. A let-up of the moderate ... and more people prefer. It's one reason wine ... earned such favor lately.

...resting new booklet on wine serving is available ...r copy will be mailed free, if you will write the ...isory Board, 85 Second Street, San Francisco. ...d represents every wine grower in California. ...ll find that wines of California are sound and ...oped, reasonable in price. Connoisseurs will tell ...e wines of our own country are good by any ...en the world.

...me you ask friends over, try this considerate ...owing hospitality — serve wine.

Pictured here is full-bodied, rich red *Port*. Refreshment wines such as *Port* and *Muscatel* are very popular for between-meal serving. *Sherry* is the favorite appetizer wine. With dinner, serve a light California red or white wine, such as *Claret* or *Chablis*. Your wine dealer will be glad to help you with your selection.

*For SERVICE*

AS WELL AS FOR SERVICE MEN

**BUXTON**

DESIGNED THE NEW

**"SAM BROWNE"**

BILLFOLD

$5.00 in Military Tan or "Uniform Blue" Calfskin. Others from $3.

**OPEN THE HIDDEN "FLAP"** and you have *two* protected "window pockets" for identification, credentials, license or a snapshot.

**THE COIN PURSE** comes out for separate use—yet double-locks back firmly into place when he wants to keep his coins, bills, papers, etc., in one compact unit.

***New . . . Designed to meet not only Service requirements, but the needs of any active man***

No matter whether he's in the Army, the Navy or the Marines—no matter whether he wears a First-Class Private's chevron or an Admiral's gold braid—he'll acclaim this *newest* Buxton as the most convenient, best planned and best looking billfold he ever saw!

It's been carefully thought out to meet his present requirements . . . and beautifully made, to serve him long after he gets back into civil life. Organization PLUS! Special places for bills, checks, papers, passes, identifications, licenses, even for a photograph of the sender. Everything "stows" neatly—everything protected. And, in addition, a roomy, *locked*-in coin purse that can be removed easily for "solo" use.

Fine leathers, too, and Fine Craftsmanship that will stand "inspection" in any company—anywhere. In deep Military Tan for Soldiers, Aviators, Marines, and in black or deep "Uniform Blue" for the man afloat. Here's one of the few gifts that the man in the Service can really *use*. (And we'll bet that any civilian, too, would be mighty glad to get one of these handsomely tailored and downright practical billfolds.)

**PACKED IN A GIFT BOX**—and sent postpaid to army camp, ship or station. Here's a parcel he'll be proud to unwrap. The Caps of the Army, Navy and Marines, needless to say, are completely "Regulation." Full instructions in each "Sam Browne" to help him get the most out of it.

MSC

*Initials and Branch of Service Insignia Stamped in Gold*

**A personal touch, "his" initials and service insignia (Infantry, Artillery, Air Corps, etc.). For name of dealer who'll do this for you, write Buxton, Inc., 4161 Orleans St., Springfield, Mass., or Dept. G, 47 W. 34 Street, New York City.**

left Dunkirk, Paris had had its one and only air raid, and Howard had made up his mind. He admitted as much that night to Mrs. Cavanagh.

"I don't like the look of things at all," he said. "Not at all. I think I shall go home. At a time like this, a man's place is in his own country."

She looked at him, startled. "But surely, you're not afraid that the Germans will come here, Mr. Howard?"

"No," he said, "they won't get much farther than they are now. But at the same time, I think I shall go home." He paused, and then he said a little wistfully, "I might be able to get into the A.R.P."

She knitted on quietly. "I shall miss having you to talk to in the evenings," she said. "The children will miss you, too."

"It has been a great pleasure to have known them," he said. "I shall miss them."

ON THE ninth of June, Cavanagh appeared, having driven unexpectedly from Geneva in his little car. He seemed more worried and distrait than usual, and vanished into the bedroom with his wife. The children were sent out to play in the garden.

An hour later he tapped upon the door of Howard's bedroom. The old man had been reading in a chair and had dropped asleep, the book idle on his lap. He woke at the second tap, settled his spectacles, and said, "Come in."

He stared with surprise at his visitor, and got up. "This is a great pleasure," he said formally. "But what brings you out here in the middle of the week? Have you got a holiday?"

Cavanagh seemed a little dashed. "I've taken a day off," he said after a moment. "May I come in?"

"By all means." The old man bustled round and cleared a heap of books from the only other chair in the room. Then he offered his guest a cigarette. "Won't you sit down?"

The other sat down diffidently. "What do you think of the war?" he asked.

Howard said, "I think it very serious. I don't like the news at all."

"Nor do I. I hear you're going home."

"Yes, I'm going back to England. I feel that at a time like this my place is there."

There was a short silence. Then Cavanagh said, "In Geneva we think that Switzerland will be invaded."

There was a pause. Then Howard said, "If that happened, what would you do?"

The little sandy-haired man from Geneva got up and walked over to the window. He stood for a moment looking out over the meadows and the pine-woods. Then he turned back into the room. "I should have to stay in Geneva," he said. "I've got my work to do."

"Would that be very—wise?"

"No," said Cavanagh frankly. "But it's what I have made up my mind to do."

He came back and sat down again. "I've been talking it over with Felicity," he said. "I've got to stay there. Even in German occupation there would still be work for us to do. It's not going to be pleasant. It's not going to be profitable. But it's going to be worth doing."

"Would the Germans allow the League to function at all?"

"We have positive assurances that they will."

"What does your wife think about it?" asked Howard.

"She thinks that it's the proper thing to do. She wants to come back to Geneva with me."

"Oh . . ."

The other turned to him. "It's really about that that I looked in to see you," he said. "We were thinking—Felicity was wondering . . . if you could possibly take the children back t you, when you go?"

He went on hurriedly, could speak: "It's onl them to my sister's hous on Boars Hill. As a m could send her a telegra meet you at Southampt and drive them straight asking an awful lot, I'm feel you couldn't mana understand."

Howard stared at h chap," he said, "I shall b to do anything I can to

"You re wasting your time, Roger." He snapped a form sheet from his pocket. "Here. Here's *tomorrow's* program."

Roger paused to polish his glasses. "Just before you came," he said, "I did work out the other races. And you know what?"

"What?" Happy Jim waited confidently.

"The horses that were supposed to win the fifth and seventh races didn't. But I'm developing a formula. These racing forms aren't really complete."

Happy Jim wet his lips. "You can find a formula that will work *every* time?"

Roger blinked. "Of course. You can do anything with mathematics."

Jim sat down on the bed. "Go right ahead. Don't mind me. I'll just sit around quietly and watch."

"You don't understand," the boy said. "This would take a couple of months at least—even if I had the time to give to it, which I don't. I was just playing with the idea, today."

"Playing with it?" Jim sat bolt upright on the edge of the bed. "Roger, you wouldn't *play* with a thing like this!"

Roger yawned. He rubbed his head. "I'm tired. I think I'll go to bed."

"Jim?"

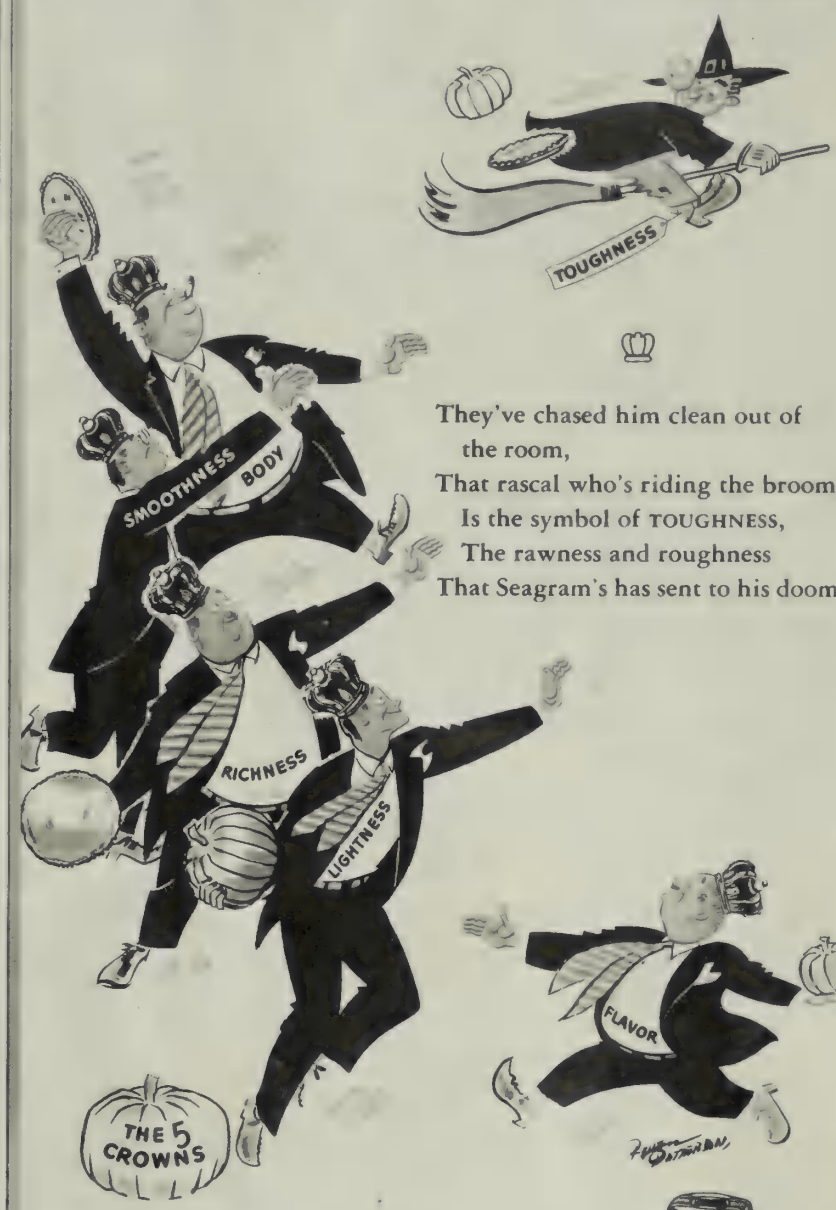
It was Sweet Marjorie, halfway up the stairs.

Jim moved to the hall door, then turned and eyed Roger sternly. "Better work that formula out, kid," he said, and turned to meet Marjorie.

It wasn't until they were parked on the bluff overlooking Devil's Gate Dam that Jim produced the ring. Marjorie gasped and looked up at him, incredulously.

"But Jim, darling! The budget!"

He pressed his finger against her lips. "Fortunately, the budget didn't take into consideration my investments."



Perplexity etched a delicate frown

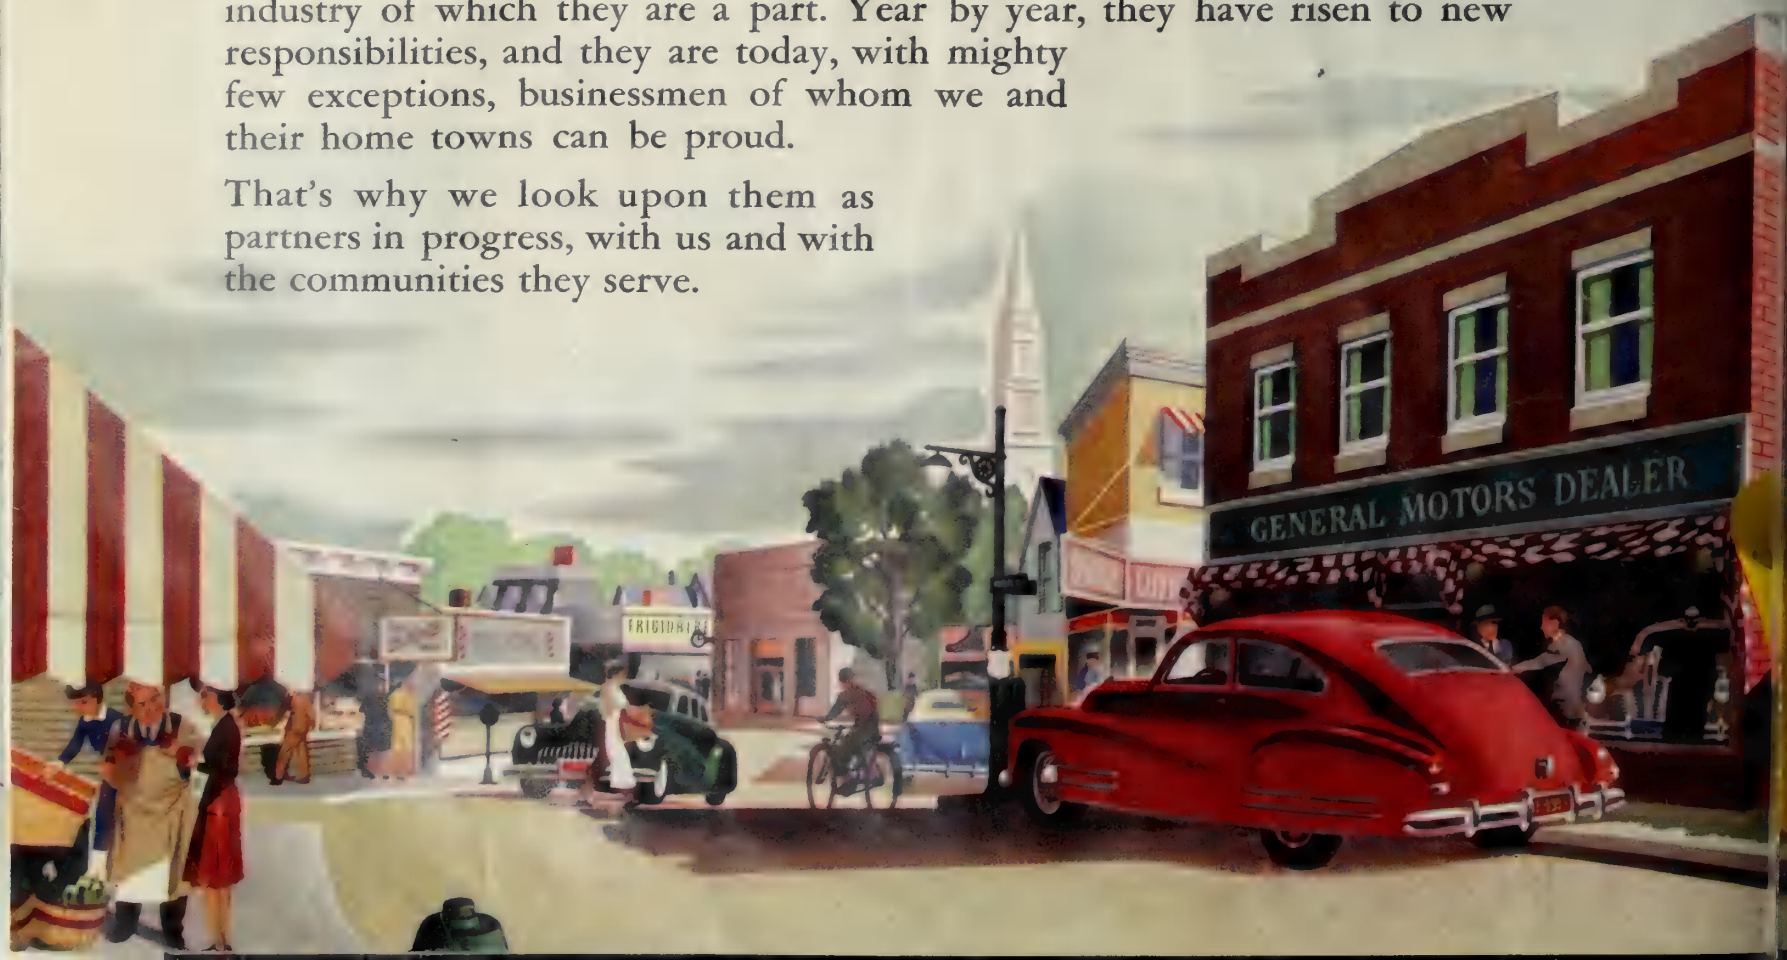
# His mechanics know their three Rs'*

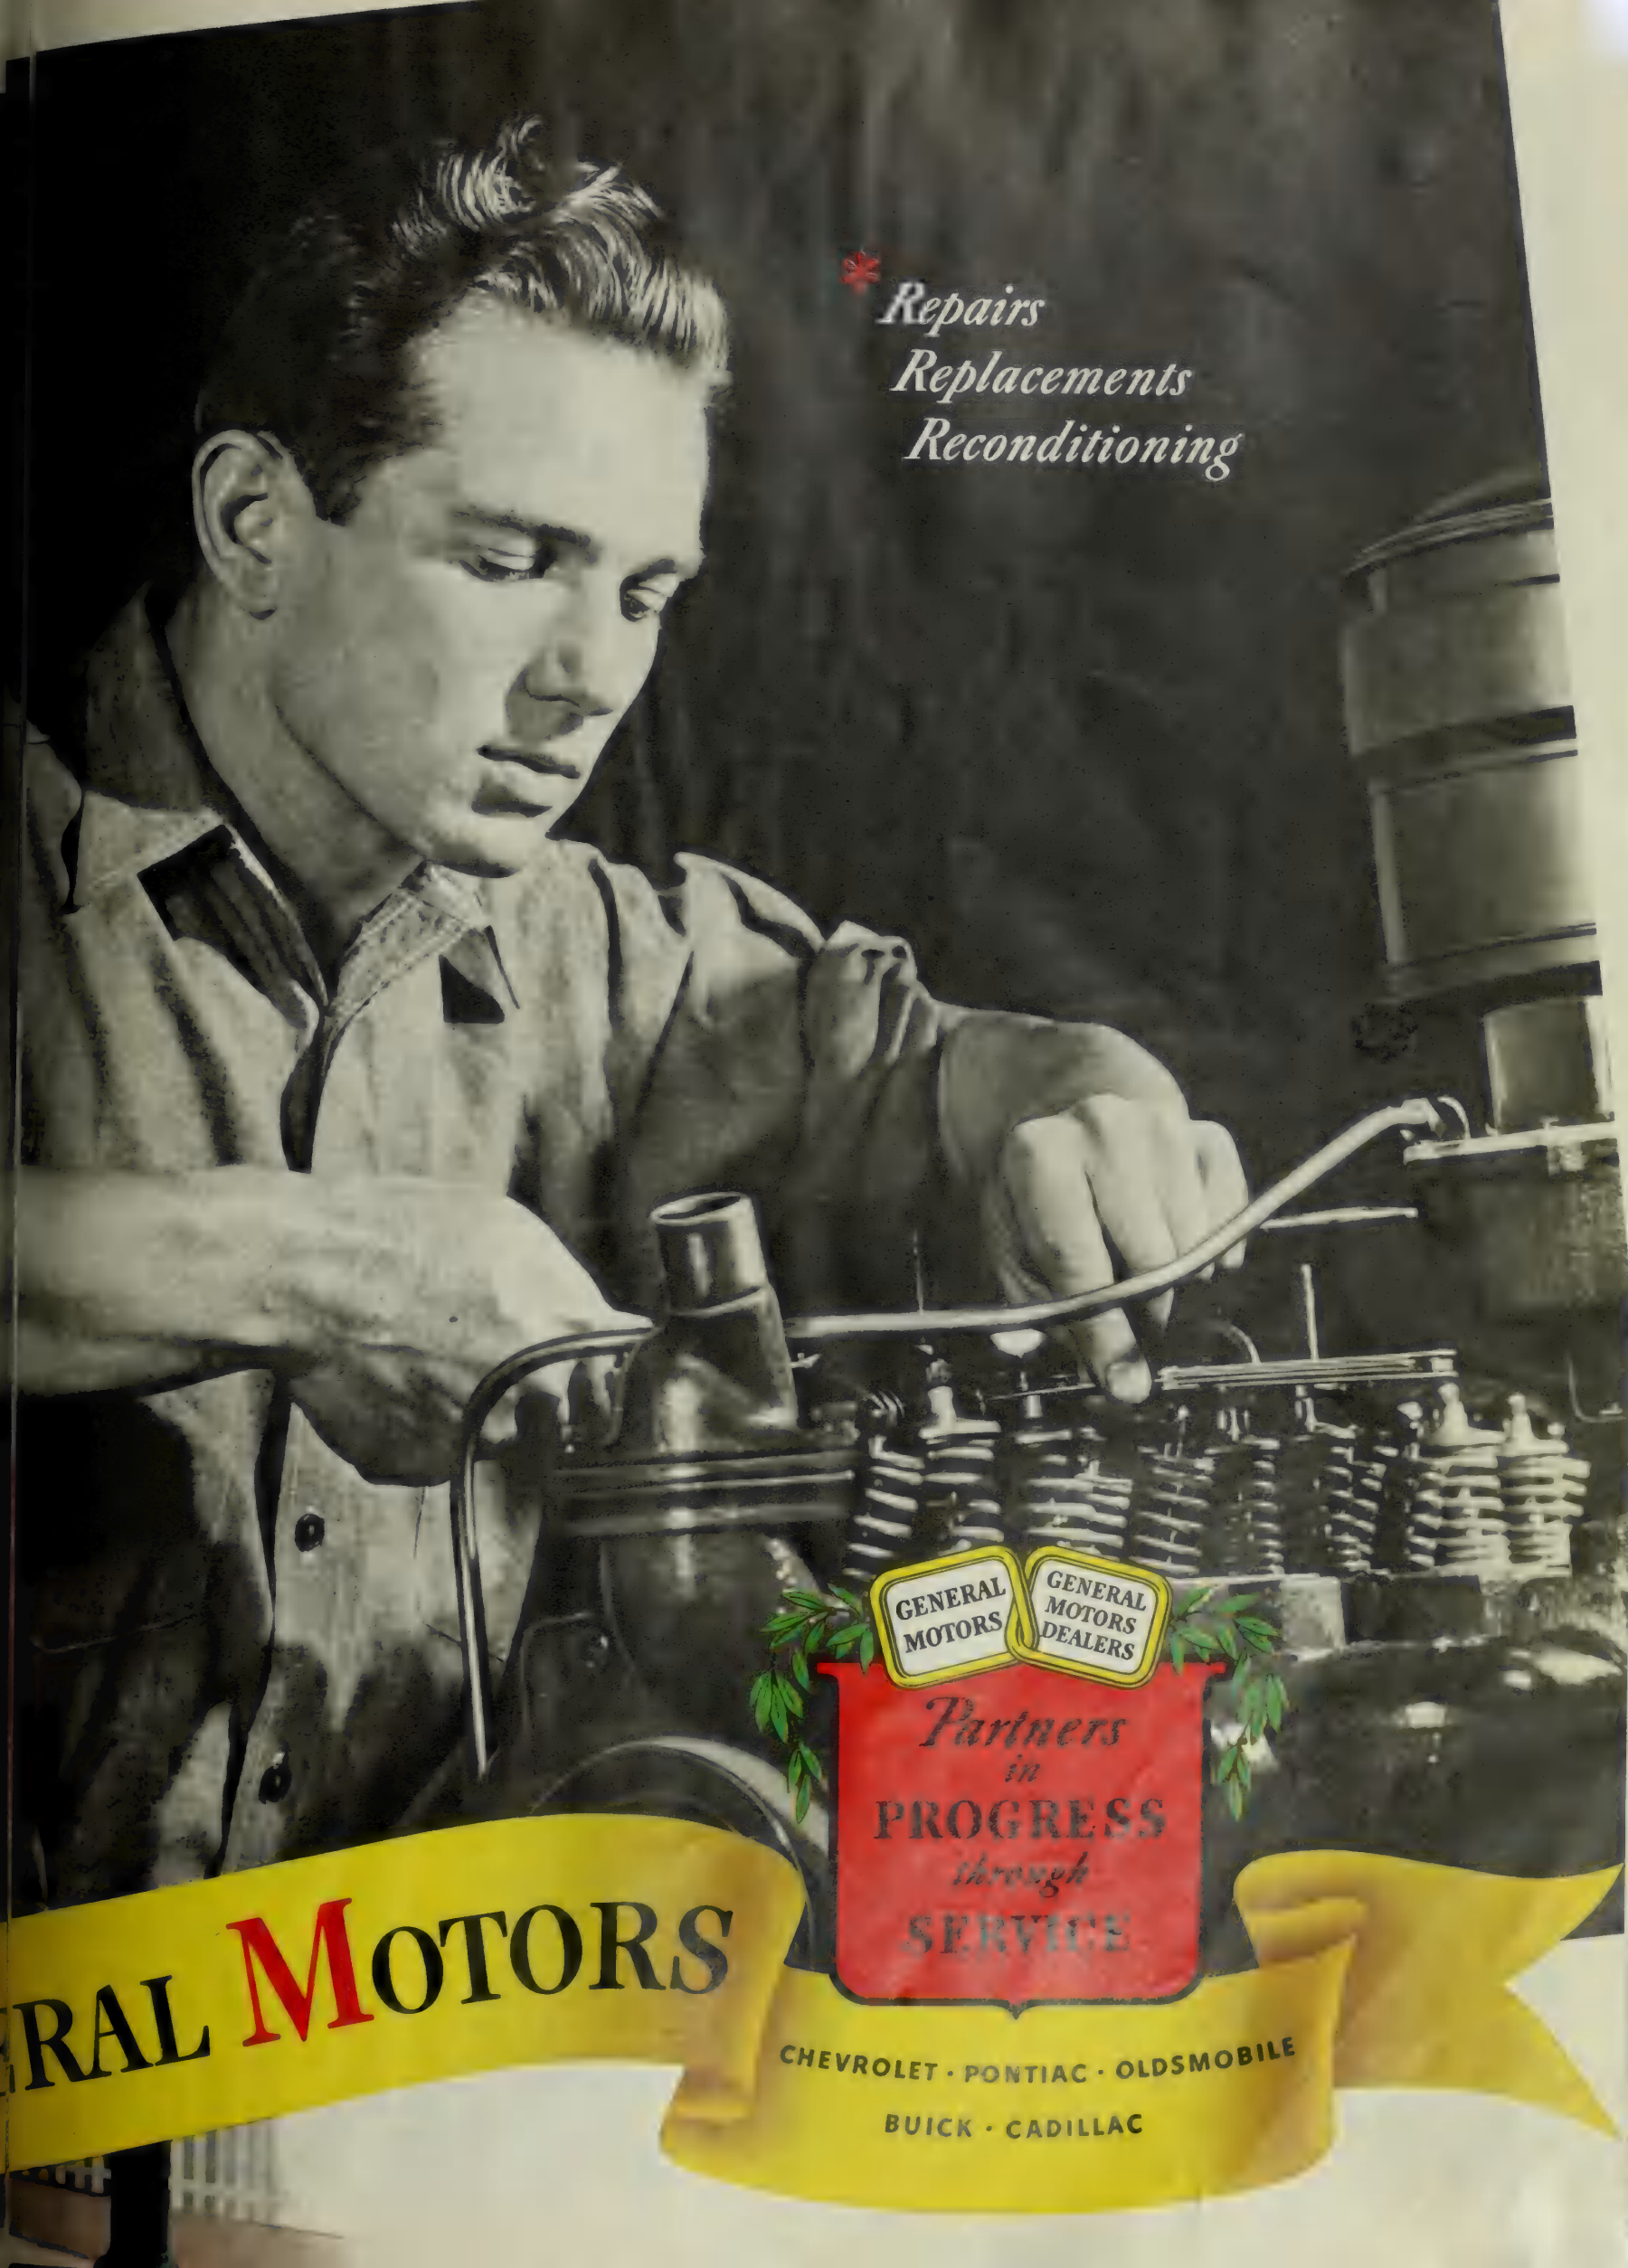
It may surprise you to know that the modern automobile contains some 12,000 parts.

Those parts are so durable and precisely fitted that most of them function throughout the life of the car with no attention at all.

However, since anything mechanical requires some care, one of the things General Motors dealers do for their communities is provide service based on complete, firsthand, up-to-the-minute knowledge of the whole automobile.



To do this, most GM dealers send their mechanics to a factory training school each year.



There they study the new engineering principles in the current models, learn the latest "wrinkles" in service techniques and refresh themselves on the proper care of standard mechanical features.

This is an important safeguard for the satisfaction you and millions like you desire from an automobile. It will be doubly important if the needs of national defense make it necessary for dealer service to prolong the useful life of cars in the future.

As a group, the dealers who sell GM cars have grown in ability with the industry of which they are a part. Year by year, they have risen to new responsibilities, and they are today, with mighty few exceptions, businessmen of whom we and their home towns can be proud.

That's why we look upon them as partners in progress, with us and with the communities they serve.

Your engine, too, needs "armor" against the blitzkrieg of dirt

CONSERVATION of automobile engine life is more important than ever before. Good lubrication is the first and most important step. But remember, good lubrication simply isn't possible unless the oil is kept clean. Follow the recommendation of leading automotive engineers—keep it clean with a Purolator oil filter.

Purolator is the finest protection against the ever-present menace of harsh, sticky, gummy dirt. It traps and removes the damaging impurities that get into your oil every mile you drive.

When the oil shows dirty on the dip-stick, the filter element has reached its capacity and should be replaced at once. Genuine Purolator elements cost only $1 to $2.75.

If your engine is not filter-equipped, your dealer can install a complete Purolator unit quickly and easily. Most prices $5.30 to $7.

Purolator Products, Inc., Newark, N.J. ☆ *Founder and leader of the oil filter industry*

KEEP IT CLEAN with PUROLATOR

between her eyes. "Investments? What investments?"

"For a number of years I have been contributing to an institution which is just now beginning to pay dividends," he said, giving Truth a reckless handling.

The diamond sparkled in the moonlight. When she looked up there was adoration in her glistening eyes. "It's so lovely, Jim!"

Tears came to his own eyes as he stroked her shining hair. *Shall I give it up. Shall I turn over a new leaf for Marjorie?*

He had almost convinced himself that he should make the sacrifice by the time he phoned in his story of a Los Angeles murder trial the next noon. The switchboard operator, however, informed him that little Roger Curtis had called, leaving a list of horses for Happy Jim. Was she to give them to his bookmaker?

While the girl held the wire, he had it out with himself. Gambling was out—definitely—but to miss taking advantage of a safe, scientific method of making money would be sheer idiocy.

"Give 'em to Ed," he said.

When he dragged in that evening, weary with life and disgusted with justice, the telephone girl greeted him with the astonishing news that his bookmaker owed him one hundred forty-one dollars and sixty cents.

His heart was light and gay when he parked before the Curtis dwelling that evening. He took the front steps in a single stride and gave the doorbell the old one-two. Roger opened the door and stood in the hall, blinking nervously. Jim handed him his hat and stepped inside.

"How's every little thing?"

"Very bad." Roger shifted his feet uneasily. "I don't think you'd better come in, tonight."

"You don't mean that Marjorie knows?"

Roger nodded, avoiding Jim's look. "I asked a professor some questions and he got in touch with Mother and she mentioned it at the dinner table and . . ."

Happy Jim wet his lips. "Where are they all?"

"The folks went to a movie. Marjorie's in there," Roger jerked his head toward the living room, "reading a book—upside down."

"NOW that you're here," came Marjorie's vibrant voice, "you might as well come in. I've something to say to you!"

There was quite a bit of it. She mentioned honor and deceit, and gambling, and the budget—*if* there was going to be a budget—the leading astray of children and the misapplication of talent—oh, a number of things. When she was through Happy Jim bent down and kissed her. The time had come to make her understand.

"I haven't failed you, Sweet Marjorie. With Roger doing the doping, this isn't gambling. It's a business. An upright, honest, out-of-doors business. Filled with thrills and excitement—the Sport of Kings . . ."

The blue eyes grew sardonic.

Happy Jim dropped his arm around Roger's thin shoulders in a brotherly embrace.

"For the first time in the history of this magnificent sport, a wager on the outcome of a race has ceased to be a gamble and become an investment." He beamed down at Roger. "See it as I do, Sweet Marjorie. Because of your brother's genius, a two-dollar investment becomes a refrigerator, or a gas stove, or a davenport—or a bassinet!" Passion crept into Jim's voice. "Is it fair to ourselves—is it fair to—to posterity," he cried, "if we turn our backs on a sure thing because of some old-fashioned moral principle?"

There was considerably more—never talked so brilliantly. Du course of the speech, Marjori softened. He knelt beside h finally, gently asked:

"Sweet Marjorie: have you e a horse race?" When she sh blond head, Jim went on, swiftly "You are much too fine a p condemn a sport you have neve he said. "Tomorrow, you an and I shall go out and watch th Tomorrow you will feel what I f

l *never* lose another race!"

But Roger only shook his head. "No," he said bitterly. "I'm through!"

"Jim."

For a moment he had forgotten Sweet Marjorie. He turned to see her ashen face lifted up to him, the Bermuda eyes glistening pools, her lips quivering.

"The furniture . . . my new stove . . ."

Perspiration stood out on Jim's brow. "Darling—all we lost was the first twenty dollars. Don't you see that, Sweet Marjorie? All we lost was . . ."

"Was my house." She choked up and two tears slipped down her pale cheeks.

Happy Jim slipped his hands under her arms. "But, darling," he said, "we almost made it. Even the best of businesses sometimes go sour. Just think: when Roger works out the real formula—with the human element included . . ."

"No." Roger, at his elbow, spoke up with piping vigor. "I'm all through! I'm going back to the model of the structure of the atom. I don't know what I've been thinking about!"

"Roger, my cooky . . ."

Roger's eyes suddenly gleamed balefully. "I'm not your cooky," he said. "You've been wasting my time. I've been getting behind in my homework!"

Sweet Marjorie spoke up swiftly: "But, Roger, honey—you've got to help us get back the house!"

Roger moved irritably away from her.

"I don't have to," he cried. "I don't have to do anything! It isn't scientific!" The boy's disgust with the whole affair was patent.

"You wouldn't even help your own sister?" Jim chided.

Roger glared scornfully at Happy Jim. "What's the matter with you?" he demanded. "You can add, can't you?"

THE Pasadena Call's librarian dumped the books on Jim's desk.

"There you are, Happy Jim. Trigonometry. Solid Geometry. The Psychology of the Individual." The man leaned against the desk and leered. Funny collection for a guy to be takin' on his honeymoon."

Happy Jim gathered the books into his arms. He scowled up at the librarian. "Anything a fourteen-year-old kid can do, Happy Jim Marlowe can also do—and don't you forget it!" He stood up suddenly and bent belligerently over the desk. "And what difference does it make to *you* what I do on my honeymoon?"

**"Of course I wouldn't talk about her unless I could say something good—and, boy, is this good!"** BILL KING

## *Try It Yourself Tonight*

TODAY, as you've probably read in newspapers and magazines, there's a *new idea*—of what to do to meet special strain. A *scientific idea* of how to build up increased vitality—the idea that people under special strain need *special food*—in addition to the normal diet—*to be at their best!*

All this may be news to the public, but it is old to Ovaltine. For more than 20 years, Ovaltine has pioneered in preaching the need of special supplementary food, for those who want to be really fit.

*What It Does*

For years, thousands who wakened tired and logy—lacked freshness and vitality to carry them through the day—have found they wakened fresh and buoyant—with lasting vigor—when they drank a cup of Ovaltine regularly each night and morning. For Ovaltine is a special food-concentrate designed to do two important things:

*First:* When taken warm at bedtime, Ovaltine fosters sound sleep, in a safe, natural way, *without* drugs. It has the power to relieve that feeling of "nervous tension," thus helping to condition the mind for rest.

*Second:* Ovaltine supplies a special combination of food factors designed to replenish vitality *while you sleep*—rebuild worn-out muscle, nerve and body cells. It provides significant amounts of the rarer food elements everyone must have for vigorous health—in a food specially processed for easy digestion—protecting minerals, Vitamins A, $B_1$, D and G, all the essential amino acids, pyridoxine, pantothenic acid—elements now known to be deficient in many foods. Thus acts as an insurance against strength-sapping food deficiencies which affect more than ⅓ of all people today.

So, by all means, try this "special food" idea modern science is urging. Turn to *new, improved* Ovaltine night and morning—starting tonight. See if you don't begin to feel infinitely "fresher" and more alive—with abundant vitality to face these strenuous times. Get a tin of Ovaltine, now.

THE PROTECTING FOOD-DRINK

# THE QUARREL

## BY ERNEST HAYCOX

ILLUSTRATED BY HARRY MORSE MEYERS

**Before the day was out two men would meet, and one of them would die. She would go to the dance that night if the right one lived to escort her**

**Van Horn turned to the girl and said: "Where do I carry this for you?" The ... had gone from her face and she watched him with the deepest and most solemn ...**

JIM VAN HORN left his ranch in the Yellow Hills before daylight Saturday, reaching Two Dance by ten in the morning. Even then the town had begun to fill with cattlemen and riders from the roundabout country. Homesteaders' wagons were parked under the courthouse cottonwoods, and a sign on the Oddfellows Hall said, "Dance Tonight," and a traveling dentist had set up his portable chair at the corner of Arapaho and Custer streets. Slats McGinn and Charley Engleman were standing in front of Donlake's store; he wigwagged at them and turned into Menefee's stable to leave his horse.

As he came out afoot he noticed Drake Purple riding full tilt down the street, but he thought nothing of it until Purple yelled at him and charged through the stable's archway. Van Horn avoided being run down by a quick side jump and a slow irritation stirred in him as he crossed the street and joined McGinn and Engleman. Both these men laid their usual cheerful insults upon him, as old friends will do, and he parried in kind and the three had about decided on a drink when Purple crossed from Menefee's. Slats McGinn happened to be speaking, but Purple, who never bothered about manners, broke in with his stiff, blunt voice:

"You're all a dry-looking lot."

"That subject," rejoined McGinn, "has been discussed and shortly the complaint will be taken in hand."

"In order to give this crowd some reputation for honesty," said Purple in his pushing way, "I'll string along." He meanwhile took time to fabricate himself a cigarette. He was a short, heavy figure stained half-black by the sun, with meaty, weather-cracked lips and heavy white teeth and a pair of stone-colored eyes, which even in the man's lightest moments were strong with bold self-will. He said to Van Horn, "Haven't seen much of you."

"Been working over near the reservation all summer."

"Bring back any Indian beef?"

"Couldn't steal a thing," said Van Horn, smiling.

Drake Purple swiped the cigarette with his tongue. "Now that you have lied like a gentleman, let's go get the drink."

There was a malice in Purple always close to the surface; he had no gift in getting along with other people and his record was one of sudden quarrels and long-continued contentions. From most men the remark would have gone unnoticed, but from this rough-tongued owner of the Broken Bell outfit it was something that jarred the indolent ease of the others, producing immediate reserve. Van Horn ceased to smile; he gave Drake Purple a straight, searching glance and he obviously took a good deal of care with his reply, finally saying, "As for honesty, you would scarcely be a competent judge, Drake."

He had framed his remark to suit the other man's humor; if Purple had intended to crowd him, he would crowd back. Purple could take it or he could leave it, and meanwhile he continued to watch Purple with an inexpressive reserve. He had his answer soon enough: A red stain moved up Drake Purple's neck and spread into the mahogany darkness of his skin. The muscles of his jaws bunched and he drew in a breath of wind and he seemed on the verge of expressing it; but instead he cast a furious glance at the three men before him, dashed his ci... ground and wheeled awa...

Neither McGinn nor C... man commented on the ... Van Horn's quarrel and ... general etiquette of the s... cated that they remain si... blow over or it might be s... while, Van Horn thought ... **Do You Realize How Oil-Wealthy You Are?**

A nation in high gear for defense . . . and, in a large way, America's oil wealth makes it possible.

Other nations of the world fight for oil . . . any oil. We, among all nations, may pick and choose, not by brand alone, but even by type.

America has many oil fields. They produce good crudes of various types. But of all oil fields in the world, the Pennsylvania Oil region produces the choicest crude oil for the manufacture of high grade lubricating oils.

For your protection, Pennsylvania producers, refiners and marketers of high grade Pennsylvania Motor Oils, formed this association many years ago for co-operative research constantly to improve Pennsylvania Motor Oils, and for co-operative advertising to keep you constantly informed about them.

Guaranteed 100% PURE PENNSYLVANIA OIL — Made from the highest grade crude oil in the world

For your protection, fine oils made from 100% Pure Pennsylvania Grade Crude are entitled to carry this emblem, the registered badge of source, quality, and membership in our Association.

PENNSYLVANIA GRADE CRUDE OIL ASSOCIATION • OIL CITY, PENNSYLVANIA

# One-Night Tour

Continued from page 22

Three hundred and seventy-five miles to make tonight and tomorrow. To Norfolk, Virginia. The bus careened around curves, snapping your neck awake if you tried to sleep. It swung in and out of traffic, passing slower vehicles. Time to make. The men sat in the bus talking slowly and in murmuring tones. They were too worn for laughing or shouting. All the laughing and shouting was in the instruments. . . . Dorothy Claire had a make-up kit on her lap. She was slapping cold cream on her face, wiping make-up off with tissues.

Palmer and Dick Farrell, the drummer, talked about some girls they knew in Norfolk, Virginia. Johnny Martell, one of the best solo trumpeters in the business, rubbed unguent on his upper lip where a small sore had developed; lip sores are the occupational disease of a trumpeter. Byrne, given a double seat for himself according to the leader's prerogative, placed a blinder over his eyes. Then he twisted himself into an S and tried to sleep. Bob MacDonald, third trumpeter, sat in a back seat and looked quite depressed. Abe Siegel, bassist, yelled for an aspirin. The bus roared louder as it turned out of a mountain road and merged into Route 113 . . . "This is the last one-nighter for me," mused MacDonald aloud. "I'll be in the Army pretty quickly. I hope they put me into one of those Army dance bands. What'll happen to me if I can't practice? I used to hate one-nighters like hell, but now it feels good, even staying up in a bus all night feels fine. I wish this tour could go on forever. Suppose they don't let me touch a horn for two years?"

### It's All Okay with Tony

Tony Faso, second trumpet and the youngest member of the band, leaned across the aisle and slapped MacDonald on the shoulder. "Solid, solid," he said happily. For Faso, a seventeen-year-old boy from Brooklyn, it was the first one-night tour, the first job with a big band. Faso used to play in a parochial brass band at the Church of Our Lady of Hope in Brooklyn. A few months ago he was "discovered" when he sat in on a Sunday-afternoon jam session at the Hickory House on 52d Street. Tony has the drive, hoarse vibrato and imagination of the born swingster. He plays every note on his trumpet as if he had only one more note to play. He is loud and raucous and his notes drive into your body like hypodermic needles.

Tony had never been away from Brooklyn before. He was thrilled by everything on the trip, the tobacco plants growing in Carolina, the hot rolls served at breakfast, the barefoot farm kids. "It's a big country," he says, staring out of the window as the bus rolled toward Philadelphia. Miss Claire, finished with her toilet, tied a bandanna around her head and tried to compose herself for sleep. MacDonald joined Palmer and Farrell in the discussion about girls. Byrne sat up abruptly and said, "Where are we? Why can't I learn to sleep on busses?" Nobody laughed. In the back of the bus, Siegel, Matthews, Skinner, Usifer and Martell started gossiping about music. In the night, when the bus lights are out, all you can do is talk. Who is playing with whom, so-and-so is in bad with Local 802, too bad about Gray Gordon's band busting up, did you hear Benny Goodman's got a new drummer, who, big Sid Catlett, they say Mildred Bailey's new record is solid. Gradually, the conversation drowsed. One by one, the heads sank down, bodies tried to r[illegible] to loosen tense muscles, [illegible] paralyzed lips. As soo[n] away, the bus made a sl[ight] glaring headlights of an[other] through the windshield [and] ruptly awoke. They smo[ked] rettes instead of sleepi[ng] of the boys tried to ma[ke a] pile of luggage in the [aisle] tried to sleep. Except T[ony] stared out of the windo[w] derment. MacDonald tr[ied] couldn't. He stared out [the window] but in a different way, [as] mer and Farrell continu[ed] girls.

### Theosophy on t[he] Side

The bus slowed down [in] Philadelphia at a paltr[y] hour. I sat down next [to] verton, who plays seco[nd] clarinet. Yelverton, wh[o] gomery, Georgia, is a s[olid] intense blue eyes and a [slow] manner of speaking. H[e] smoke, or go with girls. [On] tire tour he sat immov[ably] and read religious b[ooks] studying a work on The[osophy] Annie Besant. Yelvert[on] higher realms of being [than] of a divinity student.

Toward morning sev[eral] started a poker game, [for] dime stakes. They plan[ned] the aisle, and propped a [suitcase] on the suitcase. Seven o[f] the game. The others ta[lked] really talk the way they [do] they talk their own bran[d] English language. Wh[en] pretty girl they shout, ["]When they liked a Tor[ry] cording of Yes, Indeed, [very] roadside juke box they [said] a long distance." An[d] "solid." Anything old [is] "beat."

The poker game con[tinued] when the bus arrive[d at] Maryland. "Ten minute[s or] Reis announced. They [had] the time was up and s[aid] bus restlessly. The c[ards] argued about mileage [and] wanted the driver to esc[ape] because tolls are paid b[y] bus started rolling.

We reached Cape C[harles] after noon and boarde[d the] Norfolk. On the ferry [I] who is only twenty-thr[ee] a professional musicia[n] and a maestro for two[ ] stand the tribulations [of] Bobby is a handsome [lean-cut] who looks very clear-ey[ed] and who plays a full, [rich] style of trombone that [is] Tommy Dorsey's (and [Tommy] teen years older). Bob[by] tough musical educatio[n] musician has the same [feeling] ing This is no job for [sissies."]

Bobby received his [physical] ing at the hands of his [father.] Byrne, former U. S. A[rmy] who is now head of th[e] ment at Cass Technica[l High] Detroit. A believer i[n] discipline, even where[ ] cerned, Mr. Byrne put [Bobby] the piano at two, and [had] ing the flute, piccolo an[d] was six. 28 choruses in all, a matter of
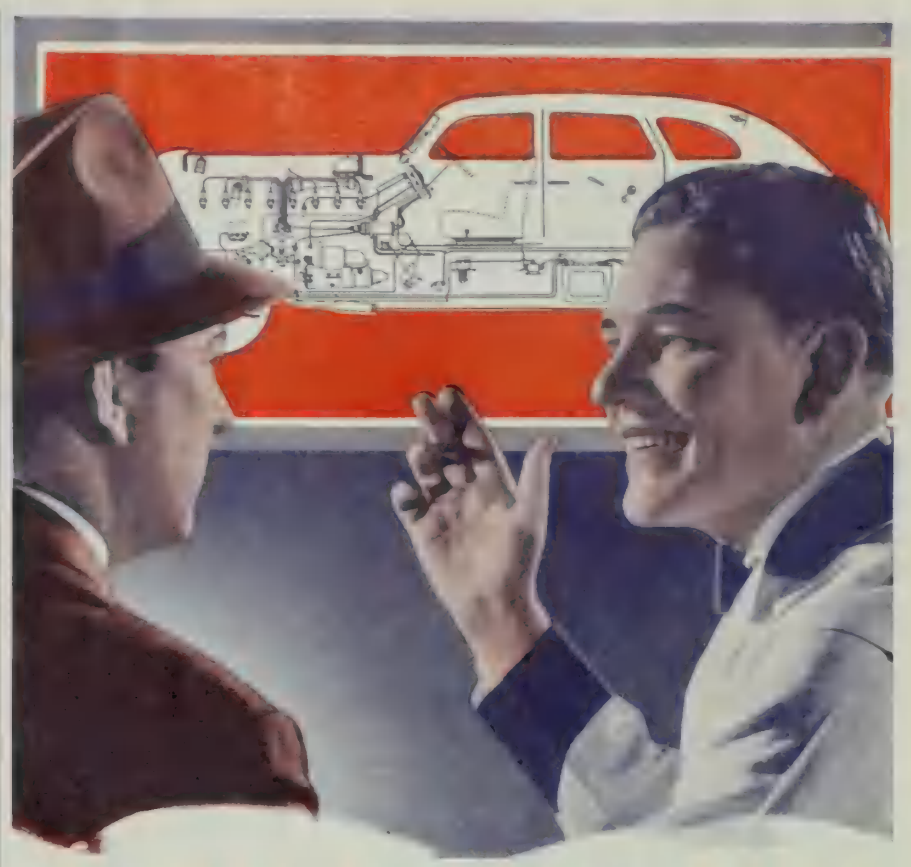
minutes. They forgot warped
d sea-damp drums; they just
played for the sheer tingle of it. You had to see it in order to believe that boys without sleep could get all that music out of their worn bodies.

They returned to the hotel in Norfolk at 4:30 in the morning, and Reis paid the men their salaries in his room. They snatched two hours of sleep and were up at 8. Play, and ride on. One hundred and seventy miles to Wilson, North Carolina, for the annual Coronation Ball of Wilson's famous Tobacco Exposition and Festival, which celebrates the resumption of tobacco auctions. The band played in the New Planter's Warehouse —86,500 square feet, and by 11 P. M. every foot was packed with the sons and daughters of the tobacco aristocracy—everybody from Durham to the eastern seaboard was on hand, nearly 10,000 strong. Mayor Bill Daniels, who likes swing, sat near the bandstand so he could enjoy the rhythms at close quarters. At one point, he became so moved that he came up to Bobby and suggested several request numbers.



Then without any warning, the lights went out! The band played in pitch-darkness for ten minutes. Then, presto! the lights came on. Then, another black-out. This time Bobby fished out a searchlight and flashed it on the singers when they took a chorus. After the fourth black-out, however, the lights came on and stayed on. They played till 3 A. M.

Play, and ride on. Two hundred and fifty miles to Washington, D. C., where the band played for two cruises on the S. S. Potomac along the Potomac River. One cruise went from 8:45 till midnight, and the other from 12:30 till 3:30. Now, even the dancers on the floor could see the bandsmen were tired, eyes bleary and red-rimmed. You could see that if you looked, but if you just listened and danced you couldn't have told the difference. On the S. S. Potomac, which was hot and stifling and crowded with 2,200 slightly hysterical jitterbugs, was the worst bandstand of all; it was no more than ten feet wide and the men and instruments were literally wedged in. Abe Siegel, who had been barnstorming with the big bands for close to ten years, vowed this was the worst bandstand he had ever encountered. But they played on, and the jitterbugs danced. For six solid hours they played, and by the time they were ready to leave they were ready to drop.

They were on the road again at dawn, en route to Bridgeport. Dorothy Claire rubbed cold cream into her cheeks. Road Manager Reis figured out mileage. Two saxophonists and three brass men organized a poker game. Yelverton gently cleaned his clarinet with a handkerchief, and then he read a pamphlet. Siegel read Down Beat. Tony Faso was staring out of the window, wide-eyed at the passing landscape; he was thinking his own thoughts and smiling a little to himself, smiling proudly. Farrell and Palmer talked about some girls they knew in Boston. Nobody slept. By some miracle it seems that you can get by without sleep on a one-night tour.

Burnt Tablecloth

# LET AN EXPERT TAKE CARE OF YOUR CAR'S "Nervous System"

THE ELECTRICAL SYSTEM OF YOUR CAR NEEDS A TRAINED EXPERT TO PROPERLY DIAGNOSE STARTING, LIGHTING, IGNITION TROUBLES!

THE AUTO-LITE SERVICE MAN uses only original factory parts. He is a skilled technician specially trained in testing Auto-Lite electrical equipment to give you "like-new" performance.

THERE is a simple rule that will help you save whenever your car needs preventive service... will keep your car giving "like-new" performance, too. Always have your car checked by a qualified service man. Insist on original factory parts. This is particularly important in checking electrical units, the "nervous system" of your car. It will pay you to get acquainted with the Auto-Lite service man in your neighborhood. He carries a stock of original service parts that are used as standard equipment by more than half of America's car manufacturers. He is a trained specialist in Auto-Lite starting, lighting, and ignition equipment. It is his business to help you avoid trouble, to keep you getting top performance from your car. See him regularly to keep minor car troubles from causing major repair bills.

*Only a Kaywoodie has the Kaywoodie Flavor*

There's something heart-warming about smoking a pipe as good as a Kaywoodie is. The smoke is mild and cool and sweet, because this pipe is made only from the "prime cut" of those rare, costly imported briar burls from which the sweetest-smoking briar comes. Kaywoodie has a large supply, imported before the war.* Yes, and a Kaywoodie is made by artisans who carry on a ninety-year-old tradition of fine pipe craftsmanship. The gainer from all this? Yourself, when you own a Kaywoodie. The shape illustrated is a Slim Billiard and $3.50 makes you a proud owner.

*Kaywoodie briar is dug out of the ground years in advance; so the war has not interfered with our supply.

Here you see a giant imported briar burl cut in cross section to show the "prime cut" segment from which Kaywoodie pipes are made. Only this prime cut produces pipes with the sweet-smoking qualities of Kaywoodie pipes.

Yours for the asking: *The Kaywoodie Pipe Almanac which tells how to get the fullest pleasure from pipe-smoking.*

# Murder in Retrospect

Continued from page 21

said. "This time it's different," to which I answered somewhat cynically, "It always is!" Amyas then looked quite worried and anxious. He said, "You don't understand. She's just a girl. Not much more than a child." He added that she had very modern views and was absolutely free from old-fashioned prejudices. He said, "She's honest and natural and absolutely fearless!"

I thought to myself, though I didn't say so, that Amyas had certainly got it badly this time. A few weeks later I heard comments from other people. It was said that the "Greer girl was absolutely infatuated." Somebody else said that it was a bit thick of Amyas, considering how young the girl was, whereupon somebody else snickered and said that Elsa Greer knew her way about all right.

There was a question as to what Crale's wife thought about it, and the significant reply that she must be used to that sort of thing by now, to which someone demurred by saying they'd heard that she was jealous as hell and led Crale such an impossible life that any man would be justified in having a fling from time to time.

I mention all this because I think it is important that the state of affairs before I got down there should be fully realized.

I was interested to see the girl. She was remarkably good-looking and very attractive, and I was, I must admit, maliciously amused to note that Caroline was cutting up very rough indeed.

Amyas Crale himself was less lighthearted than usual. Though to anyone who did not know him well, his manner would have appeared much as usual. I, who knew him so intimately, noted at once various signs of strain, uncertain temper, fits of moody abstraction, general irritability of manner.

Although he was always inclined to be moody when painting, the picture he was at work upon did not account entirely for the strain he showed. He was pleased to see me and said as soon as we were alone, "Thank goodness you've turned up, Phil. Living in a house with four women is enough to send any man clean off his chump. Between them all, they'll send me into a lunatic asylum."

IT WAS certainly an uncomfortable atmosphere. Caroline, as I said, was obviously cutting up rough about the whole thing. In a polite, well-bred way, she was ruder to Elsa than one would believe possible—without a single actually offensive word. Elsa herself was openly and flagrantly rude to Caroline. She was top dog and she knew it, and no scruples of good breeding restrained her from overt bad manners.

The result was that Crale spent most of his time scrapping with the girl Angela when he wasn't painting. They were usually on affectionate terms, though they teased and fought a good deal. But on this occasion there was an edge in everything Amyas said or did, and the two of them really lost their tempers with each other. The fourth member of the party was the governess. "A sour-faced hag," Amyas called her. "She hates me like poison. Sits there with her lips set together, disapproving of me without stopping."

It was then that he said: "Damn all women! If a man is to have any peace he must steer clear of women!"

"You oughtn't to have married," I said. "You're the sort of man who ought to have kept clear of domestic ties."

He replied that it was too late to talk about that now. He added that no doubt Caroline would be only too glad to get rid of him. That was the first indication I had that something unusual was in the wind.

I said: "What's all this? Is this business with the lovely Elsa serious then?" He said with a sort of groan: "She *is* lovely, isn't she? Sometimes I wish I'd never seen her."

I said: "Look here, old boy, you must take a hold on yourself. You don't want to get tied up with any more women." He looked at me and laughed. He said: "It's all very well for you to talk. I can't let women alone—simply can't do it—and if I could they wouldn't let me alone!" Then he shrugged those great shoulders of his, grinned at me and said: "Oh, well, it will all pan out in the end, I expect. And you must admit the picture is good!"

He was referring to the portrait he was doing of Elsa, and, although I had very little technical knowledge of painting, even I could see that it was going to be a work of especial power.

While he was painting, Amyas was a different man. Although he would growl, groan, frown, swear extravagantly and sometimes hurl his brushes away, he was really intensely happy.

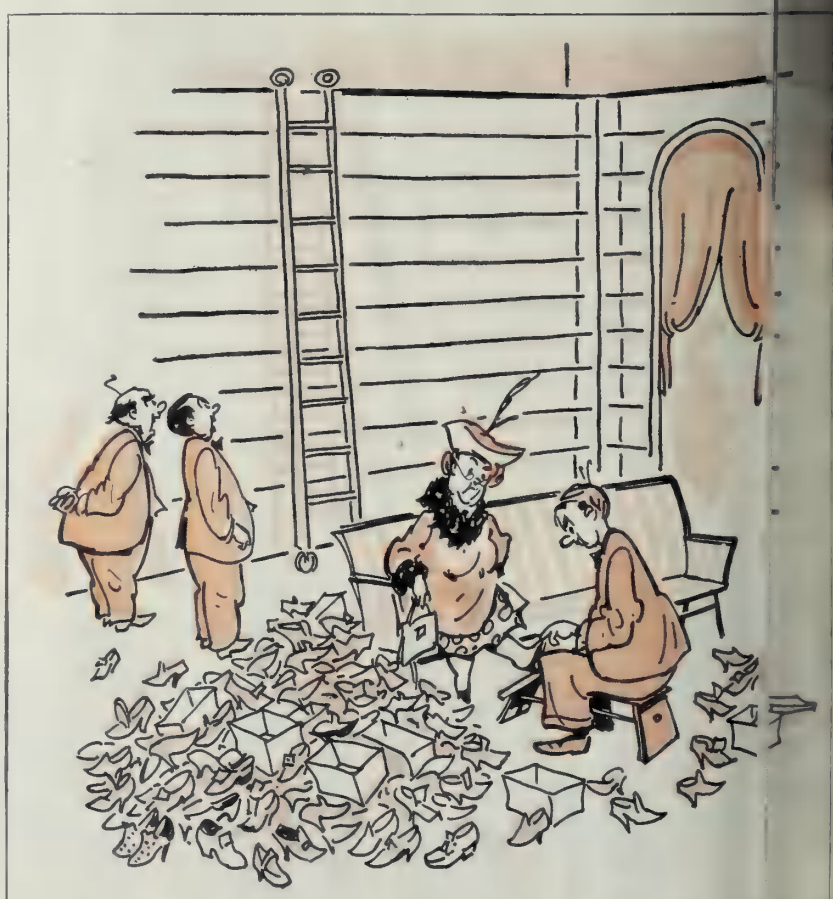
It was only when he came back to the house for meals that the hostile atmosphere between the women got him down. That hostility came to a head on September 17th. We had had an embarrassing lunch. Elsa had been particularly—really, I think *insolent* is the only word for it! She had ignored Caroline pointedly, persistently addressing the conversation to Amyas as though he and she were alone in the room. Caroline had talked lightly and gaily to the rest of us, cleverly contriving so that several perfectly innocent-sounding remarks should have a sting. She hadn't Elsa Greer's scornful honesty—with Caroline everything was oblique, suggested rather than said.

Things came to a head after lunch in the drawing room just as we w ing coffee. I had commented o head in highly polished beec very curious thing—and Car "That is the work of a young sculptor. Amyas and I admir very much. We hope to go a next summer." That calm a of possession was too much She was never one to let a pass. She waited a minute o then she spoke in her clear, ra emphasized voice.

She said: "This would b room if it were properly fixe far too much furniture in it. living here I shall take all t out and just leave one or pieces. And I shall have copp curtains, I think—so that the will just catch them throug western window." She turn and said, "Don't you think t be rather lovely?"

I DIDN'T have time to answ line spoke and her voice w silky and what I can only d dangerous. She said, "Are y of buying this place, Elsa?"

Elsa said, "It won't be ne me to buy it."

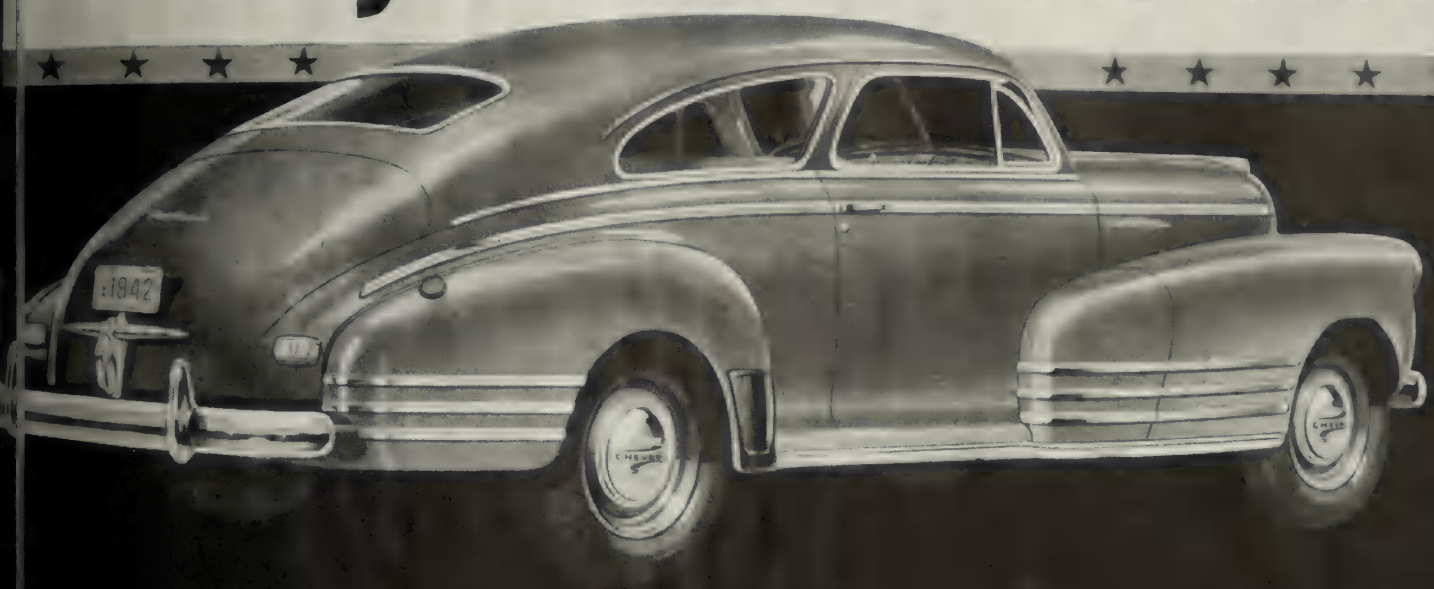


Caroline said, "What do y And there was no softness i now. It was hard and meta laughed. She said, "Must w Come now, Caroline, you well what I mean!"

Caroline said, "I've no id

Elsa said to that: "Don't ostrich. It's no good prete don't see and know all about and I care for each other. your home. It's his. And married I shall live here wit

Caroline said, "I think yo



Elsa said: "Oh, no, I'm n and you know it. It woul simpler if we were honest other. Amyas and I love e

you've seen that clearly enough. There's only one decent thing for you to do. You've got to give him his freedom."

Caroline said, "I don't believe a word of what you are saying."

But her voice was unconvincing. Elsa had got under her guard all right.

And at that minute Amyas Crale came into the room and Elsa said with a laugh, "If you don't believe me, ask him."

And Caroline said, "I will."

She didn't pause at all. She said, "Amyas, Elsa says you want to marry her. Is this true?"

Poor old Amyas. I felt sorry for him. It makes a man feel a fool to have a scene of that kind forced upon him. He went crimson and started blustering. He turned on Elsa and asked her why the devil she couldn't have held her tongue.

Caroline said, "Then it *is* true?"

He didn't say anything, just stood there passing his finger round inside the neck of his shirt. He used to do that as a kid when he got into a jam of any kind. He said—and he tried to make the words sound dignified and authoritative—and of course couldn't manage it, poor devil:

"I don't want to discuss it."

Caroline said, "But we're going to discuss it!"

Elsa chipped in and said, "I think it's only fair to Caroline that she should be told."

"Is it true, Amyas?" Caroline said very quietly.

He looked a bit ashamed of himself. Men do when women pin them down in a corner.

She said, "Answer me, please. I've got to know."

He flung up his head then, rather the way a bull does in the bull ring. He snapped out, "It's true enough, but I don't want to discuss it now."

And he turned and strode out of the room. I went after him. I didn't want to be left with the women. I caught up with him on the terrace. He was swearing. I never knew a man to swear more heartily. Then he raved:

"Why couldn't she hold her tongue? Why the devil couldn't she hold her tongue? Now the fat's in the fire. And I've got to finish that picture—do you hear, Phil? It's the best thing I've done. The best thing I've ever done in my *life*. And a couple of fool women want to muck it up between them!"

Then he calmed down a little and said women had no sense of proportion.

I couldn't help smiling a little. I said, "Well, dash it all, old boy, you have brought this on yourself."

"Don't I know it?" he said, and groaned. Then he added: "But you must admit, Phil, that a man couldn't be blamed for losing his head about her. Even Caroline ought to understand that."

I ASKED him what would happen if Caroline got her back up and refused to give him a divorce.

But by now he had gone off into a fit of abstraction. I repeated the remark and he said absently: "Caroline would never be vindictive. You don't understand, old boy."

"There's the child," I pointed out.

He took me by the arm. "Phil, old boy, you mean well, but don't go on croaking like a raven. I can manage my affairs. Everything will turn out all right. You'll see if it doesn't."

That was Amyas all over—an absolutely unjustified optimist. He said now, cheerfully, "To hell with the whole pack of them!"

I don't know whether we would have said anything more, but a few minutes later Caroline swept out on the terrace. She had a hat on—a queer, flopping, dark brown hat, rather attractive.

She said in an absolutely ordinary, everyday voice: "Take off that paint-stained coat, Amyas. We're going over to Meredith's to tea—don't you remember?"

He stared, stammered a bit as he said: "Oh, I'd forgotten. Yes, of c-c-course we are."

"Then," she said, "go and try and make yourself look less like a rag-and-bone man."

Although her voice was quite natural, she didn't look at him. She moved over toward a bed of dahlias and began picking off some of the overblown flowers.

Amyas turned around slowly and went into the house.

Caroline talked to me. She talked a good deal. About the chances of the weather lasting. And whether there might be mackerel about and, if so, Amyas and Angela and I might like to go fishing. She was really amazing. I've got to hand it to her.

But I think, myself, that that showed the sort of woman she was. She had enormous strength of will and complete command over herself. I don't know whether she'd made up her mind to kill him then, but I shouldn't be surprised. And she was capable of making her plans carefully and unemotionally, with an absolutely clear and ruthless mind.

Caroline Crale was a very dangerous woman. I ought to have realized then that she wasn't prepared to take this thing lying down. But, like a fool, I thought that she had made up her mind to accept the inevitable—or else possibly she thought that if she carried on exactly as usual Amyas might change his mind.

Presently the others came out. Elsa looking defiant, but at the same time triumphant. Caroline took no notice of her. Angela really saved the situation. She came out arguing with Miss Williams that she wasn't going to change her skirt for anyone. It was quite all right—good enough for darling old Meredith, anyway—*he* never noticed anything.

We got off at last. Caroline walked with Angela. And I walked with Amyas. And Elsa walked by herself, smiling.

I didn't admire her myself—too violent a type—but I have to admit that she looked incredibly be[au]tiful afternoon. Women do wher[e] they've what they want.

I can't remember the ev[ening] afternoon clearly at all. It's I remember old Merry co[me] meet us. I think we walked [in the] garden first. I remember h[im] discussion with Angela abo[ut] ing of terriers for ratting. incredible lot of apples, too persuade me to do so too.

When we got back to th[e] was going on under the bi[g] Merry, I remember, was upset. I suppose either Amyas had told him som[e] was looking doubtfully at [her] then he stared at Elsa. looked thoroughly upset. Caroline liked to have M[e] string more or less—the c[on]tonic friend who would ne[ver] too far. She was that kin[d of]

AFTER tea Meredith h[ad a] word with me. He said Phil, Amyas *can't* do this t[o] g!"

I said, "Make no mistak[e] to do it."

"He can't leave his wife go off with this girl. He's than she is. She can't b[e] eighteen."

I said to him that Miss [Ellis] fully sophisticated twenty "Anyway, that's under ag know what she's doing."

Poor old Meredith. chivalrous pucka sahib.

I said, "Don't worry, o[ld] knows what she's doing it!"

That's all we had the c[hance] ing. I thought to myself Merry felt disturbed at t[he] Caroline's being a deserte[d] the divorce was through pect her faithful Dobbin I had an idea that hopeless really far more in his line. fess that that side of it an[noyed] me.

## Ward Off Winter Driving Ills—Help Conserve Gasoline with new CHAMPION SPARK PLUGS

Here's quick relief from the paralyzing effects of cold weather on cars using old, worn-out, inferior quality spark plugs, which cause hard starting, sluggish performance, poor gas mileage—new Champion Spark Plugs!

Old plugs—spark plugs that have been in service 10,000 miles or more—invite trouble. Carbon encrusted insulators, burned electrodes and compression leakage rob all spark plugs of their efficiency. This results in hard starting, run-down batteries, poor acceleration and loss of power and speed. Economy of operation disappears.

A new set of Champions will not only ward these winter driving ills, but in addition you that imperative *extra* gas mi ge requ by our national gasoline economy rogram.

Outstanding among Champions' any pate features is the sensational Sillm t seal w banishes troublesome leakage *com on to ord spark plugs.* Since leakage in spa plugs c them to overheat, resulting in pre-i ition, ro unresponsive and wasteful engine eration can see how important it is for y to insis Champions—the spark plugs cha pions us

nd your women! I'd like to
Some day I will kill you."

Amyas said, "Don't be a fool, Caroline." And she said, "I mean it, Amyas."

Well, I didn't want to overhear any more. I went out again. I wandered along the terrace the other way and came across Elsa.

She was sitting on one of the long seats. The seat was directly under the library window, and the window was open. I should imagine that there wasn't much she had missed of what was going on inside. When she saw me she got up as cool as a cucumber and came toward me. She was smiling.

She took my arm and said, "Isn't it a lovely morning?"

It was a lovely morning for her all right! Rather a cruel girl. No, I think merely honest and lacking in imagination. What she wanted herself was the only thing that she could see.

We'd been standing on the terrace talking for about five minutes when I heard the library door bang and Amyas Crale came out. He was very red in the face.

He caught hold of Elsa unceremoniously by the shoulder. He said: "Come on; time for you to sit. I want to get on with that picture."

She said: "All right. I'll just go up and get a pull-over. There's a chilly wind."

She went into the house.

I wondered if Amyas would say anything to me, but he didn't say much. Just, "These women!"

I said, "Cheer up, old boy!"

Then neither of us said anything till Elsa came out of the house again.

They went off together down to the Battery Garden. I went into the house. Caroline was standing in the hall. I don't think she even noticed me. It was a way of hers at times. She'd seem to go right away—to get inside herself as it were. She just murmured something. Not to me—to herself. I caught the words:

"It's too cruel . . ."

That's what she said. Then she walked past me and upstairs, still without seeming to see me—like a person intent on some inner vision. I think myself (I've no authority for saying this, you understand) that she went up to get the stuff, and that it was then she decided to do what she did do.

And just at that moment the telephone rang. In some houses one would wait for the servants to answer it, but I was so often at Alderbury that I acted more or less as one of the family. I picked up the receiver.

It was my brother Meredith's voice that answered. He was very upset. He explained that he had been into his laboratory and that the coniine bottle was half empty.

I don't need to go again over all the things I know now I ought to have done. The thing was so startling, and I was foolish enough to be taken aback. Meredith was dithering a good bit at the other end. I heard someone on the stairs and I just told him sharply to come over at once.

I myself went down to meet him. In case you don't know the lay of the land, the shortest way from one estate to the other was by rowing across a small creek. I went down the path to where the boats were kept by a small jetty. To do so I passed under the wall of the Battery Garden. I could hear Elsa and Amyas talking together as he painted. They sounded very cheerful and carefree.

Amyas said it was an amazingly hot day (so it was, very hot for September), and Elsa said that sitting where she was, poised on the battlements, there was a cold wind blowing in from the sea. And then she said: "I'm horribly stiff from posing. Can't I have a rest, darling?" And I heard Amyas cry out: "Not on your life! Stick it! You're a tough girl. And this is going good, I tell you." I just heard Elsa say, "Brute," and laugh, as I went out of earshot.

Meredith was just rowing himself across from the other side. I waited for him. He tied up the boat and came up the steps. He was looking very white and worried. He said to me: "Your head's better than mine, Philip. What ought I to do? That stuff's dangerous."

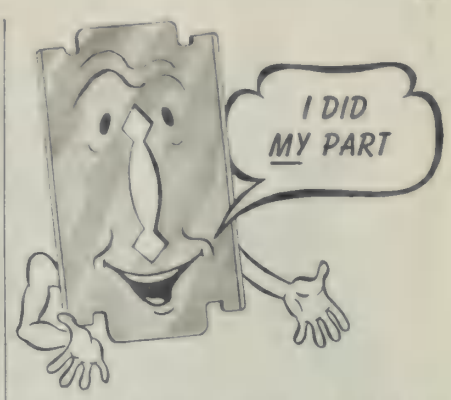
I said, "Are you absolutely sure about this?" Meredith, you see, was always rather a vague kind of chap. Perhaps that's why I didn't take it as seriously as I ought to have done. And he said he was quite sure. The bottle had been full yesterday afternoon.

I SAID, "And you've absolutely *no* idea who pinched it?"

He said none whatever and asked me what *I* thought. Could it have been one of the servants? I said I supposed it might have been, but it seemed unlikely to me. He always kept the door locked, didn't he? Always, he said, and then began a rigmarole about having found the window a few inches open at the bottom. Someone might have got in that way.

"A chance burglar?" I asked. "It seems to me, Meredith, that there are some very nasty possibilities."

He asked what did I really think? And I said, if he was sure he wasn't making a mistake, that probably Caroline had taken it to poison Elsa with—or that, alternatively, Elsa had taken it to get Caroline out of the way and straighten the path of true love.



Meredith twittered a bit. He said it was absurd and melodramatic and couldn't be true. I said: "Well, the stuff's gone. What's *your* explanation?" He hadn't any, of course. Actually thought just as I did, but didn't want to face the fact.

He said again, "What are we to do?"

I said, stupid fool that I was: "We must think it over carefully. Either you'd better announce your loss straight out when everybody's there. Or else

*Made by Cluett, Peabody & Co., Inc.*

you'd better get Caroline alone and tax her with it. If you're convinced *she* has nothing to do with it, adopt the same tactics for Elsa." He said: "A girl like that! She couldn't have taken it." I said I wouldn't put it past her.

We were walking up the path to the house as we talked. As we were rounding the Battery Garden again I heard Caroline's voice.

I thought perhaps a three-handed row was going on, but actually it was Angela that they were discussing. Caroline was protesting. She said: "It's very hard on the girl." And Amyas made some impatient rejoinder. Then the door to the garden opened just as we came abreast of it. Amyas looked a little taken aback at seeing us. Caroline was just coming out. She said: "Hullo, Meredith. We've been discussing the question of Angela's going to school. I'm not at all sure it's the right thing for her." Amyas said: "Don't fuss about the girl. She'll be all right. Good riddance."

JUST then Elsa came running down the path from the house. She had some sort of scarlet jumper in her hand. Amyas growled, "Come along! Get back into the pose! I don't want to waste time."

He went back to where his easel was standing. I noticed that he staggered a bit and I wondered if he had been drinking. A man might easily be excused for doing so with all the fuss and the scenes.

He grumbled: "The beer here is red-hot. Why can't we keep some ice down here?"

And Caroline Crale said: "I'll send you down some beer just off the ice."

Amyas grunted out: "Thanks."

Then Caroline shut the door of the Battery Garden and came up with us to the house. We sat down on the terrace and she went into the house. About five minutes later Angela came along with a couple of bottles of beer and some glasses. It was a hot day and we were glad to see it. As we were drinking it Caroline passed us. She was carrying another bottle and said she would take it down to Amyas. Meredith said he'd go, but she was quite firm that she'd go herself. I thought—fool that I was—that it was just her jealousy. She couldn't stand those two being alone down there. That was what had taken her down there once already with the weak pretext of arguing about Angela's departure.

She went off down that zigzag path, and Meredith and I watched her go. We'd still not decided anything, and now Angela clamored that I should come bathing with her. It seemed impossible to get Meredith alone. I just said to him, "After lunch." And he nodded.

Then I went off bathing with Angela. We had a good swim—across the creek and back—and then we lay out on the rocks, sun-bathing. Angela was a bit taciturn, and that suited me. I made up my mind that directly after lunch I'd take Caroline aside and accuse her point-blank of having stolen the stuff. No use letting Meredith do it—he'd be too weak. No, I'd tax her with it outright. After that she'd have to give it back or, even if she didn't, she wouldn't dare use it.

I was pretty sure it must be her on thinking things over. Elsa was far too sensible and hard-boiled a young woman to risk tampering with poisons. She had a hard head and would take care of her own skin. Caroline was made of more dangerous stuff—unbalanced, carried away by impulses and definitely neurotic. And still, you know, at the back of my mind, was the feeling that Meredith *might* have made a mistake. Or some servant might have been poking about in there and sp d th and then not dared to own . Yo poison seems such a meloc matic —you can't believe in it.

Not till it happens.

It was quite late when I oked watch, and Angela and I f ty ra to lunch. They were just ing d all but Amyas, who had r ained in the Battery painting. ite a thing for him to do, an priva thought him very wise to ect t today. Lunch was likely hav an awkward meal.

We had coffee on the t ace. I could remember better w C looked and acted. She d 't se cited in any way. Quiet l rath is my impression. Wha devi woman was!

ATIVE OF MEREDITH BLAKE

R 1. POIROT:

romised you, I have set down
an account of all I can re-
elating to the tragic events
ened sixteen years ago. First
ould like to say that I have
ver carefully all you said to
recent meeting. And on re-
m more convinced than I was
t it is in the highest degree
hat Caroline Crale poisoned
nd. It always seemed in-
but the absence of any other
n and her own attitude led
ow, sheeplike, the opinion of
ple, and to say with them—
didn't do it, what explana-
there be?

eing you I have reflected very
on the alternative solution
at the time and brought for-
e defense at the trial. That
yas Crale took his own life.
rom what I knew of him that
emed quite fantastic at the
see fit to modify my opinion.
ith, and highly significant, is
at Caroline believed it. If
to take it that that charming
lady was unjustly convicted,
wn frequently reiterated be-
arry great weight. She knew
ter than anyone else. If *she*
icide possible, then suicide
*been possible in spite of the*
of his friends.

vance the theory, therefore,
was in Amyas Crale some
nscience, some undercurrent
, and even despair at the ex-
which his temperament led
ich only his wife was aware.
k, is a not impossible sup-
e may have shown that side
only to her.

it is inconsistent with any-
r heard him say, yet it is
s a truth that in most men
me unsuspected and incon-
ak which often comes as a
people who have known
ately. A respected and aus-
s discovered to have had a
to his life hidden. A vulgar
er has, perhaps, a secret ap-
f some delicate work of art.
ruthless people have been
f unsuspected hidden kind-
nerous and jovial men have
to have a mean and cruel
n.

y be that in Amyas Crale
strain of morbid self-accusa-
tion, and that the more he blustered out his egoism and his right to do as he pleased the more strongly that secret conscience of his worked. It is improbable, on the face of it, but I now believe that it must have been so. And I repeat again, Caroline herself held steadfastly to that view. That, I insist, is significant!

And now to examine *facts*, or rather my memory of facts, in the light of that new belief.

I think that I might with relevance include here a conversation I held with Caroline some weeks before the actual tragedy. It was during Elsa Greer's first visit to Alderbury.

CAROLINE, as I have told you, was aware of my deep affection and friendship for her. I was, therefore, the person in whom she could most easily confide. She had not been looking very happy. Nevertheless, I was surprised when she suddenly asked me one day whether I thought Amyas really cared very much for this girl he had brought down.

I said: "He's interested in painting her. You know what Amyas is."

She shook her head and said, "No, he's in love with her."

"Well—perhaps a little."

"A great deal, I think."

I said: "She is unusually attractive, I admit. And we both know that Amyas is susceptible. But you must know by now, my dear, that Amyas really only cares for one person—and that is you. He has these infatuations, but they don't last. You are the one person to him, and, though he behaves badly, it does not really affect his feeling for you."

She said: "But this time, Merry, I'm afraid. That girl is so—so terribly sincere. She's so young and so intense. I have a feeling that this time it's serious."

I said: "But the very fact that she *is* so young and, as you say, so sincere, will protect her. On the whole, women are fair game to Amyas, but in the case of a girl like this it will be different."

She said, "Yes, that's what I'm afraid of—it will be different."

I said, "But you know, Caroline, you *know* that Amyas is really devoted to you?"

She said to that, "Does one ever know with men?" And then she laughed a little ruefully and said, "I'm a very primitive woman, Merry. I'd like to take a hatchet to that girl."

*(To be continued next week)*

tra oceanic clipper was off the
r, e navigator had just given
ot e course and, retiring to his desk, he removed his coat and began to busy himself with things. He glanced at his own compass and to his horror it showed the ship was 40 degrees off. He dashed up to the pilot's compartment and found both cockpit compasses exactly on the course he had prescribed. Back to his own he went and still it was 40 degrees off. Compasses just don't act that way without sufficient provocation, particularly since they are thoroughly checked before plane takes off.

For no particular reason he decided to put on his coat and as he removed it from a hook over the desk, his compass promptly swung around to the correct course. Then dawn broke through the fog, for in the pocket was a photoelectric light-exposure meter. It contained powerful magnets. And magnets attract compasses as fish attract cats. Now all exposure meters are kept at least six feet away from compasses.

# The Case for Innocence

Continued from page 20

Rio to carry on the fight against the powers of aggression and their secret agents.

"Of course," I said, "you have every right. I don't blame you. But I wish you wouldn't. Wait just a little longer—a week about—till Gil's girl is out of danger."

For the first time, confused and impatient, she grimaced. "Oh, Henry, aren't there other doctors here? In this modern city there are hundreds of doctors."

"But none Gil feels he can trust to keep it from the police. After all, two policemen were wounded in the skirmish. It was not her fault. They were wounded by the men who were trying to take Gil, but she and Gil had their guns out and she was seen—clearly—by one of the policemen. Any local doctor in his right mind would have sent Margarida to a hospital. But they couldn't risk a hospital. She wouldn't go."

"I DON'T understand it," Fern said, shaking her head again and again. "People like Gil—and like Margarida—dashing about with guns, hiding out, risking their lives. For what? All I hear is Fascist this and Nazi that, until one would think they were everywhere dogging your footsteps. And yet I have never seen one in the flesh. I have never met one. I don't want this kind of hunted, hounded life I hear about and read about. All I want is you—safe and sound and not under a—a threat. Henry, dear, let's go home. I made reservations for two on the Panair plane."

"You had no right to do that, Fern," I said.

"I had every right, Henry."

"I've not been threatened. No one has threatened me."

"No?"

"No."

She was about to cry and I said, "Now don't, Fern—please don't."

"I can't help it. You *were* threatened. I didn't want to tell you—I just wanted to get you away."

"Fern, what are you talking about?"

She sniffled. "The telephone. On the telephone, this afternoon. A man telephoned. He said, 'Mrs. Wayne?' I said, 'Yes.' And he said, 'Mrs. Wayne, your husband is playing a dangerous game. If you love him and wish him to live, you had better get him out of Rio immediately.' And he hung up."

"Any kind of accent?"

"Oh, Henry, darling, what does it matter? I've just told you your life is in danger and you ask me what kind of accent the man had. I don't know. I don't remember."

"Now don't go all to pieces," I said, putting my arms around her.

"Henry," she sobbed, "I'm afraid—dreadfully afraid. I don't care about ideals or who fights whom—I care about you, only you, and I don't want you to get hurt. Maybe I don't think. Maybe I'm dumb. But I feel and all my feeling is for you and our life together and I'll take that anywhere—in a trailer or cabin or in a tent, in sickness or in health—just so long as something dreadful and malignant doesn't come between us."

I believed that, though I suppose I should have loved her anyway if less than half of it had been true. She had gone to the schools to which the well-to-do send their daughters and she had been brought up in a safe, gentle and becalmed world that had nothing at all to do with the world at large. She had done the things it had pleased her family to do. In her own world, which is small in the long view but nevertheless large and important to those who live in it, she was sure of herself. Beyond it, even a little bit, she was in deep, troubled waters. Margarida with a gun in her hand fighting it out in the dark angle of a back street was something she simply could not comprehend. She was a natural innocent.

"Will you, Henry—will you go away with me?"

"When I'm sure Margarida can be moved to a safe place."

"Oh, Henry, you're so stubborn!" she cried, and turned and ran into the bedroom, slamming the door.

I thought that if I took a drink of Scotch I'd feel better, so I took one. In a little while the telephone rang and Gil's quiet voice said, "Are you all right, pal?"

"Am *I* all right! Are *you* all right?"

"I'm all right. I understand they got the brief case from the waiter. There was just some junk in it."

"That's right."

He laughed softly. "Okay, boy. Nice going. What time will you be out?"

"The usual time."

"I'll pick you up along the Avenida Atlantica."

"Right."

"Until then," he said, and rang off.

I WAS strolling along the striped walk of the Avenida Atlantica watching the moonlight on the water when Gil whistled from his car. Felippe, Margarida's brother, was in the back seat.

"Hello, Doctor," he said.

"Hello, Felippe. Hello, Gil."

"Boy, you gave me a scare," Gil said as I climbed in.

"I gave you a scare?"

"When he walked in with the brief case, I thought sure as hell they'd slugged you at least. I knew you wouldn't have just handed it over, please, thank you. Then when all they dumped out was the agency junk I guessed you must have used your head."

I gave him the envelope. "Was he the one in the brown gabardine suit? Big fellow? Dark-skinned?"

"Just dark from the sun. He's from Blumenau in the state of Santa Catarina. Used to be a Lufthansa agent before they cut the transatlantic service, and he went down to Blumenau for a while to stir up the old stock there—but I've heard he wasn't too successful. The two that held me in an office while he went around to spot you were just a couple of domestic Fascists. All they wanted was the stuff I brought from São Paulo. They must have got a wire that it was missing before I got back here. Jorge Pinto did the rest."

"I never trusted him," Felippe said.

"In this business, if you waited until you were able to trust everybody down to the roots you'd get nowhere. Jorge was all right until he went bad. The trouble was, I was unable to tell the minute he went bad. The others have a lot of money and Jorge just stopped thinking. Once you stop thinking, you can make any kind of compromise with your conscience."

"Boy, was that play a honey!" LOUIS JAMME

"Well, I never trusted him. It accounts now for what went wrong when Margarida was shot. We will have to liquidate Jorge Pinto."

"Don't use that word, Felippe. You sound like a damned Communist."

"At any rate, you must admit I was right when I said no one but you and me and the doctor should know where we took Margarida."

"You were right," Gil said. "I felt it—just a twinge—when I left the table and went along with Jorge. You can smell fear and you can smell the rain before it comes, and sometimes I think you can smell defection in a friend. But defection in a friend is not common and so perhaps you don't recognize the smell."

"Sometimes, Gil, I think you are too romantic," Felippe said.

"I am a good Brazilian and a practical liberal. I got results in São Paulo. I have facts—here in this envelope. I know the amount of in monds and platinum the have taken out of the co past two months. I kno they plan to take out in and I think we are going thing about that."

"Of course," admitted added, "Nevertheless, about the smells seems highly romantic. Besides, recognize a smell, how car be of practical value in a t

"You possess little ima lippe."

"Correct. I never im Pinto was incorruptible. Then:

"We are being followed

Gil nodded. "I was abo same thing. They are pre I dare say they came to t that since the papers we brief case, nor on my p must have in some way re He turned to me. "Obvio tel was watched and you to the point where we p I'm going to drive you hotel. They'll follow, and out and go into the hotel t naturally and truly, that the packet over to me. me."

"I ought to see Margari

"The risk is too great."

"Understand, Gil, I through what I began."

# "After the Game is Over..."

A well-fought game, a great victory ...glowing spirits...a pretty girl... fun ahead... all's right in *their* world—there are so many good things in it.

For instance, their eagerly anticipated fountain drinks...yes, and the Dixie Cups in which they're served. No lips but theirs have touched these cups. There's no troubling thought of doubtful washing, no lurking question of possible contamination. With Dixies—used but once—all's right, of course.

The installation of single-service Dixies in all public drinking places is a move in the public interest. They go far in helping prevent the spread of common colds, influenza and other communicable diseases. With Dixie Cups at soda fountains... Dixie Cups in offices and factories ... Dixies at milk bars, lunch rooms, on railroads and at camps, the Nation's progress toward better health moves on and on.

**DIXIE CUPS**

DIXIE-VORTEX COMPANY, EASTON, PA., CHICAGO, ILL., TORONTO, CAN.

★ **DIXIE CUPS are safeguards of health at all times... everywhere. In the office, in the shop, in public places, at soda fountains, on trains and airplanes, the common drinking vessel is becoming a thing of the past. The expanding uses of Dixie Cups are but an indication of the trend of the times.**

ing in the French window of the balcony smoking a cigarette through a long holder, with the lights of the city and the bright stars beyond her.

"How was Margarida?" she said.

"H'm? Oh. Well, I didn't get there. We were followed and we should have been followed there. Gil brought me back here and they followed him off again. I'm stuck."

"How do you mean?"

"Gil thinks that I'll probably be shadowed—every move I make. He urged me to leave the city."

"Will she die?"

"Without proper attention, she may. I'd hoped to see her in a condition where she could be moved to the country."

Fern shuddered. "Oh, Henry, it's awful!"

"It was a risk she took. I don't know whether she believed in the things Gil believed in—but she believed in him. And believing in him didn't mean just saying so. It meant doing something about it."

I was thinking of her, Margarida, in the tiny room above Greco's barbershop, taking it all without a whimper—grave, not smiling much, because she knew the danger she was in and the danger Gil was in. But she didn't cry. That was all out, the crying. She was determined to get well; she had her eye and her mind and her will set on getting well.

"Henry," Fern said, sitting down beside me. "Henry, what are you going to do?"

"Fern, I don't know, I don't know."

"I wish I could think of something. I'm never any good at thinking up things. But one thing I know: we can't leave Margarida."

"I can't get to her. Gil must be certain I'll be followed. I did all I could. If they follow me there—and if Gil and Felippe get away from those others tonight and go there they'll be trapped, ambushed, to say nothing of Greco and his wife, who are taking care of her."

"She's a human being but all you say sounds logical. I tried to be logical this afternoon when I pleaded with you to go but ever since it has been like something I was unable to digest. I'm not by nature logical, Henry. Perhaps I don't recognize an impasse when I see one. If you went away with me tomorrow it would be because of me. If you were single, alone, you would stay. In only one way I want to be like Margarida: If I don't understand all the things you believe in—I at least believe in you."

"Fern, when I said that I wasn't in the least implying—"

"Of course you weren't."

"Fern, there is nothing you can do. This is a dangerous business. You don't realize how dangerous it is. These people are fighting underground for ideas they believe in. It's one set of ideas against another and to either side life is cheaper than a postage stamp."

"WELL, Henry," she said, standing up, "I'm sure I don't understand their ideas, one or the other, but I think I understand decency and compassion."

"Fern, you're not making sense. Do you think I want to leave her there? Do you think Gil wanted me to? Do you want me to risk setting a trap for Gil and Felippe and Greco and his wife?"

"Certainly not. But it occurred to me this evening, after you went out, that here I am, your wife, and I've done nothing, absolutely nothing, to help you or your friends."

"I told you in the beginning I didn't want you mixed up in it, which is why I never took you to Greco's."

"Henry," she said, "I want Greco's address."

I stood up. "This has gone far enough, Fern. You have suddenly turned into a very difficult woman."

"No one will follow me instance, in the past week have we been seen togethe ber, you've been a very bus tor. Besides, I'll wear a sc head."

"Fern, despite what yo several occasions, I'm swayed. No."

"Please don't be stubbo

"I will not give you Gre If it's a case of either you c it will have to be Margari

She subsided on the c well, Henry. Perhaps, af recognize an impasse. We go to bed."

IT MIGHT have been t shining in my face that and when I turned over, a could see that Fern's bec I turned on the lights, t There was a piece of biu on her pillow. There was

I sat beside the bed and held her hand and talked to her, telling her it wouldn't be long now, she would be well and it would be possible to move her. When I stood up Gil was standing in the doorway. His smile was crooked, a buttoned-up sort of smile, and there were tears in his eyes.

"She ought to sleep now," I said.

Gil wasn't looking at me. He was looking at Margarida and I could see his throat move when he swallowed. He raised his hand a little and wiggled his fingers at her.

Margarida said, "Doctor says it won't be long now. We can go to the country. I'll be well. I'm no good to you this way, Gil. Darling, be careful, be careful!"

"You're doing fine, baby," Gil said.

"It's so wonderful, so wonderful," Fern said in a small, stifled voice. We looked at her but she didn't explain. She dabbed at her eyes and hurried into the living room and Felippe jumped up and bowed courteously. I motioned to Gil and then followed him and closed the door and in the corner the couch creaked and old Greco looked at Jorge Pinto and made a faint spitting sound.

"Henry," Fern said, lighting a cigarette, "when do you think it will be safe to move Margarida?"

I accepted a glass of wine from Felippe and said, "Not less than a week. At the end of a week."

She glanced at Gil, then at Felippe, and they all nodded.

Fern sat down. "Henry, it will be very simple. With constant care, then, we can depend on it. I simply don't know why I never thought of it before. Besides, during the week there will be practically no risk whatever; and at the end of the week we can all drive her to Petrópolis."

"Will you explain to me why there will be no risk during the week?"

Felippe said, "Oh, she has it all figured out. A remarkable woman, with vision."

"Dear, this is what I mean," Fern

"Good morning, sir. Haven't you often dreamed of retiring at sixty on twenty-five dollars a week?"

WHITNEY DARROW, JR.

BE SURE TO GET *Skinless*
TRADE MARK

FRANKFURTERS OR WIENERS

***There's Not a Ghost of a Skin on Them!*** All you do is ask for your favorite brand by name and then watch the fun begin!

Because they have no skins you can make all kinds of exciting Hallowe'en dishes out of SKINLESS frankfurters or wieners. "Weeny Witches" . . . ghosts, and goblins. SKINLESS are easy to digest and they don't split open. The surface is formed by the wiener itself in the smoking process. So, every bite is tender, juicy and delicious.

**Plan a "Weeny Witch" Party, Now!**

Most packers and sausage makers now make frankfurters or wieners the SKINLESS way. Your nearby market has them for your "Weeny Witch" Hallowe'en Party! It'll be barrels of fun!

went on earnestly. "Why is it necessary for you to keep dashing back and forth between here and the hotel all the time? Why can't you just stay here?"

I set down my wineglass and looked at her and then I looked at Gil and Felippe. Their eyes were veiled, asking nothing, recommending nothing. It had, in fact, never occurred to me.

"It came to me suddenly," Fern continued. "Besides, it will take some of the load off Mrs. Greco. You can sleep on the couch there and Mr. Greco says he can sleep downstairs in the shop and put a cot in with Mrs. Greco for me to sleep on. Henry, it's all very simple."

I drank all that remained in my glass. I don't think I had ever really known my wife until that minute, and all at once—with Gil and Felippe and Greco and Mrs. Greco standing around—I was inordinately proud of her.

"You're right, Fern," I said. "Gil, she's absolutely right."

Felippe tipped the bottle. "More wine, Doctor?"

"Thank you. I suppose Jorge Pinto will have to sleep on the floor."

Fern said, "Oh, no. Felippe is going to put him on a boat and send him out of the country; he told me so."

FELIPPE dropped his eyes but Gil was staring across the room at Jorge Pinto with more bitterness than I had even seen in his face before.

"I didn't know what to do with him for a while," Fern said. "It was the hotel doorman's fault, really."

"What was the hotel doorman's fault?" I asked.

"Oh, he didn't mean to, of course. It was natural. He said, 'A wonderful evening, Mrs. Wayne,' and when he said it I saw this man, this Jorge Pinto, look up sharply from lighting a cigarette. Henry, there was a frightful gleam in his eyes, and I shuddered. I was scared. So instead of getting into a cab right there—really, I was suddenly all confused—I began walking away, with a foolish notion, I suppose, of eluding him. But he followed me in his car. He kept following me, wherever I walked. Until finally I couldn't stand it any longer. I was terribly frightened, Henry!"

Felippe shook his head. "I deny it. It showed not only courage but extreme logic. Madame, you would [illegible] revolutionary!"

"Oh, Felippe, you and [illegible] tionary," Fern chided. "[illegible] be a revolutionary?"

"Fern," I said, "what e[illegible]

"Yes, Henry. Well, I c[illegible] it any longer. So the gu[illegible] your gun—I took it out o[illegible] turned around and step[illegible] street gesturing as thoug[illegible] ride. He stopped and I r[illegible] and pointed it at him a[illegible] have been following me[illegible] And I climbed into the b[illegible] and said, 'Now you may t[illegible] I wish to go.' A heavy surf the beach that cold, raw ary when the inventor and ker" crew made a test a cargo of mighty appreines. But the Alligator's wled true saurian defiance, des hit deep into the frigid he amphibian rode a wave erfect landing. The Alli- of other things, too, such own trees and crawling up mbankment. So the adne generals approved an order for 200 Alligators, exclusively for the Marine Corps, following this up later with authorization for another big consignment.

Mass production of Alligators has been under way at the Food Machinery Company plant, four miles from Clearwater, for the past seven months. A new plant was recently opened at Lakeland in central Florida to speed deliveries and further expansions may be necessary to handle probable shipments to Great Britain.

British interest in the amphibian came in the natural course of events in view of the enthusiastic reports sent to Washington from the detachments of Marines that are being trained in the operation and maintenance of the amphibians at the Corps' new station at Clearwater. A party of British officers went to Florida last August, saw the Alligator put through its paces and within a fortnight one of the new Navy models was shipped "somewhere in England," perhaps as the advance guard of hundreds that may some day take position as the spearhead of an assault upon the German-held French coast.

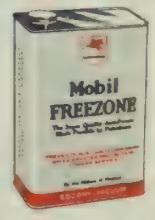
Some veteran military tacticians believe the Alligator just fills the British staff's prescription for any assault maneuver in which the element of surprise is vital to the success of the operation. If our Marine Corps, using Roebling amphibians with muffled motors, can crawl across a beach and pulverize theoretical machine-gun nests—as the lads are doing every day down in Florida—then the British should be able to do the same thing against Nazi outposts at Calais, Le Touquet and Boulougne when the big invasion rolls around. The Marines think so—and are perfectly willing to take a crack at the job.

ne of my business, brother, but you're holding it all wrong"

WILLIAM VON RIEGEN

# Be Prepared

## GET YOUR CAR READY NOW FOR COLD-WEATHER DRIVING!



### For Your Car's Engine

● MOBIL UPPERLUBE, with its special ingredient, reaches the engine as a mist with the gasoline. This ingredient produces an adsorbed film on cylinder walls, pistons, valves and other surfaces, which helps protect against scuffing and undue wear, internal rust and corrosion. Especially valuable for cold-weather starting and about town stop-and-go driving. Fine to use during the break-in period of a new car.

### For Protection against Freezing

● MOBIL FREEZONE is the anti-freeze petroleum made possible. It contains Isopropanol combined with other anti-freeze elements. It provides high protection against radiator freeze-ups and is long lasting because it is slow to evaporate. Also guards the radiator and cooling system against rust and corrosion. Has no objectionable odor. Mobil Freezone costs only 25¢ per quart.

### For Your Car's Radiator

● MOBIL RADIATOR FLUSH quickly rids the radiator and cooling system of clogging rust, scale and grease. It is non-caustic, and entirely safe to use. When the radiator has been cleaned, add a can of Mobil Hydrotone to the water. This neutralizes corrosive action and treats the metal surfaces so that further rusting and corrosion are avoided.

### For Your Car's Finish

● MOBILGLOSS is double-acting—it both cleans and polishes. Highly effective solvents and cleaners dissolve all grease, get rid of dirt and road film, and bring back the original color and lustre of your car. Then a few brisk rubs produce a beautiful lasting polish. For a protecting wax finish, apply Mobilwax. It is in cream form, easy to use—saves considerable time.

HE THINKS I DON'T KNOW HE'S TAKING MY SANI-FLUSH TO CLEAN OUT HIS CAR RADIATOR FOR WINTER

A clogged cooling-system invites trouble. Clean out your car radiator *before* you add anti-freeze. It's easy with 10c worth of Sani-Flush. (25c for the largest truck or tractor.)

Do the job yourself—or have your service station do it. Plain water isn't enough. Insist on Sani-Flush. Can't harm aluminum cylinder heads. It's used in most bathrooms for cleaning toilet bowls. (*Directions on can.*) Sold by grocery, drug, hardware and 5-and-10c stores. 10c and 25c sizes. The Hygienic Products Co., Canton, Ohio.

Range, is getting plenty of practice, but little of it is Army. This sub-post near the Nevada line is on a straight, flat highway along which motorists smash up their cars with customary frequency. Civilians, learning that the only doctor handy is an Army medico, aren't backward about asking for attention—and on the cuff.

### WASHINGTON

FORT LAWTON, Seattle. Nobody talks much around this post in the heart of the city. First place, it's the quarters for the Port of Embarkation and thereby directly responsible to Washington, D. C.; secondly, it's headquarters for members of the Interceptor Command and hides in its confines a couple of Aircraft Warning Service companies having their obligations to secrecy. Seattleites formerly used the post as a short cut between Seattle districts. Now there are sentries on duty at all times and a civilian has to wade through a morass of paper work to get to see anybody. Only flaw in all this hush-hush is that a municipal bus enters the fort freely every fifteen minutes or so all day long—and nobody seems to care who's on it or why.

Lawton, incidentally, is famous throughout the Army as one of the most scenic of posts. A man living in Officers' Row can sit on his back porch and watch the sun rise over the Cascade Mountains; he can face south and take a gander at Mount Rainier; turn north and glimpse the distant outline of Mount Baker; then saunter to his front porch and get a sweeping view of Puget Sound, with its Olympic Mountains backdrop.

The troublesome feature of this scenic beauty (and the fort's reputation for placidity and extremely good food) was that the guardhouse population began to swell. It got so that men who had gone A.W.O.L. from posts as far back as the Midwest did their surrendering at Lawton. There's a rumor going the rounds that all the beds have been removed from the clink. It may not be true, but the report has served its purpose. The number of surrenders has dropped off nicely.

### MASSACHUSETTS

1ST DIV.

FORT DEVENS, Ayer. The 101st Horse-Mechanized Cavalry's Sgt. Jack Chapin got a little fed up with cracks about what-good-is-cavalry-in-modern-warfare, so he and another scout-car commander took their crews and cars, wiggled their way through 23,000 "enemy" Yankee Division troops and captured Major General Roger W. Eckfeldt and his command post. To add insult to injury, the boys snaked their way another twenty miles and dumped the commanding general on the chief co-ordinator's doorstep; after which they made their way back to headquarters without a hitch. The 101st Cavalry is maneuvering in the Carolinas now and nobody is making any cracks.

"WHY, certainly," the officer said; "the First Division is about ninety-eight per cent equipped." While he was talking, the First Engineers were tossing a pontoon bridge across the Nashua River, some fifty feet upstream from the bridge on which the officer stood. The engineers knew their stuff; they had the bridge about four fifths of the way across the river in no time. Then, suddenly, they knocked off work. The officer asked a soldier the reason for this. "That," the soldier replied, "is all the equipment we've got." The officer shrugged. "I guess," he said, "that's the two per cent we're missing."

### NEW YORK

CAMP UPTON, Long Island. Letter from a private that ought to make some C.O. sit up and take notice of his noncoms: "I found a good way of getting out of a lot of work. All you do is find out what your corporal likes to talk about and then talk to him about it. Usually it's women. Anyhow, I've spent days leaning on a shovel, just talking. Never fails."

THREE Upton selectees were standing at the side of a road, the other day, watching the various companies come back from retreat. One of the three smartly saluted a passing officer; the other two just stood there like a couple of goons. The officer gave with a first-class bawling out to the soldier who had saluted him—with the Boy Scout salute. The two goons just laughed and laughed.

### NORTH CAROLINA

FORT BRAGG NOTES: This largest artillery center has been drained to a population of only 19,000. Some 45,000 men have moved farther south for maneuvers. . . . Pvt. Brookes Fryer, 28-year-old pianist at the reception center, turned down his old-age discharge so he could have a go at the new organ ordered for the chapel. A lot of his pals say he's nuts. Pvt. Fryer says no; he's always had a yen to make with organ music. . . . how deep down you are r ears hurt and the way ss on your face. When o wrestle fish between ty feet down you are a st of the boys don't like thirty feet, but some go down to forty, which is pretty deep, especially when the water is below sixty degrees temperature at the surface. The shock of the first couple of dives usually gives you a numb ache between the eyes, but that soon wears off and you are good for a half-hour of diving.

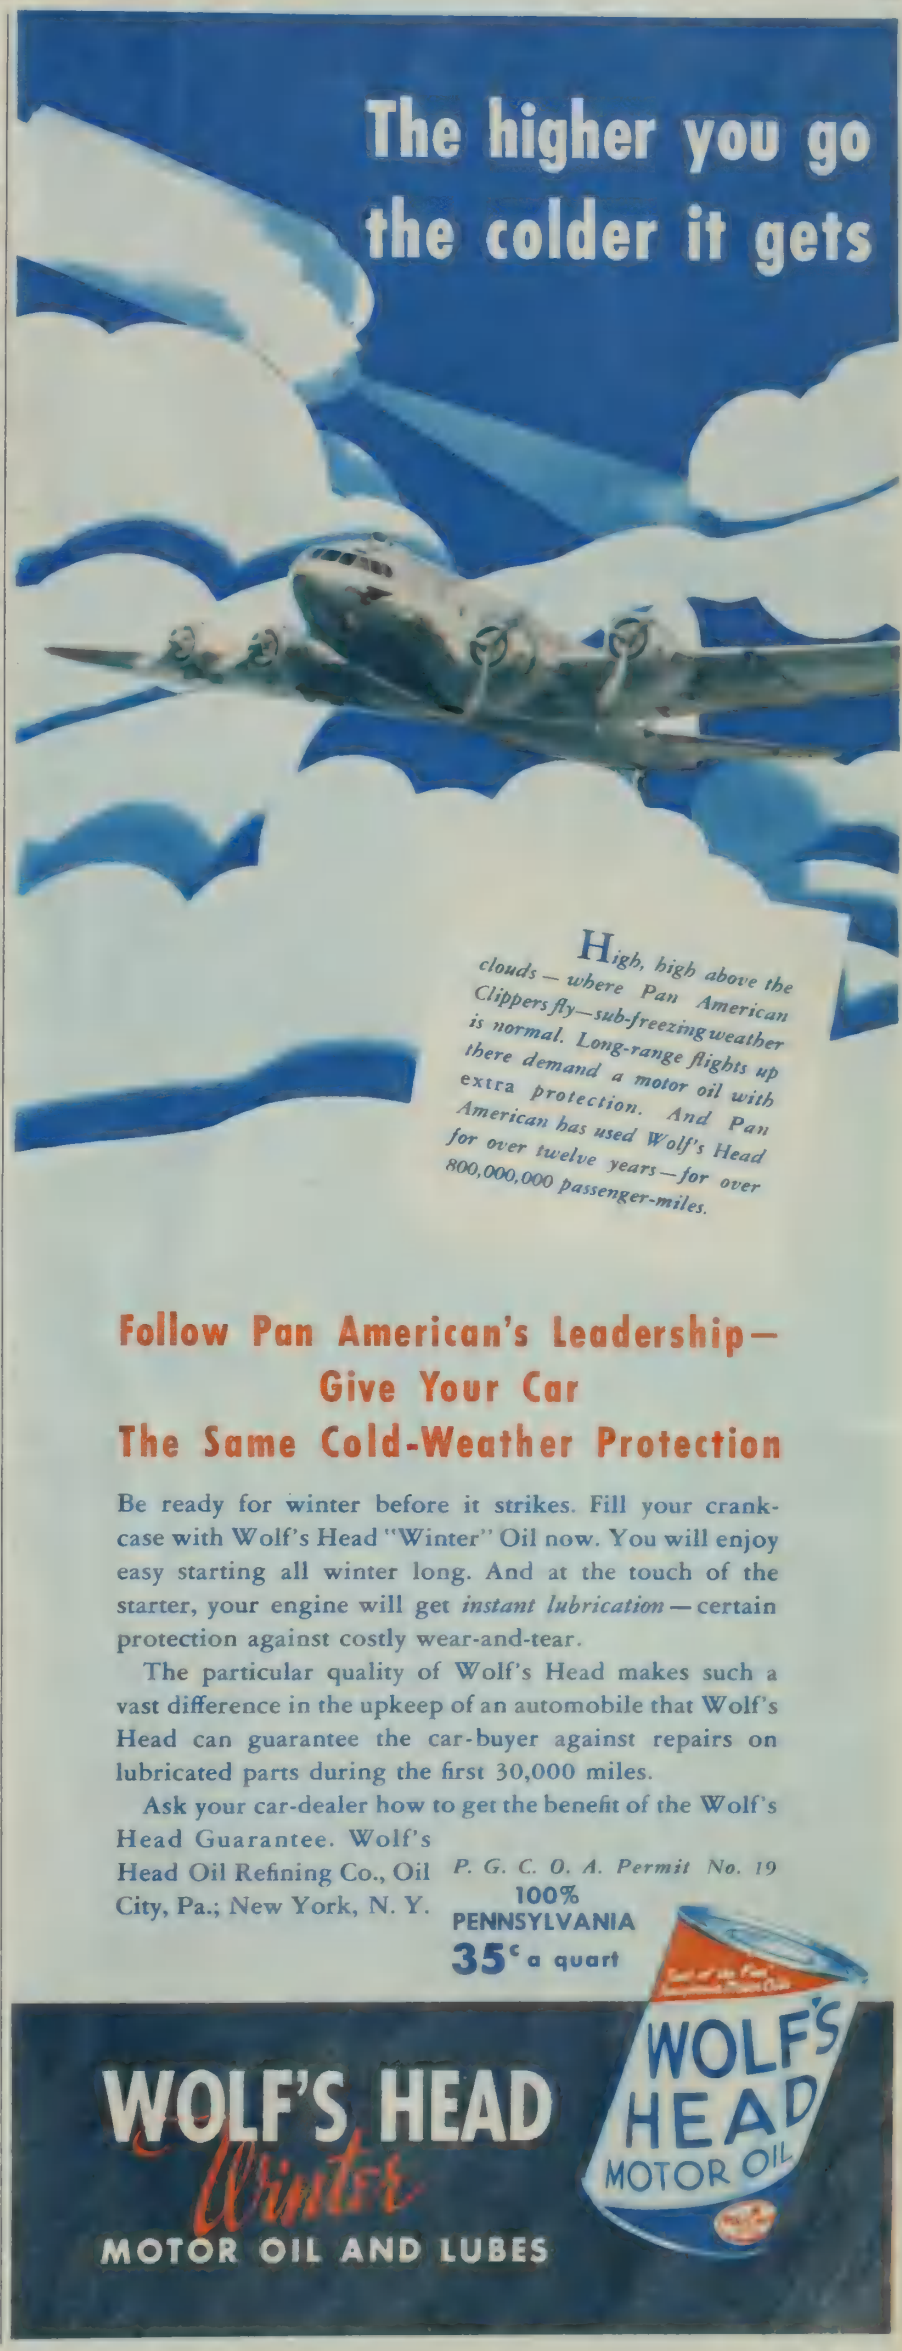
Skin divers don't go down on the bottom and walk around like suit divers. They swim continuously, most of the time with their heads lower than their feet, because as long as they do that, fish will stick around with only an occasional scowl at the hick Sunday swimmers who are always snarling up traffic. Most divers stay down only about thirty seconds at a crack, although any good skin diver can hold his breath easily for two minutes. Chaser claims he once clocked "Cowboy" Jay for three minutes, seven seconds, which is almost a lifetime in the sea holding your breath.

With swim fins, a skin diver can travel seventy-five to one hundred feet underwater in half a minute. Most of the watermen prefer to dive half a minute, then come up for half a minute for air, then dive again. Doing that, a skin diver can stay at it an hour or so.



Of course there are tricks for tackling the various denizens of the ocean. If you take on a shark (they are only three or four feet long on the southern California coast) the idea is to grab him by the tail and steer him up toward the surface, meanwhile maneuvering so as to keep away from his head. If it is an octopus (they run from three to five feet off the southern California shore) you can slip a hand underneath him and scoop him up, acting nonchalant, as he winds his tentacles around your arms and neck, and paying no attention to the dirty looks he gives you or the ink he spills in the water. The watermen rarely bother an octopus, except now and then to haul one up for a Japanese friend. The Nipponese rate them great delicacies.

Among the fish, the toughest customers—unless you count eels as fish—are the stingarees, which carry a four- or five-inch stinger, covered with barbs, where their taillights ought to be. These are something to stay away from. The technique is to see the stingaree before he sees you, jab the spear through his middle, then scram, meanwhile hanging onto the line with which you can play him from the surface, where breathing is better. Dr. Bob Crossland of Santa Monica and Dr. Tom Quirk of Fullerton hold the record in this event. Last year they were skin diving together and poked their harpoons simultaneously through a thirty-five-pound bat stingaree. It took the two of them five minutes to pull the angry fish to the surface, where it, too, became the makings of a Nipponese feast.

### You Can't Waste Time

The same spearing technique goes for sheepshead, halibut, bass, sculpin, and other big fish. "You can't waste time, though," warns Frank Rodecker, who is a top-flight fish spearer, because fish will thresh around and wear holes in themselves through which the spearheads slip and there goes your dinner. A diligent skin diver can spear a nice mess of fish for a sizable party in half an hour, with luck. Witness Don St. Hill, who supported his family for two years when jobs were scarce, by spearing the provender under the sea.

Eels, said Mr. Rodecker, are something else again. They are the only marine life in the southern California waters that sail into a battle with a man

## EMBLEMS OF EXCELLENCE

**DEWAR CHALLENGE TROPHY.** Presented by Scotsman Sir Thomas Dewar to encourage soccer football in the United States, the handsome trophy shown at the right has since 1913 been emblematic of the national open championship in this fast, exciting sport. The highest goal of every amateur and professional soccer club in the country is to get its name engraved on the Dewar Trophy—because that's proof that the team is tops and every player on it is better than good!

**ETHYL EMBLEM.** There is an award for excellence in gasoline too. It is the Ethyl name. Gasoline in a pump which bears the Ethyl trade mark has to be better than good. It must be "tops" in anti-knock (octane number) and all-round quality. "Ethyl" means a cooler-running engine in summer; a quicker-starting engine in cold weather; extra power throughout the year. When you stop to buy gasoline, "Ethyl" tells you which pump contains the best.

over an abalone, for instance, abalones being the favorite diet of the pugilistic Maori eel. Eels' teeth are as sharp as needles, and the trick, if you don't want an eel pushing you around down there, is to get your harpoon in him just behind the head before he begins needling you. Doc Cross landed one not so long ago six feet long and seven inches in diameter.

"Eels are hard to see, even when you are looking for them," explained Rodecker. "Usually you see what you are looking for underwater. If you are looking for lobsters, you see lobsters. If you are looking for abalones, you see them. But eels just pop out of nowhere and first thing you know, you are staring one in the face."

The abalones, which are muscular mollusks with a heavy shell six to ten inches across, cling to the rocks or pile up on the bottom of the floor of the ocean. The skin divers say there are literally millions of them down there, but the law says only ten a day. To bag abalones, a skin diver has to be quick with a piece of tire iron or the big knife he takes down to pry them loose from the rocks. Abalones have muscles like the circus strong man's, and if they are not knocked loose before their suction pads begin to work, it is goodby knife or tire iron.

"I've had tire irons bent double trying to get abalones loose," Chaser says, "and there are reports of Japs getting their fingers caught under abalones and being held underwater until they drowned."

### Law's on the Lobster's Side

A lobster hunt takes some nerve, too. Some skin divers spear them, but not the watermen. Their idea of fun is to grab a lobster by the horns and wrestle him out of his niche in the rocks before he counterattacks and sinks his teeth into your wrist. It takes some huffing and puffing, down where you can't huff and puff much, to yank a four-foot bull lobster out of his crevice (purely for sport, you understand, the big bulls being protected by game wardens for breeding purposes). The only legal lobsters are those between ten and a half and sixteen and a half inches, and males at that. It is easy to spot the females because they carry a cluster of red eggs hanging from their tails. But down in some dark sea cavern w[ith the ...] on your goggles distort [everyth...] you see, you have to be [careful ...] make a mistake about th[e size of a] lobster. . In other words, the job
now increased to a bewil-
of complexity. You not
teach your team dozens of
e plays, but you have to
h *offensive* play in dozens
ariations to cope with the
ne, six-man line, five-man line, sliding line and backfield shifts which the opposition may throw in against you.

The entire idea of quarterbacking on the defense is based on a peculiar quirk of the rules. *There is no rule in the book that prevents the defense from moving around while the play is being called or when the ball is being snapped. Nor is there any rule that requires a minimum or maximum number of men in the line of scrimmage.* Thus the defensive quarterback is in the position of an army leader in the field. As soon as the enemy begins to concentrate forces for an attack, the defensive field general analyzes the situation and rearranges his defenses to meet the attack at the expected point.

What weapons has he at his command? First there is the standard 7-2-2 defense, in which the ends charge straight ahead and force the ball carrier inside of them, while the other five linemen just try to crash through. Then there is the 6-2-2-1 defense, in which the ends ignore the ball carrier and concentrate on stripping him of his interference. Finally there is the 5-3-2-2-1 defense, in which all five linemen smash forward like five guards, leaving the ball carrier and the interference to the backers-up.

In addition to these basic formations and their numerous variations, there are dozens of others. Linemen may unexpectedly pull out of the line or charge obliquely instead of straight ahead, backs may suddenly hurtle through to nab the ball carrier, and whole teams may refuse to charge at all but float along with the play instead.

Imagine trying to plot an offense against a cockeyed setup like that! It's the same as plotting in advance an offense against Bob Feller's pitches.

Today, quarterbacking on the defense has reached such a high state of development that it is accepted and taught as one of the fundamentals of the game. The New York Giants actually go into a huddle when the *other* team has the ball. Fordham has a backlog of no less than 120 defensive plays. And as Nebraska found out in the Rose Bowl, Stanford has a little-publicized defensive system that is just as tricky as their famed T-formation on the offense.

Quarterbacking on the defense was slow in developing, however. As recently as four years ago, it was still done in a haphazard, spontaneous manner. I'll never forget my own first experience with quarterbacking on the defense in my sophomore year at Michigan, back in 1924. It was just before my first varsity game against a tough Wisconsin team. I was to start at right halfback, and I was plenty scared. Wisconsin had a back named McAndrews, who was the Big Ten 220-yard sprint champion. I was the slowest man on the Michigan squad. I had spent the night wondering what I was going to do if McAndrews happened to come around my end.

I was sitting in the locker room, chewing my fingernails, when George Babcock came over and spoke to me. At the same time he also spoke to Flop Flora, who was starting *his* first game, too, at right end. Babcock was the veteran right tackle, and one of the smartest football players I have ever met.

"Boys," he said, "we are a triumvirate. We three are responsible for the right flank. If McAndrews comes into the game and Wisconsin shifts our way, I'll go in and take as much of the interference as I can. Flop, forget your regular assignment and strip the rest of the interference. And Benny—you play to the outside and come up to make the tackle."

This was smart quarterbacking on the defense. It was a totally unexpected variation of Michigan's 7-man line. Babcock knew that McAndrews was a sprinter, he knew that he couldn't pass, and that as soon as he got the ball he'd tear for the side lines. That's why he posted me to the outside, where I could nab McAndrews as soon as he was stripped of his interference.

And the strategy worked!

That afternoon, through no fault of my own, I became a hero! I was hailed as a great defensive star. Every time McAndrews took the ball, I nailed him for a loss. And yet every time it happened, I was the most surprised guy in the world. McAndrews just seemed to drift into my arms. Flora and Babcock had cut down the interference on each play. They had made it as easy for me as hitting a tackling dummy. Wisconsin just couldn't figure out the amazingly simple defense we had prepared.

After the game, I spoke to Babcock. I was still befuddled by what had happened. Babcock tapped the side of his head. "Always remember this, Benny," he said. "You don't stop using the old noodle when the other team gets the ball." I never forgot that piece of advice as long as I played football.

### The Answer to Red Grange

The following year I was moved over to quarterback. That was in 1925 and Red Grange was still running wild for Illinois. The year before he had amazed the country by scoring four touchdowns against Michigan in exactly twelve minutes! But in the 1925 Michigan-Illinois game, one of the miracles of football history came to pass. The great Red Grange, who had scored at will the year before, carried the ball 27 times. He gained a total of *minus 54 yards!*

This was not done with mirrors. It was a primitive example of quarterbacking on the defense. The strategy was simple. We noticed that the Illinois left guard was dropping out of the line to run interference for Grange whenever he carried the ball. So each time Grange was back, we shifted to the left. The idea was for Bob Brown, our center, to "drop into the slot" and charge obliquely through the hole vacated by the Illinois guard. He did. In fact, he did it so convincingly that he smeared the unsmearable Mr. Grange behind the lines of scrimmage *no less than ten times!*

Michigan scored one of the greatest upsets of all time on the day. The final score was Michigan 3, Illinois 0.

Fourteen years later, Illinois reversed the procedure by stopping the great Tom Harmon in his tracks in the Illinois-Michigan game of 1939. Amazingly enough, the Illinois team used *exactly the same defensive strategy* we had used against Red Grange! The only difference was that our play was made up almost on the spur of the moment. The Illinois play had a name, "46-58," and it was mixed with dozens of others for deception.

And so quarterbacking on the defense has developed from the spontaneous individual thinking of my own college career to the complicated defensive formations of today. But it all adds up to the same thing—George Babcock's advice to a bewildered kid on Michigan's Ferry Field, long, long ago: "You don't stop using the old noodle when the other team gets the ball!"

Happy nightmares, coaches!

SHARP cheese, sir! Dependable, too, if I may say so

● At long last, a mellow-sharp cheddar with a flavor as constant as the North Star! It's a triumph from Kraft—Old English Brand. Yes, actually, a Pasteurized Process Cheddar with the rich, aged flavor you hanker for. Taste Old English and see.

# Get your car read

**This winter, Preventive Service becomes more than a matter of your personal comfort, safety, and economy. It's a "Must" in the Nation's defense program**

You followers of Preventive Service have long been mobilized, so to speak, for the present emergency. Because thanks to Preventive Service, your cars are undoubtedly in better running order than your neighbors'. And while that is important to your personal comfort and safety, it is even more important from a national standpoint. For it is the condition of your cars that is making vital contributions to the conservation of gasoline, oil, rubber, aluminum, and many other defense materials.

To paraphrase the Air Corps slogan, *Let's Keep 'em Running.* And keep 'em running at their best! *Collier's* offers some authentic and timely suggestions to help you. You will find still more assistance in the Question and Answer Booklet which will be sent upon request with postage to cover the cost of handling and mailing.

## Don't Let Your Anti-Freeze Make a Get-away

In the autumn, the thoughts of most motorists immediately turn to anti-freeze. Putting anti-freeze into your car is one thing—*keeping it in* is something else again. The chances are that you're now occasionally adding some water to your cooling-system. It may not be very much, and you may not have to do it very often. Even so, it means the system isn't tight—and you'll pay for it with wasted anti-freeze or more serious trouble.

Have a thorough investigation made for leaks. Some leaks show up only at high speeds. Your service man knows how to detect them.

Water-pump packing, hose connections, the hose itself, gaskets, the radiator, and the drain cocks should all be under suspicion as possible saboteurs of anti-freeze.

## You Need a Hardy Battery in Winter

With your cooling-system clean, tight and able to stay tight, put in the anti-freeze. Before leaving the cooling-system, have your thermostat tested. Then look to the battery. It has more work in winter than at any other time of the year—due to cold-weather starting, more night driving, and the use of a heater.

In addition, even a fully charged battery feels the cold. Every drop in temperature means a drop in its cranking power. At zero, for instance, it has only 40% of its normal efficiency.

So it's wise to start the winter with a fully charged battery and with your battery cables in good condition. After that, have your service man check the battery frequently in the months ahead. His hydrometer should show that the solution has a specific gravity of no less than 1.250. This not only assures a sufficient amount of juice for winter loads, but it also means a solution that will resist freezing—unless the temperature goes to 85° below!

## Get the Most Out of Your Gasoline

Don't be content, however, with simply bringing your battery up to par and keeping it there. Lighten its load with a tune-up. As part of the tune-up, your service man will clean the spark plugs and reset the gaps. He will check the distributor and replace the points, if necessary. He will change the manifold heater setting to the winter position. Then he will turn his attention to the all-important ignition timing.

Timing has a very direct relation to the gasoline you use. If the gasoline is a high anti-knock type, then the timing can be set so that you get great power and good gas mileage without any "bucking" or ping at low speeds or on hard pulls. Always keep in mind that timing should be matched to gasoline. You are likely to get one or two extra miles to the gallon when your timing is brought to the critical point.

## Change to Winter Oils and Lubricants

Be sure, also, to have your service man make the important seasonal change to winter oil in the crank-case and winter lubricants in the differential and transmission. Oils and lubricants not designed for cold weather result in serious wear to gears, bearings, and other moving parts, and considerable loss of power—and often excessive battery drain and hard starting.

And speaking of power, don't stop at the engine. Power has to get to the rear wheels to do you any good. And there are several important links in the chain of events that transmit engine power to the wheels. The starting point is the clutch—and it should not be ignored. For instance, if your clutch develops a tendency to grab, don't merely consider it an annoyance. It is a sign that an adjustment or replacement is needed. Have it attended to before it does damage to the universals, differential, or rear axle. Universal joints, by the way, should be lubricated in strict accordance with the car manufacturer's recommendations.

## The Value of a Tune-Up

These Preventive Service measures are much simpler than they may sound. In their own way, they amount to nothing more than what you do around your house—such as taking down the screens, for example, and putting up the storm sash. They can be ordered from your service man practically as they are outlined here. But you wi probab that he includes them, a ng with other things, in a winter e-up—at a cial price. And that's wo looking

A tune-up, you unde nd, is major operation. It is t ounce o ventive Service that inc ses the motoring and decreases pair bill other value is that if yo appen t real trouble lurking unc the hood tune-up will uncover it ar ave you breakdown on the road.

# The Haunted Wall

**By Georges Surdez**

ILLUSTRATED BY SAUL TEPPER

**The whole gang piled against my wall, four killed, seven injured**

MY DEAR *Maître* Nollais:

You have been my notary for twenty-four years, and long before that your father handled business documents for my family. I know that until you open it the envelope I shall hand you tomorrow to place with my last will and testament will make you curious. You shall wonder what secret codicil there could be, when I am three years over seventy, when every centime I possess is known of by you, and is assigned to one or another of my surviving children and grandchildren.

This document is, in effect, a confession. After my death, you must rewrite the whole thing in your own style—I know you have contributed little pieces to the Paris magazines—and send it to the nearest German Command, should I die before they are thrown out, or to their general headquarters in Berlin, if I live to see victory.

You know what the Germans refer to as "the unfortunate incident of the sixth of June." It was about a year ago, when a column of our soldiers, prisoners, were marched through our town. It was a sad enough sight. Right opposite my house, located as you know almost at the corner of the Rue des Flandres and the Rue des Petits-Miquets, some poor chap left the ranks to refasten his shoelaces.

A German sergeant ran up and kicked him, because he had not asked for permission. The Frenchman did not stop to think, and punched at him. He was shot at once.

Madame Lherbier, the grocer's wife, was near by. She started to call the Germans names, and a young German officer, who evidently understood French, walked up to her and slapped her.

Her son, Jules, fourteen years old, who had come running when he heard her scold, attacked the German, and Old Man Lherbier, arriving, tried to keep the soldier from kicking the boy he had knocked down. There was a melee, as other Germans rushed up.

I was watching from my window on the first floor and I could not believe my eyes when all three Lherbiers, battered, bleeding and half-conscious, were shoved against that white wall, the back of my machinery shed, and shot down with one of those little machine guns. There were flecks of blood on the wall, and all day the bodies were ordered left there, as an example.

After that, I would sit by the window and watch that white wall with the specks on it, and find myself growing mad with rage.

It was then that I remembered something trivial: Back in 1875, which isn't yesterday, my cousin Raymond came to visit us. He brought a magic lantern with him. And we soon spotted the white wall opposite the window as a possible screen.

But merely throwing our ordinary pictures on it was too simple. Raymond suggested that we should scare the farmers when they drove home after market, most of them with drink inside of them. We knew we must not be seen at the window, or it would give the whole thing away. So we removed the wooden frame below the sill and bored a slanting hole through stone and cement. We worked harder than we did in school, I'll bet; he studied angles, distortions, and we experimented with a slide until we could throw the silhouette of a creditable devil, complete with hoofs, horns and tail, on that wall.

WE USED a bull's-eye lantern, and the beam was not noticeable. Yet the silhouette was clear, if faint. You remember the old shadowgraph—the game in which you make rabbits, eagles and so on with the shadow of your hands against a wall? It was the same principle, and we could create the illusion of movement by tilting the slide. We had some good laughs. But one evening my parents caught us and ended that amusement.

You are beginning to understand? I tested the frame, and it could still be moved. I cleaned the hole with a wire. I merely hoped to frighten their sentries. You know their regulations, no lights and no traffic after nightfall, except their own. You know also how their motorcycle patrols tear around at night, using only those patent blue lights because of the English fliers.

You remember that first accident, don't you? The whole gang piled against my wall, four killed, seven injured.

That first time, the surviving members of the patrol knew nothing more than that their leader, who was giving the signal for a right turn, had swerved left and bounced across the street. The way was narrow, and at such speed there had been no time to think. The second time, the leader had lived long enough to swear that he had seen someone leaping at him from the right and had tried to dodge.

They placed a sentry at the corner for a while. I kept quiet, whiling away the time in perfecting the silhouette on my glass slide. Then new soldiers came to replace the others, and there was the third accident.

You remember the conference at the council about our town being fined for the accidents. Even the Boches felt ridiculous when we asked for proof that some Frenchman was to blame. And they recalled the fine.

It was the first time they had backed down. You know why: They were afraid of publicity of that sort. I mean that they couldn't admit being unable to prove the matter, and in so doing appear to agree with the superstitious civilians and troopers, who heard that one of the dying men stated "a fat woman" had leaped at him, arms wide, and therefore were su

RODUCT OF **Delco-Remy**

*Delco batteries are available through 34,000 Delco battery dealers in every section of the United States. Delco batteries are distributed nationally under the direction of United Motors Service.*

## Look to your battery NOW!

Take your car to your Delco battery dealer today. Let him test your battery and check it against the Battery "Life Expectancy" Chart. He'll tell you how much more life you can expect from it, and whether you will need a new battery for sure starting this winter. He'll show you the Delco battery that is the right size and type for your car.

And because it is a Delco, you can depend on it for *extra starting power* in zero weather. That is an outstanding characteristic of all Delco batteries. It is an outstanding reason why a Delco battery belongs in your car.

Delco batteries are original equipment in 43 per cent of all new cars sold . . . are in daily use in more than six million cars, trucks and buses. Make sure of battery satisfaction—with a Delco.

# The Quarrel

Continued from page 40

shoulders. "Well," he said, "we were talking about a drink."

They went into Faro Charley's, once again cheerful, and had a drink. Everybody felt good to be here after a long summer's sweating on the range and Jim Van Horn stood at the bar's end and swapped talk with men he hadn't seen since spring. He was soft of voice, he had long, rawboned arms and a willowy body, and when he got to swapping talk with his friends a bright and rash humor flashed up through the grave, false innocence of his eyes. He was twenty-seven and the owner of a small outfit back in the Yellows; and sometimes in the midst of the talk he had a way of falling silent and looking across the room at nothing in particular, as though arrested by some strange sound or color or thought.

He hadn't been in Faro Charley's more than a quarter-hour when Orv Ghent came in. "Jim," he said, "Purple is in Corbin's and says he expects an apology."

News of the quarrel had already gotten around, and the crowd in the saloon now grew silent. Ghent, who was an unpopular man, was not easy in these surroundings. Charley Engleman and Slats McGinn moved forward until they stood near Van Horn, but nobody broke into Van Horn's thoughtful debate with himself.

"Tell Drake," he said finally, "there is no cause for an apology."

Orv Ghent nodded and left the saloon. Slats McGinn said: "As I was saying, how about another drink?"

Charley Engleman shook his head. "Drinking can wait."

"For a fact," spoke up Van Horn, and strolled from the saloon.

He left behind him a largely silent group. All these men were friends who knew him well; but they also knew Purple's fighting reputation and now were troubled. "I don't like this at all," said Slats McGinn. It was as far as he would go in expressing his doubt of Jim Van Horn's survival in such a battle, but Charley Engleman understood the rest of it and nodded. Little Con Spencer, an interested spectator to the recent scene, spoke his mind aloud: "He's up against the dirtiest fighter in the country."

Con Spencer was the one to know about that; for Con, little as he was, had unlimited courage and his courage had taken him into a brutal fist fight with Purple, the result of which was a crooked arm, four bent ribs and a permanent limp. Slats McGinn said: "Don't publish the fact, Con, and bring Drake down on you again."

MEANWHILE, Jim Van Horn loitered under the shelter of the sidewalk's board awning, eyes half closed against the silver glare of fall's sunlight on the deep dust of Arapaho Street, and the milky rolling of this dust as horsemen and wagons moved steadily into town.

Pardee's Rafter W crew came into town with a racket and a rush and a patient in the dentist's chair shouted. A group of homestead women came down the walk, momentarily stopping Van Horn by Donlake's store. He stood out of their way and he lifted his eyes over them and saw Orv Ghent step from Corbin's and move at him through the risen dust, and at that moment a free, warm laugh broke through his preoccupation. Lowering his head he saw a girl in the store's doorway.

She held an armload of packages with round, firm white arms and all he saw at the moment was a pair of lips and a pair of eyes smiling at him above the heavy load. Other people, moving into the store, had unsteadied her; and it was the quick and pleasant way she looked at him that made him step forward and lift the top packages from her arms. She was a straight, robust girl and her upper body was round, and on the sun-dusted tint of her face lively interest ran and suddenly disappeared behind gravity.

Orv Ghent reached him and said: "Drake says for you to look out for yourself."

VAN HORN moved the packages from one arm to another and for a moment his glance lifted above Ghent and ran out beyond the town and the hills and he stood still, quietly thinking, and afterward looked at Ghent again. "Tell him I'll do that."

Ghent swung away without further comment. Van Horn turned to the girl and said: "Where do I carry this for you?"

The liveliness had gone from her face and she watched him with the deepest and most solemn attention. In the beginning it had been the tone of her voice which had arrested him; now it was the straightness of her shoulders and the rounding of their points and the strength that seemed to be in her.

"Our wagon is by the courthouse," she said, and fell in step with him. Her head came to his shoulder and when he looked down he saw the sun-dusted shading of her skin and the half circle of her lashes. She was, he supposed, about twenty-three; and there was an old-fashioned ring on the little finger of her right hand. A hundred feet beyond the Cattle King they turned into the area of cottonwood and box elder and ash which surrounded the courthouse, threading the askew ranks of wagons until they reached a big bay team. She put her package in the near-by wagon bed and relieved him of the ones he had carried for her; she turned and gave him a swift smile. "Thank you," she said, and immediately looked down.

He was bound nowhere and in no haste to leave. He had exhausted his cigarette and now rolled up another. "Homesteading?"

"We're on Weeping Woman Creek."

"My name," he said, "is Jim Van Horn."

Liveliness came again to her face and again went away. "I'm Margaret Calhoun."

"That ring reminds me of one my mother had."

"It was my Grandmother Liggett's. She came from Kentucky. We all show Kentucky on us—we're all Kentucky dark."

"Dark?" he said, and looked steadily at her. "No," he said, "not dark." He dragged the last smoke from the cigarette in a deep breath and looked to the ground, and now that his eyes left her she was free to watch him. Grave as he was, she noticed the simmer of energy in him; polite as he had been toward her, she had observed the latent dance of humor and deviltry in his eyes. "Not dark," he said, "but fair." He looked up after he said it and caught her eyes, and then she turned her head aside and hoped she was truly as fair as he had said.

Donlake and Faro Charley came through the parked wagons and paused, and the girl, now in the background, saw the quick and alert way Jim Van Horn turned to them.

"Yes," said Van Horn.

"Now," said Donlake, "we've got another idea to work on. Suppose we set a meeting place, you and Drake to arrive at it the same moment, neither before or after the other, and talk it over?"

Van Horn considered that fully and at last shook his head. "It would then appear I was anxious to make a settlement."

Donlake tried another tack: "When had you expected to ride out of town?"

"I will not leave this town now before Drake does."

The two moved away. Van Horn said to DeSmet, "We'll have snow before usual this fall," and left the Cattle King.

It was then one o'clock and the town grew steadily fuller, but the wagons and saddle horses had been pulled away from the street racks so that now the space from the Cattle King on down to the depot was clear. The town expected a fight and was preparing for it. Slats McGinn stood in the full shine of the sun near Besson's saddle shop, apparently half asleep on his feet, a cigarette dipped down at the corner of his mouth. At the corner of the brick bank building, Charley Engleman squatted like a reservation Indian, facing the entrance of Corbin's. These were his closest friends; they were watching the street for him.

He crossed the street, feeling the eyes of this town upon him; and as he passed people he saw the swift looks they gave him—the human and inquisitive search for the fear they suspected might be in him. Conrad Spencer sat against the wall of Menefee's, his small body stooped on a box and his crooked arm lying across his lap; and as Van Horn went by Conrad the man gave him a look, hot and bright, and murmured: "Never turn your back on him."

Reaching the foot of the street, Van Horn looked back and saw Drake Purple leave Corbin's and go over to the Cattle King. He stood against the wall of the small yellow-brown depot and built a cigarette.

PURPLE came out of the Cattle King and met Ghent, who had posted himself on the porch. Ghent said: "He's down by the depot." Crossing toward Corbin's, Drake Purple had his impulse to slip back of town, circle and catch Van Horn off balance. But he put the thought aside, knowing that McGinn

"Quit worrying about Ickes and give it more gas!"

and Engleman were both watching him.

After Purple had gone into the saloon, Slats McGinn made a little sign to Charley Engleman, who rose from the courthouse steps and walked behind Corbin's to keep an eye on the rear entrance. At the same time Leach O'Leary looked on at the passing scene and recalled a brother who, riding across Broken Bell range, had never been seen again; and from her room over Corbin's saloon Square Madge watched all this with her private memories, remembering that she once had been a homesteader's wife. Drake Purple had been an attractive man in those days to a woman often as lonely as she. Now her husband and young son were somewhere in Montana and she was here, Drake Purple soon tiring of her.

IT WAS two-thirty when Donlake and Faro Charley came down to the depot where Van Horn still loitered. Donlake took off his hat and rubbed the sweat from the brim. He said: "We only got an hour and a half to go. Time's gettin' short. You will not meet and you will not ride out of town." He stood silent a moment, as though weighing the advisability of his next statement, then said: "Would you say that your remark to Drake was in answer to his remark to you?"

"Yes."

"You meant neither more nor less by your statement than he meant by his? If he meant nothing unfriendly, neither did you?"

"That's right."

"We'll work on that—a mutual withdrawal of remarks."

Van Horn watched them go up the street, traveling slowly as though they then knew the fruitless end of their efforts. He kept his eyes on them and his own thoughts ran ahead so that he witnessed the final scene, his lids coming together and the bright sun dying from his vision. The vision turned red and he opened his eyes and saw that he had his glance fastened to a tub of red geraniums on the porch of a house across the street; and he laughed to himself and crossed over, breaking off a cluster of flowers. As he came up Arapaho Street, Slats McGinn stepped from Besson's saddle shop and handed him a gun and belt. "It is three o'clock," Slats said, and moved away.

He buckled on the belt, still walking. Engleman, now at the bank corner, pointed to Corbin's and shook his head. Van Horn reached the bank wall, facing the courthouse square. A man passed in front of him and threw a curious glance at him; but he didn't see that, for his eyes were on the Calhoun wagon and the girl sitting in its seat. He watched her a moment, and went through the wagons toward her. She had a piece of knitting in her lap and her fingers swiftly moved the needles and her face was solemn and soft.

He stood by the wagon hub and looked up, smiling to her; and she knew that he saw everything about her and was pleased with what he saw, and the effect of it was a warmth all through her. She held her eyes away from him until she was sure he had really seen in her what he wanted to see; then she looked at him.

"Come down," he said.

She stepped to the wagon hub and felt the guiding of his hand as he reached out. She stood before him, wondering what thoughts he had behind the dance of light in his eyes. He had been grave to her and somewhat shy at the first meeting; now there was a change in him. He lifted the small spray of red geranium and he laid it against the side of her head. "That would be pretty," he said, and handed it to her.

She murmured, "If you want it there," and tucked the stem into her hair. She turned quickly away and moved into the shade of a cottonwood. She wheeled and faced him, her back to the cottonwood. She watched him come forward and squat on the ground and look down at it, his hand drawing irregular patterns along the earth. She was above him; she sat down so that she would not be taller than he was. He had ceased to smile.

"Ever been in the Yellow Hills?"

"No."

"Now's a pretty time of the year there. My ranch house faces a creek and in the morning there's a little thin fog on the creek and then the sun strikes it and it shines like diamond dust. You can smell the pine and the dry grass. I'm about five hundred feet off the valley floor. I look out on it and I can see the smudge of Hat Ranch, twenty-five miles away. Sometimes at night there'll be a campfire clear over by the bad-land breaks. Like a star blazing."

"You're lucky to live as you want to live."

"When I stand on the porch I get to thinking it isn't complete. What's one man standing there alone?"

"You can ride. You can come to town. You can go to dances and dance with whom you please."

"When I ride home, I ride home alone."

She sat silent, her shoulders slightly rounded at the points, and her hands were long and straight and strong, and she met his eyes and didn't look away. Homesteaders moved through the wagons and youngsters ran in groups past, shouting as they hurried. Jim Van Horn built a cigarette, thoughtfully watching his fingers; and when he put it to his mouth he looked at her again so keenly that she knew how much he wanted to say. The warm feeling rushed through her again and then vanished, leaving her very cold. Donlake and Faro Charley came off the street, walking as though they were tired.

"There's nothing more to say," said Donlake. "It is a quarter of four. Good luck."

THEY delayed, but they said nothing more. Looking carefully at them, she saw that they were deeply moved and that they were really saying goodby to him; and then they turned away. Jim Van Horn crouched on the ground and coolness made his face heavy and far-off thoughts held it still. She gripped her hands tightly together and held back all that she felt, all that was forlorn and full of fear and she cried out silently to herself: "Why does it have to be this way?" But none of this was for him to see.

He lifted his head. "Margaret," he said, "will you go to the dance tonight?"

"Yes."

He rose and for a moment gaiety showed through his solid expression, for a moment the old deviltry danced and made him very young. "That's the way it should be." He stood before her; he bowed and murmured, "Never dark—never to me," and turned to the street.

It was close to four and the smell of what was to be was strong through town and there were no women along the walk and men had withdrawn to doorways and alley entrances, all of them watching with their shadowed, strange thoughts. He noticed Square Madge at her window above Corbin's and saw her lift her hand to him; when he passed Menefee's stable Con Spencer's deep, breathless whisper touched him: "Watch for a trick!" Beyond Menefee's he stopped. Slats McGinn stood at Faro Charley's across the dust and McGinn raised a finger and pointed toward the foot of the street; swinging on his heels, Van Horn saw Drake Purple turn the corner of the depot and step forward.

Drake Purple was four hundred feet away, coming on. Waiting out the in-

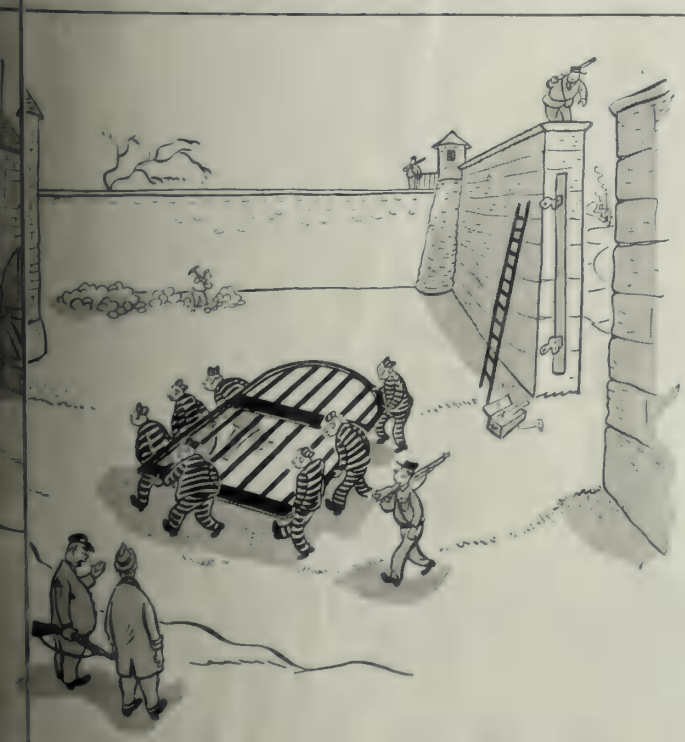
stopped Purple. For y and suspicious man, suddenly seemed to feel treachery around him. It was a new thought and a powerful thought and as he came to a stand this thought hurried him, and got into him and made him draw. The drop of his shoulders signaled the beginning of the draw and by that signal Jim Van Horn took his cue. The shots were two echoes slamming together and the wind of one of those shots was a pulse against Jim Van Horn's cheek. He watched Drake Purple stagger and scoop a hand across his chest and he watched wild shock break over Drake's face and he saw it fade into the loose, blind expression which was death. Then Drake fell and men ran out of Faro Charley's.

Van Horn stood fast. McGinn pushed through the forming crowd and presently stepped back and drew a short straight line across the air for Van Horn's information. Con Spencer limped up from the stable, his features cramped by a strained eagerness, and now the street was full and men shouted out the news: "He's dead!" Van Horn turned away. He handed the gun to Slats McGinn, who ran up, and Slats hit him on the shoulder: "As I was sayin', Jim, it is a thirsty day—"

Van Horn struggled past people who wanted to congratulate him and his long legs took him fast by the Cattle King and through the parked wagons of courthouse square. She stood by the cottonwood. She hadn't moved from it and he noted the strained and haunted expression on her face. She stared at him, long and close, and then she came forward and touched him with her hand, and the touch seemed to release everything in her and she put both hands on his shoulders and dropped her eyes to the ground.



"Did it mean so much to you?" he said.

"I said to myself," she murmured, "that nothing good ever dies." She lifted her head and he saw the smile, the small and sweet and quiet smile, return with its light and its warmth.

"As to the dance," he said, "I'll be here for you at seven o'clock. Your folks won't mind?"

"I'm twenty-three," she said. "I speak for myself."

He watched her a moment, graveness still upon him after all that he had gone through. Presently her nearness and her warmth thawed him and he lifted his hat and, smiling, moved away.

s town the cellar's the best place for it on Halloween!"

ROLAND COE

*Here...it shows you right in this Figuring Chart!"*

When you buy a car on time, naturally you want a low cost plan...one that offers you the lowest monthly payments, sound insurance, and reliable service. Here's a suggestion to help you find that plan—

Just send the coupon below for the simple GMAC Figuring Chart that gives you all car-financing details in *dollars* and *cents*. This chart shows you exactly what you get for what you pay . . . enables you to figure easily the cost of your entire deal. Then compare various finance plans and what they offer ...see for yourself just where and how you can save!

You'll see definitely that the lower the financing cost, the lower your monthly payments will be. You'll be surprised at how little it really costs for financing on the General Motors Instalment Plan! And remember, *this* plan includes broad insurance protection for your car!

But learn for yourself why the GMAC Plan is *the* low cost way for you to buy a car on time. Send the coupon for your Figuring Chart right now!

*This plan is available only through dealers in Buick, Chevrolet, Pontiac, Oldsmobile and Cadillac cars.*

# Our Cruelty to Arnold

COLLIER'S in the last year or so has pinned a couple of lilies of the alley to the lapels of Thurman W. Arnold, anti-trust poo-bah for the Department of Justice, and now Mr. Arnold is sobbing around that Collier's is persecuting him.

Arnold says we unjustly accuse him (1) of trying to ruin the five big tobacco companies' business insofar as that business is based on mass advertising, and (2) of trying to take competitive advertising out of the gasoline business and compel sales of gasoline at dull, dirty, restroomless, noncompeting service stations.

Mr. Arnold says he is really a good friend to advertising, and has no such designs on it, and has never made any statements indicating any such designs.

So we pick up Mr. Arnold's latest book, "The Bottlenecks of Business" (Reynal & Hitchcock, N. Y., 1940, 355 pp., $2.50), and at page 34 we find this:

> There is no price competition among the companies dominating the (tobacco) industry. There is plenty of competition at rigid prices. This means that most tobacco advertising is expensive and hokum.

So much for Mr. Arnold's affection for tobacco advertising. At page 33 of the same book appear these remarks on gasoline selling:

> The major oil companies, aided by the Ethyl Corporation, have put a floor under prices. There is no difference in motor fuels because they had become standardized. Competition has become a race to see which company could put out the most expensive hokum. Millions have been spent in advertising different brands that were in fact all the same. Filling stations more luxurious than the homes of most of the customers appeared on every corner. Maps were given away free. Unnecessary services were added. Men were hired to smile at poor customers and say "Happy Motoring." All this meant that a greater share of the customer's dollar was going into gasoline.

Now that Mr. Arnold is a big shot in the Attorney General's office, he is going after the tobacco companies and the oil companies along precisely the lines laid down in the above passages from his book. He reminds us of a man who has had what he considers a beautiful dream, then wakes up to find himself in a position to try to make the dream come true.

We can understand Mr. Arnold's delight in finding himself so situated. But we cannot understand his blind-spot inability to recognize that advertising in the United States has stimulated consumption by reducing prices through mass production of innumerable things, has been probably the prime force in raising American living standards to top levels for all the world to date, and costs an almost infinitesimal sum per customer.

But now we remember that Mr. Arnold is also the author of a book called "The Folklore of Capitalism" (Yale University Press, New Haven, Conn., 1937, 400 pp., $3). This earlier work was based on the proposition that words in this country no longer mean what we common, ignorant clucks think they mean. Words, according to this puckish, pseudo-Voltairean book of Mr. Arnold's, have become instruments for concealing rather than conveying meaning in our capitalistic society.

So maybe Mr. Arnold ought not to be held accountable for everything he says. Maybe when we ignoramuses think he is damning advertising he is really praising it. Maybe when we think he is talking like a pert little parlor pink intent on wrecking our social system just for the devil of it, he is really uttering old-line Republican doctrine. Maybe.

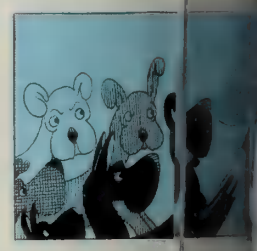
COVER LAWSON WOOD

# ANY WEEK

THERE'S an energetic young man working in the Office of Production Management in Washington under an assumed name. It's possible, of course, that he's not the only one. It's possible, too, that others, if there are others, are drawing wages under an alias for less noble reasons. Anyway, this young man makes it no secret that the name he wrote on the government's pay roll is not his. We'll give you the explanation he gave to his boss. "I'm named for my grandfather, a low-country South Carolinian. It is his boast that as far as he knows he has never spoken to a Yankee. In fact, he has not spoken to anybody outside the family for thirty years. Thirty years ago he spoke to a stranger whom he later had reason to suspect came of a Yankee family. He wasn't sure of it but he decided to take no further chances. So he hasn't spoken to anybody outside the family since. When I came to Washington from South Carolina he made me promise to change my name because I was pretty sure to speak to some Damyankee up here in the North and he didn't want anybody to get us mixed up. . . ."



WE SPOKE to this young man and began to regret that we are a Yankee and thereby disqualified from talking to the old man. The old boy has ideas. He's strong for the President's foreign policy although he wouldn't say so to Mr. Roosevelt's face, the latter being a Northerner. In fact, he's so strong that he was for shooting intervention away back in the Munich days. Grandpa has a plan. He's all for re-establishing the Confederacy for the duration, raising a butternut army and kicking Hitler's teeth out without any Yankee help. In fighting ability he has the peoples of the earth pretty well graded—South Carolinians, all other Southerners, Yankees, Sioux Indians, the British Empire, Mexicans, Chinese, Russians, Germans and so on in order down a lengthy list with the Japanese and the Italians fighting for last place.

WE DROPPED in at the State Department just as a large bale of European dispatches arrived. One of these pieces of more or less startling information was that journalistic challenge from Virginio Gayda, poor Mussolini's Donald Duck. You probably read it in your paper. Mr. Gayda said that Italians could fake the news better and faster than Americans and British and dared us to accept his challenge. Our friend in the State Department tossed it aside as unworthy of notice, saying, "It takes a magnificent liar to be as confident as Gayda seems to be. But obviously he hasn't had time lately to read us."

IF THERE'S a little more Washington here this week than you'd prefer, it isn't all our fault. Circumstances have kept us in the capital and have added to our long-time conviction that Washington is the last place to look for the country's true sentiments. At the moment a hotel strike threatens, and chief among the things Washington doesn't need is a hotel strike. The whole city gives you the impression of a strike—picket lines of businessmen filing in and out of departments, bureaus, agencies, administrations, offices of production; alibi propaganda, defensive statements, accusations and settlement terms appearing in waves, billows and floods; walking delegates for industry and government wrangling in every barroom and hotel lobby. About the hotel strike, however; we mentioned it on Capitol Hill. "I hope it happens," said a senator. "I hope it happens and lasts for a month. At least a month. If we had no visitors coming to Washington for six weeks or so we could probably go to war in peace."

WE'VE run into several more pension plans. One of them seems to us to be much too simple to be effective There's nothing complicated about it at all—and that's no way for a pension plan to act. It would merely deduct two per cent of every defense contract and set it aside for citizens sixty years old or older. Mr. Lynn T. Frynke of Oklahoma City, Oklahoma, has it in his pocket and is looking for a congressional sponsor. Mr. Frynke, an energetic fellow sharply attuned to the times, speaks in terms of nothing less than billions. "Let's say," says he, "that you're the government and I'm General Motors. I'm only illustrating, understand. But you give me a contract for two billion dollars' worth of something. See? Actually, though, it's only one billion, nine hundred and sixty million dollars' worth, the missing forty million going to the old folks. See? No trouble. No new taxes. Everybody happy." But another plan we've caught up with is being peddled by Mr. George Washington Lifft of Dubuque, Iowa. Mr. Lifft does not want it generally known that he was a member of the A.E.F. in 191 8, adding, "Please don't elaborate on t subject but merely mention it once and let it go at that." His idea is to continue Army pay to draftees of our current Army after they have been discharged from service. These payments should continue for the rest of the ex-draftee's life. "The money would never be missed," he adds. We told him about Mr. Frynke's p Frynke's pensio new taxes. "Wh got anything on manded Mr. Liff little facetious gesting that he together, calling liffters or someth But he became with us.

FURTHERMOR by a delegation Mrs. Johanna M burgh, Pennsylv a slogan—Give t purpose is to c them in great camps to be pe Duffy told us t see President R got no farther t the White House Mrs. Duffy, the it over for a fe ing a little book ing somebody, out of the Presi have to see th Husbandry, De ture."

THERE'S a re of your count that: Patriots Full of Fight. vertising: Get Instructions O Free. For a w pamphlet on Hitler. But t something wro police chased streets. Not f give you the id trifle wacky the thing less tha congressmen a virtuously whe should go to a or a nice wet thrown by a hi one came out latter. Finally should all go t of them mum going back to some work th attend to. But into a taxi he others: "Okay ing you at the

**DURAMIN,** *the amazing discovery that keeps rubber young, makes tires wear longer, stay safer.*

A FEW WEEKS AGO you could buy tires as casually as groceries! But things change fast these days. Now everything points to the necessity of getting good tires—nobody knows how long you may have to make them last.

Silvertowns always did roll out the miles. Today, they're even better than before. Why? Because Uncle Sam is using thousands and thousands of them for defense. You get the benefit of extra miles and extra safety.

Tires that wear like Silvertowns would be impossible without Duramin. That's the famous "tire vitamin" that keeps the rubber in Silvertowns lively—makes every one of these rugged tires wear longer, stay safer.

Remember, too . . . because Silvertowns wear longer, they help you save America's rubber. Prices are still low. And you don't have to pay cash. All B. F. Goodrich Silvertown Stores, and many Goodrich Dealers, offer the Budget Plan.

"All I save by doing my own housework and minding the baby you squander on oil and gas. It's high time you put Sealed Power Rings in that car!"

SMOOTH but saving, too!

...so are cars equipped with Sealed Power Piston Rings

YOU can save gas and oil and thereby help National Defense by installing Sealed Power Piston Rings in your car. They have been the choice of engine builders for thirty years. The manufacturers of over 80% of America's cars and trucks use them as original equipment. That's why you can be sure they are the safest, most economical rings to put in your engine. They are packaged in sets individually engineered for your particular make and model of car. Ask your mechanic to install Sealed Power Rings. They cost no more than ordinary rings. Sealed Power Corporation, Muskegon, Mich. and Windsor, Ont.

*Piston Rings for all types of Automotive, Airplane, Diesel, Stationary, Marine Engines.*

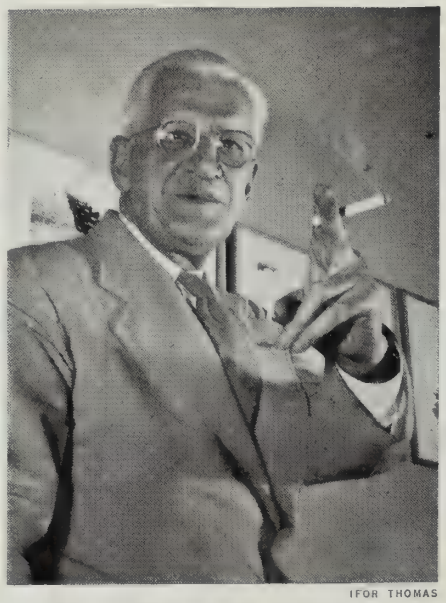
ROBERT O. REID

# WING TALK

**Frank T. Coffyn introduced the seaplane to New York, Februa 6, 19**

STATE cops, airport managers and airways traffic-control people are suffering an epidemic of pains-in-the-neck as the volume of cross-country nonscheduled flying increases and pilots forget to report changes in their announced routes and destinations.



For safety purposes, the government offers a PX (Position Reporting) service to private and commercial nonscheduled airmen, who, before departing on a cross-country trip, may "PX out."

This means a message concerning the flight and destination is put on the C.A.A. teletype system of the airway to be followed. Too often airmen change their minds and take another route or don't go at all, or forget to "PX in" at their point of arrival. They know they're all right, but meanwhile there's a missing plane on the airways records. An alarm goes out, a search is made by the police and days later the pilots turn up, oblivious to all the commotion they have created. You should hear how they're told off.

ALWAYS the world leader in lighted and radio-equipped airways, the United States now has 31,000 miles of such boulevards of the skies in operation and close to 3,000 miles more under survey and construction. These airways are both visible and i for flying on fair nights a the ground the airway i powerful beacon lights at vals and with lighted equipped emergency lan 50- to 100-mile spacings miles or so there is a radio to give directional guida ground is blotted out. # HOW YOU CAN AVE YOUR TEETH FROM THESE CAVITIES

**ENTISTS SEE PATIENT AFTER PATIENT VTH CAVITIES CUT INTO THE EXPOSED, SOFTER PARTS OF THEIR TEETH R GULAR BRUSHING WITH DENTIFRICES CONTAINING ABRASIVES"**

## Can Avoid This Trouble Simply By Changing to Liquid Dentifrice

***Liquid dentifrice cannot injure your teeth because it contains absolutely no abrasives***

al millions of people are unsing serious damage to their ch Nature can never repair.

ju is caused—not by the toothut y regular brushing with denning abrasives.

all as the months go by, these cy cavities into the softer part of on the gum line exposed by gums, where there is no hard, e amel.

hong people who brush their ul y, a very large percentage of es ong the gum line that require e obably the result of this in- is as shown by a clinical study l in a leading dental journal.

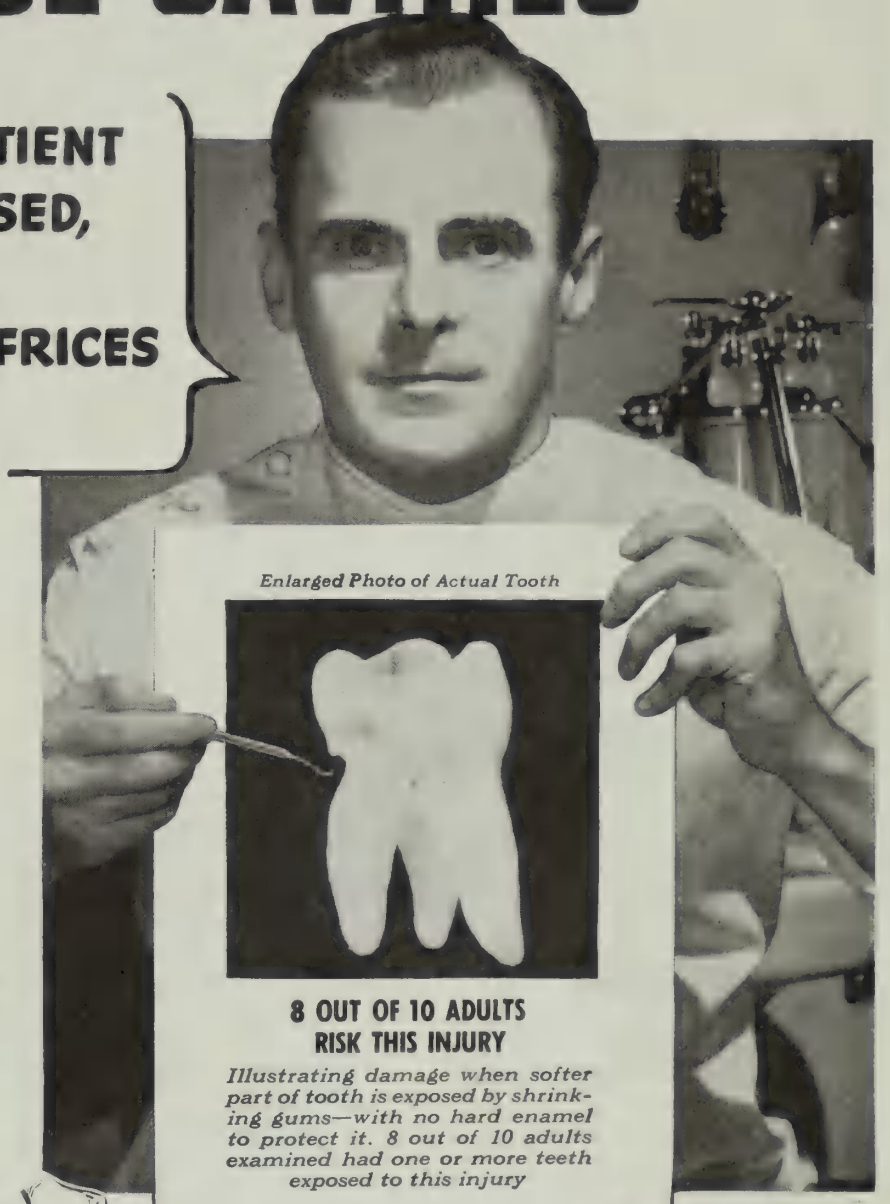
### cked by Scientific Research

ta ing facts—long known to n ts—were recently confirmed ti research. Eminent independents made laboratory toothtts with a number of dentifrices containing abrasives. Every one cut cavities into the softer part of the teeth.

In the same manner, these scientists tested the new liquid dentifrice—Teel. In no case did Teel injure the teeth in any way, because Teel contains absolutely no abrasives of any kind whatever.

Teel doesn't depend on abrasives for cleansing. Instead, it uses a newly-discovered, patented cleansing agent that's almost magic-like in the way it helps reveal natural whiteness and beauty of your teeth. It isn't soap, yet multiplies into thousands of tiny, cleansing bubbles in the mouth.

### How Teel Reveals Beauty of Your Smile



These active bubbles amazingly help to remove the daily accumulation of decaying food particles and the dulling surface film that hides natural brilliance of teeth. Thus your teeth look so much whiter, more thrillingly beautiful.

With your first Teel brushing, you'll know something good and different has happened by the satin-smooth "feel" of your teeth—by the glorious freshness of your mouth. Teel helps sweeten bad breath. It's easy to use and economical. Only a few drops are required for each brushing.

### Start This Safe Liquid Way Today

Naturally, you want to save your precious teeth from the injury pictured above. If, however, you feel that your teeth need an abrasive scouring, at least occasionally, we suggest that you follow the special directions given on the Teel package.

So today adopt this safe liquid way of cleansing your teeth. Use Teel twice a day and enjoy its amazing benefits. Get Teel at any drug, department or 10¢ store. And be sure to see your dentist regularly for his professional care. Procter & Gamble.

*Enlarged Photo of Actual Tooth*

**8 OUT OF 10 ADULTS RISK THIS INJURY**

*Illustrating damage when softer part of tooth is exposed by shrinking gums—with no hard enamel to protect it. 8 out of 10 adults examined had one or more teeth exposed to this injury*

**MAKE THIS TEST**

***to tell if your dentifrice contains an abrasive***

Tonight, put some of your favorite dentifrice in a glass of water and stir. Let it stand overnight. When you see a white sediment in the bottom of the glass, you know your dentifrice contains an abrasive. Teel, however, leaves no sediment, proving it contains no abrasives whatever which could injure exposed soft part of your teeth.

**To Dentists, Physicians, Nurses, and Teachers:** A booklet for professional people which contains an authoritative report of the scientific research summarized above will be sent to you on request, free of charge. Send your name and address to Teel, Box 687, Dept. NC, Cincinnati, Ohio.

# KEEP UP WITH THE WORLD

## By Freling Foster

*Owing* to its greater density, cold air retards the speed of a bullet much more than warm air. For example, a small-caliber bullet fired at a 200-yard target when the temperature is fifteen degrees below zero will hit about sixteen inches under the hole made by a similar bullet, identically aimed, fired when the temperature is 105 degrees.—*By Gilbert Eisenberg, Cleveland, Ohio.*

*After* Alaska sealskin (the only fur owned, controlled and sold by the United States government) has passed through 125 secret dressing and dyeing operations, it is so light and supple that a pelt from a very large animal can be drawn through a napkin ring.—*By Zelma Wager, St. Louis, Missouri.*

*The* Army Medical Library maintained by the War Department in Washington and valued at $25,000,000 is the largest of its kind in the world. It contains nearly 1,100,000 volumes, and pamphlets and 220,000 copies of current medical periodicals in many languages.—*By John J. Shields, Washington, D. C.*

*Milk* is not only our most valuable farm product, but it is subject to more sanitary regulations and higher standards of purity than any other food. Moreover, it outranks, in volume, all other articles sold in tin cans in the United States.

*A portrait* of Cardinal Ugone, which was painted in 1360 and hangs today in the Church of San Nicola in Treviso, Italy, is the first known painting of a person wearing eyeglasses.—*By Betty Seitters, Lorain, Ohio.*

*How* Japanese newspapers cover big stories was illustrated recently in Tokyo when the palace announced that a statesman was to form a new cabinet. Within an hour, his estate appeared to have been taken over by an army. Each paper had sent at least fifty reporters, equipped with tents, beds, cookstoves, radio outfits, cameras, pigeons, stepladders and other paraphernalia for any emergency.

*There* are 2,123 [illegible] forty-one states, [illegible] Columbia, Canada [illegible] or 46 per cent of wh[illegible] are in York. They have u[illegible] as mu[illegible] 15,000 miles of ticke[illegible]ape in a gle five-hour day.— *R. M. [illegible] per, Wilkinsburg, P[illegible]nsylvan*

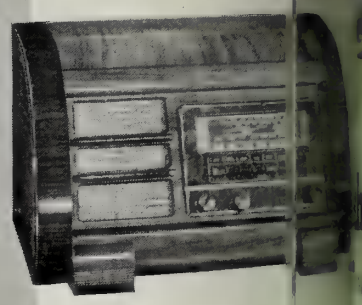
# "There's something *extra* in Beauty and Tone that you get only in a PHILCO"

## "MUSIC ON A BEAM OF LIGHT"... ONLY PHILCO HAS IT!

LISTEN to the new Philco Photo-Electric Radio-Phonograph. Instantly you recognize something extra, something different, something no other phonograph can give you. It's there because of "Music on a Beam of Light," the revolutionary development of Philco engineers!

You hear new overtones of lifelike beauty long hidden in your records . . . new depth and fullness of tone . . . brilliance and clarity unmarred by needle scratch. There are no needles to change (a permanent jewel floats lightly over the grooves) and your records last 10 times longer!

The new Philco Automatic Record Changer with Stroboscope Control gives you absolute fidelity of pitch and simpler, more reliable operation. The Tilt-Front Cabinet does away with awkward phonograph compartments. And Philco's exclusive engineering triumphs in radio give you thrilling tone and performance—plus Frequency Modulation at new low cost!



**PHILCO 1013 PHOTO-ELECTRIC RADIO-PHONOGRAPH** (illustrated). Authentic Hepplewhite design. Latest 1942 Philco phonograph and radio inventions. American and Foreign reception; exclusive Philco FM System. Liberal trade-in allowance; yours on easiest terms. *Philco Home Recording Unit optional.*

gh vatch had begun to make
ds. ith a pocket torch he was busy verifying the locks on the shop doors on the main street. A boy, whose wooden shoes struck the paving blocks with rhythmic click-clack, whistled a shrill marching tune. He stopped whistling as he passed the Doelen, or meeting house, of which the door was suddenly swung open, letting a yellow beam of light fall across his path. There had been a lecture in the Doelen that evening. About fifty citizens had turned out to hear a professor from the University of Utrecht discourse, as objectively as he could, he had said, upon the merits and demerits of the different social philosophies which had come to contend for mastery in the great countries of Europe.

The collector of internal revenue, Mr. van der Plank, was chuckling as he stepped out of the Doelen into still High Street. He shook hands with several other gentlemen, who were lighting a last cigar before retiring.

"Yes, the rain is over, I can smell it," Mr. van der Plank was saying. "I think I will do a turn around the park and have a sniff of this good air by the river before I turn in."

He was about to move away when the nervous chug of a motorcycle made the gentlemen, standing before the Doelen door, turn in its direction. Before they could utter a word, a soldier with a short carbine flung over his shoulder and a steel helmet on his head roared by. The soldier went on to the next intersection and there brought his machine to a stop with a sharp grating of brakes. He was seen to speak to someone for a moment, but then his motor was heard to roar once more and he vanished. Mr. van der Plank and his friends walked over a few steps toward the man to whom the soldier had spoken and asked him: "Well, what did that boy want so late, Mynheer van Sas?"

"The soldier was looking for the military bureau. I told him the barracks are right at the end of the next street, if that was what he wanted," came back the gentleman who had been addressed as Mynheer van Sas.

### An Inkling of Disaster

"Did he say anything else?" asked the tax collector, blowing out thick clouds of cigar smoke. "He did not say another word." Van Sas shook his head. "But he seemed in a desperate hurry. There must be something serious brewing."

"Nonsense," broke in another man, who was principal of the high school, "nonsense, they have got to invent something urgent from time to time in the army to keep all those boys from growing too fat and lazy."

"Eh, what's that?" called out Mynheer van Sas. "Lights in the town hall at half past ten in the evening! Now surely the world is coming to an end. And in the burgomaster's chambers, too! I wonder if it could be a burglar. No," he corrected himself at once, "it is not a burglar, for there goes the good burgerfather himself . . ."

"Good evening, Mynheer Verwey!" someone called out to the mayor. "What brings you so late in the streets? Nothing serious, I hope?"

"Gentlemen," said the burgomaster, as he stopped to wipe the perspiration from his forehead, "gentlemen, the situation is very serious. It is grave. It has not been so grave in a hundred years." With these words he rushed up the steps of the town hall and disappeared inside, leaving the small group of lecturegoers speechless with amazement.
